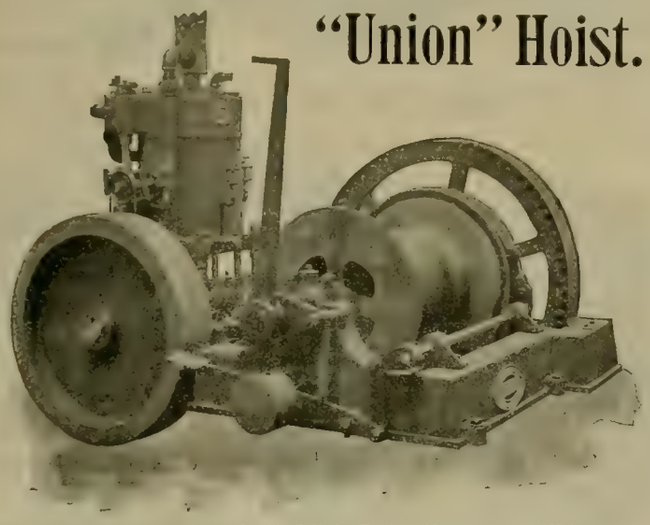
We beg to call attention to our "RISDON HAMMERED" Shoes and Dies, which are made of a special quality of steel, are hammered and then compressed in moulds so as to give the greatest possible density.

These Shoes will outlast any other make and will not chip or cup.

We have attached a sketch showing sizes; fill in the size of your Shoes and Dies, and order a trial set.



Our prices are as low as any, and the article we offer should commend it to all mine owners and mill men.

Market Reports.

The Markets.

SAN FRANCISCO, April 15, 1897.

The trade reports increasing orders, with the buying as a rule in larger quantities, which is quite a radical departure from what has been a characterizing feature of their purchases for a long time past. This is accepted as a growing feeling of confidence, inspired by the belief that prices are low, crops will be large, that a gold mining boom is at hand and there will be a revival in speculation before the summer months pass. The activity reported in railroad car shops, new lines being built, with contemplated improvements in other directions, are an incentive to trade. It is said that more buildings will be erected in interior towns and cities than for several years past. Manufacturers continue to report increasing orders, with the majority adding more help. At this writing the outlook is quite promising.

The local money market is reported practically unchanged. The banks accommodate regular customers to a larger extent than at any time last year, while those with gilt-edge security have no difficulty in getting shaded rates of discount. Collections are reported by jobbers as fairly easy, with accounts not so large as has been the practice. In the absence of a liberal supply of Eastern and foreign bills the premium on New York exchange holds to strong figures. New York advices state that the money market is still dull, with the rates of discount from 1½ to 2 per cent, with the bulk of transactions from 1¼ to 1¾. The supply of commercial paper is light. The sterling exchange loans have been reduced to below $5,000,000, which causes some to believe that gold exporting will be the order before long, in the absence of any large export movement of American products and free imports of foreign. Even if this does take place it will not have much effect, owing to the large gold reserve, over $150,000,000, held by the Treasury. London cables report continued ease in the money market, by reason of heavy disbursements. They also report gold in active demand by the Orient and also Austria, which causes the premium to be maintained.

New York Silver Prices.

NEW YORK, April 15. — Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	28⅜	61¾
Saturday	28 7-16	61⅞
Monday	28½	62⅛
Tuesday	28½	62⅛
Wednesday	28½	62⅛
Thursday	28 7-16	62

	Copper.	Lead.	Iron.	Tin.
Fri.	11 45 @11 55	3 32½	10 00@12 50	13 35
Sat.	11 50 @11 60	3 30	10 00@12 50	13 30
Mon.	11 40 @11 50	3 30	10 00@12 50	13 25
Tue.	11 37½@11 50	3 35	10 00@12 50	13 25
Wed.	11 35 @11 50	3 35	10 00@12 50	13 25
Thur.	11 35 @11 50	3 35	10 00@12 50	13 30

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	15c Prem
New York Telegraphic Transfer	17½c Prem
London Bankers' 60 days	$4 87¼
London Merchants	$4 85
London Sight Bankers	$4 88½
Refined Silver, per oz., 1000 fine	62¼
Mexican Dollars	49@50

SILVER.—The market advanced the past week in sympathy with better prices in London. The improvement abroad is said to be due to a better inquiry from India. The export movements from New York continue large. *Money*, of London, in its issue of March 31, says that at 28 7-16d "it seems likely that the Indian Government will purchase more freely, and it is not improbable that the Continent will become a buyer once more. Of course, very much depends upon the way in which supplies are forced upon the market; but it can scarcely be worth the while of American holders of the metal to adopt a policy which would clearly be detrimental to their own interests." The appointment of a commission by President McKinley to visit Europe and sound the countries on an international monetary convention may possibly have some effect on the buying.

MEXICAN DOLLARS.—The market is practically unchanged. There has been some quiet buying for shipment to China, but at low current prices.

QUICKSILVER.—There is a fair movement for export and for domestic consumption. The market has held fairly firm at unchanged quotations. The East reports a firmer market at 54@55 cents.

Our market is quoted at $40 for domestic consumption.

COPPER.—The markets at the East and abroad have sold lower, closing weak at the decline. Our market, while not quoted lower, favors buyers. In the face of a large consumption in Europe and this country, it is hard to understand the decline, unless it is through an enlarged protection and more anxiety to sell.

The local market is quoted as follows:

Ingot, jobbing	—@14½
Ingot, wholesale	—@13½
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—In our market there is a good demand for both pig and plate. The market has held to fairly steady prices both in this country and abroad. The tariff has not had much effect as yet.

We quote as follows in a jobbing way:

Pig, per lb	14½c@ —
Plate, I C coke, heavy, per box	$4 05@ 4 15
" " light, "	3 95@ —

POWDER—The market is steady.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX. — The market is reported unchanged.

The market is quoted as follows:

Refined, in car lots	4¾
Refined, in sacks	5
Powdered, in car lots	5
Concentrated, "	4½

LEAD—There is a continued free consumption. Prices at the East and with us have not varied much the past week.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—The market is steady with only a fair jobbing demand reported.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do. " "	1 60

IRON.—The market is practically unchanged. Some shading is reported on American, but foreign is said to hold to fairly firm prices in view of the proposed tariff. The East continues to report free shipments to Europe.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—Domestic coals have met with a smaller consumption owing to warmer weather. Steam coals are unchanged. The outlook promises a larger consumption of the latter. The market is steady.

COKE.—The market is quoted as follows:

Gas Companies'	—	—	—
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is steady.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7¼c for Cookson's, 7@7⅛c for Hallett's and 7c for Japanese.

NAILS.—The market is firm.

Wire, carloads, basis per keg		
" jobbing, " "		$2 25
Cut, carloads, " "		
" jobbing, " "		2 10

SPELTER.—The market is steady.

We quote our market in a jobbing way at 5 cents a pound.

NICKEL ANODES.—The markets here and at the East are steady.

PLATINUM.—Dealers report a better inquiry.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is steady at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is firm.

We quote in jobbing lots at 50 cents per pound for ingots.

BISMUTH.—There is nothing new to report.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steady.

We quote in a jobbing way at 70 to 75 cents per pound.

Chemicals.

The market is steadily firming up in all lines with a better demand reported. It is expected that higher quotations will be made within a few days. Eastern advices state that slightly higher prices are quoted in everything affected by the tariff with still better figures looked for at an early day.

BONEASH.—The market is steady.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is fairly active, but steady at 2½c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is quiet but firm at $1.70 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a good demand at 2½c a pound from stores.

NITRATE OF SODA.—Advices from the East reports a strong market.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is firm at 6 to 12c per pound from store for carboys, according to make.

NITRIC ACID.—Our market is reported steady from store at 6½c per pound in carboys.

SULPHURIC ACID.—The demand is fair. We quote in a jobbing way at 1½c per lb for 66%.

BLUE VITRIOL.—Our market is strong. The East reports higher markets.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, April 15, 1897.

The market has continued fairly active, with Con. Virginia the leader. After selling down to $1.60 and Ophir to $1.05, Chollar to $1.10 and the rest of the list in proportion, it advanced to $1.75, carrying the others up, with Chollar sold up to $1.35. Yesterday morning there was an easier tone and as the day passed the leading shares sold down, closing with Con. Virginia $1.55 bid; but Chollar was $1.20 bid. The action of the market indicates that it is being manipulated for lower prices, for at each decline there is a rally to force the smaller shorts to fill, by which a break can be engineered with no short fillers to interfere. That lower prices can be made for the higher priced shares is generally admitted by usually well-informed operators. These hold to the opinion that without the business of the country showing larger revival, without confidence being restored, and without speculation being more pronounced at the East, it is quite impossible to promote a large deal even if a good-sized showing of ore should be made in one or two of the mines. A few years ago the showing that is now made by Chollar on the Brunswick lode, and that which is being made by Potosi on the Comstock lode, with several other prospects as good as they now are, the market would have sold at a big advance on present prices. The trading would have also been active, with outsiders largely in evidence. To-day there are comparatively few of them, and these are board room chippers and chronic traders. The very low price at which silver is selling is no inducement for mine managers to work silver-bearing ore, even if they should have it in larger quantities than advices indicate. Under this condition it seems to be their policy to exploit the mines for gold-bearing ore, and this takes time, expenditure of money and considerable dead work. There can be no doubt that in quite a number of them dead work has been so well advanced on several levels as to admit of more active exploiting when deemed advisable by the powers that be. From the nature of the work on the Comstock lode it looks very much as if there will be a more general driving to the west, which can be now more easily done since several long west crosscuts have tapped the water, which is said to have interfered with exploiting work in that direction. On the Brunswick lode the work points to a downward continuation with each 100-foot level opened up as it progresses down. With the return of warm weather more active work will be inaugurated in the Bodie district. It is said that preparations have been or are being made for extensive exploiting work, and also for milling on an enlarged form and more economically the ore o' the Con. Standard Company. With those informed on the situation the opinion prevails that there will be more activity in that camp than for several years past.

The following companies report having had balances on hand April 1, 1897: Andes, $7696.42; Alta, $305.27; Best & Belcher, $13,-777.73; Consolidated California & Virginia, $1317.20; Caledonia, $2656.85; Consolidated New York, $356.11; Confidence, $717 69; Consolidated Imperial, $3843.18; Challenge Consolidated, $773.63; Exchequer, $2123.44; Gould & Curry, $842; Julia Consolidated, $784.59; Kentuck Consolidated, $572.66; Ophir, $14,-378.23; Overman, $3906.38; Occidental Consolidated, $1970; Potosi, $540.68; Sierra Nevada, $14,608.27; Standard Consolidated, $18,-228.29; Syndicate, $848.87; Union Consolidated, $1472.37; Utah Consolidated, $2160.77.

The following mining companies report having had an indebtedness April 1, 1897: Alpha Consolidated, $370.68; Belcher, $8569.83; Crown Point, $4719.32; Chollar, due bank $9500, less $355.31 cash on hand; Lady Washington, $1280; Mexican, due bank $1000, less $472.90 cash on hand; Savage, due bank $3000, less $428.45 cash on hand; Segregated Belcher, $54.19; Silver King of Arizona, $1731.84.

From the Comstock lode our advices are largely from official sources, and they are generally as unsatisfactory to assessment-worried shareholders as a picked bone is to a hungry man. The majority of the letters are largely a repetition of those sent for many weeks. The only variations are a change in number of feet run and a few words added or stricken out, so as to give them the appearance of newness. In Utah they are working east from the south drift. They are in over 170 feet. In Sierra Nevada they are also running east, but from the Layton tunnel level. They are in about 370 feet. Work is continued east in Union from the north lateral drift. They are driving ahead, but slowly, three east crossdrifts from the work on the 900-foot level. In both Mexican and Ophir they continue to work on the 1000-foot level—the former running south from a west crossdrift and the latter a west crossdrift. In Ophir they are also exploiting on the

Central tunnel level. The official letter from Con. Virginia reports continued exploiting work on the 1000-foot, 1550-foot and 1650-foot levels. The letter is more encouraging than for some time past, as it denotes increased activity, particularly on the 1650-foot level. As yet nothing has been found to encourage the belief of a large body of ore being near at hand. The joint Best & Belcher and Gould & Curry east crossdrift was at last advices in soft porphyry. The work in Savage is continued on same levels heretofore reported. No work is being done in Chollar. In Potosi they are working to open up the 1750-foot level. In prosecuting the work they extract some ore. Fully 112 tons have been raised, assaying about $13 gold and 11 ounces silver. The work in Bullion, Alpha, Con. Imperial and Confidence is on the same levels and in the same directions heretofore reported in this department. From Crown Point, Belcher and Seg. Belcher nothing new is at hand. The official letters from the two latter still fail to report levels on which they are at work and also about the ore said to have been struck some time ago. In Overman and Caledonia the work is practically unchanged. The management of the former has succeeded in striking an assessment—but this should not create surprise. Private advices, it is reported, from Alta are quite encouraging, but nothing, it is said, is allowed to leak out.

From the Brunswick lode our advices continue to report active work in Occidental, Chollar, Savage and jointly by Best & Belcher, Gould & Curry and Con. Virginia. In these mines the work is practically unchanged, but it indicates an earnest desire to open up these mines to the best possible advantage for future operations. Chollar has resumed extracting and shipment of ore. Last week's letter reports 94 tons extracted and shipped to the mill. The top assays averaged $10.25 in gold and 14.58 ounces of silver.

The following illustrates the changes of the week:

THE CALIFORNIA DEBRIS COMMISSION having received applications to mine by the hydraulic process from T. C. Cox and W. C. Pidge, in the Philadelphia mines, near Columbia, Tuolumne Co., to deposit tailings in Rose and Eagle creeks, and from F. G. Curnow and others, in the Little Grass Valley Mine, near Columbia Hill, Nevada Co., to deposit tailings in an old reservoir, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on April 19, 1897, at 1:30 P. M.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from M. J. Williams and others, in the Galena Hill Mine, near Camptonville, Yuba Co., to deposit tailings in Eastman's Ravine; from Joseph Hustler, in the Hustler Mine No. 2, near Cherokee, Nevada Co., to deposit tailings in Shady Creek; and from McGregor & Nix, in their mine near Cueroke, Butte Co., to deposit tailings behind the impounding works of the Spring Valley Mine, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on May 3, 1897, at 1:30 P. M.

Assessment Notices.

THORPE MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No. 6) of .02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company room 44 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 22d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

HALE & NORCROSS SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 20th day of March, 1897, an assessment (No. 111) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 11, 331 Pine street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 23d day of April, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on FRIDAY, the 14th day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

R. R. GRAYSON, Secretary.

Office—Room 11, 331 Pine street, San Francisco, California.

SEG. BELCHER AND MIDES CONSOLIDATED Mining Company.—Location of principal place of business, San Francisco, California; location of works, Gold Hill Mining District, County of Storey, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 6th day of April, 1897, an assessment (No. 19) of 5 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 10th day of May, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on SATURDAY, the 29th day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

E. B. HOLMES, Secretary.

Office—No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

MARGUERITE GOLD MINING AND MILLING Company.—Location of principal place of business, San Francisco, California; location of works, Auburn, Placer County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 12th day of April, 1897, an assessment (No. 6) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 237 12th street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 21st day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

F. METTMANN, Secretary.

Office—237 12th street, San Francisco, California. Office hours from 5 to 6 o'clock P. M. The Secretary will also receive payments from 12 to 5 P. M. at his business office, 225 Sansome street.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on WEDNESDAY, the 21st day of February, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

Assaying Gold

.....AND.....

Silver Ores.

A Standard Work.

THIRD EDITION JUST OUT.

By C. H. AARON.

This work is written by an experienced metallurgist who has devoted many years to assaying and working precious ores on the Pacific side of the American Continent. He writes whereof he knows from personal practice, and in such plain and comprehensive terms that neither the scientist nor the practical miner can mistake his meaning.

The work, like Mr. Aaron's former publications ("Testing and Working Silver Ores," "Leaching Gold and Silver Ores,") that have been "successfully popular," is written in a condensed form, which renders his information more readily available than that of more wordy writers. The want of such a work has long been felt. It will be very desirable in the hands of many.

Table of Contents:—Preface; Introduction; Implements; Assay Balance; Materials; The Assay Office; Preparation of the Ore; Weighing the Charge; Mixing and Charging; Assay Litharge; Systems of the Crucible Assay; Preliminary Assay; Dressing the Crucible Assays; Examples of Dressing; The Melting in Crucibles; Scorification; Cupellation; Weighing the Bead; Parting; Calculating the Assay; Assay of Ore Containing Coarse Metal; Assay of Roasted Ore for Solubility; To Assay a Cupel; Assay by Amalgamation; To Find the Value of a Specimen; Tests for Ores; A Few Special Minerals; Solubility of Metals; Substitutes and Expedients; Assay Tables.

The volume embraces 126 12mo pages, with illustrations, well bound in cloth; 1896. Price $1.00 postpaid. Sold by the Mining and Scientific Press, 220 Market St., San Francisco.

READ WHAT MINERS THINK OF THE BRYAN PATENT ROLLER QUARTZ MILL AND JOHNSTON CONCENTRATOR.

OFFICE OF THE CANDELARIA CONSOLIDATED MEXICAN MINING CO.,
SAN DIMAS, DURANGO, MEXICO, October 25, 1888.

RISDON IRON WORKS, San Francisco—Gentlemen: Our company has been operating three of the 4-foot Bryan Roller Quartz Mills, one of which has been running steadily for three years, one for two and one for one year. Our quartz is very hard; we crush through a No. 60 mesh screen. Our mills run 55 revolutions per minute, and each crush through 60-mesh screens 12 tons in 24 hours; through 50-mesh, 15 tons; and through 40 mesh, 18 tons. This proportion has been continuous.

One set of dies will crush from 1500 to 1600 tons.
One set of tires will crush 1500 tons.
One ring plate will crush from 2200 to 2500 tons.

The mills require very little attention. At our mill an ordinary "peon," earning one dollar per day, has complete charge.

In regard to sliming, in comparison with stamps, by reason of the discharge surface and the continuous agitation by the scrapers, a MUCH less amount of slime is created. A three years' experience teaches me that, in every respect, the mills are a complete success, and of material benefit to the mining world. They can be set up and running in forty-eight hours and can be dismounted in the same time and removed to wherever desired. Ours were packed on our mule trail over as difficult a road as any in Mexico. As a gold amalgamator it is unequaled by any mill now in existence. Yours truly,

D. M. BURNS, Superintendent.

BULLION-BECK AND CHAMPION MINING COMPANY.
EUREKA, UTAH, August 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: Referring to contract made by you with the Bullion-Beck and Champion Mining Company, by which you were to furnish one 5-foot Bryan Roller Quartz Mill on four months' trial, in competition with the Huntington Mill, would say that we have made the test, and the Bryan Mill has proven so greatly superior on all points claimed, viz., capacity and economy, that we have ordered a second Bryan Mill from you and have concluded to discontinue the use of the Huntington Mill.

Yours truly, JOHN BECK, Pres.
SIMON BAMBERGER, Director. [Copy.] W. J. BEATIE, Sec'y.

BULLION-BECK AND CHAMPION MINING COMPANY.
EUREKA, UTAH, Aug. 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: In February last, in connection with the five-foot Bryan Roller Mill which we took from you to test in competition with the Huntington Mill, we also took a six-foot Johnston Concentrator to be tested with ten Frues, one end shake with four belts and one side shake Woodbury. We have been working these machines since the mill was completed, at such times when we had sufficient water.

The terms on which the test was made was that the machine doing the most satisfactory work should be accepted and the others taken out. This did not apply to the Frue, as they were purchased with the plant. In compliance with this agreement, we now inform you that the Johnston Concentrator has proved so superior over the other machines that we now order from you four more of the Johnston Concentrators. Yours truly, JOHN BECK, Pres.

SIMON BAMBERGER, Director. W. J. BEATIE, Sec'y.

GREAT SALT LAKE AND HOT SPRINGS RAILWAY.
S. BAMBERGER, President and Manager.
SALT LAKE CITY, UTAH, October 10, 1895.

B. R. TAWNDRAW, ESQ., care Guyer Hot Springs, Ketchum, Idaho—Dear Sir: In reply to yours of the twenty-eighth of September, we have been using at the Bullion-Beck Concentrating Works, Frue Vanner, Woodbury and Johnston machines, side by side for the last four months; and after a thorough trial of all of them, we concluded that the Johnston Vanner was doing the most accurate work and was the best; hence, we bought four more Johnston machines and shall continue to use them in preference to any other.

You will find it the easiest regulated machine and very much easier set up than either of the other machines. We bought our machines from the Risdon Iron Works, of San Francisco, where Mr. Johnston, the patentee, personally superintends the manufacturing of them.

Hoping you will make a success, I remain, Yours truly,
[Copy.] [Signed] SIMON BAMBERGER.

THE GOLD VALLEY MINING COMPANY OF SAN FRANCISCO.
C. C. McIVER, President; D. CUSHMAN, Secretary.
MISSION SAN JOSE, CAL., Oct. 17th, 1895.

RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: We take great pleasure in having to inform you that, after a careful investigation extending over a six weeks' steady run alongside of six other concentrators, the Johnston which you put in for us was the only machine from which you could not find a loss in the tailings. It has done all you claim for it and has proved more than satisfactory. We intend replacing all our other concentrators with Johnston's, as we are convinced they will pay for themselves many times over in a year. CHAS. C. McIVER, President.

MINE BELL SIGNALS. Adopted, Used and in Force in Accordance with State Law.

FOR THE CONVENIENCE OF OUR READERS IN THE MINING COUNTIES WE PRINT IN legal size, 12x36 inches, the Mine Bell Signals and Rules provided for in the Voorhies Act, passed by the State Legislature and approved March 8, 1893. The law is entitled "An Act to Establish a Uniform System of Mine Bell Signals to Be Used in All Mines Operated in the State of California, for the Protection of Miners." We furnish these Signals and rules, printed on cloth so as to withstand dampness, for 50 cents a copy. MINING AND SCIENTIFIC PRESS, 220 Market St., San Francisco.

Arrastras.

That the arrastra for small work is still a great favorite, especially in the remoter districts in the mountains away from the wagon roads, there can be no question. In western Siskiyou, Trinity, Plumas and all along the Sierras south these serviceable gold savers may be seen. In many places it is almost impossible to bring in heavy freight, owing to want of wagon roads, and nearly all the material for building an arrastra may be found on the ground.

E. B. Preston, in his "California Gold Mill Practices," says: "Although the arrastra has been largely superseded by the stamp mill, the fact remains that it is the cheapest and best all-round gold-saving appliance we have. Hence its use is always indicated where small, rich veins are worked in the higher mountain regions."

On this page is illustrated an arrastra in use at the Georgia mine in Redding canyon, Inyo county, owned by George F. Willis of Independence. It is a 10-foot arrastra, driven by 12 miners' inches of water on an 18-inch sigmoidal wheel under 90 feet pressure through 450 feet of 4-inch pipe. The drags (mullers) weigh from 300 to 800 pounds and make about eight revolutions per minute.

ARRASTRA OF THE GEORGIA MINE.

On page 345 will be found plans for building a double arrastra which costs but little, and with the exception of a very little iron and nails all the material for its construction may be found in most of the mining districts of the State. The plans are from an arrastra at the Commodore mine in Siskiyou county, owned by C. C. Humphrey of Scott Bar. It reduces five tons of ore per twenty-four hours, and cost, complete and ready to run, about $700. It requires two men, one on each shift, and is driven by a wooden hurdy wheel, 18 ft. in diameter, using 30 miners' inches of water, supplied through a 7-in. pipe with a 2-in. nozzle, under 100 ft. pressure. The two grinding pits are situated one on each side of the water wheel, so that its shaft, *L*, transmits the power by pin wheels (at right angles to each other) to the arrastra shafts, *H H*. The horizontal pin wheels, *I I*, have fifty-one perpendicular hard-wood pins, 2 in. in diameter, 4 in. in length, and set 4 in. apart from center to center. The pin wheels, *K K*, are 3 ft. in diameter, and are built on the 2-ft. wheel shaft. Each has thirteen hard-wood pins, 2 in. in diameter, 4 in. in length, driven in horizontally, 4 in. apart from center to center. Both wheels are made of sections of 2-in. plank, nailed together and bound with two bands of wagon tire. The ends of each shaft terminate in 3-in. iron spindles. Each pit is built as follows: Heart-wood center post, *A*, 8 ft. long and 18 in. in diameter, is set 4½ ft. in the ground; around this a double floor, *B*, 16 ft. square and made of 2-in. plank, is laid as a foundation. Next, the circular rim, *C*, 12 ft. diameter, is built of 2-in. plank with broken joints, until the top is 38 in. above the floor. In the pit thus formed, moist clay, *D*, is rammed, a thin layer at a time, until it is 10 in. thick. Next, a bed of dry, clean sand for the pavement is placed upon the clay. The pavement is made of hard, fine-grained rocks (trap), having at least one nearly flat surface, which are placed as close together as possible and the interstices filled with spawls tightly wedged. The annular pavement, *E*, should be as smooth as possible, and with a depression 4 in. deep. The drags or mullers, *F F*, are made of the same rock as the pavement, and weigh from 800 to 1000 lbs. each. By means of eyebolts, let into the rock, they are hung to the drag-arms, *G G*, by chains. The forward edge of the drag is raised about 1 in. to allow it to pass over the material, and the eyebolts are so placed that one corner of the drag is somewhat in advance. As it plows through the pulp, a portion is pushed to one side, directly in the path of the next following drag. The relative position and size of the drags must be such that every part of the pavement is passed over in each revolution. The proper speed is twelve revolutions per minute. The *modus operandi* is as follows: Each charge, consisting of one and one-fourth tons of ore, broken to the size of a walnut, is gradually shoveled into the pit, water enough being added to make a rather thick pulp when the quartz is pulverized. After eight hours grinding (more or less, according to the hardness of the ore), two ounces of quicksilver for every $20 gold in the ore is added gradually. After two hours more, the speed is reduced to four revolutions per minute, to allow the amalgam to settle, water being added to thin the pulp. After another two hours, or when a pan scraped along the bottom does not show any amalgam or quicksilver, the pulp is allowed to pass off slowly into the sluices. The outlet for this purpose is made as follows: A slot 16 in. high and 6 in. wide is cut through the rim, extending from a point 4 in. below the top of the rim to the pavement. This opening is closed by pieces of board 2 in. high and sliding in guides. By removing these pieces, one by one, 2 in. in depth of pulp can be run off each time. The sluices into which the pulp flows are from 12 ft. to 24 ft. long, and the bottom is covered with amalgamated plates, riffles, and burlap. When the arrastra is emptied to within 3 in. or 4 in. of the bottom, the outlet is closed, the speed is increased, and a new charge of ore put in. About once a month the paving is taken up and the amalgam collected from the sand below, cleaned and retorted.

A WISE step is being taken by the Executive Committee of the California Miners' Association in striving to increase the interest in the organization throughout the mining sections of the State by strengthening the local or county associations. For some time past the vice-president of the California Association, Samuel K. Thornton, has been visiting the principal mining centers and has been calling to the attention of the miners the advantage of giving the Association support by joining the local organizations, and has been doing good work in starting the formation of local branches where they have not heretofore existed. He believes that 10,000 men can be induced to join, and if so—or even if half that number join—the California Miners' Association will be put upon a firm basis and enabled to go on with the work it has in hand. Under great difficulties and with very little money the Association has done splendid work in the past, and there will be even more need for its services in the future.

A New Field to be Opened.

There is a plan of business men in the East to have representatives visit the ports on the Mexican, Central American and South American coasts with a view to ascertaining what may be accomplished in the way of establishing business relations between the countries of the south and the United States. It would be well for mining machinery manufacturers to be represented in this undertaking. The time will come very shortly when Mexico and South America will receive a great deal of attention in the mining world. Those first upon the scene will reap the greatest rewards.

Hardly a week passes now that there do not come requests from the south for men specially fitted for certain kinds of mining or for machinery for large enterprises. From this State during the past six months a large number of skilled engineers and practical miners have been engaged for different countries of South America, including Brazil, Peru, Bolivia, United States of Colombia and the Guianas. The friendly feeling on the part of the peoples of these countries for those of the United States should be a great advantage. American skilled miners have done more than those from all other countries for the opening up of African, British Columbia and Mexican mines, and there should be no reason why the first and best fruits from South America should not come this way.

The discovery and opening up of mines has done more for Africa than anything else. So, too, with Australia and British Columbia; and if the world's attention is to be attracted to Mexico and to South America in the near future, it will be through the opening up of the mineral resources.

The Railroad's Last Move.

The following is a sample of a number of items that have been going the rounds of the press in the country for some months past:

The Southern Pacific Company has, through its land agent, W. H. Mills, issued a circular stating that miners who wish to prospect on railroad lands can do so under contract, and the company will willingly relinquish all claim to any operated mine on their lands. Lands which can be reasonably classified as mineral lands will be held for encouragement of mining, the policy of the company being to encourage mining and the development of such enterprises.

This item and others similar in tone have been printed most persistently during the past few weeks, more especially in newspapers with railroad leanings, but quite often in those which have not.

This work on the part of the railroad people at this particular time is in the nature of "back firing" in their fight against the mineral lands bill now before Congress. Doubtless clippings from the papers will be made and presented to the committees of Congress to show that there is no real need for the passage of the proposed bill, because the railroad will do more for the miners than would the Government. In southern Oregon the same tactics are being pursued. It is presumption for the railroad to make these offers in regard to lands that they have no honest title to. It is not theirs to give to miners or any others the privilege to develop or work mineral lands. Their offer, as far as it relates to the lands to which they have already obtained patents, is made in order to disarm opposition to their plans to acquire title to others.

Assessment Work on Locations.

The new mining act of California was signed by the Governor on March 27th and will go into effect May 26th. Lode locators should take notice that $50 worth of work must be done within sixty days after posting the preliminary notice. This applies, of course, only to those claims located after the act goes into effect. The impression seems to prevail that this amount of work will be counted in and be given credit for as part of the annual assessment work required by the Federal statutes, but in very few cases will this be so. Section 2324 of the United States statutes was amended January 22, 1880, by adding the following words:

"*Provided*, That the period within which the work required to be done annually on all unpatented mineral claims shall commence on the first day of January succeeding the date of location of such claim; and this section shall apply to all claims located since the tenth day of May, A. D. 1872."

In the case of lode claims the amount of labor that would have to be performed up to within a year from the first of January succeeding the date of location would be therefore in California $150 worth.

The new State law requires that $10 worth of work must be done on each twenty acres of placer ground located within sixty days after location. Besides this, under the United States statutes, the required annual assessment work must be done.

In cases where claims are located near the end of the calendar year it will be possible to do the required $50 worth of work after January 1 of the year following and within sixty days of location, and so make it part of the required annual assessment work specified by the United States statutes.

School Sections and Mineral Lands.

There has been some question raised as to one section of the act of the California Legislature to repeal the Act of March 28, 1874, to provide for the sale of mineral lands in Sections 16 and 36—school sections ceded to the State by the Federal Government. Section 3 of the Act is as follows:

The sixteenth and thirty-sixth sections belonging to the State, in which there may be found valuable mineral deposits, are hereby declared to be free and open to exploration, occupation, and purchase of the United States, under the laws, rules and regulations passed and prescribed by the United States for the sale of mineral lands.

This section gave the advocates of the bill much trouble. It was contended on one hand that with a repeal of the old laws permitting purchases of these lands from the State, the mining possessions would be upheld, although no title could be obtained, and that Section 3 was a nullity, but that as a whole the bill would prevent much trouble. Then again it is contended that the land is by the Act receded to the United States Government. But it is asked: The State having got title by virtue of the return of the Surveyor General, how can such title be divested so as to permit mineral claimants to purchase from the United States? Nevada has ceded back to the Federal Government the mineral lands in school sections acquired by that State.

In regard to this, the author of the bill, Mr. A. H. Ricketts, says:

I intended that said section should operate as a complete retrocession of the title of the State to such portions of the school sections as might at any time be found to be valuable for minerals, and for which application to purchase might be made to the United States. It is said, in that section, that lands containing valuable mineral discoveries are "free and open to * * * purchase of the United States, under the laws, rules and regulations passed and prescribed by the United States for the sale of mineral lands." This I take to be a waiver of the claim of the State to the land in place. It cannot be assumed that the Legislature would do so vain a thing as to declare that lands can be purchased of the United States unless all necessary incidents to the carrying out of the provision are presumed. It might have been added that, when lands were purchased of the United States under the provisions of the act, such purchase should be considered as a waiver of the claim of the State; or a provision in express terms that all mineral deposits occupied and purchased of the United States are ceded by the State to the United States; but I think that these things are all presumed and are necessary conclusions from the wording of that section. When an application of this character is made in the United States Land office, it will, in my opinion, be necessary only to suggest this bill to effect a complete waiver of the claim of the State; and the United States will deal with the property the same as other public lands. The permission and resulting waiver are limited by the terms of the act to those valuable mineral deposits which, except for the claim of the State, would be subject to sale under the United States mineral laws.

My theory in drafting this section was that it should be as concise and comprehensive as possible. I feel confident that the Interior Department of the United States and the courts will decide as I have suggested. The intent of the Legislature is shown in the balance of the bill, which provides for the reservation of mineral lands, and repeals all State laws for the sale thereof. It leaves the mineral lands of the State subject to only one method of disposal, and that is by purchase of the United States, as provided in the third section.

Forestry Commission Report.

The substance of the detailed and voluminous report to be submitted by the Government Forestry Commission, the body designated by the National Academy of Science, is embraced in the following letter, which has been submitted by the commission to the Secretary of the Interior, in advance of the formal report to be made early next month:

The legislation relating to reserved forest lands of the public domain, which the commission of the National Academy will recommend in its final report, now in course of preparation, provides for the following:

First—That authority be given to the Secretary of War to make details of troops, at the request of the Secretary of the Interior, to protect temporarily and until the forest service is organized the property of the Government in the forest reservations from fire and trespass and to enforce such rules and regulations as he may make for their care.

Second—The establishment of a permanent forest bureau in the Department of the Interior, composed of trained officers, to administer, maintain and improve the reserved forest lands.

Third—The appointment of a commission to institute as rapidly as possible, under the supervision of the director of the Geological Survey, topographical surveys of the reservations, and determine what portions of them should be reopened to entry and sale.

Fourth—To authorize the Secretary of the Interior to issue the necessary rules and regulations for the protection, growth and improvement of the forests on the reservations, for the sale of timber, firewood and fencing from them to actual settlers in and adjacent to the reservations and to owners of mines legally located therein, for use in such mines; granting permits to sawmill owners to enter the reservations for the purpose of manufacturing such lumber as may be sold actual settlers in and adjacent to the reservations and to the owners of mines located therein; for allowing actual settlers who have no timber claims to take from the reservations firewood, posts, poles and fencing material necessary for their immediate personal use; for allowing the public to enter and cross the reservations; for granting county commissioners right of way for irrigating ditches, flumes and pipes and for reservoir sites, and for permitting prospectors, under such rules and regulations as he may from time to time establish, to enter such reservations in search of valuable mineral.

The commission will recommend that the reservations be opened to the location of mining claims under the general mining laws, and that the owners of valid mining locations in the reservations made and held in good faith shall be permitted to fell and remove from their claims the timbers growing on them for actual mining purposes in connection with the particular claim from which the timber is cut. It will also recommend that the owners of unperfected bona fide claims or patents of land included in the forest reservations be permitted to relinquish their claims, the Government selecting in lieu tracts of vacant land open to settlement, but not exceeding in area the tracts covered by their claims or patents; and that the owners of such unperfected claims shall not be subjected to additional charges for entries or record, and that credit shall be allowed them for the time spent on the relinquished claims.

The commission will also recommend that the Secretary of the Interior be authorized to enter into negotiations with the land grant railroad companies for the purpose of concluding agreements by which these companies may relinquish to the United States the title acquired by them to lands within their grants and indemnity limits when these lands lie within the boundaries of forest reservations, and may accept other unappropriated lands in exchange for the even numbered sections within their granted and indemnity limits not included in forest reservations.

Concentrates.

OVER 500 miners are now regularly employed at Mercur, Utah.

A SECOND mining exchange is being organized at Spokane, Wash.

THE number of miners engaged in Russian mines exceeds 500,000.

IN the past three years Owyhee county, Idaho, has produced $7,000,000 in bullion.

THERE are 340 men on the pay-roll of the Mountain Copper Company at Keswick, Shasta county, Cal.

SURVEYS are being made of a site secured near Nelson, British Columbia, for the erection of a smelter.

THE gold exports from West Australia for March amounted to 40,296 ounces, against 32,526 for February.

THE mines of Yuba and Butte counties are being examined for the State Mineralogist by E. B. Preston.

BAYNE & AHART will erect soon a 5-stamp mill on the Belle Union quartz mine at Weimar, Placer county, Cal.

ANOTHER strike has been reported from the Harqua Hala mountains in Arizona, not far from the Sunset mines.

WORKMEN sinking a well in the town of Nelson, B. C., last week, found gravel bearing gold in paying quantities.

SENATOR E. W. CHAPMAN has bonded the Black Oak mine, near Weimar, Placer county, Cal., from Wyman, Seaver & Co.

MINING MACHINERY manufacturers in the West are not complaining that the "wave of prosperity" has not struck them.

THE assayer of the United States assay office at Helena, Montana, states that gold is coming in more freely than last year.

THERE are over forty companies registered in London formed to carry out operations in, or in connection with, British Columbia.

ON Dry creek, near Golden, Colorado, an oil well being driven is down 610 feet and in solidified shale saturated with oil.

THERE was exported from New York in the week ending April 8th to Europe 1,840,000 ounces of silver, valued at $1,140,800.

THE Old Dominion copper mine and smelter at Globe, Arizona, closed down last Monday, throwing 300 men out of employment.

THE gold yield of the colony of Queensland, Australia, for March was 64,800 ounces, of which 13,700 ounces came from the Mount Morgan.

THE owners of the Highland Boy mine at Mammoth, Utah, have let a contract for the erection of a mill with a capacity of 200 tons of ore daily.

ST. LOUIS people, represented by Stephen Peck, who have a bond on copper properties near Casa Grande, Oregon, propose to erect a smelter.

THERE was discovered near Kamloops, B. C., last week what was supposed to be a diamond, which has been sent to Victoria for examination.

ACCORDING to the Spokane *Spokesman-Review* the owners of the Reco mine of the Slocan, B. C., have sixteen cars of ore in transit which will average $3500 a car.

THE good work of the prospectors during the past winter in the south is shown by the great interest being taken in newly discovered mines in New Mexico and Arizona.

AT the Millikin Ranch mine, near Nevada City, Cal., new hoisting works are to be built by the owners, Poorman & Hastings, to take the place of those burned last week.

THE export of gold from British Guiana for the first two and a half months of this year amounted to $272,571 in value, an increase of $29,533 over the corresponding period of 1896.

THERE is to be a great deal of railroad building in the Kootenay, British Columbia this summer, and it is reported that inquiries are being made for 5,000 men to begin work in June.

AT Crum canyon, in Lander county, Nevada, in the coal mine opened a short time ago, they have a seam 40 inches thick, which is widening, and the coal tested is of good quality.

IT is claimed that there will be twice as many men engaged in developing mines this season, as soon as the weather has settled, as there ever has been in the Black Hills, South Dakota.

IT is announced as the intention of the Le Roi Company, at Rossland, B. C. or individual owners to build a smelter this summer either at Northport, Washington, or between there and Rossland.

ABOUT forty miles north of Helena, Montana, near the Missouri river, the Boston & Montana and other companies are taking considerable interest in promising new discoveries of copper deposits:

A NICKEL DEPOSIT has been discovered near Washington, Nevada county, Cal., and a quantity of ground has been located. The assays made show a large percentage of nickel and some gold.

JOHN TAYLOR & SONS of London, one of the heaviest firms there as mining engineers and dealers in mines, are sending a representative to British Columbia to inspect mining property in their behalf.

JAMES HILL, of the Great Northern, proposes soon to begin the construction of a branch line from Jennings or Kalispel, Montana, to Wardner and to Fort Steele, in British Columbia, to tap the rich mineral belts.

In the new town of Preston, in the Ragged Top district in the Black Hills, the streets will soon be paved with $20 ore. Ore, unless worth more than that, cannot be shipped with profit, and such material is to be put in the streets.

THE Alaska-Treadwell reports for March, twenty-eight days run: Bullion shipment, $45,052; ore milled, 18,642 tons; sulphurets treated, 401 tons. Of bullion there came from sulphurets $15,775; gross expenses for period, $24,054.

THE concession granted by the Dominion Government to F. August Heinze and his associates to build the Columbia and Western railroad in British Columbia amounts to about 3,450,000 acres of land and about $400,000 in cash subsidy.

THE representative of an Eastern company has lately been in Nevada City and Grass Valley trying to make arrangements with the mining companies for working their tailings; and, if terms are satisfactory, promises to put up a plant.

MRS. LAVINA E. HAYNES, a Chicago milliner, made some money in stock in a Cripple Creek property two years ago, sold her store and went to Colorado. Now she is returning to Chicago to close a sale of a $75,000 property she has placed.

F. M. STEVENS has applied to the Canadian Government for the privilege of establishing a series of trading posts in British Alaska, extending from the Klondiek country to the boundary, the stations to be at distances of fifty miles apart.

FOR the eight months ending with February last the imports of gold into the United States was valued at $79,729,952 and exports $14,756,455. For the same period ending with February, 1896, the imports were only $29,786,501, against exports of $82,180,764.

THERE are numerous old gold mines in Germany which were shut down—some because of exhaustion of ore and some by the Thirty Years War. Of the latter the Newalbenreuth in the Upper Palatinate was worked up to the Thirty Years War and the books are still in existence.

THE Oonegum, an Indian mine, produced in 1896, 63,888 tons of ore from which 59,461 ounces of gold was extracted by milling, and from 59,461 tons of tailings 10,413 ounces were obtained. The total gold produced was 63,845 ounces, valued at £246,645, on which the profits were £108,956.

SAMPLES of graphite from the newly discovered mines at Renfrew, in Ontario, Canada, were sent to the Johann Faber factory in Bavaria, and the manufacturers state that, upon testing it, they have found it equal to their own Bohemian graphite. They have given an order for a trial shipment of forty tons.

MANAGER FRANK NICHOLSON of the Consolidated Gold Fields of Mexico reports the latest assays as follows: 1. East breast of San Juan 4½ feet wide, gold $10, silver $15.06, total $25.06. 2. West breast of San Juan 4¼ feet wide, gold $10, silver $16.06, total $26.06. 3. Ore being hoisted from old chute, gold $4, silver $5.61, total $9.61.

IT has been estimated that, owing to the increased demand for copper in this country, the exports in 1897 will not exceed 80,000 tons, against 125,000 tons in 1896. The total visible European supply, including that afloat, was on April 1st 32,222 tons, which, with the exception of the amount at the first of last month, is less than for many years.

THE shipments of ore from the mines of Rossland, British Columbia, from Jan. 1 until April 10 amounted to 15,896 tons, of which amount the Le Roi has shipped 11,112 tons; the War Eagle 2991 tons; Iron Mask, 863; Columbia and Kootenay, 455; Josie, 126; the balance, 349 tons, is from seven other mines, of which 86 tons were concentrates from the O. K.

A REPRESENTATIVE meeting of members of the Chamber of Commerce, the Miners' Bureau, Mining Exchange and Real Estate Exchange of Denver, Colorado, was held last week to arrange for the proposed National Gold Mining Convention. It was decided to have appointed an executive committee of twenty members from the bodies represented to promote the enterprise.

A COMPANY has been formed in Colorado with a capital stock of $1,750,000 to build a railroad to connect the Cripple Creek towns. The proposed system is to start near Victor, run through Horseshoe pass to Cripple Creek. Connections will run to Gillett, Goldfield and Independence, and connection will be had for carrying ore to the main lines from all points of the district.

THE mining committee of the Legislature of British Columbia has recommended that aliens be not allowed to take up mining claims. While this will work some inconvenience it is claimed that there will be no hardship connected with the passage of such an act. The committee also recomends that a person filing an adverse claim must prove that the location is no good.

THE Federal Government will in a few days dispatch a company of infantry to the Yukon gold mines. An officer, probably with the rank of colonel, will be in command and will be given extraordinary powers. Besides that, a United States Commissioner will be appointed and stationed at Circle City. The Secretary of the Interior will appoint a surveyor to survey the mining claims, and the Secretary of the Treasury will detail an officer of the Internal Revenue Service.

LEADING MINERS of Tintic, Utah, held a meeting last week, at which it was decided to contest the new mining law which provides that district recorders shall turn over their records to the county recorders, and that in future all records must be filed with the county official. Resolutions were passed asking the district recorder to refuse to give up his records as required by the new law, on the ground that they are the property of the miners of the district, and not of the State or county.

THERE seems to be a peculiar situation at Fool's Gulch, five miles southeast of Congress, Arizona, wherein the Planet Saturn Company developed their mine to considerable extent and built a mill, and after operating it two or three months closed it down. The management comprises Boston parties, and, while rumors are abundant, there seems to be no reliable information as to the cause of the closing down of the property, which has long been considered a valuable one.

EXPERIMENTS are being made at Niagara, which may have an important effect upon copper mining. According to the Chicago *Inter Ocean* it has been found possible to substitute aluminum for copper for the transmission of heavy currents used in the reduction process. A line made of aluminum weighed eleven and one-half tons, whereas it would have required twenty-four tons of copper. The relative conductivity of copper and aluminum is as 100 to 63; but copper being three and three-tenths heavier than aluminum, weight for weight, aluminum has a conductivity, relative to copper as 208 to 200.

AT the annual meeting of the Sierra Buttes Gold Mining Company, held in London early in the month, the chairman, in his address, said: "However small the profit was, we were satisfied to go on working the mines in the hope that some developments might be made to give us better returns in the future. Pursuing that policy during the past half-year, a small profit was made and considerable development work done. The total profit at the various mines only amounted to £3880 16s 10d, of which £1647 7s 2d was the share of the Buttes and £2233 19s 8d that of the Eureka. The Whitlock paid for its own development out of its profits before this amount was brought to account; but the Mammoth earned hardly anything—the ore was so poor—and the amount of expenditure over its earnings for development during the last half-year was £1849 10s 2d.

IN the case of co-owners advertised as delinquent. or served personally with notice of delinquency, they have from the time of the personal service 90 days in which to pay up, and, in case of publication of notice, 90 days from the last day of publication. As the notice must be published 90 days, this gives 180 days from the time of the commencement of the publication of the notice.

THE Amador *Record*, published at Sutter Creek, Cal., has issued a special mining edition that is of value. The forty pages are filled with conservative accounts of the mines and mills and statistics of one of the richest counties in the State. Amador has been particularly fortunate in securing the attention of capital during the past few years and as a result the claim of the *Record* that it will soon lead all counties of the State in the production of gold is apt to be borne out. The mining edition of the *Record* will be well worth the careful study of those interested in mining in any part of the State.

THE first quartz mill ever built in Montana was put up at Bannock in 1863, says the *Mining World*. The mill was built with wooden stamps on which pieces of wagon tires and other old iron plates were used for shoes. This mill was intended to work gold quartz ores entirely. The first silver mill was unquestionably the old Pioneer, now owned by the Hope Company near Philipsburg. The pans for this mill were shipped by wagon all the way from San Francisco, and in crossing the Rio Virgin in southern Utah, the wagon and teams sunk in the quicksands, and the pans were buried there for several weeks until they could be dug out and raised by derricks.

SOME desirable changes are being made in the quarters of the State Mining Bureau. The library and offices are now much better lighted and more commodious than formerly. Mr. Cooper, the State Mineralogist, is endeavoring to induce the State Harbor Commission to allow him the use of the upper floor of the new ferry depot building at the foot of Market street for the housing of the Mining Bureau. He claims that, aside from the saving to the State in rent, there are many other advantages. A large proportion of those from the country who would be benefited by visiting the museum could do so much more easily if located there than in its present quarters.

THE announcement of any new discovery of mineral wealth is generally followed by a rush of people who have no business on the scene—men without experience or means. At Gleason, Arizona, lately some rich discoveries were reported, and now comes word that for miles about prospectors are in the hills, many of whom have come in without money, tools or food. A mining camp is the most hospitable place in the world, but it is rather hard on the honest men to be compelled to care for all these worthies. Already warnings are being sent out from Gleason for men without means to stay away. There is no demand for labor, and there are more prospectors than enough.

IN the Cienega placer fields near Santa Ana, Sonora, Mexico, which are some forty miles square in extent, the concessionaires—the Serna Brothers, Governor Corral and W. Loaiza—have some 900 men, mostly Yaquis, operating dry washers. Of these there are about 150 in operation, each machine being worked by five men. Some of the gold, especially the larger nuggets, is not turned over by the workmen with the returns, but in a roundabout way sold to the concessionaires, who are content to purchase them—their own property—having from long custom come to believe that the best way to get along. In the profits from the supplies given in exchange they manage to come out on the right side and ultimately get all the gold.

THERE has been published by the Victor Gold Mining Company of Cripple Creek, Colorado, a report covering its operations from February 15, 1893, to December 31, 1896, which will rank as one of the best productions of the kind, both typographically and as to the matter contained. It was prepared by Leo Von Rosenberg, of 35 Broadway St., New York. For the benefit of the shareholders in France it is printed in French, as well as in English. As to the data given, it appears that the total length of drifts run from February 15, 1893, is 7098 feet; depth of main shaft, 460 feet; product, 37,254 tons of ore: net proceeds from ore sales, $1,237,804.88; value of smelting ore per ton, $148.27; value of cyanide ore per ton, $8.24; operating expenses, $458,245.67; cost of producing each dollar, 37 cents; dividends paid to January 31, 1896, $705,000. The dividends are 70 per cent on the capital. Only sufficient ore is being extracted to pay the operating expenses and the monthly dividend of $20,000. A measurement of the blocks of ground now opened exposes over 32,000 tons of ore.

OF the prospector Sam Davis says in the *Chatauquan*: "To the brave and rugged prospector, with his cheap outfit of mining tools, his empty stomach, and his hopeful heart is due the rapid development of the West. At the tap of his pick the doors of nature's treasure vaults open; but their wealth is not for him. The stock sharks, the speculators and the promoters rob him of his interest, and the snow is no sooner sinking from the slopes of the foothills than the poor fellow is wending his course into new territory. He appears in the rocky fastnesses of the mountains, and, with no companions but his pick and frying pan, is lost to memory. Suddenly comes the news of another discovery, and a city rises like a pillar of flame in the wilderness. 'Lucky Bill has struck it rich,' gambled away his pile and pushed on. The bones of hundreds of the advance couriers of civilization blaze the path of progress in the West, or moulder in forgotten graves, while in their wake are teeming cities they have founded and the ceaseless murmur of the money-seeking multitude whose fortunes they have builded."

THE Grand Central mine, placed on the London market last year by the Exploration Company, has come in for considerable criticism. At the annual meeting of the company in London a few days ago, the following statement was made by the chairman: "Regarding the Grand Central mine of Mexico, our connection with which has subjected us to some adverse criticism, the recent results and reports are disappointing, we regret. The mine was reported upon by two eminent experts, on whose judgment, and Mr. Hamilton Smith's, we were entitled to act, and which judgment was confirmed by Captain Mein in November last. Knowing him so well, and appreciating him as fully as I do, I had no hesitation in adopting his views. Captain Mein was mistaken then, and he may be mistaken now, and the mine, judging from its past history and that of its neighbors, should again yield large profits. All I want to establish now is that, before joining others in this business your directors took all reasonable precautions." Now word has reached San Francisco that this week a strike has been made in the Grand Central that will make it worth more than it was estimated at by Captain Mein and others when it was purchased by the Exploration Company.

Practical Notes on Hydraulic Mining.*

NUMBER III.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

To find the area of a flume or ditch with sloping sides, add the width at top and bottom (in inches) together and multiply the result by 2. This answer will be the area in square inches, which, divided by 144, will give the area in square feet.

Example: What is the area of a cross section of a ditch 48 inches wide at top and 26 inches wide at the bottom, with a depth of 24 inches? Answer: 48 + 26 = 74, which, × 24, = 1776, and this divided by 2 = 888 square inches ÷ 144 = 6.16 square feet.

To find the square feet of the cross section of a ditch or flume with sides sloping to a point at the bottom, multiply the width (in inches) by half the depth (in inches) and the answer will be area in square inches which divided by 144 gives area in square feet.

Example: What is the area of a flume or ditch 70 inches wide and sloping to a point at the bottom, with a depth of 36 inches? Answer: 70×18, or half the depth in inches, = 1260 inches, or divided by 144 = 8.75 square feet.

Carrying Capacity of Pipes, Discharge of Nozzles, Etc.—It is hardly possible to point out any portions of a hydraulic plant that are of more importance than pipes and nozzles, and in out of the way places miners have great difficulty in finding out the correct sizes of pipes and particularly the capacity of of same, especially with regard to quantities of water discharged through pipes and nozzles of different diameters, there being innumerable instances at the present day where miners do not know the pressure of water is only as the head, without any regard (neglecting friction and bends) to the size of pipes. For example:—A pipe line composed of 6-inch pipe, and another line of 40-inch pipe, with same fall or head will both give the same pressure. It was only a short time since that I was asked by a miner of some experience if he could not double his pressure by doubling the diameter of his pipe.

As an illustration, this fact is easily demonstrated by attaching the same size and kind of faucet to two tanks, one say of 3 feet diameter and 3 feet deep and the other as large as convenient, say 6 feet in diameter and 3 feet deep. Fill both with water to same depth, then after placing buckets of equal capacity under each faucet, turn both on at the same time. To the surprise of any person not acquainted with hydraulics it will be seen that although the larger tank contains four times more water than the smaller one both buckets will be filled at the same time.

It is well to thoroughly understand the principle of hydrostatics in building storage dams and reservoirs, remembering that there is the same pressure on the bank of a reservoir with water 3 feet deep and extending back for a distance of 10 feet, as there would be if the water dammed back ten miles, so long as the depth remained the same.

In reference to nozzles, they require great care in construction so as to be of correct form, in order that the water leaving them will be in a solid stream, instead of scattering and thus losing its power, which is the case with nozzles of improper construction. In order to get the best effect it is absolutely necessary that the head of the pipe conveying the water should be at least 3 or 4 feet under water in order to prevent any air getting into the pipe, which also causes the water to scatter when leaving the nozzle.

All pipe lines should be laid as straight as possible, or with curves having as large a radius as can be obtained, and it must be remembered that new pipes well coated will carry more water than old pipes that have been rusted inside; therefore allowance must be made accordingly. It is good practice to allow one-sixth the diameter of pipes under 6 inches, and 1 inch on all diameters over 6 inches.

The first thing necessary for the miner to do is to ascertain the fall available for the pipe line and its length in feet. Knowing this and the quantity of water he is going to use it is easy to determine the diameter of the pipe, always bearing in mind that in order to secure efficiency and economy in construction water should flow in the pipe at a velocity of not more than 3 feet per second. A few of the simple methods of determining the discharge of pipes are as follows:

First—To obtain the velocity, first multiply the diameter in feet by the effective head in feet and divide the result by the length of the line in feet, then take the square root of the product and multiply by 50; this will give the velocity in feet per second, and the velocity multiplied by the area of the pipe in square feet will give the quantity of water discharged in cubic feet per second, which, multiplied by 40, will give the number of miners' inches.

Second—To find the velocity in feet per minute, multiply the number of cubic feet of water discharged per minute by 144 and divide the product by the area of the pipe in inches. For example: A 11-inch pipe discharging 150 cubic feet of water per minute, the velocity would be 150×144÷95.03 (the area of pipe in inches) or 227.6 feet per minute, or 227.6×$\frac{2}{3}$=151.7 miners' inches.

Third—In all cases the pipe will require a funnel or bell-shaped entrance, and an additional head to put the water in train in addition to correct dimensions for overcoming friction, assuming of course the total head available be required. To obtain the additional head commonly termed the velocity head, a simple method is to square the velocity in feet per second and divide by 64.4 and then divide that product by 0.70. The answer will be the extra head in feet required.

We are told by some authorities that in cases where the length of the pipe exceeds 1000 diameters the head due to velocity and even bends may be neglected, but in practice I find it better to err on the right side and in no case neglect working out the heads due to those losses and including them in all estimates.

Another simple and approximate method of finding the velocity is by multiplying the number of miners' inches discharged by 11 and divide the product by three times the square of the diameter of the pipe. For example: A 10-inch pipe discharging 400 miners' inches; the velocity will be 400×11=4400, divided by three times the square of the diameter, or 3×100=300. Answer, 14.6 feet per second. By means of the same formula the number of miners' inches discharged through a pipe of a known diameter and velocity will be found as follows: Multiply the velocity in feet per second by 3 and the product by the square of the diameter, then divide by 11 and the result will be the discharge in miners' inches.

For example: A pipe with a diameter of 20 inches, discharging water at a velocity of 3 feet per second, the number of miners' inches discharged will be as follows: 3×3×400 (the square of the diameter) or 3600÷11= 327 miners' inches.

Fourth—A more complicated but accurate formula for determining the velocity per second of water in pipes is: 140 times the square root of R×S minus 11 times the cube root of R×S—where R is the hydraulic radius, which is found by dividing the diameter of pipe in feet by 4, and S the sine of inclination, which is found by dividing the total fall in feet by length of pipe line in feet.

This formula has been tested in a thoroughly practical manner by Mr. Gordon, the Government Engineer in New Zealand, and he found it could not be relied upon when calculating high velocities, as it gave too great a discharge, but with low velocities and small diameters of pipe, it was deemed fairly accurate.

(To be Continued.)

African Mining Costs.

The annual report for 1896 of the Robinson Gold Mining Company, the greatest property on the Rand, South Africa, shows that 177,500 tons of ore was mined during the year, and it is estimated that the ore in sight at the end of December was 441,506 tons down to and including the tenth level.

During the year there were sunk 655 feet of shafts, 6267 feet of drifting done, 3384 feet of raises and 1542 feet of crosscuts. The costs of these works will be interesting to American miners for comparison. All expenses for 11,193 feet of drives, raises and crosscuts were £31,738 5s 7d, or at the rate of $13.79 per foot. Nearly one-third of this sum was paid out for explosives. This item, owing to the heavy charges caused by the Government monopoly, is out of all proportion to the cost in other countries.

The total cost of mining and milling and the rate per ton of ore are given in the following table:

	1896. Total.	1896. Per Ton Milled.	1895. Per Ton Milled.
	£ s d	£ s d	£ s
Mining, includ'g mine maintenance	110,747 11 5	12 5.75	8
Milling, includ'g mill maintenance	32,788 4 0	3 8.34	05
General maintenance	4,387 3 7	5.94	.74
General charges (see revenue acc't)	20,044 13 6	2 3.10	2.07
Cyanide expenses	14,769 12 1	1 7.97	5.82
Totals	182,737 4 7	1 0 7 10	1 0 7.16
Mine development	37,091 10 5	4 2.15	5 8.65
Machinery, plant and buildings	28,088 6 8	3 1.86	7.47
Totals	247,837 1 8	1 7 11.11	1 6 11.28

The following table will show the cost of cyaniding in one of the largest plants in the world. It is stated in the report that the main feature of the year's work in this line has been the saving of an additional 10 per cent. This, of course, will more than make up for the increase in cost. The percentage of extraction for 1896 was 73.8, against 63.89 in 1895:

	1896. Total.	1896. Per Ton Cyanided.	1895. Per Ton Cyanided.
	£ s d	s d	s d
Wages (whites and natives, includ'g food)	3,486 15 1	0 8.38	0 7.42
General supplies	1,268 9 0	0 3.05	0 2.76
Fuel and power	1,466 7 9	0 3.52	0 2.92
Cyanide, 54,371 lbs	3,371 8 6	0 8.10	0 9 88
Zinc, 22,485 lbs	383 3 5	0 0.87	0 0.66
Filling and discharging vats	4,813 8 4	0 11.56	0 9.51
Totals	14,769 12 1	2 11.48	2 9.05

The duty per stamp per diem was 4.06 tons, crushed through a 900-mesh screen. The cost per ton for milling 177,500 tons was about 90 cents.

The average number of employes for the year has been of Europeans 256 and natives 1606

Theories of Pan Amalgamation.

Written for the MINING AND SCIENTIFIC PRESS by E. HERLIGENDORFER, Durango, Mexico.

While pan amalgamation is a complete success for chloridized silver, it is but partially successful for the so-called free milling silver combinations with sulphur, antimony and arsenic.

What is the reason why raw pan amalgamation can never recover *all* the silver from sulphurets, not even from the most free milling silver mineral, viz., silverglance?

There is in the pan on one side metallic copper, precipitated from bluestone and at once amalgamated when quicksilver is present; on the other side, silver sulphide. The silver sulphide wishes to be combined with copper sulphide, and to satisfy this wish it undergoes a partial self-destruction by giving the greater part of its sulphur to the copper, which needs for saturation more sulphur than the silver; and just as much copper is sulphurized as the remaining silver sulphide wants to form a compound combination of silver sulphide + copper sulphide, while the greater part of the silver is amalgamated.

Raw pan amalgamation has only one bait to hold out, namely, metallic copper; and though the copper is aided in its electro-chemical action by heat, friction, brine, iron and quicksilver, it cannot be an inducement for the compound silver sulphide + copper sulphide, which is already satisfied with copper. The newly formed compound has become rebellious for the pan and will escape into the tailings; or in other words, only a limited percentage of silver can be extracted by the raw pan amalgamation of sulphurets.

Likewise will raw pan amalgamation have no inducement whatever for the silver sulphide contained in sulphuretted copper ores, and the inducement will not be strong enough for the silver sulphide contained in iron pyrites, zinc blende, etc., though iron and zinc sulphide are not quite so attractive for silver sulphide as copper sulphide is for the same.

We have the example that in a watery solution of silver sulphate the silver can be replaced by copper or iron, without leaving a rebellious balance. It is evident that raw pan amalgamation does not work in a similar way. Or could the copper, simply by its affinity for sulphur, take the place of the silver? Seeing the difficulty to chloridize the silver contained in the same free milling combinations with cuprous chloride, though silver has probably more affinity to chlorine than copper has to sulphur, it appears that an extra help is wanted to reach the object. Such an extra inducement is for raw pan amalgamation the predisposing power to form the compound silver sulphide + copper sulphide, which nature has also formed in several minerals.

The raw ore is frequently overloaded with sulphur, a part of which is in a firmer and another part in a looser combination with the base metals. The looser part of sulphur would destroy the quicksilver were the latter not protected by copper precipitated from bluestone. It is then obvious that more or less copper sulphide will be formed without the necessity to take the sulphur from silver sulphide, and that either all or a part of the silver sulphide will find the desired share of copper sulphide; and the result will be that little silver or none at all is amalgamated, because the free milling silver combinations have become rebellious.

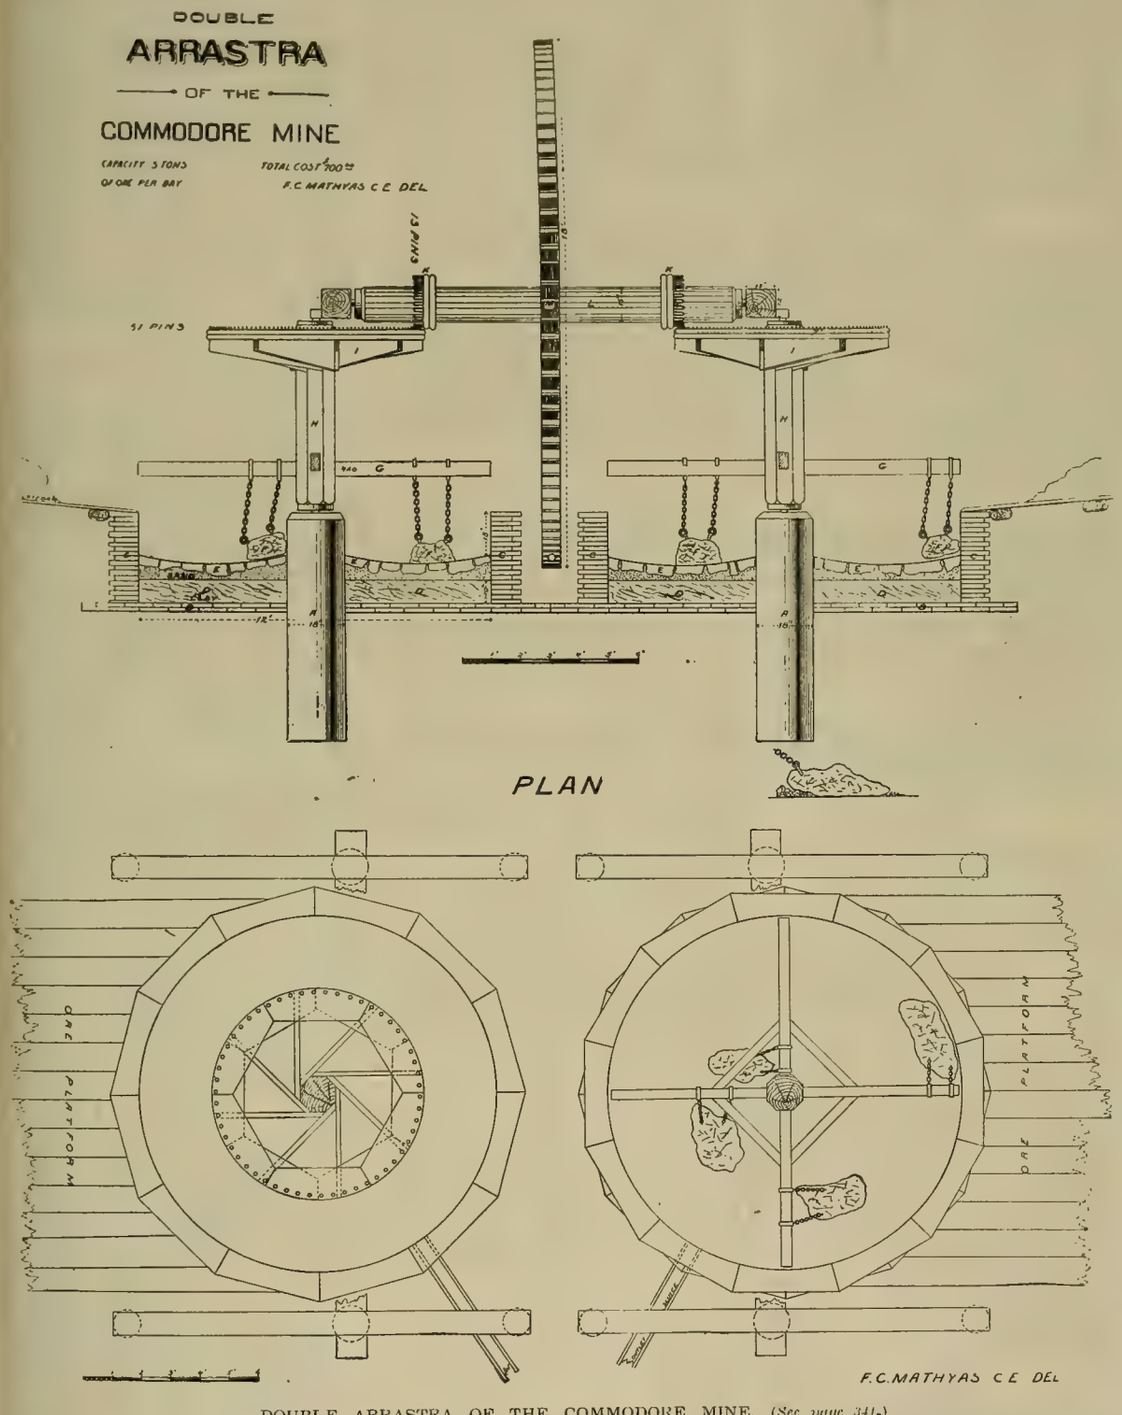
The same will happen after imperfect roasting, when the roasted pulp contains loose sulphur, one part of which will resulphurize some silver chloride to form silver sulphide; but this silver sulphide will not be amalgamated as in free milling ore, because another part of sulphur joins the copper of the bluestone, to form again the rebellious compound silver sulphide and copper sulphide.

Most likely will antimony and arsenic form similar combinations with silver and copper as sulphur, but as antimony and arsenic have less affinity to copper, raw pan amalgamation will be less successful when antimony and arsenic prevail.

I also suppose that the Russell process works in an analogous way as raw pan amalgamation does, replacing silver with copper, but never completely, only so much of it that a rebellious or insoluble compound of silver sulphide + copper sulphide remains. After imperfect roasting, the Russell process as well as pan amalgamation will form a great deal of copper sulphide and silver sulphide. But the thoroughly mixing pan will, with detrimental result, favor the union of the two partners, while in lixiviation the silver sulphide cannot easily find the separately formed copper sulphide and remains amenable to the action of the extra solution. This explains the better results of the Russell process for all imperfectly roasted ore and also for raw ore overloaded with sulphur.

The chloridizing theory for raw pan amalgamation with cuprous chloride has been doubted long ago. Some gentleman who has the opportunity might oblige the profession by preparing copper amalgam in a separate pan from bluestone and quicksilver. When the copper amalgam has been well washed before using it, then, of course, any chloridizing idea

will be given up. I expect that pure copper amalgam will not only do all amalgamating work in pan amalgamation perfectly well, but the absence of iron chloride originating from bluestone will avoid much destruction of quicksilver and also the carrying away of silver and gold by foamy quicksilver. I hope, then, that copper amalgam may become an article of commerce, always to be used in pan amalgamation instead of bluestone.



The Law of Mines.

Existing mining law literature will shortly be further enriched by an exhaustive treatise on the American law relating to mines and mineral lands and the acquisition of mining rights in lands of the public domain, by Hon. Curtis H. Lindley of San Francisco, who has devoted considerable time to the preparation of the work which is shortly to be issued. The publication is of timely value. No department of human industry is of more present prominence than the mining interests, and if from many fragmentary monographs and conflicting decisions a clear, systematic and comprehensive compilation of leading facts and authoritative information can be secured, its author will have conferred a benefit on the mining public.

That this desirable result will be attained seems evident by the conception of the scope and trend of the book, as outlined by Mr. Lindley in the preface. As he points out, there is no such thing as a national mining code. Indeed, the remark of Emerson, "law is only a collection of memoranda," is almost a just one when applied to our system of mining jurisprudence. The basis of mining law, as we understand it, is the common sense rules formulated by miners themselves in local organizations, tempered and directed by natural evolution from precedent and ancient custom and crystallized into the dignity of an accepted statute.

The introductory treats of the mining laws of foreign countries; chapter I of title acquired and rights conferred by location, the character of the tenure; chapter II the nature and extent of property rights conferred by lode locations; chapter III the same as conferred by placer and other locations; chapter IV perpetuation of the estate by annual development and improvement; chapter V forfeiture of the estate and its restoration by resumption of work, and so on.

Out of the great mass of mining literature the author seems to bring an orderly, philosophical and comprehensive collection of law applying to the rights and duties of the miner in the many instances where his interests and requirements are dimly defined and often misunderstood.

DOUBLE ARRASTRA OF THE COMMODORE MINE. (See page 341.)

An interesting memoir presented by Bertholet to the French Academy of Sciences describes the ancient copper mines of Sinai, which were in operation 5000 to 1200 years before the Christian era. Vestiges of these mines may still be seen near the coast of the Gulf of Suez. Two deposits were worked—that of Wadi-Maghera and, somewhat later, that of Serabil-el-Khadem. Both occur in sandstone, not in the porphyry which forms the main portion of the mountain. In addition to copper, there also occur iron ores and gypsum. Old levels are still in existence, as well as vestiges of furnaces, crucibles, slags, miners' dwellings, tools, etc. The ores comprise turquoise, a hydrosilicate of copper, and sandstones impregnated with copper salts. These appear to represent the surface alteration products, while the deep-seated pyrites deposit has not been touched. The ores must have been smelted with imported wood. The slags are precisely similar to those of the present day. The tools found are of special interest. They were discovered in the ruins of the miners' dwellings, and are of three kinds. The pick is of cast copper, containing no appreciable proportion of tin, but a great quantity of arsenic, which appears to have been intentionally added. The chisel is of very hard metal, a bronze very poor in tin, and free from arsenic. Lastly, the pricker is of copper, containing no tin, a little arsenic, and inappreciable traces of antimony. The presence of tin and arsenic in some of the tools, and their absence in others, shows that the ancient Egyptians understood the way to modify the properties of their metals at will by adding foreign materials. The Sinai mines were shut down 3000 years ago, owing to the poor quality of the ores, and also owing to the difficulties of transport.—London Mining Journal.

The Rand in 1896.

The following gives rather a gloomy outlook for the shareholders in the Rand mines in South Africa. It is from the London *Mining Journal*, and among other things shows that more money was spent upon the Rand than was produced:

The figures dealing with the mining industry are not altogether satisfactory, inasmuch as the yield per ton shows a decline of over 2 dwts. as compared with 1895. Though this might not appear a serious decline on other gold fields, it is on the Rand, and in the case of many mines would mean their absolute failure. This decline, when it becomes generally known, might sound a note of warning to many who had a serious intention of investing in South African mines, but we would warn and advise them not to take it too seriously. The total production of ore for 1896 was 1,339,952 tons. This is an increase of 304,631 tons over 1895.

The total production of Transvaal gold in 1896 was 2,497,946 ounces valued at £8,597,013.

The dividend list shows a distribution of £1,545,256 in dividends for gold mining companies on the Rand (including the Rand Central Ore Reduction Company) and £168,625 by collieries and the Consolidated Deep Levels. A total is given of the returns of the stores consumed by 81 companies, which shows the value of the stores to be £4,040,605. Some prominent factors in this total are: Machinery, £892,651; coal, £609,102; dynamite, £101,993; blasting gelatine, £439,671; gelignite, roburite, etc., £22,791. Candles to the extent of 119,135 boxes were consumed of a value of £76,526. Cyanide figures at 1,969,437 pounds, valued at £125,531; mealies, meal and forage at £338,845; timber and deals at £274,655; sundries at £427,527. While the consumption of dynamite has fallen in value from £117,126 in 1895 to £101,998 in 1896, that of blasting gelatine has risen from £297,828 to £439,671.

From the above figures it will be seen at a glance that the stores amount to an excessive sum. It is closely approached by the expenditure on labor, which is nearly £4,000,000. It is obvious, therefore, that there is still plenty of room for economy. The future prosperity of the field is absolutely dependent upon the practice of economy, and there is abundant scope for this in the reduction of wages. We are not alluding exclusively to native pay, but also to the remuneration paid to the white hands. It will also be seen from these figures that more money was spent upon the Rand than it produced—a fact which will surprise a great many. But this is not to be wondered at, inasmuch as it is the experience of nearly every gold field, and it is not to be expected that the Rand should prove an exception to the rule. The magnates of the Rand are still impressed with the necessity of retrenchment. One means thought to be very effective was direct cyaniding, but the experiments which have been carried out have not been a success. These trials have been made on the Village Main Reef, where 617 tons of ore was treated, estimated to give a yield of 80.2 per cent. The actual return, however, was no more than 64 per cent.

Mining Summary.

CALIFORNIA.

Amador.

Dispatch: The Butte Basin tunnel, which is being run on the Amador side of the Mokelumne river, a short distance from Big Bar bridge, has now reached a distance of over 1000 feet. There are about 850 feet yet to run to reach the point desired.

Mr. Petrie writes from Baltimore that he will soon open up and operate the Tripp and Roaring Gimlet mines on the Amador side of the river, between the electric plant and the Big Bar bridge. After he gets the mines under way it is Mr. Petrie's intention to begin to develop the Ibex property at Rich gulch.

In crosscutting for the Union ledge at the Weiland mine they have struck the ledge about 25 feet off the shaft. The ledge is from 4 to 5 feet wide and shows sulphurets and considerable good-looking quartz. The company will keep on crosscutting towards the gouge ledge with machine drills, and are to start drifting east on the Union ledge with hand drills to a distance of 1000 feet, after which they will continue sinking.

At the Amador Queen No. 1 the new hoist is completed and the mine is now equipped with hoisting machinery to go down 2000 feet as it is, and, by a slight change in the pipe line, to go down 3000 feet. Mr. Dye has finished enlarging the shaft from 8x4 to 9x5 feet in the clear for a distance of 150 feet. The new skip will hold one and one-half tons of rock and the water skip will bring up 400 gallons at a load.

Ledger: The managers of the Potazuba have decided to sink the shaft 200 feet below its present depth, making it 450 feet deep. At the depth of 100 feet drifts were run on the ledge over 100 feet north and 100 feet south, and mill tests were made which were satisfactory.

The South Eureka is now sinking a new shaft about 300 yards south of the old shaft.

Some people from Utah are negotiating with the owners of the Price mine at Plymouth with the idea of purchasing.

The Gold Hill, south of the Pocahontas, is being exploited by a company under a two-year bond. They have tunnel in 150 feet.

At the Oneida the old hoisting plant has been removed and the new machinery is being used.

W. H. Glenn is operating the Blue Gravel placer mine, in Rancheria district, under permission from the Debris Commission.

Republican: At the Argonaut graders are at work excavating for the mill.

At the Anita the north drift is being pushed ahead, with a long distance yet to go before they expect to reach the ore chute on the Shober ground, the outcroppings of which show so strongly on the surface. A crosscut has been run 175 feet immediately west from the shaft.

Butte.

Mercury: J. H. Challen and San Jose people have incorporated the Topaz Centennial mine, near Spanish Ranch, and it is now being worked, a bedrock tunnel being developed with good results.

Mr. Warner of San Francisco has bonded the Buchanan gravel mine for six months. He will run a tunnel to the channel.

Calaveras.

Chronicle: The work of sinking at the Esperanza mine still continues. The shaft is now down 460 feet. Good ore was encountered at the 400-foot level.

The California Exploration Company have placed a gasoline hoist upon the Gold Hill mine.

An air compressor and drill are to be put in at the Vair tunnel, on the Gobbi ranch.

At the Gwin work is prosecuted on the 1300 and 1400-foot levels, the drifts being driven north and south from the shaft at both levels. The miners are stoping and up-raising in all drifts and taking out rock sufficient to keep the forty stamps running night and day.

Mountain Echo: The Great Western mine, owned by F. Baumhogger, has been started up with a full force of men. The work of sinking the shaft is proceeding.

Work is progressing actively at the Carson Creek mine.

T. T. Lane has purchased the interests of Morgan & Smith in the Plymouth Rock mine at Jenny Lind.

Work will be resumed on the Keystone mine, owned by Demarast & Linxwiller, in a few days.

Operations on the Ghost mine have been suspended for the present, but will shortly be resumed.

Citizen: Men are at work at the Judith or Edna mine grading for the mill. The mill will be used for prospecting, and will be of four stamps.

Preparations are being made at the Vair tunnel, near Mokelumne hill, to utilize the water from the Mokelumne Hill and Campo Seco Canal Company's ditch for power to run the air compressor and machine drills which will be put in.

At the Burgess mine development work is progressing steadily. The force of men was increased the first of the week, making the number of men employed at the mine fourteen.

El Dorado.

(Special Correspondence).—The Big Sandy at Kelsey has reached 320 feet in the shaft. They will crosscut to the hanging wall and also run drifts both north and south. The outlook for this property is growing quite encouraging.

The new tunnel on the Blue Gouge has been run 213 feet through the country rock, locally known as granodiorite, and cut through the east wall (of a schist formation) and cut 6 feet into the ledge. Judging from the surface surveys, the distance through ledge matter to the west wall will be 280 feet. The tunnel will be 500 feet, with 650-foot "backs." This is 300 feet below an upper 300-foot tunnel, which also cut 280 feet of milling ledge matter. The ore in the new tunnel yields about $4 in free gold and a good percentage of high-grade sulphurets.

The old Jeffries mine is making a good showing and will soon have a 10-stamp (gravel) mill in operation. The property is less than a mile from town. The tunnel is 800 feet and the upraise 100 feet, on which the tunnel runs through a fair grade of gravel with indications of an approach to slate. The company expects to run the tunnel 650 feet on the bench.

The Star Light is stoping on the 270 (lowest) level and taking out rich ore from a good-sized ledge.

J. A. White & Co., prospectors, have three locations twenty miles east of town, on one of which they have sunk a 30-foot shaft and made several surface cuts. The footwall is slate and the hanging wall porphyry. The ledge is 4 feet on a fair grade of ore. The sulphurets run 15 per cent and assay $300 per ton.

S. K. Thornton, vice-president of the State Miners' Association, reached here to-day. He will canvass the county in the interest of the State organization, and he will meet with a warm welcome among the miners and the mine owners of old El Dorado county.

Placervil e, April 19th, '97.

Nevada.

Union: In Washington district French & Bell have commenced work on their mine at the head of Crombecker creek. In a week they will haul in ten 2-stamp mills, each of which will have a capacity of crushing four tons of quartz a day.

Superintendent Durbin has men at work removing the burned timbers and debris at the Milliken mine. The machinery is not damaged much. It will be but a month before operations are resumed.

Transcript: Dr. Dow and Dr. McMahon of San Jose, owners of the Le Du and Nancy Hanks mines in Maybert district, intend to work them this summer. Machinery is at Emigrant Gap and will be hauled to the mines as soon as the road is open.

Placer.

Sentinel: At the Belle Union, the property of Bayne & Abart, the ledge has an average width of 4 feet. It has been crosscut in numerous places from the tunnel. The ore prospects from $6 to $12 per ton.

Bedrock has been reached at the Occidental mine, near Iowa Hill, at a depth in the shaft of 280 feet. The company is now running a stope and have reached a point about 80 feet from the shaft.

Argus: The tunnel at the Dardanelles mine, the scene of the late accident, is being reopened.

Herald: Operations have begun at the Gray Eagle mine, and quite a force of men will be put on. When the mine is well opened up the force will be increased. It is said that no Chinamen will be employed.

Plumas.

J. H. Challen has incorporated the Golden Ancient Channel & Yellow Jacket. Development work will be commenced as soon as snow clears.

Work at Thistle Shaft will soon be resumed.

At the Sunnyside mine on North Fork preparations are being made to do a great deal of work in the way of developing the property. Advices from the East indicate a disposition to engage in work on a large scale. It is probable that some big contracts will be let.

San Diego.

Sentinel: At Banner camp the Ready Relief and Redmond mines are being worked by Baily Bros., with the usual force of ten men.

At the Ranchita mine the mill is a new 5-stamp. An engine has been added recently for hoisting purposes in place of the mule used previously. The main shaft is now down 240 feet.

The Owens mine at Julian, which is the property of the Owens Consolidated Mining Company, is at present working only ten men, as the mill is not running at this time. The main shaft is down 350 feet. There are two ledges, one north and the other south of the main shaft with crosscuts, about 450 feet worked at each level drifting. The ledge varies in width from 1 to 4 feet.

Union: The stamp mill for the United States Mint mine, near Warner ranch, has arrived at Temecula, and will be hauled to the mine.

Shasta.

Searchlight: Captain Roberts has suspended operations for the present in his Harrison gulch properties, pending such time as will be required to put in a better system of treating the ore. The mill heretofore used has permitted too much waste of value, it being estimated that not more than one-half of the gold has been saved.

Democrat: H. McDonald and Fitzmaurice of the Mountain Mines Company have left for the Copper City mining camp, where Mr. McDonald is interested in the copper fields of the district, which are known to be very extensive, and it is given on good authority that a syndicate proposes to erect large smelters, run a railroad to connect the Southern Pacific, and mine for copper on a large scale.

Searchlight: C. Jones, who recently struck a pocket on the east side of Muletown mountain, from which $800 has already been taken, is now erecting a small quartz mill on the property.

Desmond & Merchant are developing a promising claim on the Squaw-Clear creek divide, north of the Balakalala mine. A 3-foot ledge has been uncovered for a distance of about 200 feet, and the outcroppings show gold for a much greater distance.

H. Weiser, in opening his mine above the Miller property, above Shasta, struck a rich ledge, running high in gold value. The recent extensive demand for flux has set the miners of that section to digging.

W. H. Bergh and F. Cobrowsky, at the Early Discovery, near Shasta, have four men employed, and the development is showing up good property. A crosscut tunnel 250 feet long has tapped the ledge at a depth of 100 feet. It is the intention of the owners to put in a stamp mill in the near future in the place of the present crude arrastra.

Sierra.

Mountain Messenger: The mill which has been standing idle for some time at the Northern Belle mine, near Loganville, will be started up soon.

Owing to the heavy flow of water struck in the old works at the Prospect mine, in Slug canyon, it was deemed expedient to run a lower tunnel and also to drain the water encountered in the old works.

Work is progressing rapidly at the Bald Mt. Extension mine, the north tunnel being pushed ahead at the rate of 40 feet a week. It is expected that after running 200 feet farther they will strike the channel. In the old south tunnel gravel is being taken out which is paying very well.

Siskiyou.

Journal: The finding of rich ore in the extension of the Siskiyou, on Humbug, has aroused considerable interest in mining circles, especially among those who have ledges in that locality.

The Garrett mine, at Humbug Bar, which was purchased by a Chinese company last fall, is now in operation. It was found last year before selling out to the Chinamen that they had dumped an immense pile of rocks directly over the pay channel, which the Chinese began removing upon taking charge.

The Distlehorst & Barton dredger is now working at the David Collins place, below Oak Bar. They are gradually moving down on the Klamath, and will soon reach the mouth of Scott river.

The placer mine situated opposite Scott Bar, recently purchased by Mr. Garrett of Woodland, will soon be opened up.

The Seattle placer mine on Thompson creek is in active operation at present, and will no doubt prove richer than ever this season. It is under excellent management and has a splendid plant.

Thompson creek is about the liveliest section of the county now. The two large hydraulic mines, the Nanetta B. and the Seattle placer mine, employ a large number of men, all of whom make their headquarters at Nolton, on Thompson creek, while there are also numerous other smaller mines in operation in that locality.

The Eastlick Brothers' mine at Oro Fino is running full blast at present, there being plenty of water for the giants. This mine will be kept in operation until after the 4th of July.

Journal: The Eastlick Bros.' hydraulic mine at Oro Fino is running full blast now, with a bountiful supply of water. They have two giants in operation and expect to keep them going until July.

The Wright & Fletcher and the Gardiner hydraulic claims are also doing well at Oro Fino and expect to have fully as long a season as usual.

Trinity.

Journal: There is considerable activity in mining on the East Fork and vicinity this winter. A number of new placer mines have been opened and worked with good results. The work done on the old claims yield good returns. The quartz claims are being worked with good results.

Cannon & Hanley of French Gulch in a quartz location near Castella have a 20-foot ledge of free-milling ore.

Hedges & Pelletreau Sr. have sold the Highland placer mine, opposite Taylor's Flat, to Red Bluff men. The property comprises about seventy acres of gravel, with water right. The claim is a high bench and had been overlooked for years until the present owners took possession and began working the mine.

Tuolumne.

Democrat: At the Black Oak, operated by the Scott brothers, the main shaft is down past the 800 level and is being driven to the 900, where more crosscutting and drifting will be done. The vein at the 800 has a width of 14 feet, which is getting stronger with every shift. The quartz from wall to wall is high grade ore, though quite rebellious. A 10-stamp mill does the crushing at present, but ten more are being put in position as rapidly as possible. Ore is being shipped regularly to the Selby Smelting Works for reduction.

At the Dead Horse the main shaft is being driven another 200 feet which will give it a total depth of 1700 feet.

At the Lady Washington George McGillivray has a large force under Superintendent Fisher doing development work. A good body of ore has been struck and the outlook is favorable.

At the Confidence a new 20-stamp mill is in course of erection to take the place of the old fashioned one now on the site.

The California Exploration Company has the Belleview mine under bond, and will very likely take the property at the expiration of the time. One of the requirements is that the operators drive the shaft 200 feet deeper from the 800 to the 1000 level.

The main shaft of the Rawhide is nearing the 1100 mark, and sinking will go on till the 1300 level is reached.

The North Star and Black Warrior Consolidated has driven the tunnel in to a depth of 180 feet, and are breaking ground at the rate of 8 feet per day, with three shifts. The ledge will be tapped when 650 feet has been run, and then the big shaft started down on its 1000 feet trip. There will also be 200 feet of stoping between roof of tunnel and surface.

Independent: Dr. Redding of the Tarantula mine will shortly erect hoisting works.

The Jumper mine is having a new air compressor put in.

Sinking in the main shaft at the Mammoth mine has been continued and a new tunnel is being run.

Mapes & Peters are operating their gravel mine at the head of Woods' creek. Several other placer mines are being opened up in that vicinity.

Work on the Nervy mine, at Italian Bar, will be resumed shortly. The lower tunnel, which is being run to tap the chute is now within 20 feet of it.

NEVADA.

Silver State: Mining properties in Ione, Nye county, are receiving a great deal of attention from outside investors. Several pieces of property have been bonded. The mine owned by Bray, Bell and others is turning out regular shipments of gold bullion, as well as shipping concentrates that run high.

At Battle Mountain a number of mines are being worked and some paying well, notably the Morning Star at Dean, near Lewis, from which regular shipments of gold bullion are made.

Dayton *Times*: At Silver City the Taylor and Pollard mills are running steadily.

The Succor mine is producing good ore, and quite a force of men are at work. The Lager Beer mine is also looking well. Both of these properties are operated by the same company.

Men are at work in the Combination tunnel, running crosscuts and driving ahead.

The Oest is still producing good ore. A cleanup was made last week which yielded over $4000.

The old Silver City mine is being prospected under the direction of Col. Boyle.

E. Pedroli & Co. are putting up a steam mill near their mine.

White Pine *News*: The possession of the Chainman group of mines has passed from the old Chainman Company, and is now under the control of the new company, with Charles D. Lane of California at its head. It is quite generally understood that operations will be begun at once. A civil engineer representing Lane & Co. and an electrician are now on the ground looking over the situation, having in view the location of a mill site, etc.

Enterprise: The placer mines near Carlin are showing up splendidly.

Mason valley is experiencing a prospecting boom just now. Ledges carrying free gold, also copper ledges, are being discovered every day, and the hills are being scoured by ranch prospectors.

Battle Mountain *Nevadan*: Johnson and Clives of Salt Lake City, who have a bond on the Copper Canyon property, intend to make a shipment of about fifty or sixty tons of the ore as soon as it can be extracted and hauled to the depot.

Gold Creek *News*: The water has been turned into the ditch at the headgate on Penrod creek, and every headgate and valve is set ready for the rush of water from the melting snow that is expected any hour.

Silver City *Enterprise*: W. H. Newcomb is shipping two cars of iron ore daily from Legal Tender hill, almost within the city limits.

At Carlisle the new 10-stamp mill is about completed and will soon be running full blast. If the process of extracting the precious metals prove a success, a larger plant will be erected.

Pinos Altos will probably have the finest display of ores from any single mining camp at the Nashville exposition. The mine owners have all taken an active interest in the matter.

A. Hersberger is working twelve men on the Western mine. The ore is being reduced at the Stanley-Martin mill and producing good results.

Bell & Stephens have eighteen men employed upon their claim on the Pacific. The only work in progress is the running of drifts north and south at the 450-foot level. The ore body is larger and of better grade than ever before found in the mine.

The Treasure Mining Company is cutting out a station at the bottom level preparatory to resuming sinking on the main shaft of the Atlantic mine. The shaft is now 297 feet in depth and will be sunk 163 feet deeper, thus allowing for a sump of 10 feet below the 450-foot level, at which level drifts will be run.

At Mogollon the force upon the Maud S has been increased to eighteen men, all upon development work. New ore bodies have been encountered in two places in the mine, and, from present indications, there will be sufficient ore uncovered within ninety days to warrant starting the mill.

The Confidence mine is employing about fifty-five miners and producing its regular quota of seventy-five tons of ore per day, which supplies the mill at Graham, on Whitewater creek.

OREGON.

Baker City *Democrat*: Operations on the old Sanger mine will be commenced before May 1st. The Sanger mine has produced more gold than any other mine in eastern Oregon, with the possible exception of the Virtue.

Rogue River *Courier*: A 5-stamp mill is being set up on the Belding-Dowell ledge, on Green's creek, about five miles from town.

Cramer & Wheeler of Myrtle creek have purchased a quartz ledge on Galice creek from Henry Hutchins for $3000.

Placer men have about quit in the Dry Diggings country, as the water has given out. Some prospecting is being done for ledges.

Jacksonville *Democratic Times*: The Lance Mining Company of Foots creek will enlarge their plant next season. One giant has been in operation and more will be added. The flume being constructed from Rogue river, to

secure a dump, has been run into bedrock about 2000 feet from the river.

A. A. Davis of Medford will soon erect a mill at the ledge in Lane's Creek district, formerly owned by Scott & Lee.

Hull & Beck of Louse creek are running their placer mines on full time, with plenty of water and good prospects.

If this weather continues many placer miners will commence cleaning up. The water supply is diminishing in different localities.

A 200-foot working tunnel is to be run at the Barth-Signoretti mine, on Murphy gulch, to tap the ledge at a depth of 150 feet below the old shaft.

Dr. Hinkle's North Star mine, on the Sardine creek divide, is being developed, and is showing up well.

WASHINGTON.

Spokesman-Review: The Scotia Mining and Milling Co., on Toulon mountain, in the Colville reservation, has tunneled through 20 feet of ore at a depth of 200 feet from the surface, and arranged to put down a shaft 100 feet on the vein and drift both ways from that depth. The progress of work on the Scotia will be greatly facilitated by the addition of needed machinery.

North of Colville is a short chain of rugged hills, lying between Mill creek and the Colville river, which are now proving to be rich in mineral deposits. This section has long been considered worthless, so far as the existence of the precious metals is concerned, but small finds have been coming to the surface for some months, until now the hills are being thoroughly prospected, with good results.

At Marcus, in the Anaconda, on Kettle river, the shaft shows a solid face of ore for a width of 8 feet. The property will begin shipping ore at once.

BRITISH COLUMBIA.

In the Slocan, John Tingling has taken a bond on the Little Daisy and Golden, adjoining properties on Springer creek. The purchase price was $35,000. One year ago the same property was offered for $15,000.

The Nicola, Tremont and Osborne, Four Mile creek properties, have been sold to K. A. Roberts and A. T. Monteith of Rossland, for $25,000 for a two-thirds interest.

Representatives of the Porter-Watson syndicate, that has lately bonded the Arlington group on Lemon creek, will at once put a force of men to work on the property.

Ore exports from the Slocan made by the way of Revelstoke during March amounted to 334 tons, valued at $34,041.

A. L. Davenport has sold to R. E. Brown of Spokane his five-eighths interest in the Emerald Hill, adjoining the Silver Tip on Blue Ridge, about ten miles from Kaslo.

At Fort Steele at the North Star mine there are are several thousand tons of ore now at the landing awaiting shipment down the river, and about 500 tons at the mine ready to ship.

Several townsites have recently been taken up, among them the town of Kimberly, lying between the North Star and Sullivan group. Owing to its proximity to those mines, it bids fair to be a town of considerable importance. There will be another good town at Cranbrook. Where the big town of the district will be located it is difficult to say.

Word comes from Cascade that a strong syndicate has been formed to operate on Castle mountain. It has secured 19 claims at the foot of Christina lake, and will push development work as soon as snow will permit.

Spokesman-Review: A majority interest in the Maud S. and Ben Hassen, on the North Fork of the Salmon, has been bonded by the North Fork Mining Company, a Victoria company, for $25,000. James Stuart will immediately put a large force of men to work. A 200-foot tunnel will be run on the Maude S. to tap the ledge at a depth of 175 feet.

At Rossland the shipments for the week ending April 10 were Le Roi, 405 tons; War Eagle, 400; Iron Mask, 60; a total of 865 tons.

UTAH.

Salt Lake *Tribune*: The richest strike of ore that has been registered in Silver City the present season is that in the South Swansea. In the drift, 150 feet off the 350-foot level, native silver was uncovered that assays showed to contain thousands of ounces of silver. How much there is of this class of ore has not been determined.

The directors of the Utah and the Galena have under consideration a proposition looking to a consolidation of the property of the two companies, who are also reaching out for the Oriole, the Wildcat and Miner's Dream, all of which claims are regarded as extensions of the main vein. The workings of the Utah, which has been productive of $175,000, and those of the Galena, that has divided $71,000 among its stockholders, have already been connected, and as the ore chutes are but a few feet apart, one hoisting plant should be made to serve both companies.

Tribune: At Bingham the drift off the 450 level in the Crown Point has broken into vein matter at a distance of 196 feet from the shaft. Meanwhile Manager Pat Ryan continues sinking the shaft to greater depths, and at certain distances will crosscut to the vein.

The Luzerne having been absorbed by the Alma Gold Mining Company, work upon it will be resumed at once. The acquirement of this claim gives the company a group of three claims lying between the Swansea and the Sunbeam, that promise to become productive.

Bingham *Bulletin*: A bunk-house with accommodations for about thirty men was completed at the Fortune last week, and Manager Hill is expecting to soon have that many employed. The present force is fourteen working one shift.

At the Montezuma there will be out early next week a 100-ton shipment. Manager William Strickley has increased his force and is extending the main tunnel, which is now in 800 feet.

Manager Weir of the Highland Boy Company says that the contract for building the new mill would be let immediately.

There are now fifteen leases working in the Tiewaukee, and all in more or less ore, some doing well.

Tintic *Miner*: Last week shipments were as follows: From the Bullion-Beck mine, 25 carloads ore; Bullion-Beck mill, 5 carloads concentrates; Eureka Hill mill, 5 carloads concentrates; North Star, 3 carloads ore; Carisa, 5 carloads ore; Dragon iron mine, 2 carloads ore daily; Noon's iron mine, 1 carload ore daily; Centennial Eureka, 9 carloads ore; South Swansea, 8 carloads ore; Swansea, 5 carloads ore; Mammoth mill, 6 carloads concentrates; Ajax, 8 carloads ore.

The failure of the Centennial Eureka to declare its regular dividend is a great surprise, as that company continued the payments during the great depression, when hardly another company in the country was doing so. The fact that no dividend was declared does not indicate anything wrong at the mine, as it never looked in better shape.

Work has been commenced on the Gen. Logan mine.

C. L. Cope has sold the Silver Dollar claim to J. W. Lynch and J. W. Murdock, the stated consideration being $12,000, of which amount $500 was paid down.

Mercur *Mercury*: The discovery of ore on a new portion of the Sacramento, as reported last week, proves to be of great importance. The strike was made on the hill west of the mill, and a body of ore from 13 to 14 feet in thickness has since been developed, which gives average returns of $32.

The Cedar Valley Company will soon resume development.

Magnificent cinnabar ore is being blocked out in the south drift in the Overland.

The West Geyser strike is opening up exceedingly well, and large bodies of $11 ore are being blocked out.

It is estimated that there is already blocked out in the Daisy 13,500 tons of ore of an average value of $7.40 per ton.

State Line *Buzzard*: Prospectors who anticipate prospecting at State Line and vicinity can venture in about ten days, as the snow will have thawed by that time so as to not materially impede their progress. The route to State Line should be by Desert Springs. and provisions can be obtained at State Line as cheap as in Salt Lake, minus the freight; also, camping utensils and miners' supplies. The grass will be plentiful in the hills this spring.

The Ofer will make another shipment of high-grade ore shortly.

Hicks and Mosher are down about 30 feet on their gold claim, and are taking out ore which runs high in gold, which is visible in the rock.

The Rice Bros. and J. Lund are working on their claims and extracting some good gold rock.

The owners of the Confidence and Perseverance claims, situated ten miles north of State Line, will resume work as soon as the snow is gone.

Murphy and Higgins have resumed work on their Blueledge claim. They are in 100 feet, and expect to strike the ledge in 40 feet more.

Salt Lake *Tribune*: At West Dip in the Daisy the incline is now 270 feet deep and drifts are being run on the vein. The vein widens with depth and, while it now shows about 15 feet thick, it is believed that crosscuts running east and west would show that it is thicker than this. Superintendent Mayne has been making a leaching test on Daisy ore and finds that 95 per cent can be extracted in forty-eight hours.

At La Cigale the new mill will start out with a capacity for handling 200 tons per day, which will be increased as the needs demand. The mill will probably be completed within sixty days.

Mercur *Mercury*: The Mercur is reported doing better than at any period in its career.

The Geyser-Marion, since the interests of the two companies were pooled, is achieving excellent results, the latest shipment of cyanides reaching a total of $14,000.

It is expected that the Golden Gate will get to work on its mill and have the plant in operation before another winter.

IDAHO.

Idaho Avalanche: Work upon the Dewey crosscut tunnel being driven to tap the heart of Florida mountain is progressing steadily. A contract has been let for an additional 200 feet.

On the Nugget the leesees are rushing work upon the crosscut tunnel and are near the vein.

A hoist for the shaft in the Blain tunnel of the Trade Dollar is now enroute, and the vein will be opened to a greater depth. The mine is making regular and heavy shipments each month, and is producing more money than ever before in its history.

At the Golden State negotiations are in progress looking toward the settlement of all misunderstandings between the co-owners, and it is more than probable that work will be resumed upon the property within a very short time.

The contract for sinking the first 120 feet of shaft from the Idaho tunnel level in the Black Jack is well under way. It is expected that a hoist will be installed by the time this contract is completed.

Spokesman-Review: A strike of rich ore about three miles east of Porthill, on the Kootenay river, is creating considerable excitement in that section.

At Pierce the Pacific Placer Company has sold its property in Read's creek to a Chicago syndicate for $55,000.

At Lewiston large numbers of prospectors are outfitting, and they depart daily for the mountains. The season is late, and the snow is deep on the high ranges. It will be impossible to do any prospecting for a month, but many of them go in on the river bars to camp, and in the meantime they will use the rocker on the bars.

The Green Creek Mining Company, Limited, has been incorporated at Moscow to operate a group of thirty claims on the South fork of the Clearwater river, thirteen miles above Grangeville.

MONTANA.

The Alice Mining Company will develop the Valdemire to greater depth, and are making arrangements to put on a large hoisting plant to sink the present shaft deeper.

The hoisting engine formerly on the Glengarry, the property of the Montana Ore Purchasing Company, has been placed on the Nipper claim cornering on the Anaconda, where it will be used to sink the present shaft 200 or 300 feet deeper. This property was recently acquired by this company on bond for $235,000, with the privilege of exploring the same for one year.

At Deer Lodge there will be more ore shipped from the smaller mines about that camp this summer than ever before. A good many prospectors are at work opening up claims and some of the smaller mines are looking remarkably well. A new district has been opened up between Elliston and the Ontario. It comprises the territory known as Marcus Daly's old wood camp.

Inter-Mountain: The Boston & Montana Company will make a record for itself this year in the matter of production of ore. During the past few months the production has exceeded 800 tons of ore per day and within the past few days orders have been given by Superintendent Klepetko to increase the output at least 200 tons per day. For this purpose the working force at the mines is being increased.

It is reported in Marysville that the 50-stamp mill of the Montana Mining Company, Limited, will begin crushing Drum Lummon ore May 1. One hundred men are at work underground and large reserves of ore have been blocked out, since the two mills closed down last fall. The ore bins are about full and there is more ore in the mine ready to be lifted to the surface.

The Gold Belt properties at Empire, which were purchased about two years ago by Sam Word & Sons, have been started up under the management of Will Word, and forty stamps of the mill will be dropping on ore the latter part of the week. The Gold Belt when worked by an English syndicate called the Gold Leaf Company, produced nearly $2,000,000 in gold.

The Mayger brothers of the St. Louis Mining & Milling Company are hauling ore from their mine in Marysville to Trinity gulch, where they erected a new mill last summer.

The recent decision of the Northern Pacific people to build a branch of that road down the Ruby valley from Gaylord to Twin Bridges with a promise of a further extension of the line at a later period has given the mine owners around Silver Star, Sheridan and Rochester new hope.

WYOMING.

W. S. Ward, director of the Mining Bureau of the Denver & Gulf Railway, purchased of I. S. Bartlett, E. A. Stack and others the Blue Bird and Good Fortune mines at Hartville, paying $22,000. Heretofore ore shipments from the mines have been made by team for sixteen miles to the line of the Denver & Gulf. A spur will now be built to the mines and an all-rail haul secured.

During the past winter a number of mining properties in districts tributary to Laramie have been purchased by Eastern syndicates, who will commence active operations as soon as the season will permit. The American Gold and Copper Company of Chicago have purchased a small plant for the reduction of their copper ores in the Jelm mountain district, some twenty-eight miles southwest from Laramie.

A contract has been let by the Oregon Butte Mining Company for freighting 5,000,000 pounds of iron pipe from Rawlins. The pipe is to be used in connection with the hydraulic apparatus in working the placer mines of the company.

SOUTH DAKOTA.

Black Hills *Times*: The Durango Mining Company have commenced shipping 100 tons of ore, which will average better than $100 a ton in gold. This is a month's output, with a force of five miners, making the net output $10,000.

An option for two months, at $8500, on the Badger group of mines at Ragged Top, has been given to Eastern people.

NEW MEXICO.

Denver *Republican*: Despite the unusual snowfall which now covers northern New Mexico's mining district, there is now an unprecedented rush of miners and prospectors into the camps of Taos, Colfax and Rio Arriba counties, which border on the southern Colorado line.

On the Piedre Lumbre grant, in Rio Grande county, all sorts of sluicing, dry and wet placer devices have for years been tried on the gravel pits without avail. There has been of late considerable experiments that give promise of success in working the ground.

New Mexican: Within a few miles of Hillsboro there are many acres of gold placers. For several years a company, of which W. S. Hopewell, W. H. Bucher, W. B. Childers, J. T. McLaughlin, John A. Lee and others are members, has had several thousand acres of these placers located. For a year past some Pittsburg capitalists have carefully investigated the problem of working them and tested the gravel. These capitalists have now closed a deal for the placer claims, it is understood, paying $82,000 for them. The water rights have been purchased from W. S. Hopewell for $25,000, and water will be brought to the placers by a system of open ditches and pipes —about fifteen miles of the latter and about ten miles of the former.

COLORADO.

Denver *Republican*: At Cripple Creek the production from the Ingham last month was 350 tons of an average value of $80, and so far this month seven carloads have been sent out. The development is being kept ahead of the stopers in such a way as to guarantee steady production for several months.

The Franklin-Roby Company has shut down its Lillie in Poverty gulch and will, in all probability, start damage proceedings against the Moon-Anchor. The management claims that the water from the Moon-Anchor is allowed to flow down the gulch and fill the Lillie shaft.

The richest ore that was ever broken in the Anchoria-Leland is now coming from a new drift started west on the Maloney cross-vein from the first level of the big shaft.

The Maggie, on Howell hill, has been bonded to Boston parties for $35,000.

The Victor Mining Company has issued a circular in which it is said that for the past ninety days trouble has been experienced in marketing the third and fourth class ores (which comprise from 75 to 90 per cent of the tonnage) at the cyanide mill, more of these grades being offered there than they can handle and treat. The works are being enlarged, and within three or four months the increased capacity will enable them to handle all the shipments made them. They now have over 2000 tons at the mill awaiting treatment, and the ore bins at the mine are full. This necessitates an almost complete stoppage of mining for the present. During the past four years the company has paid out $800,000 in dividends, at the rate of $20,000 a month.

At Central City, at the Fisk mine, 100 men are working, mostly on tribute, and all of them are making day's wages and a good many are making good money. Most of the work is being carried on in the upper levels and in the day shift, while at night timber men are busy putting in new timbers in the shaft below the 800- oot level, and President Conie of the property says they are anxious to get the water out so as to reach the 900-foot level (the bottom of shaft), when the force of men will be increased.

At Silverton the Silver Lake is producing 225 tons daily; and, as soon as the mill can handle it, 500 tons daily will be forthcoming.

The Victoria Company have been opening up new ground this winter and enough ore has been opened to keep the mill running all summer.

Judge Terry, who took back the Sunnyside mine, after a company had spent $50,000, and threw it up because they could find no ore, has already broken enough mineral to supply his mill this summer, and has a 15-foot breast of ore that is of better grade than any ore previously discovered.

The Ariadne, owned by the Congressional Company, has been developing all winter, and a firm body of copper and silver ore has been opened at a depth of 400 feet, while a discovery of rich tellurium ore has been made on the surface.

The Pearl, on Cement creek, which has one of the largest bodies of pyritous ores in the district, but too low grade to ship, is being worked by Beaver & Co. under lease.

J. M. Callow, general manager of the Golden Horn Consolidated Company, in Ice Lake basin, is on his return from London, where he has been attending a meeting of his company. He is accompanied with $60,000 with which to build a tramway from the mines to the mill, and also to add a steam plant and air compressors.

A Chicago syndicate has bought the Jersey mine, overlooking the town of Eureka, and has let a contract for 100 feet of drifting

Samples of ore from the new strike in the Ajax sustain all that has been claimed for it, and are identical with those that were obtained from the Mammoth at a corresponding level several years ago. The silver expresses itself in the form of a sulphuret, and that the percentage of lead is high is made known through the presence of galena.

ARIZONA.

Phœnix *Republican*: The Copper Queen Company of Bisbee has completed a deal with the Detroit Copper Company of Morenci whereby the former company acquires a controlling interest in the Morenci properties. The Copper Queen Company has been a minority stockholder in the Detroit Company.

The Kassar Gold Mining Company has been reorganized, and the properties will be worked in the future by the new company, which owns the Kassar and Diamond H gold properties in Lost gulch.

The Duquesne Mining Company are adding new machinery to their plant near Nogales.

The output of the Old Dominion Copper Mining and Smelting Company at Globe was the largest last month in the history of the company's operations.

New reduction works are to be erected at the Holland mine in Washington camp.

Prescott *Journal-Miner*: J. K. Murphy and W. T. Hutchinson are working the Gold Bug mine with excellent results, taking out good shipping ore.

Parties have taken a lease on Powell's Dark Horse and Right Bower claims, silver properties, and are taking out ore from them. The vein is 7 feet wide.

Men are at work on the Texas Chief and Texas Prince, on which there is a tunnel 100 feet long. The ledge is from 2 to 3 feet wide and the ore carries gold and about 33 per cent in copper.

Republican: An option has been obtained by a Pennsylvania company on the Peabody mine at Russellville, in the Dragoon range, in the southern part of the territory. The Peabody has been dormant for some time.

Electrical Progress.

Heating a Building by Electricity.

Written for the MINING AND SCIENTIFIC PRESS by ORRIN E. DUNLAP.

The central power station of the Niagara Falls Power Company, at Niagara Falls, is probably the largest building in the United States, if not in the world, that is heated entirely by electricity. Despite the large proportions of this structure, no heat other than electricity is employed to make it comfortable during the cold months. The power house is 195x60x50 feet.

The power house is divided into the dynamo room and the office quarters, making necessary the use of two kinds of heaters. All the heaters in the office portion of the building are on a secondary 100 volt circuit, which circuit is fed through converters which reduce the voltage from 2000 to 100. The use of a high potential circuit through the offices would necessarily entail danger, and it is for this reason the low voltage was adopted. The office section is two stories in height, and in it there is about 175 H. P. in heaters. The current devoted to heating the offices is taken from the primary of the circuit which feeds the street railways about the city of Niagara Falls. In the office are two 7 H. P. heaters, or a total of 14 H. P. in this room, 20x15x10 feet high.

In the dynamo room, which is quite spacious, the heaters employed are of different pattern. Instead of being placed on the floor, they are fastened on the wall of the room about 15 feet above the floor. There are fifteen of these heaters in the dynamo room in circuits of five each, each circuit being capable of taking up 200 H. P., but it never yet has been found necessary to put all three circuits in service, two of them answering every purpose. The current used for heating purposes in the dynamo room is taken from the bus bars, and carried on No. 4 covered wire. As this current is taken direct from the 2200 volt circuit, and as each heater takes up about 40 H. P., it is apparent that to install converters to convert this power down to 100 volts, the voltage used in the office portion of the building would be expensive. All the heaters in the dynamo room are of simple construction, being made of two circular rolled iron plates ⅛-inch thick and 24 inches diameter. Bolts hold these plates 4 feet apart, one above the other. In each plate there are twenty-eight holes, the diameter of each hole being half an inch. Each hole contains a porcelain insulator; through these insulators No. 6 wire is strung. There are thirty-eight coils, each 1½-inch in diameter, the distance between convolutions being twice the diameter of the wire; the resistance of the heaters will take about 65 amperes at 440 volts, so that each five heaters in series will consume 2200 volts at 65 amperes.

In heating the dynamo room and the office portion of the power house the maximum amount of power used is 430 H. P., not taking into account the heat from the dynamos, an important factor, so far as the dynamo room is concerned. Three dynamos, each of 5000 H. P. capacity, are now in use in the dynamo room; but, as a general thing, only two of the machines are operated at the same time. Were each of the dynamos run so as to generate 4000 H. P., instead of at its full capacity, and 3 per cent of this power was lost in heat, which is a fair estimate, each of the two dynamos would contribute 120 H. P. toward heating the dynamo room, or from the two machines 240 H. P. in heat would be the result. By adding this 240 H. P. to the amount of power consumed by the heaters, it will be seen that nearly 700 H. P. is consumed in heat in the building.

The Niagara Falls Power Company have found their electric heating service very comfortable, but this does not denote that electricity will come into general use for heating purposes. The company are fortunate in having a large amount of cheap power, but, despite this fact, the electrical heating of their power house is a luxury, and one which few people are rich enough to enjoy. To the subject of electrical heating P. M. Lincoln has given considerable thought and study, and his views of the future of it are given in these words: "I do not think electric heating will ever come into general use. You can look at it in this way: It takes a great deal of power, comparatively, to make a given quantity of heat. Suppose a man was going to buy current enough to heat his house. Every form of heater has 100 efficiency. In an incandescent lamp all of the power is ultimately converted into heat and if a man were to put in enough incandescent lamps to heat his house, you can imagine what his bill would be at the end of a month. That is the only proper way to look at it. When we get electricity direct from coal, it may be used for heating. By far the most economical way to use coal for heating at present is to burn it, and not transform it into electricity by the present methods. Yes, I think the time will come when they will get electricity direct from coal—not direct from coal itself, but possibly from the products of coal. The effect depends upon the efficiency of the apparatus. We now get electricity from coal, but we have to go through a circuitous method. Electric heating may be advantageous for some particular purposes, such as heating soldering irons, where the heat must be constant. Electric heat in application to cooking may become popular, because it does not take much heat to cook, and very little heat would be wasted, where by the ordinary method considerable is lost."

DYNAMO ROOM OF THE NIAGARA FALLS POWER CO.'S CENTRAL STATION, SHOWING HEATERS ON WALLS: LARGEST ELECTRICALLY HEATED BUILDING IN THE WORLD.

Independent Driving of Machines by Electric Motors.

The advantages of independent driving of machines in any shop—that is, without the use of the traditional long lines of shafting—are never so well appreciated as when figures are available designed to show how much power is ordinarily used up in simply turning the shafting—in the friction of the transmission between driving and working points. A good many experiments have been made in the past to determine what this waste amounts to, and the results nearly always have indicated tremendous losses, relatively speaking. Still, one is not quite prepared for the figures given in a paper on the subject recently presented before the American Society of Mechanical Engineers by Prof. C. H. Benjamin. The trials of which they are the outcome were made at sixteen different establishments, with horse power totals ranging from 8 to 400, and with percentages lost in friction from 14½ to 80, the average friction loss amounting to over 55 per cent. These figures, it is proper to add, include, in every case, the friction of the engine itself, but even if a liberal deduction be made for this we have still a formidable reminder. What a fruitful field there is here for the electrical engineer! While small steam engines are used in some cases for driving single machines, and form a part of them, it is to the electric motor that we will eventually be indebted for a wider application of the independent driving system. There are a few shops—models in their way—where this system is in use, and has been for several years, and year by year fresh proofs are given of its manifold advantages. In these shops machine tools of all kinds, traveling cranes, elevators, each has its own motor, big or little, and the line shaft, the countershaft and the multitude of pulleys are, indeed, relics of a past regime.—Cassier's Magazine.

Scientific Progress.

A New Power of Air.

C. E. Tripler claims to have discovered a new power which, according to him, is going to revolutionize transportation and manufacturing. It is liquefied air. How he liquefies air he will not tell. It has been done before, but in small quantities in scientific laboratories, but never commercially. When liquefied, the air is at a temperature of 450° below zero, on the Fahrenheit scale. It boils or vaporizes again at 210° below zero, and it is from the expansion consequent upon this vaporization that Mr. Tripler obtains his "power," which is transmitted through an engine exactly as the power generated by steam from boiling water is transmitted. It is possible, however, he declares, to obtain a pressure of 2000 pounds to the square inch at a temperature of 200° below zero, and at practically no cost, from liquefied air, while to obtain 150 pounds of steam a temperature of 360° above zero is required and the consumption of large quantities of coal. It can be seen that if Mr. Tripler's contention is true all ideas of transportation and manufacturing must be readjusted.

The most remarkable claim is yet to be told. Mr. Tripler declares that his liquefied air in boiling, or changing to vapor again, absorbs the heat in the surrounding air so rapidly that it in turn is liquefied and flows into the reservoir, which in this manner is always kept supplied. That is, once the apparatus is charged with a supply of liquefied air it feeds itself, and will practically run forever without any cost for fuel. Mr. Tripler declares, too, that there is no loss of power in this process. He says he has set up one of his machines at the works of the American Air Power Company, in 129th street, New York City, and will soon give an exhibition of its operation. In appearance the apparatus resembles an ordinary barrel placed above a small engine. The interior of the barrel is lined with a thick coating of felt or other non-conducting material, and is filled with a network of pipes, somewhat like the condenser in a distillery. In the bottom of the cylinder is the tank containing liquefied air. The method of operation is Mr. Tripler's secret.

Longevity in Southern Latitudes.

Because in tropical countries more decayed vegetable matter is found, and in consequence more miasma, the idea has become popular that only vigorous health and long life are likely in northern latitudes, where frost now and then asserts itself. The fact that humanity matures much earlier in tropical climes seems to warrant the conclusion that it must necessarily perish much earlier. Dr. Luigi Sambon of Rome attempts to put these popular impressions to sleep by an elaborate exhibition of statistics. He doesn't contend that the warmest climate is most suitable to a man, under the conditions of modern civilization, but he remonstrates vigorously against the idea that a cold and variable climate is the most conducive to the physical and intellectual improvement of the human race. While northern climates may produce stalwart frames, statistics show that they do not conduce to longevity. In proof of his position, the doctor cites the fact that the average Arab outlives the average Esquimau by not less than twenty-five years. He shows that the people who live along the unhealthful coasts of Central and South America survive the inhabitants of the higher and cooler altitudes of the interior. He shows also that the Hindus, who often reach puberty as early as nine years, live to a surprising old age. The inhabitants of the southern countries of Europe are found to live much longer than those of the northern latitudes. To illustrate, in England in a population of 27,000,-

000 there are but 146 centenarians, while in Spain with a population of but 18,000,000 there are 401 centenarians.

Science of the Mosquito.

There are four truths respecting the mosquito which modern science has established:

First—A mosquito cannot live in air free from malarial poison. Untainted air has the same effect on him as a healthy community on a doctor. It deprives him of patients, and he must go to less favored localities to practice his profession.

Second—The lymph, which flows through an automatic valve when it inserts its proboscis, contains a modified germ of the malarial fever; and, according to the well-settled law of inoculation, the introduction of the weak germ renders harmless a subsequent attack by the strong germ.

Third—The mosquito never swallows human blood. It cannot. The fact that its body becomes discolored and swells, while probing, is caused by the discoloration of the lymph in contact with the blood and the muscular effort of inserting the probe.

Fourth—A mosquito will never insert its lancet in a person not susceptible to an attack of malaria. In this respect its sense is more accurate than the most skilled and experienced pathologist. This also proves not only its unerring instinct, but that it never wounds unnecessarily. Its thrusts are those of a skilled and human surgeon.

THE analyses of Berthelot not only show that the Chaldean weapons, ornaments and tools of 5000 or 6000 years ago were of pure copper, but that iron, silver and gold were known. The copper age preceded that of bronze, which appeared later in both Egypt and Chaldea. It is further noted, moreover, that the form of hatchets with handles, the processes of manufacture, and even the practical uses, were the same for the pure copper hatchets of Chaldea and the prehistoric hatchets of Europe.

Mechanical Progress.

Subaqueous Pipe Tunnel.

E. F. Sanford, Merced, Cal., has patented a subaqueous pipe tunnel, designed to be a solution of a difficult engineering problem. The invention relates to the class of pipe tunnels or conduits for any purpose, such as the conveying of liquids or gases, or the transportation of messages and goods, or the passage of vehicles, such tunnels being laid under water to rest upon or in the bottom. It consists essentially of flexibly jointed sections; a continuous flexible line secured to each section and crossing the joint so as to connect them together; coupling sections telescoped in the adjacent ends of the main section, and of sufficiently smaller diameter to permit the main section to bend out of line; bands of flexible waterproof material encircling the joints exteriorly, and fastenings on the main sections consisting of fixed and movable jaws which engage the continuous cable which flexibly connects the sections together. In conjunction with these are controllable nozzles in each section with pipes leading thereto, whereby water may be introduced and ejected against the bottom so as to adjust and grade the line of the tunnel or conduit.

The invention is deemed by the inventor to be applicable to any river or body of water where a bridge would be a hindrance to navigation or where the nature of the soil is such that a bridge foundation could not be made without great expense. The estuary between Oakland and Alameda could, in his judgment, be crossed by a tunnel of this description at an expense not greater than that of a bridge. If the practicability of laying such a tunnel over a short distance were established, longer ones would presumably follow. The accompanying illustrations give a good idea of its practical structure and operation.

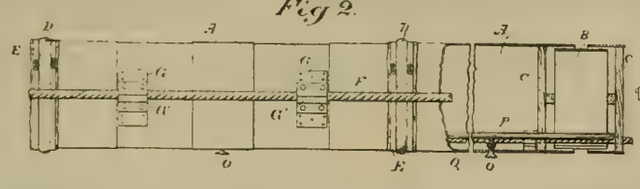

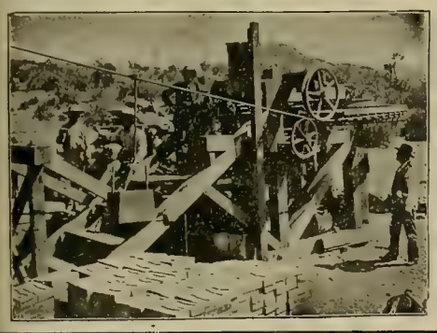

Fig. 3.

SUBAQUEOUS PIPE TUNNEL.

Power From Ocean Waves.

A recent issue of the London *Industries and Iron* describes and illustrates an apparatus constructed by B. M. Fletcher, Am. Inst. C. E., for the conversion of the force of the ocean waves into useful power by the operation of a high pressure pump. The apparatus consists of a buoyant submerged horizontal plane securely anchored at the bottom at a depth sufficient to be beyond wave action (probably 40 feet or more) and carrying a vertical pipe that rises a few feet above the surface of the water and serves as a guide upon which a floating buoy slides up and down. The top of the stationary pipe is made to serve as a pump piston working in a movable eccentric cylinder attached to the buoy. Sea water is thus pumped through a system of valves and pipes to suitable reservoirs or accumulators to serve for the storage of hydraulic power.

THE HALLIDIE ROPEWAY

Stands pre-eminent for the transportation of Ore, Fuel and other materials over mountainous and rugged country.

Parties desiring to remove large quantities of Sand, Gravel, Earth, Ore, Rock, to construct Dams, Levees or Embankments, etc., can do more efficient work at less cost by the

Hallidie System of Ropeway Transportation

Than by any other known system.

Coast Industrial Notes.

—There are 151 creameries in California.

—A starch factory is building at Port Costa, Cal.

—Work has begun on the King's river bridge by the Valley road.

—The California Asphalt Co. is about to build a refinery at Ventura, Cal.

The transfer to the Southern Pacific of the New Mexico and Arizona and Sonora railways will be made May 15.

—The Electric Power Company is considering the question of building an electric railway from Grass Valley to Nevada City, Cal.

—The thirtieth Industrial Exposition of the Mechanics' Institute will open at the San Francisco Pavilion August 17th and close September 18th.

—Two guns, each weighing 115,880 pounds, 45 feet long and throwing a 1000-pound shot, will be mounted at Lime Point and Fort Point, San Francisco harbor, next month.

—The Spokane & British Columbia Telephone Company have received twelve tons of copper wire from San Francisco. This will string 144 miles. Within a month Rossland and Spokane will be connected.

—The Manufacturers' and Producers' Association is engaged in a present effort to have freight rates from San Francisco and Eastern points reduced to the amounts now being paid by Eastern shippers to this coast.

—San Diego, Cal., proposes a contract for the development of a supply of water which will impose a municipal debt of $1,500,000. The proposal to contract another $100,000 of debt for an electric light plant is not favorably received.

—In '96 the Chino, Cal., beet sugar factory grew 7000 acres of beets, producing 64,000 tons of beets, an average of 2286 pounds of crude sugar per acre. The net profit to the factory was about $240,000. The average return per acre to growers of beets was $33.75.

—The grade on the Sierra Railroad is now finished to Tulloch's ranch, and within a few days the grade will be complete to the Emery ranch. Two large trestles must be constructed at once—one at Tulloch's and one on the McKinnie ranch. A large force of men will be put on the rock work in the mountains in a few days.

—The Southern Pacific Company is considering the closing of the sixty-mile gap in the coast division. There will be required twenty-seven iron bridges in this distance. The cost of building the sixty miles will be about $2,500,000. The coast route will not shorten the distance by rail between San Francisco and Los Angeles; it will be 488 miles as against 482 by the San Joaquin Valley route. At present it is 22½ hours, and this will be cut to 17.

—The line of boats from Golden, on the C. P. R. R., down the Columbia, with that from Jennings, on the Kootenay river, north into the Fort Steele country, has been consolidated. The combined concern will be known as the International Navigation Company. It is a branch of the C. P. R. R. service. There are already five steamers on these routes, and the sixth is building. The new company has one contract to carry 4500 tons galena ore from the North Star mine to Jennings.

Recent California Mining Incorporations.

Logan G. M. Co., S. F.; J. C. Young, D. Hughes, W. Johnstone, J. J. Scoville, G. L. Brown; capital stock, $500,000; $250 subscribed.

Behemoth Con. G. M. Co., S. F.; D. A. Donelson, A. T. Sherwood, J. B. Whitney, C. Williams, G. T. Emery; capital stock, $600,000; $5,000 subscribed.

Caro M. Co., S. F.; F. S. Samuels, J. L. and F. L. Mudge, I. Stewart, J B. Smith; capital stock, $250,000; $500 subscribed.

Jupiter M. Co., S. F.; B. J. C. and A. O. Wendt, I. Cantour, V. Pouclet; capital stock, $10,000,000; $2,500 subscribed.

Big Ledge Mining Company, San Bernardino. Directors—S. Theis, Perry; M. Peacock, Los Angeles; C. B. Morris, San Bernardino; capital stock, $100,000; subscribed, $21,040.

National Con. M. Co., Redding, Cal.; capital stock, $1,000,000; G. Schmitt, G. F. Volz, C. Rehn, C. Wollpert, J. Scharff.

Recently Declared Mining Dividends.

The Morning Star Mining Company of Iowa Hill, Cal., has declared its seventy-sixth dividend of $5 per share.

Swansea, Utah, $5000; payable April 20th.

South Swansea, Utah, $7500; payable April 19th.

Geyser-Marion, Utah, $9000; payable April 21.

Rambler-Cariboo Company, British Columbia, $20,000; payable April 15.

Mercur, Utah, Mining Company, $25,000, April 20. Other Utah mining company dividends are: Geyser-Marion, $9000; Swansea, $5000; South Swansea, $7500.

Anaconda Copper Mining Co., Montana, $1,500,000, a total of $3,750,000 to date.

Anchoria-Leland M. Co., Colorado, $6000; April 15.

Calumet & Hecla M. Co., Michigan, $500,000; April 23.

Portland M. Co., Colorado, $30,000; April 15.

For Sale at a Bargain.

One new GOLD KING AMALGAMATOR—never used. Apply to Marshutz & Cantrell, N. W. corner Main and Howard streets, San Francisco, California.

Personal.

CHAS. UREN of Grass Valley, Cal., has gone to Mexico to examine some mining property.

ALBERT MALIMAN of Grass Valley, Cal., will take charge of some mining operations in northern China.

LIEUT. PEARY, of Arctic fame, has been transferred from the New York navy yard to Mare Island, Cal.

R. CAVILL has returned from South Africa and will manage the Poorman Gold Mines, Ltd., at Silver City, Idaho.

J. F. MCDONNELL of Virginia, Nevada, has organized a branch of the Western Federation of Miners in Tuolumne Co., Cal.

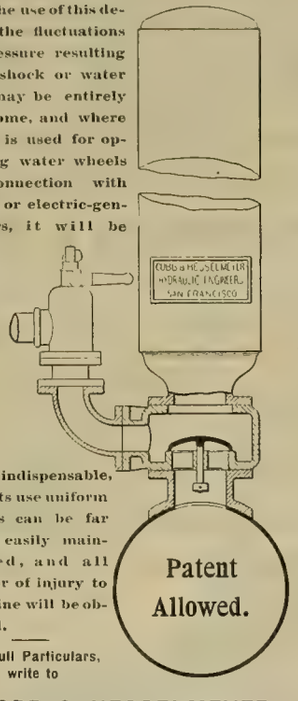
JESSE MILLER has been appointed superintendent of the Scotia Mining and Milling Company on Toulon mountain, on the Calville reservation, Washington.

LOUIS WILLIAMS has been appointed superintendent of the Detroit Copper Company at Morenci, Arizona, control of which was lately acquired by the Copper Queen Company.

JOHN HAYS HAMMOND, resident consulting engineer in London of the Consolidated Gold Fields, returned to England last week from South Africa. It is his intention to return to California shortly.

HAMILTON SMITH, who has long been managing director of the Exploration Company of London, which he and De Crano founded, has, owing to want of time, given that position up, but remains in the board of directors.

APPARATUS



—FOR—

Regulating Pressures

—IN—

PIPE LINES

By the use of this device, the fluctuations of pressure resulting from shock or water ram may be entirely overcome, and where water is used for operating water wheels in connection with hoists or electric-generators, it will be found indispensable, as by its use uniform speeds can be far more easily maintained, and all danger of injury to pipe line will be obviated.

Patent Allowed.

London Head Office.....8 Drapers Gardens.
Laboratory and Ore Testing Plant, 1530 Wynkoop St., Denver, Colo.
This process has a well-demonstrated merit in treatment of low-grade Gold and Silver Ores, especially those of a complex character, talcose and clayey combinations or slimes, which class of ore, as is well known, cannot be treated by leaching or lixiviation.
Gold and silver values, both fine and coarse particles, are by the PELATAN-CLERICI PROCESS recovered direct from ore without roasting as pure amalgam, and the precious metals are saved in the form of fine bullion without any refining costs.
F. CLERICI, Manager for U. S.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

FAUCET AND VALVE.—Frank A. Fowler, San Francisco, Cal. No. 580,574. Dated April 13, 1897. This invention relates to a discharge nozzle or faucet which may be applied to cans or receptacles of any kind containing liquid from which it is desired to withdraw the contents from time to time. It is especially applicable to cans containing oils. It consists of an interior spring-actuated controlling valve, an air vent connecting with the nozzle, a means for operating the valve and controlling the air vent simultaneously, so that the air vent is opened when the nozzle is opened and closed when the latter is closed. The device may be locked when the valves are closed, so as to prevent any leakage or escape therefrom.

FRUIT CUTTER.—M. B. Totten, Colusa, Cal., assignor of one-third to Joseph B. Cooke, same place. No. 580,563. Dated April 13, 1897. This invention relates to a hand implement or tool for cutting fruit so as to remove the pits therefrom preparatory to drying. It consists of opposing blades, each having a distinct cutting edge at its point and heel and an intervening cutting edge of curved or recessed form adapted to embrace and hold the pit while the severed sections of fruit are being removed, these blades being arranged to overlap at the point and heel on opposite sides so as to prevent their springing sideways while holding the pit.

PROCESS OF MANUFACTURING FUEL.—Frank Batter, Marshfield, Or. No. 580,568. Dated April 13, 1897. This invention relates to the manufacture of fuel from lignite and coal containing a low percentage of fixed carbon. It consists in subjecting the material to a low temperature in a closed retort to dry off the moisture and volatile products, then collecting and condensing the volatile products and allowing the gases therefrom to return to the retort furnaces to be used as a fuel after being first subjected to a washing action, then withdrawing the residue from the retorts, reducing it to fine particles or powder, withdrawing the tar and oil resulting from condensation of the volatile products and mixing them with the reduced residue from the retort, then subjecting the mass to pressure, baking it and separating it into blocks or ingots in molds, where it is subjected to pressure to form permanent blocks.

ELECTRIC HEADLIGHT.—R. P. Schwerin, San Francisco, Cal., assignor to Market Street Railway Co. No. 580,557. Dated April 13, 1897. This invention relates to the class of illuminating devices and is especially adapted as an electric light to be carried by electrically operated cars. A parabolic casing is constructed having a top opening, a lamp socket fixed therein; the parabolic mirror within the casing is separated from the lamp to form a ventilating space or channel, and an air inlet opens into the bottom of the casing just in front of the lower edge of the mirror, and an outlet between the outer portion and the ventilating space, thence to the open air. The front of the casing has a flat glazed door, through which the light is delivered. The casing is supported upon a jointed leg so that it may be set to any desired angle. The exit openings for the escape of air are protected by a shield.

APPARATUS FOR REFINING ASPHALTUM.—Arthur F. L. Bell, Carpenteria, Cal., assignor to the Alcatraz Asphalt Co., San Francisco, Cal. No. 580,592. Dated April 13, 1897. This invention relates to the general class of refining apparatus and is especially applicable to refining asphaltum. It consists essentially of a rotatable closed drum to receive a jar of material, means for admitting air or steam to the interior of the drum, and a means to permit the escape of the gases therefrom. The drum has a hollow axle, into one end of which the air and steam are admitted and allowed to pass into pipes or passages which discharge into the mass of material toward the bottom. The opposite end of the axle is designed to permit the escape of gases and vapors and hollow shields are so disposed with relation to the inlet and outlet openings as to protect the openings from the contents of the drum, the arrangement being such that the air or steam is continually injected into the lower part containing the asphaltum, and the inlet and discharge openings are protected.

FRUIT SLICING MACHINE.—Ives Scoville, Oakland, Cal. No. 580,560. Dated April 13, 1897. This invention relates to the class of slicing machines and is especially adapted for slicing such fruit as peaches after they have been peeled and the stones or pits removed. It consists essentially of a fruit holder having a recessed end to form a segmental socket, which receives the end of the fruit and having a horizontal forward projecting support upon which the fruit rests while being advanced to the slicing devices. These slicing devices consist of a series of radially disposed knives, towards which the slidable horizontal support or plate and the holder are movable. The holder is slotted so that the slots coincide with the blades, and when the holder is pushed forward the fruit will be subdivided by these blades, which pass into the slots of the holder sufficiently for that purpose.

A Great Mining Triumph.

Capt. J. R. DeLamar, of New York City, is one of the largest owners and workers of Gold Mines in the world. After the most careful investigation he purchased in August, 1895, two Griffin Mills, and his report is so remarkable as to demand the careful attention of every one interested in Gold Mining.

We give it in his own words.

NEW YORK, Jan. 9, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—The two Griffin Mills have been in operation now for 90 days on the hardest rock, with the exception of corundum, that I have ever met during my mining life. They have taken the rock direct from the breaker, and they average about 20 tons to each machine, 40 mesh fine, without elevating or bolting. We simply put a ¼ mesh screen around the Griffin Mill, and the stuff comes out 40 mesh fine or over, which makes it an excellent pulp for leaching by cyanide or chlorination; therefore we have concluded to order **10 more Griffin Mills.** We have tried high-speed rolls and dry stamps, and after looking into the Huntington Dry Pulverizer, the Narod Pulverizer, the Stedman Pulverizer, the Frisbie Lucop, the Cook, and various other dry pulverizers, unhesitatingly recommend your Griffin Mill to any one.

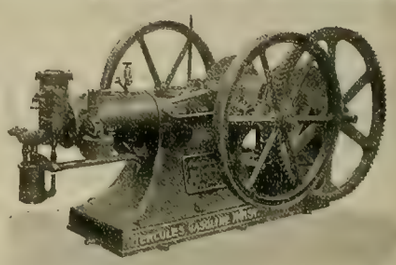
Yours truly, (Signed) J. R. DELAMAR.

HOW 10 GRIFFIN MILLS WORK.

DELAMAR'S NEVADA GOLD MINING CO.,
SALT LAKE CITY, UTAH, Nov. 24, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—In answer to your inquiry as to what the "Griffin Mill" is doing at our DeLamar Mill, DeLamar, Nevada, we beg to state that we often run 310 tons per day with 10 of your mills in operation, and on one occasion these 10 mills produced 408 tons in one day. I have no hesitancy in stating that they will regularly produce at least 30 tons per day each on our ore, which is extremely and unusually hard.

Yours very truly, H. A. COHEN, *General Manager.*



These strong letters coming from such representative men are conclusive evidence that we are right in claiming that the "Griffin Mill" will produce a larger amount of finer pulp at less cost than any other stamp or pulverizer made.

Let us send you a free copy of our illustrated pamphlet, which will tell you all about the Mill and bring to you other evidence of its great achievements.

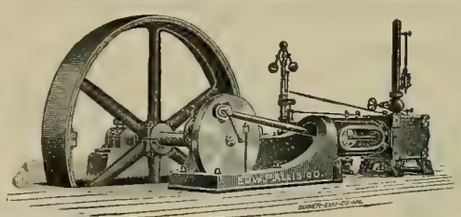
BRADLEY PULVERIZER CO., 92 State St., Boston, Mass.

HERCULES GAS, GASOLINE AND DISTILLATE ENGINES.

HOISTING ENGINES, 2 h. p. to 200 h. p. ✦ **STATIONARY ENGINES,** 1 h. p. to 200 h. p. ✦ **MARINE ENGINES,** 2 h. p. to 200 h. p.

Our newly designed and perfected DISTILLATE VAPORIZER insures a saving of 50% on cost of running. Just ½ your expense SAVED BY USING A HERCULES in place of ANY other. We make no exception.

NEARLY 3000 HERCULES HOISTING, STATIONARY AND MARINE ENGINES IN ACTUAL USE. HIGH GRADE.



We claim **full power, automatic and positive adjustment regulating speed and consumption of fuel** in proportion to work being performed. **No spring electrodes to burn out. All springs are outside. Point of ignition, speed and amount of fuel can be changed while engine is in operation.**

Market Reports.

The Markets.

SAN FRANCISCO, April 22, 1897.

There is a steady but, as yet, a slow increase in the volume of goods going out. From the agricultural sections the call, so far, has not come up to expectation, this, doubtless, is owing to dry weather and the need in many locality of rains at an early day to insure a good yield of grain. So far the fruit crop prospects are favorable for a large yield, yet it will be from one to three weeks before it can be known how much the fruit has set, if favorable then there will be more disposition to buy goods and make improvements in anticipation of a large outturn. Manufacturers report that the outlook favors the expectation that there will be a decided increase in demand for all kinds of work. The tariff question is somewhat of a disturbing factor at present, but this will soon be set at rest by the Senate committee's report on the House bill. It is generally conceded that nearly all, if not all the amendments that will be recommended will be accepted by the House.

In the local money market there is absolutely nothing new to report. The rates of discount are being shaded on gilt-edge security and call loans. For term loans the rates at commercial banks are unchanged, but the savings banks are disposed to more ease. The expectation that large requirements will come for crop moving purposes makes banks rather conservative in placing time loans. It is stated that some inquiry is being made as to accommodations later on or within the next two or three months. There are considerable quiet inquiries in the market for gold mining properties. It is stated that quite a number will change hands if expert reports are favorable. The New York market is reported as follows: "The money market appears to have fallen into a condition of extreme lethargy and nothing but the fact that many of the banks will not mark down their rates below 2% keeps the call money rate above 1%. The principal banks prefer to have call loans paid off than to reduce below 2%. Their argument is that if they loan below this rate it would eventually mean a 1% rate for call money and that within a very short time. They argue that they would have to keep twice as much money outstanding with money at 1% as they now keep in order to earn the same profit, with double the risk. In their opinion this is not good business. It is better to have loans paid off to a moderate extent. The Trust companies are taking a lot of business from the Clearing House banks, especially street loans. These companies are apparently willing to make the best of existing rates in the call loan market."

London advices continue to report an active demand for gold with the premium not only sustained, but tending to stronger figures.

New York Silver Prices.

NEW YORK, April 22. — Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	28 7-16	62
Saturday	28 7-16	62
Monday	28 7-16	62
Tuesday	28 7-16	62
Wednesday	28 7-16	62
Thursday	28 7-16	61 15-16

	Copper.	Lead.	Iron.	Tin.
Fri.	11 40 @11 60	3 25	10 00@12 50	13 30
Sat.	11 35 @11 60	3 25	10 00@12 50	13 25

Tue.	11 30 @11 50	3 30	10 00@12 50	13 20
Wed.	11 25 @11 50	3 30	10 00@12 50	13 20
Thur.	11 25 @11 50	3 30	10 00@12 50	13 20

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87½
London Merchants	$4.85½
London Sight Bankers	$4.89½
Refined Silver, per oz., 1000 fine	61¾
Mexican Dollars	49@50

SILVER.—The market held steady at 62 cents up to to-day, when it was a shade lower. The demand is slow not only here, but at the East. The last steamer for the Orient took out only $144,148 in bullion. The East reports a slow market. Our London advices are to the effect that steady holding in the United States keeps the market from breaking, owing to the very light demand from all sources.

MEXICAN DOLLARS.—The last steamer for China took out 14,998 dollars. The market is slow, with a very light inquiry reported. The East reports a quiet market, with shaded prices necessary to place a round parcel.

QUICKSILVER.—The market here is reported practically unchanged so far as quotations are concerned, but the demand is enlarging. The Eastern markets, at last mail advices, were easier. The last steamer for Central America took out 120 flasks.

Our market is quoted at $40 for domestic consumption.

COPPER.—The market has been sinking at the East and abroad for fully one month until prices are now, it would seem, low enough to justify buying. In our market quotations are not given lower, yet buyers can get concessions. James Lewis & Sons write under date of April 2nd from Liverpool as follows: "The quantity of Chile bars at Liverpool and Swansea is now reduced to 19,282 tons, against 30,008 tons a year ago, while the invisible supply of copper both in England and on the continent must be much less than it was on the 1st of January of this year. European consumption continues on a large scale, and a great increase is expected in the course of the year in the United States, so large that a leading American authority anticipates that the exports to Europe this year will not exceed 80,000 tons, against 125,000 tons in 1896."

The local market is quoted as follows:

Ingot, jobbing	—@14¼
Ingot, wholesale	—@13½
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

LEAD.—There is a continued free consumption. Prices at the East and with us have not varied much the past week.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—The market is steady with only a fair jobbing demand reported.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

TIN.—The market with us is dull for both pig and plate, owing to the bulk of wants having been met. There is reported a quiet market, with lower prices ruling for pig. Plates are steady at combination prices.

We quote as follows in a jobbing way:

Pig, per lb	14½c@ —
Plate, I C coke, heavy, per box	$4 05@ 4 15
" " " light, "	3 95@ —

POWDER.—The market is steady.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—The market is reported fairly active.

The market is quoted as follows:

Refined, in car lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4¼

LEAD.—There is a fairly free consumption. The East reports quieter markets, with St. Louis not so strong, owing to a falling off in the demand.

IRON.—There is practically nothing new to report. The market is firmer for foreign and steadier for American. The East reports that Southern furnacemen think that no further reduction can be made in prices.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—The demand is light for all descriptions, but the market is held steady. The consumption of steam is expected to show a large increase this year.

We quote as follows:

SPOT FROM YARD—PER TON.

Wellington	$8 00@— —
Greta	6 00@ 6 50
Nanaimo	6 50@ 7 00
Gilman	5 50@ 6 00
Seattle	5 50@ 6 00
Coos Bay	— —@ 4 75
Cannel	8 00@— —
Egg, hard	12 00@13 00
Wallsend	6 50@— —

TO ARRIVE—CARGO LOTS.

Australian	5 50
Liverpool Steam	6 25
Scotch Splint	— —
Cardiff	6 25
Lehigh Lump	9 00
Cumberland	13 00
Egg, hard	10 00
West Hartley	6 50

COKE.—The market is quoted as follows:

Gas Companies'	— —		— —
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is steady.

Our market is quoted at 7⅞@8⅛c in a jobbing way. New York mail advices quote 7¼c for Cookson's, 7@7¾c for Hallett's and 7c for Japanese.

NAILS.—The market is firm.

Wire, carloads, basis per keg		
" jobbing, " "		$2 25
Cut, carloads, " "		
" jobbing, " "		2 10

Chemicals.

The market is quite firm for all lines affected by tariff legislation, but importers and jobbers are not disposed to advance values until the Senate bill is reported. This bill, it is thought, will be passed with only a few changes. The East reports strong markets, but with few changes in quotations, and these are of no consequence.

SPELTER.—The market is quiet.

We quote our market in a jobbing way at 5 cents a pound.

NICKEL ANODES.—The markets here and at the East are firmer.

PLATINUM. —Dealers report a light inquiry.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is steady at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is firm.

We quote in jobbing lots at 50 cents per pound for ingots.

BISMUTH.—There is nothing new to report.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steady.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—The market is firm.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is fairly active, but steady at 2¼c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is quiet but firm at $1.70 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a fair demand at 2½c a pound from stores.

NITRATE OF SODA.—Advices from the East are unchanged.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is firm at 6 to 12c per pound from store for carboys, according to make.

NITRIC ACID.—Our market is reported steady from store at 6½c per pound in carboys.

SULPHURIC ACID.—The demand is slower. We quote in a jobbing way at 1½c per lb for 66%.

BLUE VITRIOL.—Our market is steady. We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, April 22, 1897.

The market has continued fairly active at generally firmer prices. The action of the market gives unmistakable evidence of its being manipulated for a coming deal. The moves also indicate that stronger parties are in the background who are pumping outside shareholders of their long-held assessment paid shares, and at figures considerably below what have been paid in assessments. There can be no doubt that the mines, taken as a whole, were never in better condition for working to the west, or in any other direction, while the general condition—financial, manufacture, or general business—of the country is shaping itself in line with greater activity and more prosperous times which will give strong support to a speculative bull campaign this summer and fall, not only in the East, but also on this coast. It looks now as if the many ways by which the mines have been looted in the past, have been well ventilated through the press and law suits so as to make it impossible to bring a new action at law against those guilty, owing to its being outlawed by time after the facts had been made known. This, of course, does not apply to the cases now pending in court, but these will probably be out of the way within a few months. The advance in Con. Virginia the past week to $2.10 a share, with other north end shares sympathizing, is said to have been based on news of an improvement on the 1650-foot level towards the Ophir line. Official advices do not give much importance to the improvement, but private advices do. It is stated that the vein is 4 feet wide, 2 feet of which goes considerably over $100 to the ton. It looks as if more ore is expected in that portion of the mine, for they have prepared for something of the kind with a two-compartment shaft. The west joint workings of Kentuck, Crown Point and Yellow Jacket on an upper level is expected to result in finding high grade gold ore, provided the west crosscrift is not stopped before reaching the ore known to be towards the west. The long crossdrift run jointly by Con. Imperial, Challenge and Confidence ought to be near the west lode. When this is struck better prices ought to rule for the shares. There are several points along the lode which bear close watching, provided the work is done honestly and in the interest of shareholders, and not operators in the share market in this city.

Official letters from the Comstock mines do not report any essential changes, yet they indicate the approach in two or more points, which ought to give good results before many weeks pass, unless the inside give word to have it stopped. In Con. Virginia they are getting the 1000-foot level in better working condition and until this is done it looks as if it is not the intention to show up the ore there. The work on the 1550-foot level is practically unchanged. On the 1650-foot level, as noted above, an improvement is reported. There is an increase in the number of tons raised. Last week there were 94 tons assaying over $42 to the ton. There was milled 135 tons which yielded in bullion an assay value of $15,124. In Ophir some stringers of good ore have been struck in prosecuting the work reported in our last issue. In Mexican fair progress is still the order in running the west crossdrift on the 1000-foot level. The total length was 56 feet about one week ago. From Sierra Nevada, Union and Utah nothing new from official sources has come to hand. The work is the same heretofore reported, while the number of feet run does not vary much. Some very interesting work is being done in Andes. Best & Belcher and Gould & Curry continue to report work in the joint east crossdrift on the 800-foot Bonner shaft

FOR SALE.

Mine well developed. Complete working plant. Situation and facilities first class. Address H. D. RANLETT, Ranlett, Amador County, Cal.

level. In Savage active exploiting and dead work is being done in several levels. No work is reported in Chollar. They are still opening to the south on the tunnel level in Potosi. Some ore, about 40 tons, was extracted last week. It assayed over $42 to the ton. In Bullion work is continued on the north lateral drift. The work in Alpha is still confined to the 500-foot level. Last week they averaged 1-foot a day. There is no change in the work being done in any of the Gold Hill mines, and nothing of much importance is expected to be reported until the inside managers have frozen outside holders out of the bulk of their holdings which were bought at higher figures. No mention has been made yet of the ore strike made a long time ago in two of the mines. The official letters do not contain anything that would indicate an expectation of rediscovering the ore at an early date. In Alta the work is practically the same as heretofore reported by us. There are some ugly rumors out about the management of this mine.

From the Brunswick lode public advices do not report any material change from advices received the preceding week, but private advices are quite encouraging; yet in operating in shares it is not safe to go by the latter even if they are thoroughly correct. The joint work being done by Con. Virginia, Best & Belcher and Gould & Curry is confined to sinking shaft No. 2, which is down on an incline about 730 feet, and running east crosscrifts on the 300-foot level. In Savage no change is reported in the work that is being done. In Chollar they have about finished the station in shaft No. 1 on the 600-foot level. They have started three crossdrifts on the 500-foot level—two to the east and one to the west. On the 400-foot, 300-foot and 200-foot levels active exploiting work is the order. Last week nearly 200 tons of ore were extracted from these levels and sent to mill. The battery assays averaged over $17 in gold and 16 ounces in silver to the ton. This was higher than the car sample assays.

The following illustrates the changes of the week:

Stockholders' Meeting Jamison Mining Co.

Notice of Annual Meeting of Stockholders of the Jamison Mining Company: In accordance with the by-laws of the company, the regular annual meeting of stockholders of the company will be held at 2 o'clock P. M. on MONDAY, the 3d of May, 1897, at the office of the company, rooms 50 and 54, 120 Sutter street, San Francisco, California.

By order of the President.

SAM W. CHEYNEY, Secretary.

Dated San Francisco, April 9, 1897.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from Charles and Ben Howlett, in the Howlett claim, near Columbia Hill, Nevada Co., to deposit tailings in Knapp Ravine, and from the Marguerite Gravel and Quartz Mining Co., in the Marguerite Mine in Eureka Mining District, Nevada Co., to deposit tailings in a ravine, gives notice that a meeting will be held at Room 59, Flood Building, San Francisco, Cal., on May 10th, 1897, at 1:30 P. M.

Assessment Notices.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 13th day of April, 1897, an assessment (No. 6) of 025 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, room 11 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of May, 1897, will be delinquent and advertised for sale at public auction; and an essa payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. PREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

SEG. BELCHER AND MIDES CONSOLIDATED Mining Company.—Location of principal place of business, San Francisco, California; location of works, Gold Hill Mining District, County of Storey, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 6th day of April, 1897, an assessment (No. 19) of 5 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 10th day of May, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 29th day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

E. B. HOLMES, Secretary.

Office—No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

MARGUERITE GOLD MINING AND MILLING Company.—Location of principal place of business, San Francisco, California; location of works, Auburn, Placer County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 12th day of April, 1897, an assessment (No. 6) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 237 12th street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 21st day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

F. METTMANN, Secretary.

Office—237 12th street, San Francisco, California. Office hours from 5 to 6 o'clock P. M. The Secretary will also receive payments from 12 to 5 P. M. at his business office, 225 Sansome street.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

STOCKHOLDERS' MEETING.—Notice of Stockholders' Meeting of the Steeple Rock Development Company: In accordance with a resolution passed by the Board of Directors of the Steeple Rock Development Company, a meeting of the stockholders of this company will be held at 3 o'clock in the afternoon on TUESDAY, the 11th day of May, 1897, at its principal office, No. 320 Sansome street, room 24, San Francisco, California, to consider and vote upon a proposition to increase the capital stock of this company to Two Million Dollars, in four hundred thousand shares, at the par value of five dollars each.

J. PICHOIR, Secretary.

Dated at San Francisco, Cal., March 26, 1897.

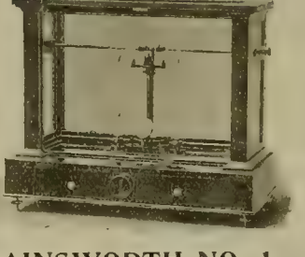
THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from M. J. Williams and others, in the Galena Hill Mine, near Camptonville, Yuba Co., to deposit tailings in Eastman's Ravine; from Joseph Hustler, in the Hustler Mine No. 2, near Cherokee, Nevada Co., to deposit tailings in Shady Creek; and and from McGregor & Nix, in their mine near Cherokee, Butte Co., to deposit tailings behind the impounding works of the Spring Valley Mine, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on May 3, 1897, at 1:30 P. M.

PROPOSALS FOR CANAL.

Sealed proposals will be received at the office of the Southern California Power Company, Redlands, California, until May 15, 1897, for the construction of 3½ miles of canal, on the north side of Santa Ana river, from the mouth of Bear creek to the mouth of Keller creek, San Bernardino county, California.

The work is mostly through granite rock and consists of tunnels, flumes and trestles. Over two miles of the distance is through tunnels ranging from 100 to 1600 feet in length. There are twenty tunnels in all.

Contractors may bid on the whole or any part of the work. Plans and specifications can be seen at the office of the company, or they will be sent by mail upon application if desired. Satisfactory references must be given by bidders as to their responsibility, and as a guarantee that a contract would be entered into, providing the bid is accepted. The company reserves the right to reject any and all bids.



SOUTHERN CALIFORNIA POWER CO.
By HENRY FISHER, President.

NOTICE TO CONTRACTORS—Electric Lighting Plant. Office of the Water Commission, Astoria (Or.), April 8, 1897.—Notice is hereby given that sealed proposals will be received at this office until 12 o'clock, noon, May 1, 1897, for the various works and materials necessary for the installing of a series sixty-arc-light plant to be operated by an impulse water wheel, and owned by the municipality. Proposals must be made on printed forms supplied by the clerk of the Commission, and in full accordance therewith, and must be accompanied with a certified check or bank deposit in an amount equal to (10) per cent of the aggregate sum bid, made payable to the clerk of the Astoria Water Commission. Duplicates of bids and accompanying specified plans shall be filed at the office of the engineer on or before the date mentioned. Plans and specifications can be seen after April 15th, either at the office of this Commission or at the office of the engineer.

THE ASTORIA WATER COMMISSION.
By W. W. PARKER, Chairman.
Attest: H. G. VAN DUSEN, Clerk.
ARTHUR L. ADAMS, M. Am. Soc. C. E., Engineer, 401 California Street, San Francisco, Cal.

FOR SALE.—A Well-Developed Gold Mine in This State.

Twenty-two hundred feet of tunneling done. Lots of ore in sight, with a 10-stamp mill now working. Map of property can be seen any time. Prefer to negotiate with intending purchasers and so save large commissions. Address Box 19, care Mining and Scientific Press, 220 Market Street, San Francisco, California.

AINSWORTH NO. 1.

SENSIBILITY.....1-200 MILLIGRAMME.

This is a short beam balance and especially adapted for smelters and assay offices where extreme accuracy and rapidity are prerequisites.

Photos and Prices on Application.

WM. AINSWORTH,
No. 2151 Lawrence Street, DENVER, COLORADO.

British Columbia.

W. J. R. COWELL, B.A., F.G.S., Mining Engineer, Reports on mines, designs and superintends the erection of mining and milling machinery; makes analyses of ores, metals, soils, etc.; arranges for mill tests, and selects suitable processes for the treatment of ores. Correspondence invited. Address W. J. R. COWELL, Victoria, B. C.

British Columbia.

E. S. TOPPING, TRAIL, B. C.,

Has prospects for sale in Trail Creek and the whole of the Columbia basin. Will buy legitimate stock and mines for investors. Will examine mines. Has lots for sale in Trail and Deer Park.

Constantly on hand a full assortment of Manila Rope, Sisal Rope, Duplex Rope, Tarred Manila Rope, Hay Rope, Whale Line, etc., etc. ☞Extra sizes and lengths made to order on short notice

611 and 613 FRONT ST., San Francisco, Cal.

Cheap Power!

SAVE MONEY BY USING

—THE—

"DANIEL BEST" Crude Oil Engine.

This Engine can be operated on either Crude Oil, Distillate, Gasoline, or Kerosene. It is the cheapest power on earth and is not tied to any one kind of Oil, but can use any kind that will make gas and is not handicapped by being compelled to use a certain Oil. Do not forget this when in need of an Engine.

We guarantee our Engines to work perfectly on California Crude Oil, or Distillate, or any other kind of gaseous Oil; we however prefer CALIFORNIA CRUDE OIL, from Coalinga, Fresno county, for the reason that gas from Crude Oil will produce more power from the number of feet of gas used than from any other Oil, and it is also a natural lubricant as well, the valves being always lubricated sufficiently to prevent them from sticking, thus assuring greater durability of the working parts than it otherwise would be in using dry gas. And another advantage we claim is, that danger from explosions is reduced to a minimum, there being no accumulation of gas, but is used by the Engine as fast as it is generated and hence is absolutely safe. The following is a test that we made with one of our Five-Horse Power Crude Oil Engines, running ten hours on the different gas oils:

California Crude Oil	40 grav.,	7½	galls. at	5c., $.37½
Distillate	40 "	7½	"	8c., .60
Domestic Coal Oil	40 "	7½	"	12½c., .93¾
Gasoline	74 "	8¾	"	15c., 1.31¼
City Gas		1000	feet,	2.00

We manufacture all sizes from two-horse power up, and will guarantee that our Engines will run cheaper and are more simple in construction, have fewer parts and hence are more durable than any other Gas Engines on the market. Seeing is believing; don't take our word for it, but come and investigate for yourselves. You can always see one in operation at our works. We will be pleased to see you and will at all times take pleasure in showing them up. Our Engines are specially adapted for running well and mining machinery—in fact, for any kind of power desired. We are the pioneers and first inventors of Crude Oil and Distillate Engines. We always lead and never follow. Send for Catalogue and Price List of the only genuine Crude Oil and Distillate Engine made.

The Best M'f'g Company,

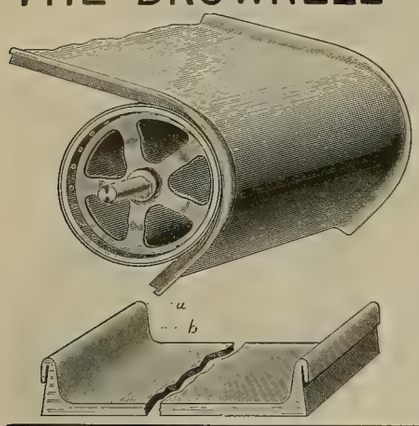
SAN LEANDRO, CAL.

SMITH & THOMPSON,

MANUFACTURERS OF

Finest Assay Balances.

Our Beams are the lightest on the market, and positively inflexible. They are unequaled in accuracy and sensitiveness. Edges and bearings are of Sapphire. All makes of balances thoroughly repaired at reasonable rates.



2219 Stout Street, DENVER, COLO.

DEWEY & CO., Patent Solicitors.

220 MARKET ST., SAN FRANCISCO, CAL.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class agency. We have able and trustworthy associates and agents in Washington and the capital cities of the principal nations of the world. In connection with our scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us to give advice which will give inventors the expense of applying for patents upon inventions which are not new. Circulars and advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S. F.

THE BROWNELL "PATENT LIP" FLANGE FRUE VANNER BELTS.

It has taken years of ceaseless testing and experimenting to produce the superior belt which we now offer, with elastic flanges and pliable body reinforced with specially woven duck. Every belt is manufactured by experienced workmen, and carefully tested on machines especially built for that purpose; consequently we are to day manufacturing the best belts that mechanical ingenuity, combined with honesty of construction, can possibly produce.

ORIGINAL EMPIRE MILL & MINING COMPANY,
GRASS VALLEY, NEVADA CO., CAL., Feb. 20, 1897.

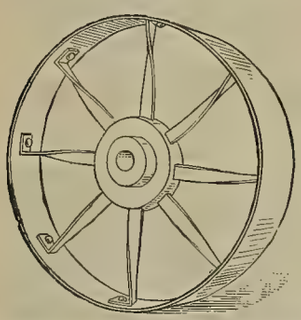
JAS. S. BROWNELL, ESQ., San Francisco, Cal.—DEAR SIR: The Brownell Patent Lip flange belt for ore concentrators, which I bought of you nearly two years ago, has been in constant use and is in good order and gives us perfect satisfaction. We have several other kinds of belts in the mill, and your belt and flange I consider the best of all. Yours respectfully, ROBT. WALKER, Superintendent.

ROANOKE MINING COMPANY,
MOKELUMNE HILL, March 5, 1897.

MR. JAS. S. BROWNELL, 132 Market St., San Francisco, Cal.—DEAR SIR: We have in our 20-stamp mill at this place five Frue vanners; three of these are equipped with the Patent Lip flange belt and two with the plain flange belt. We certainly consider the former a great improvement on the latter. They will certainly wear much longer, as cracking now seems out of the question. Any one purchasing the Frue vanning machine should see that it is equipped with the Patent Lip flange belt. Very truly yours, ROANOKE MINING COMPANY,
Per G. M. WILDE, Acting Superintendent.

For any information regarding Frue Vanner or Belts, call on or address

JAS. S. BROWNELL, Western Agent FRUE VANNING MACHINE CO.
(Successor to Adams & Carter.) 132 MARKET STREET, ROOM 15, SAN FRANCISCO.



RISDON IRON WORKS,

SAN FRANCISCO, CAL.

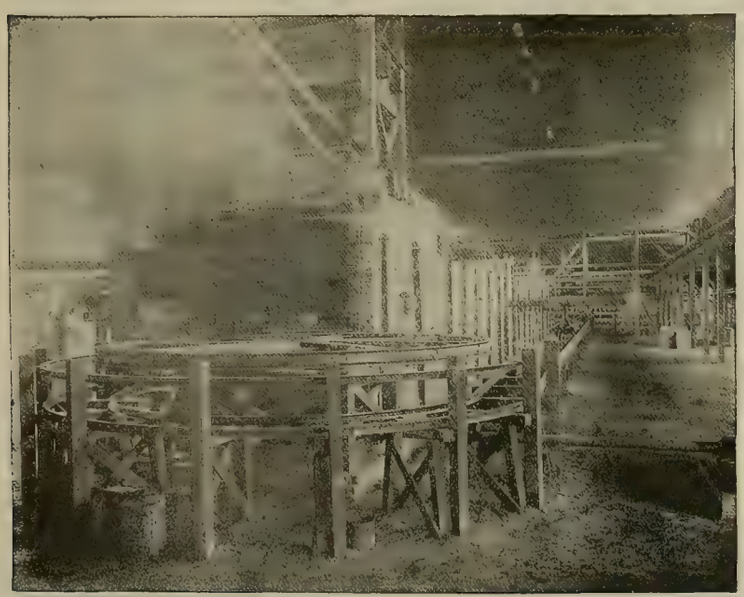
MANUFACTURERS OF THE CELEBRATED

McBETH PATENT STEEL RIM PULLEYS,

WITH WROUGHT STEEL SPOKES.

The Strongest, Lightest and Best Metal Pulley in the World. Absolute Freedom from Breakage in Transportation.

WE ALSO MANUFACTURE ALL KINDS OF



Milling, Mining, Pumping, Hoisting and Marine Machinery,

Bryan Patent Roller Quartz Mills, Johnston Concentrators,
EVANS HYDRAULIC GRAVEL ELEVATORS,
RISDON ORE FEEDERS "CHALLENGE" TYPE.
Risdon Improved Concentrators, Frue Type. Risdon Patent Water Wheels, Pelton Type.
AIR COMPRESSING MACHINERY A SPECIALTY.

Sole Licensee for the Manufacture and Sale of the

ROPP STRAIGHT LINE FURNACE

FOR ROASTING, CHLORINATING AND DESULPHURIZING ORES.

Extracts from Letters Received from Mr. Philip Argall, Manager the Metallic Extraction Co., Cyanide, Colorado:

January 2, 1897.

"The roasting is invariably good. We can do 80 tons per day to 0.13% sulphur, when everything runs smooth. Our month record which, of course, includes all delays, is 1700 tons, from 1.94% sulphur to 0.18%."

February 19, 1897.

"Our furnace is now running very nicely indeed, averaging 90 tons per day to 0.10% sulphur, and doing excellent work; in fact it has improved right along and we are highly pleased with it.
"For 24 hours ending 7 A. M. to-day 102 tons were roasted."

The ROPP FURNACE is now in successful operation at the following reduction works: The Hanauer Smelting Works, Salt Lake City, Utah (one furnace); The Metallic Extraction Co., Cyanide, Colo. (one furnace); The Colorado-Philadelphia Reduction Co., Colorado City, Colo. (three furnaces); The Selby Smelting & Lead Co., Selby, Cal; (one furnace); The Mount Morgan Gold Mining Co., Rockhampton, Queensland (one furnace); and Broken Hill Proprietary Co., Broken Hill, New South Wales (two furnaces).

AND PACIFIC ELECTRICAL REVIEW.

No. 1921.—VOLUME LXXIV. Number 18. SAN FRANCISCO, SATURDAY, MAY 1, 1897. THREE DOLLARS PER ANNUM. Single Copies, Ten Cents.

Two California Mines.

On this page is illustrated two typical large well-managed California mines—the old Providence at Nevada City and the Uncle Sam near Kennett, Shasta county. One thing that strikes the miner from the arid regions or from the more rigorous climates of the north is the great advantage the climate is to the miner along the Sierras. As far as the weather is concerned, in nearly all cases he may work the year round without any difficulty. For this reason, some day, with the splendid water power of the mountains, California should become a great manufacturing State. The employer of labor knows how much better value can be obtained from workmen and from machinery in an equable climate than a more rigorous one.

The view of the surroundings at the Uncle Sam is a great contrast to those of mines in many districts of the West, but such scenes may be found in any mining camp from Siskiyou to the southern end of the Sierras.

PROVIDENCE MINE, MILL AND FURNACE.

The Providence mine is one of the old and deep mines of Nevada county. It has seen many ups and downs, like other of the rich properties of to-day. In 1887, after having been given over to tributers, the owners began to work it but soon quit. Again in 1890 work was resumed, the 1250-foot shaft retimbered and new machinery put in. Since then the mine has become one of the leading properties of the district, employs about 100 men and keeps its 40-stamp mill running steadily. Several efforts have lately been made by European capitalists to purchase the Providence.

The Uncle Sam is comparatively a new mine, having been located in 1886. It is situated in the Backbone mining district, [illegible] Kennett, in Shasta county, and owned by t[illegible]erra Buttes Gold Mining Company, L'd. Up t[illegible] a year ago this property paid large div[illegible]—nearly a million altogether—but the pay[illegible] were worked out about a year ago and only [illegible]x's fo[illegible] tributers are working. This is an example [illegible] equipped and well-managed property up t[illegible]e of its closing down.

UNCLE SAM MINE AND MILL.

[illegible] River Dredging.

[illegible]t the [illegible]rable money has been exp[illegible] same upon dredgers for working [illegible]auriferous gravels of the Fras[illegible] and Quesnelle rivers, in British Columbia, but without very gratifying results. During the season of 1896 there were seven dredgers in operation, some only for a few days, but none of them achieved more than a partial success. Four others had been built and abandoned before last year. The total cost of these machines is estimated at $170,000, and none of those in operation last year will be worked this season without radical changes in the machinery. It seems that the natural obstructions to work—the swift currents and heavy boulders—will prevent any successful operations unless new methods are adopted. The work done, however, has demonstrated that the beds of the streams are rich in places. Several dredgers are being rebuilt for another trial.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Providence Mine, Mill and Furnace; Uncle Sam Mine and Mill, 361. Utah Mine, Eureka, Utah; View of Eureka, Utah; Mammoth Station, R. G. W. Railway, and Farrell Mill; Mammoth Mine, Mammoth; Mammoth Mill, Mammoth; Centennial-Eureka Mine, Eureka; Eureka Hill Mine and Mill, Eureka; Double Circle, Tintic Line, R. G. W. Ry.; Bullion Beck Mine and Mill, Eureka, 364. View of Congress, Arizona, Showing Mines and Mill, 367. New Style Gallows Frame; Quadruple-Expansion Single-Crank Mill Engine, 369. Leyner Rock Drill, 374.

EDITORIAL.—Two California Mines; Fraser River Dredging, 361. Worth Noticing; British Capital's New Field; California Bullion Product, 362.

SCIENTIFIC PROGRESS.—Watt and the Measurement of Power; The Diameter of Jupiter, 368.

ELECTRICAL PROGRESS.—Double Trolleys for Street Cars; Calibration of Current Meters; Refining Bismuth by Electrolysis, 368. Government Telegraph Lines; Electricity in Japan, 369.

MECHANICAL PROGRESS.—A Hydraulic Pumping Engine; Quadruple-Expansion Single-Crank Mill Engine; New Style Gallows Frame; Self-Propelling Fire Engines, 369.

MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 370–1.

THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 382–3.

MISCELLANEOUS.—Concentrates, 363. Tintic District, Utah, 364. Practical Notes on Hydraulic Mining; Japanese Alloys, 365. The Conservation of Intellectual Wave Forces, 366. The Great Northern Gold Field; The Congress, Arizona, Mines and Mill, 367. Coast Industrial Notes; Commercial Paragraphs; Recent California Mining Incorporations; Personal; Recently Declared Mining Dividends, 373. The Leyner Rock Drill, 374. List of Patents for Pacific Coast Inventors; Notices of Recent Patents, 378.

British Capital's New Field.

There will soon be a great change in the trend of investment of English capital in mining properties, unless all the signs fail. In last week's issue there was some account of the last year's work on the Rand in South Africa, from which it appears that the cost of mining has amounted to more than the total yield of gold. This would not be a bad sign in an undeveloped district; but in Africa, where the amount of ore that will be available may be estimated with comparative certainty, it seems a great deal. Certainly the British public will not invest in Africa with any expectations of great profits or opportunities for speculation.

In Western Australia the case is a little different. While the profits from the [illegible] invested have been extremely small, there can [illegible] question that the country is practically under[illegible] and there will be opportunities for speculati[illegible]t present, owing to overcapitalization, the E[illegible]vestor is not inclined to make investments. So much harm has been done by this overcapi[illegible]n, that it is difficult now in London to f[illegible]d mines from any part of Australia.

The British speculators a[illegible]omoters are bound to find new fields, and, as a[illegible]t, their representatives are to be seen in far [illegible]eater numbers than ever before in the western p[illegible]t of the North American continent. This will bring in a great deal of capital to the Western States, Mexico and British Columbia and the development of many large properties that are now undeveloped. But one trouble will come from it all: The English promoter will indulge in his old habit of overcapitalization and many a district in the West will receive a black eye in the London market.

British Columbia is already suffering from this to a certain extent, and the good people there lately formed a miners' protective association in the west Kootenay country, whose purpose is to protect the investing public and give out such information as will be of value to prospective purchasers. It is stated that numerous companies have been organized and the stock sold largely on account of the proximity of the prospect to some well known property. To such an extent has this been carried on that many Eastern people are beginning to lose confidence in the mines of Trail Creek and other parts of British Columbia. Such an organization can be the means of doing an immense amount of good by exposing any wild cat scheme which may appear in public.

California Bullion Product.

The statistics of bullion product of California for the calendar year 1896 have been forwarded from the San Francisco Mint to the Director of the United States Mint at Washington for publication in his annual report on the "Production of Gold and Silver in the United States." The following statement shows the gold and silver yield of the State by counties for 1896:

COUNTY.	Gold.	Silver.	Total.
Alpine	$ 400		$ 400
Amador	1,523,351	$ 3,767	1,527,119
Butte	749,316	5,389	754,705
Calaveras	1,546,398	500	1,546,898
Del Norte	24,150		24,150
El Dorado	812,289	533	812,823
Fresno	28,235	99	28,334
Humboldt	65,092		65,092
Inyo	238,507	108,619	347,126
Kern	590,866	34,649	625,516
Lassen	40,300		40,300
Los Angeles	35,468		35,468
Madera	104,339	1,240	105,579
Mariposa	335,637	180	335,817
Merced	1,250		1,250
Mono	451,553	82,283	533,837
Nevada	2,380,756	8,584	2,389,340
Placer	1,674,844	6,690	1,681,534
Plumas	462,526	83	462,609
Riverside	262,800	13,450	276,250
Sacramento	133,050		133,050
San Bernardino	96,722	130,714	227,436
San Diego	568,578	40	560,618
Santa Barbara	8,592		8,592
San Luis Obispo	3,000		3,000
Shasta	599,209	24,233	623,443
Sierra	786,174	423	786,598
Siskiyou	1,091,264	652	1,091,917
Stanislaus	16,635		16,635
Tulare	20,092		20,092
Tuolumne	1,070,141	328	1,070,470
Trinity	1,296,330		1,296,330
Yuba	171,687		171,687
Totals	$17,181,562	$422,463	$17,604,026

In 1895 the yield of gold of the State was $15,334,317, and that of silver was $599,789, a total of $15,934,107. A comparison of these figures shows that the gold yield of 1896 increased over that of 1895 by $1,847,245. In 1894 the gold yield of the State was $13,923,281; in 1893, $12,122,844; in 1892, $12,571,900. For purposes of comparison is appended the gold and silver product of California for 1895:

COUNTY.	Gold.	Silver.	Total.
Amador	$ 1,391,929	$ 1,089	$ 1,393,018
Butte	697,260	8,935	706,196
Calaveras	1,717,916	77	1,719,993
Del Norte	8,250		8,250
El Dorado	700,101	447	700,548
Fresno	47,249		47,249
Humboldt	92,635		92,635
Inyo	92,142	188,329	280,471
Kern	231,433	46,064	277,497
Lassen	25,000		25,000
Los Angeles	23,350		23,330
Madera	163,323		162,323
Mariposa	216,622	7	216,629
Merced	1,500		1,500
Mono	552,690	84,910	637,600
Nevada	1,789,815	400	1,790,215
Orange	144		144
Placer	1,599,634	5,272	1,604,907
Plumas	602,951	271	603,222
Riverside	285,106	2,550	287,656
Sacramento	145,872		145,872
San Bernardino	131,360	219,410	350,770
San Diego	344,307	600	344,907
San Luis Obispo	3,000		3,000
Santa Barbara	4,000		4,000
Shasta	781,696	28,417	810,113
Sierra	694,469	106	694,576
Siskiyou	950,006	177	950,183
Stanislaus	26,481		26,481
Trinity	1,166,745	1,257	1,168,002
Tulare	16,320		16,320
Tuolumne	666,754	312	667,066
Yuba	111,482		111,482
Unapportioned	53,786	11,153	64,940
Totals	$15,334,317	$599,789	$15,934,107

The following shows the increase or decrease in the yield of California counties for '96 as compared with '95:

COUNTY.	Increase, 1896, over 1895.	Decrease, 1896, from 1895.
Alpine	$400	
Amador	131,421	
Butte	52,035	
Calaveras		$171,526
Del Norte	15,900	
El Dorado	112,196	
Fresno		19,014
Humboldt		27,542
Inyo	146,364	
Kern	359,433	
Lassen	15,300	
Los Angeles	12,138	
Madera		57,983
Mariposa	119,014	
Merced		250
Mono		101,136
Nevada	590,940	
Orange		144
Placer	75,209	
Plumas		140,424
Riverside		22,306
Sacramento		12,822
San Bernardino		34,637
San Diego	216,270	
Santa Barbara	4,592	
Shasta		182,486
Sierra	91,704	
Siskiyou	141,258	
Stanislaus		9,846
Tulare	3,772	
Tuolumne	403,387	
Trinity	129,585	
Yuba	60,205	

When it is considered that there have been no discoveries of new districts nor the introduction of more than the usual small amount of foreign capital, the figures given say much for the stability of the industry of mining in California. There has been less of the speculative element in connection with mining in this State probably than in any other mining district in the world of late years, and a larger proportion of the capital required for development has been supplied by local people. True, it is a complaint often heard that California capitalists are very slow about taking hold of mining, and many ask why a boom does not materialize. If such a record as has been made for the past eight years will be continued under present conditions it is to be hoped that the day of the "boom" and wild speculation is far off.

A healthy, steady growth of the mining industry in this State can do much for all other industries, while factitious work would most certainly be followed by a relapse that would bring general disaster. Such has been the case of late with South Africa and western Australia. The latter is one of the best illustrations of the evils of speculative mining. There can be no doubt that the mines are of value and will in time add much to the world's wealth. But they were taken up by promoters and speculators in England and overcapitalized. As a result, millions were expended foolishly and now it is almost impossible to float not only a western Australia mine in London, but even a mine from other colonies of Australia. It will be several years before the colonies will recover from the setback. It is hardly necessary to mention the evils that followed the wild speculation on the Comstock. It is well understood that for that the quartz mines of California were deserted and their development delayed many years. For a long time most of the men of means in San Francisco foreswore mining of all kinds, and it looked as if mining in this State would continue to decline. There has, however, been a healthy recovery that promises a future more brilliant than the great past of the leading modern El Dorado.

Worth Noticing.

The leading authority on advertising and circulation in the United States is the American Newspaper Directory, published by Geo. P. Rowell, 10 Spruce street, New York City. In the last issue of that volume, under the head of "Mining and Engineering," is said:

In all the States of the Far West and the Pacific slope, consisting of California, Oregon, Washington, Idaho, Montana, Wyoming, Colorado, New Mexico, Arizona, and Utah, the largest circulation credited to any publication devoted to engineering and mining is accorded to the MINING AND SCIENTIFIC PRESS, a weekly, published at San Francisco, Cal.; and the publishers of the American Newspaper Directory will guarantee the accuracy of the circulation rating accorded to this paper by a reward of one hundred dollars, payable to the first person who successfully assails it.

Elsewhere it says:

Among the engineering and mining papers in California, none has credit for so large a regular issue as is accorded to the MINING AND SCIENTIFIC PRESS, published weekly at San Francisco. In fact, it fully equals five times the combined issue accorded to all the others, and the publishers of the American Newspaper Directory will guarantee the accuracy of the circulation rating accorded to this paper by a reward of one hundred dollars, payable to the first person who successfully assails it.

Again, talking of electrical papers, it says:

Among the electrical papers in California, none has credit for so large a regular issue as is accorded to the MINING AND SCIENTIFIC PRESS, published weekly at San Francisco; and the publishers of the American Newspaper Directory will guarantee the accuracy of the circulation rating accorded to this paper by a reward of one hundred dollars, payable to the first person who successfully assails it.

In this regard three things are worth noticing: First, that the above three statements were made as a matter of public record, were unsolicited, not paid for in any way, and emanated from competent authority; second, that no attempt has been made anywhere to deny or contradict any one of the three statements, and that since those statements were made the paid circulation of this paper has increased to an extent that warrants the publishers of the American Newspaper Directory to make an even more favorable statement, unpaid for and unasked, in the forthcoming annual edition of that reliable work; third, so far as known, this paper is the only one of its class that recognizes the right of the advertiser to know its circulation, and publishes it in plain figures.

Concentrates.

THE Los Angeles *Herald* is advocating the building of a smelter at that city.

A 200-TON milling plant is to be built at Freshwater, southwest of Cripple Creek.

ABOUT 250 men are now employed at the Golden Cross mine, Hedges, San Diego county, Cal.

THE Western Federation of Miners will hold a convention at Salt Lake City, Utah, on the 11th inst.

THE railway being built from Robson to Trail, B. C., it is expected, will be open for traffic by May 20th.

NATIVE laborers in the mines on the Rand, South Africa, are paid less than $10 a month in wages on an average.

NATURAL GAS has been found in the city limits of Sacramento by a company that has been boring on Y street.

THE Chloride Point Mining Company at Mercur, Utah, is about to erect a mill with a daily capacity of 200 tons.

BUTTE capitalists are figuring on erecting a smelter either at Twin Bridges or at some point on the Big Hole river.

AT Monroe, Utah, a mountain of mineral paint material has been discovered, which it is proposed by the owners to work.

THERE is a movement on foot to establish a powder factory at Rossland, B. C., encouraged by the raise in price of 3 cents per pound.

LOCAL capitalists are developing six turquoise claims twenty miles south of Santa Fe, New Mexico, recently illustrated in this paper.

STOCK in the Mollie Gibson of Aspen, Colorado, which sold at $12 in its halcyon days, is now quoted at 12 cents on the Colorado Springs exchange.

THE discovery of placer gold on the townsite of Nelson, British Columbia, has caused considerable excitement, and brought in a number of gravel miners.

THE Kaslo-Montezuma Mining and Milling Company have decided to build a mill with 200 tons daily capacity at their property near Kaslo, British Columbia.

THE managers of leading quicksilver mining companies state that the prospects for increased business and better prices for quicksilver for this year are very good.

THE East Kootenay country will attract more than usual attention this season since the building of the Crow's Nest Pass Railway, which will tap it, is assured.

A WEEKLY journal has made its appearance in London which is devoted entirely to promoting mining investments in British Columbia mines in the English market.

THE Canadian Government will send a commission to the Yukon country as soon as travel permits to organize a territorial government, and report upon the conditions.

NOTICE has been given that the Canadian Pacific Railway Company will begin at once to build the Crows Nest Pass railroad, which will mean much to the Kootenay mines.

IT is proposed to erect at the entrance of Liberty Park, Salt Lake City, an archway to be constructed of minerals from the various mines in the State, each camp to have a place in it.

THE gold yield of California for '96 was $17,181,562; for '95, $15,334,317; for '94, $13,923,281; for '93, $12,122,844; for '92, $12,571,900. On page 362 appears the yield by counties for '95 and '96.

PLACER mining in Cripple Creek, Colorado, has been carried on with some difficulty for want of water, until lately the tunnels have increased the flow, and many claims are being worked.

A BILL has been introduced in the British Columbia Legislature to provide for the appointment of an inspector of mines to secure the safety and good health of men working in metalliferous mines.

CAPTAIN J. R. DELAMAR has offered a bonus of $50,000 for the discovery of a process for working in a practical way the so-called arsenical ores of the Golden Gate mine at Mercur, Utah, says the Salt Lake *Tribune*.

IN British Columbia any miner, before working in mines even for wages, must get a Government license, costing $5. It is proposed to abolish this tax, as to the working miner, but not as to the prospector. Poor old prospector.

THE Calaveras, California, *Citizen* states that the Exploration Company of London has secured a bond on the Hall, Bachmann and Big Four mining properties, situated in Fourth Crossing mining district and adjoining the Thorpe mine.

THE Kansas City Smelting and Refining Company have purchased a site of 320 acres for a smelter at Five Mile point, the terminus of the Nelson & Fort Sheppard railway, near Nelson, B. C. The plant is to have a capacity of 300 tons a day.

U. S. CONSUL GENERAL MARETTA reports that the yield of gold in Australia in 1896 was 2,375,948 ounces, an increase of 16,000 over that of 1895. Since 1851 over 100,000,000 ounces have been produced, of which 61 per cent came from Victoria.

THERE are no funds available for continuing the work of the mineral land commissioners in Montana in designating mineral from agricultural lands within the railroad grants, and it is probable that their work will be discontinued for a time.

THE new law of Idaho as to placer locations provides that the locator must place a post or monument at each corner, and within fifteen days after making the location make an excavation of not less than 100 cubic feet for the purpose of prospecting.

A MINE OWNER of Rossland, B. C., makes the prediction that inside of two years there will be 5000 men at work on Red mountain, and not a smokestack will be seen on the mountain, for all the work of hoisting and drilling will be done by electricity.

THE Debris Commission has received applications for permits to mine from Charles and Benjamin Howlett, of the Howlett claim, Columbia Hill, Nevada county, and Marguerite Gravel and Quartz Mining Company in Eureka district, Nevada county.

AT Helena, Montana, Martin Cummings was last week awarded $13,000 damages against the Helena and Livingstone Smelting Company, owner of the Alta mine, for injuries caused by the falling of a rock, which he alleged was the result of incompetency of a miner in the preceding shift.

LARGE ACCESSIONS of membership have been made by several county miners' associations during the past two weeks. In Placer county the collectors announce that the number of members this year will be larger than ever. Among the subscriptions sent in was $30 from the Chinese at the Red Point mine.

THE Castle Peak gilsonite mines, north of Price, Utah, are sending two and three carloads a month to the East to be used in varnish and lacquer making. There are many different qualities in the State and the amount that will be mined will depend largely upon the freight charges. At present only the most valuable can be shipped.

IN Spain there were mined in 1896, at the Almaden quicksilver mines, 22,100 tons of ore. In Asturias, El Porvenia Mining Company raised 7065 tons of ore, the Union Asturiana 4471 tons, and La Soterrana 670 tons. In Granada 800 tons were obtained. At Almaden 16,076 tons were smelted, yielding 41,330 flasks of quicksilver. The total quicksilver production of Spain amounted to 43,884 flasks.

THE proposed exemption of imported mining machinery from duty under the new tariff bill pleases British Columbia in general, with the exception of a small number of engineering firms in the Province which manufacture to a limited extent certain classes of mining machinery. The change will benefit United States manufacturers in California and elsewhere to the detriment of eastern Canadian firms.

IN the Seven Devils district, in Idaho, to which several railroads are contemplating the building of branches for the business of hauling the copper ores, it is claimed that there are in sight 75,000 tons of ore in one mine, which will yield 50,000,000 pounds of copper, and in another 30,000 tons which can be mined without the use of a single candle. Without a railroad these resources cannot be made available.

THE Mexican Government has issued a statement showing that the exports of precious metals for the first six months of the fiscal year 1896-7 amounted in value to $31,787,926, as against $31,556,414 for the same period of 1895-96. There is a notable increase in the exportation in gold and a marked falling off in silver. Gold ores show a rise from $83,343 to $129,662, while gold bullion advanced from $2,541,719 to $2,829,090.

AT the annual meeting of the South Paloma Gold Mining Company, held at their office in San Francisco, April 16, the following directors were elected: John A. Wright, president; Ansel M. Easton, vice-president; C. W. Howard, Jr., Sydney V. Smith, and Mark B. Kerr manager. The shaft in the mine, which adjoins the Gwin in Calaveras county, is down 525 feet, and at 600 feet drifting to the ledge will be commenced.

THE American Flat Development Company is formulating a proposition to be submitted to the owners of mines in American Flat, by which the company will take a portion of the claims for draining the properties with a branch of the Sutro tunnel, and another proposition will be made for an agreement with the Comstock Tunnel Company. It is understood that the latter company is desirous of obtaining the contract for the extension.

THE mineral output of Idaho for the year 1896 has been compiled by Superintendent Church of the Boise City assay office, and shows an advance of over a million dollars over that of 1895. Gold showed a slight decrease, but silver and lead both show increases. The figures are as follows: Gold, 1895, $2,594,666; 1896, $2,323,700. Silver, 1895, $5,214,498; 1896, $6,474,765. Lead, 1895, $2,302,321; 1896, $2,593,380. Totals, 1895, $10,110,485; 1896, $11,751,845.

UNITED STATES CONSUL MCDANIEL writes from Bahia, Brazil, that some deposits of manganese near that city have been bought by a company, and their engineer reports that these mines have proven to be the richest in quantity and quality known, and convenient of access, being situated about sixteen miles from the port of Nazareth, on the railroad between Nazareth and Amargosa. He estimates that over 1,000,000 tons of first-class ore are in this mine.

THE joint committee representative of the leading commercial bodies of Denver, Colorado, appointed to consider the advisability of holding a gold mining convention in that city, has decided to hold the convention Wednesday and Thursday, July 14th and 15th. The members of the committee seem to be of many opinions as to what should be the scope of the business of the convention. Upon that will depend very much as to whether a large attendance may be expected from other parts of the West than Colorado.

A MEETING of the managers of the properties within the city limits of Leadville, Colorado, was held last Monday to consider the question of draining the mines. During last year's strike the pumps were stopped and many of the mines flooded. A plan was proposed and accepted. Ten thousand dollars was subscribed for the preliminary work and $4000 more will be added when pumping operations commence. The mines when drained will put 550 more men to work and increase the output of ore 500 tons per day.

ON January 23, 1897, there was published on page 75, a statement showing in detail that during 13 days there had been received at this office the names of 221 new subscribers. From January 23, '97, to April 24, '97, there were received at this office the names of 638 more. This brief statement of fact illustrates the great increase in the circulation of this paper, and why advertisers find its columns profitable. The 638 are residents of fourteen American States, British Columbia, Mexico, South America and Europe. Of the 638, 118 are residents of California.

IT is understood that the Exploration Company of London has secured an option on the De Lamar mine of Nevada, which has been under examination by Victor Clement and others lately. The report of the management, made in conformity with the Nevada law imposing a tax on the net output, for the quarter ending December 31 last shows that during that period 20,677 tons of ore were put through the mill, the gross value of which was $575,462. From this $77,000 was taken for extraction, $22,000 for transportation and $372,186 for milling, which left a net profit of about $100,000 for the quarter in question.

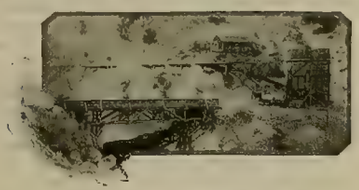
IN the April *Forum* is an article by William E. Smythe on Nevada, in which he says: "Nevada is the victim of circumstances. Rich in the potentialities of material greatness, and therefore strong in the capacity to support a social structure, she presents the baffling paradox of a declining population in a Western State. If she were located in South Africa, the nations of Europe would plot and struggle for possession of her minerals, lands and waters; if in New South Wales, the Colonial Government would employ the public capital to reclaim her deserts, and enable the surplus population of Adelaide to make homes upon her soil."

JUDGE BRANTLEY of the District Court of Deer Lodge county, Montana, believes little in evasion of the mining laws. In a case recently decided wherein suit was instituted to oust a party that had filed on a claim in good faith, the judge decided that the actual amount of $100 must be expended on a mineral claim in order to hold it. He also decided that the usual wages paid in a district must decide the manner in which the $100 is made up. In this case the parties claimed to have done twenty-three days' work and charged at the rate of $5 per day. The evidence showed that the regular rate of wages was only $3 per day, and so the judge decided that twenty-three days' work would not hold the claim, and rendered a judgment in favor of the defendants.

RIVER DREDGING for auriferous gravels has been made a success in New Zealand, but only partially so in this country, although much attention is just now being paid to that form of mining. Samuel L. Theller has lately purchased the rights for California and Oregon in the Bowers dredger, and it is proposed, under the direction of W. B. Murdock, of this city, to make trials of the dredger for mining purposes. The lifting action of the dredger is by suction, and whatever will go through the inlet pipe of, say, 6 or 8 inches, drawn from a river bed, can be forced by their system of delivery and landed 100 or 1000 yards from the point of operation. That there is abundant opportunity for dredger work there can be little question, and that a satisfactory system will be adopted soon there can be little doubt, for the engineering difficulties are not insurmountable.

THE Ætna Consolidated Quicksilver Mining Company of California, in its report for the year ending December 31, 1896, shows that the receipts from quicksilver sold were $120,236. The expenses, including $4812 for repairs and $4396 for depreciation, were $73,244, leaving net earnings of $46,992. From these was paid in dividends $40,000, or 8 per cent on the stock, leaving a surplus of $6992. The general account shows assets: Plant, $501,712; quicksilver on hand, $37,620; supplies, $6561; cash, $6618; total, $552,511. The liabilities were: Stock, $500,000; unpaid drafts, $2284; total, $502,284, leaving a surplus balance of $50,227. There were 16,392 tons of ore treated during the year, yielding 290,700 pounds of quicksilver; the average tenor of the ore was 8.87 per cent. The earnings were $7.34, the expenses $4.47, and the profit $2.87 per ton of ore. The average receipt was 41.4c per pound of quicksilver, and the average cost 25.2c, leaving a profit of 16.2c per pound.

THE report of the Napa Consolidated Quicksilver Mining Company of California for the year ending December 31, 1896, shows that the receipts from sales of product were $158,838; expenses were $110,202, leaving a profit of $48,236. The dividends paid were $60,000, or 8.57 per cent on the stock, showing a deficit of $11,364, which was drawn from the surplus. The assets at the close of the year included $50,820 quicksilver on hand, $11,756 supplies; $450 cash; a total of $63,026. Liabilities included $33,380 unpaid drafts and overdrafts, and $566 unclaimed dividends, a total of $34,146, leaving a surplus balance of $28,880. There were 17,880 tons of ore worked, from which 382,500 pounds of quicksiver were obtained. The ore thus showed an average of 10.7 per cent metal. The receipts per pound of quicksilver were 41.5c, the expenses 28.8c, and the profit 12.7c. The yield per ton of ore was $8.88, the expenses $6.16, and the net earnings $2.72. The new development work included 5128 feet of drifts and 263 feet of winzes.



THE Salt Lake *Tribune*, after stating that Utah can boast of a greater list of dividend-paying silver mines than all the world besides, gives the following list of large producers that are now paying profits, with the amount of dividends each has paid: Ontario, $13,400,000; Horn Silver, $5,130,000; Bullion-Beck, $2,117,000; Centennial-Eureka, $1,950,000; Daly, $2,925,000; Mercur, $675,000; Silver King, $1,012,500; Utah, $175,000, Galena, $75,000; Swansea, $36,100; South Swansea, $29,960; Mammoth, $1,150,000. Of those whose dividends have not been made public the Ajax has divided about $1,000,000, the Eureka Hill nearly $2,000,000, Gemini-Keystone $800,000, while large profits have been paid by the Old Jordan, Old Telegraph, Humbug, Julia, Dean and a number of others owned by individuals or close coroporations. Besides these, the Geyser-Marion and Dalton & Lark properties, which are paying dividends, have under the old ownerships paid large sums. Then there are a large number of properties being developed, or upon which milling plants are being erected, that will largely increase the list before the end of the year.

UNDER date of Virginia, Nevada, April 27th, an old experienced Comstock miner writes: "In the East, Europe and South Africa they are constantly proclaiming that the Comstock is played out, ex[illegible]'s for dead. The truth is that no better place in which the rest can be found anywhere in the United States th[illegible] deep levels of the Comstock. Counting from the ne[illegible] throw a established at the 1600 level by the Sutro tunnel, [illegible] 200 fee[illegible]ally attained a depth of only about 1750 feet in our d[illegible] orkings, which is merely a beginning compared with [illegible] ×.012 being done in Lake Superior and other places. The situ[illegible] present on the Comstock for drainage, ventilation and the orking purposes is the same as if 1600 feet of surface m[illegible] had been removed and thrown aside. We can as easily same eyond the 1700 feet attained from the Sutro tunnel le[illegible] own as we could sink below that depth from the natu[illegible]ill urface. Sooner or later work will be resumed in the de[illegible]evels. A start came near being made in 1891; everybody wa[illegible] redhot for it, but finally the scheme fell through just when a start was on the point of being made."

BINGER HERMANN, Commissioner of the General Land Office, writes the Helena, Montana, register and receiver: "Your attention is directed to the fact that by decision rendered by the department on Feb. 27, '97, in the case of W. H. Gowdy et al. vs. the Kismet Gold Mining Company, the decision rendered in said case on May 23, '96, and reported in 22 L. D., 624, was modified, and paragraph 29 of the mining regulations amended so as to read as follows: The claimant is then required to post a copy of the plat of such survey in a conspicuous place upon the claim, together with notice of his intention to apply for a patent therefor, which notice will give the date of posting, the name of the claimant, the name of the claim, the mining district, and the county; whether or not the location is of record, and, if so, where the record may be found, giving the book and the page thereof; the number of feet claimed along the vein and the presumed direction thereof; the number of feet claimed on the lode in each direction from the point of discovery, or other well-defined place on the claim; the names of all adjoining and conflicting claims, or, if none exist, the notice should so state. According to the last decision of the department, the amendment of said paragraph will take effect on the first day of June, '97, and all publications thereafter made must contain the information therein prescribed. All publications made or started prior to that date are to be treated in accordance with the practice of the department existing prior to the original decision in the case of W. H. Gowdy et al. vs. the Kismet Gold Mining Company."

Tintic District, Utah.

Utah occupies the pleasant prominence in the mining world of having paid to date an even

UTAH MINE, EUREKA, UTAH.

$33,000,000 dividends on mining stock companies operating within its borders. The old Mormon policy of discouraging mining operations has been disrailroads, with just recognition of business requirements, have made many inducements in the way of transportation. Juab county is particularly favored in this regard. In '96 Tintic district (reached quickly and easily from Ogden and Salt Lake City by the Rio Grande Western Railway) yielded $5,000,000 in gold, silver, copper and lead, and declared dividends aggregating $1,725,500.

On this page is illustrated the prosperous mining camp of Eureka, a place of 3000 population, where at an altitude of 6500 feet has been extracted many million dollars' worth of ore, and where have been fought out several legal contests over that much vexed matter of "apex" and "side lines," which constitutes one of the puzzles of American mining law. At Eureka are the Eureka Hill mine and mill, illustrated herewith, where 110 men give a daily output of 150 tons; there is a double compartment shaft down 1100 feet, and there are twenty-five miles of underground track. West of the Eureka is and a daily output of 50 tons, which averages 60 ounces silver and $14 gold to the ton; poorer ore is

MAMMOTH STATION, R. G. W. RAILWAY, AND FARRELL MILL.

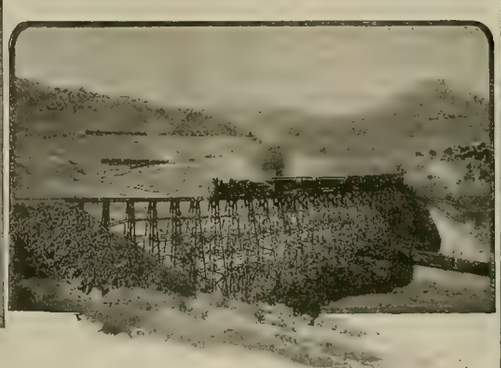
mined and stored pending the completion of a large mill.

South of Eureka, in "Mammoth Hollow," is the

VIEW OF EUREKA, UTAH.

MAMMOTH MINE, MAMMOTH.

MAMMOTH MILL, MAMMOTH.



CENTENNIAL-EUREKA MINE, EUREKA.

carded the past twenty years, and the mineral resources of the youngest State in the Union are being developed. Utah is fortunate in several matthe Bullion-Beck, also depicted, one of the biggest "base ore" mines in the country, running about 55 ounces silver to the ton and 15 per cent lead. About Mammoth, the deepest mine in Utah, the present workings being 1800 feet below the level from which the main shaft starts. The Mammoth is one of

EUREKA HILL MINE AND MILL, EUREKA.

DOUBLE CIRCLE, TINTIC LINE, R. G. W. RY.

BULLION-BECK MINE AND MILL, EUREKA.

ters regarding such mining development: coupled with rich deposits come the pleasant facts that there have never been any serious labor troubles, that most of the camps are easy of access, and that the 240 men are employed, the daily output being over 300 tons. This company has paid dividends aggregating $2,500,000. North of the Eureka Hill is the Centennial-Eureka, with a main shaft 1500 feet deep, Utah's gold mines. In the mill are sixty 1000-pound stamps. When the present additions are complete the mill's daily capacity will be 300 tons.

In the immediate vicinity are many other mines in

every stage of development, contributing to the aggregate output of the district and giving promise of continuity.

The Rio Grande Western Railway Co. has just issued another of its handsome publications, which contains much authentic information about Utah's mines in general and Tintic district in particular, and which can be had upon application to Mr. F. A. Wadleigh, Gen. Pass. Agt., Salt Lake City, to whom we are indebted for the use of the illustrations in this brief notice of a rich district which the railroad has done much to develop.

Practical Notes on Hydraulic Mining.*

NUMBER IV.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C. E., M. E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Fifth—Another set of formulæ given in "Practical Hydraulics," by Thos. Box, are as follows:

Where d = diameter of pipe in inches. L = length in yards. H = head in feet. G = gallons discharged per minute.

$$d = \left(\frac{G^2 \times L}{H}\right)^{\frac{1}{5}} \div 3 \qquad L = \frac{(3d)^5 \times H}{G^2}$$

$$G = \left(\frac{(3d)^5 \times H}{L}\right)^{\frac{1}{2}} \qquad H = \frac{G^2 \times L}{(3d)^5}$$

Example 1. Find the diameter of pipe required to discharge 300 gallons per minute with 80 feet head; length of pipe, 200 yards:

$$d = \left(\frac{300^2 \times 200}{80}\right)^{\frac{1}{5}} \div 3$$

	Log's.
300 =	2.4771
	2
300^2 =	4.9542
200 =	2.3010
	7.2552
÷ 80 =	1.9031
5 |	5.3521
Fifth root =	1.0704
÷ 3 =	0.4771
	.5933 = 3.92 inches diameter.

Example 2. Find the number of gallons discharged by a pipe 10 inches in diameter, 900 yards in length, with a head of 50 feet:

$$G = \left(\frac{(3 \times 10)^5 \times 50}{900}\right)^{\frac{1}{2}}$$

	Log's.
3 × 10 = 30 =	1.4771
	5
Fifth power =	7.3855
× 50 =	1.6990
	9.0845
÷ 900 =	2 9542
2 |	6.1303

Square root = 3.0651 = 1162 gallons per minute.

Example 3. Find the head necessary to discharge 120 gallons per minute through a 6-inch pipe 500 yards long:

$$H = \frac{120^2 \times 500}{(3 \times 6)^5}$$

	Log's.
120 =	2.0792
	2
120^2 =	4.1584
× 500 =	2.6980
	6.8574
Log. 3 × 6 = 18 =	1.2553 × 5 = 6.2765
	.5809 = 3.81 feet.

In all these examples care must be taken, and more especially in short pipe lines, to allow for loss of head due to velocity at entry, also for friction of the water against the sides of the pipe.

Example 4. Given diameter of pipe in inches, and velocity in feet per minute to find discharge in cubic feet or gallons per minute. $Q = 0.32725 \times d^2 \times V$ = cubic feet per minute, and cubic feet per minute multiplied by 7.48 = gallons per minute.

Sixth—In constructing a pipe line, care must be taken to place air valves at all high places, blow-off valves at all low places in the line, and when the line is subject to extreme heat and cold, it is absolutely necessary to provide at least one good expansion joint each half mile.

Another excellent precaution is to place near the lower end of the line a safety valve, either the spring or ordinary level kind, and set it at a pressure slightly above the maximum due to the head, then when gates are closed too quickly by careless attendants, the valve will relieve the shock, instead of allowing the whole line to be strained.

All gates should have outside screws, and the threads on them fine, so that it will be impossible to open or shut them too quickly. The careless opening and shutting of gates has wrecked many a good line.

It has always been my rule to place tell-tale gauges in the main lines a few feet behind a main gate, and from such a gauge one can easily see whether the water was turned on or off slowly, and it should be an invariable rule to discharge any man that handles a gate in a careless manner, after once being warned by those in charge of the works.

Seventh—With reference to the numerous devices for joining pipe, I have no hesitation in recommending that all pipes near and around the workings of the claim, should be furnished with angle iron flanges. In this country they are certainly the exception to the rule, but if once used, no other kind of connection will be tolerated.

It is often necessary to find the quantity of water that will be discharged through a sluice gate with side walls, and the number of gallons per minute that will flow through under certain heads may be found by the following easy formula:

In determining the head of water care must be taken to measure from the center of the opening in sluice gate to surface.

$$G = 8.025 \times \sqrt{H} \times .6 \times A \times 6.23 \times 60.$$

$$H = \left\{\left(\frac{G}{6.23 \times 60 \times A}\right) \div .6\right\}^2$$

Where G = gallons per minute, H = head or depth of water from surface to center of sluice opening, A = area of opening.

Example: How many gallons per minute will be discharged from a reservoir through a sluice gate with side walls, when the depth of water above the center of the opening is 7 feet and the opening is 2 feet wide and 1 foot high?

Answer: $G = 8.025 \times \sqrt{H} \times .6 \times A \times 6.23 \times 60 =$

$8.025 \times \sqrt{7} \times .6 \times 3$ ft. $\times 6.23 \times 60 = 14281.785$ gallons per minute. Which ÷ 11.25 = 1269.49 miners' inches.

Again, if it is required to find the head or height of water above center of opening in a sluice gate necessary to discharge 14,300 gallons per minute through an opening 3 feet by 1 foot, we proceed as follows:

$$H = \left\{\left(\frac{G}{6.23 \times 60 \div A}\right) \div .6\right\}^2 \text{ and in this instance}$$

$$H = \left\{\left(\frac{14300}{\frac{6.23 \times 60}{8.025} \div 3}\right) \div .6\right\}^2 =$$

$$\left\{\left(\frac{14300}{373.80} \div 3\right) \div .6\right\}^2 = \left(\frac{38.25 \div 3}{8.025} \div .6\right)^2 =$$

$$\left(\frac{21.25}{8.025}\right)^2 = 2.64^2 \text{ or } 6.96 \text{ or nearly 7-inch head.}$$

In many instances a sluice valve is used instead of a gate, and when the pipe attached to the valves is comparatively short, say of a length not exceeding more than three diameters, the following formula may be used:

Where G = gallons per minute, H = head in feet or height of water above the center of the valve opening, d = diameter of valve opening in inches.

Example: How many gallons per minute will a sluice valve 10 inches in diameter discharge when the height of water is 3 feet above the center of valve opening?

Answer: $G = \sqrt{H} \times d^2 \times 10 = \sqrt{3} \times 10^2 \times 10 =$ 1732 gallons per minute, or 1732 ÷ 11.25 = 153 miners' inches.

Example 2. With same measurements find the head required to discharge 1732 gallons per minute.

Answer:

$$H = \left(\frac{G}{d^2 \times 10}\right)^2 = \left(\frac{1732}{10^2 \times 10}\right)^2 = 3 \text{ feet.}$$

Example 3. To find diameter of valve necessary to discharge same quantity of water with same head as in examples 1 and 2.

Answer:

$$d = \sqrt{\left(\frac{G}{\sqrt{H} \times 10}\right)} = \sqrt{\frac{1732}{1.732 \times 10}} = \sqrt{100} = 10$$

inches diameter.

In connection with the last formula it must be borne in mind that if the pipe leading to the sluice valve to reservoir is much larger than three diameters, allowance must be made for friction, etc.

Nozzles.—Nozzles require great care in construction so as to be of correct form, and perfectly smooth in bore, in order that the water leaving them will be in a solid stream, instead of scattering and thereby losing power, as is the case with nozzles of improper construction. In order to get the best effect from any kind of nozzle, it is absolutely necessary that the head of the supply pipe should be 3 or 4 feet under water, to avoid air getting into the pipe and causing the water to scatter when leaving the nozzle.

To determine the velocity and discharge in cubic feet per second for well-made nozzles, either of the following simple methods may be followed:

First—Multiply the square root of the hydrostatic or effective head in feet by 8.03. This will give the velocity in feet per second, and that multiplied by the area of the discharge end of the nozzle in square feet will give the discharge in cubic feet per second, which, multiplied by 40, will give the answer in miners' inches. Example: Nozzle 4 inches in diameter, discharging water under an effective head of 400 feet, find velocity and discharge. The square root of the head—or 400 feet—is 20, and 20×8.03 equals the velocity in feet per second, viz., 160.60. Area of 4-inch nozzle in square feet =.087266, and this multiplied by 160.60=14 cubic feet per second, or 14×40=560 miners' inches. The result obtained by this rule is nearly the theoretical discharge, while for ordinary practical results the actual discharge will be from 75 to 85 per cent of the answer obtained by this rule.

Second—To find the discharge in gallons per minute, use the following formulæ: $G = \sqrt{h} \times^3 \times .24$. Where G = gallons discharged per minute, h = hydrostatic or effective head on nozzle in feet, and d = the diameter of nozzle in ⅛ths of an inch.

Example: Find the discharge from a nozzle 3 inches in diameter with a head of 205 feet. The square root of the head viz: 205 is 14.317 and the diameter in ⅛ths of an inch is 3×8=24, which squared is 24×24, or 576. Therefore, G = 14.317×576×.24 equals 1979 gallons per minute, and this divided by 11.25 = 176 miners' inches.

For accurate results the following two rules may be followed:

First—Discharge in cubic feet per second = $\sqrt{2 \times g h} \times a \times 0.96$, where g is the acceleration of gravity in feet per second, commonly accepted as 32.2 h = the hydrostatic or effective head in feet, and a = the area of nozzle discharge in square feet.

Second—Discharge in cubic feet per second = $\sqrt{h} \times d_2 \times G$ where h = the effective head in feet, d = diameter of nozzle in ⅛ths of an inch, and c = a variable co-efficient from .00064 to .00066.

It is a well known fact that water issuing from a nozzle should theoretically attain the height of the head. For instance, a nozzle with 300 feet effective head should throw a stream a height of 300 feet, but we all know this efficiency cannot be reached in practice, owing to the resistance of the air, and other causes, but the difference has been found by experiment to vary nearly in inverse ratio to the diameter of the jet, and in "Practical Hydraulics," by Thos. Box, we have a formula for approximately calculating the loss of head for each case, which is as follows: $h' = \frac{H^2}{a} \times .0125$. Where H = the effective head on the nozzle in feet, h' = the difference between the head and the height of discharge column from nozzle. d = the diameter of the jet in ⅛ths of an inch. Mr. Box goes on to remark that as a result of this rule each size of nozzle attains a maximum height with a certain head, and when the head is increased beyond that point, the nozzle does not throw the stream so far, but, on the contrary, the efficiency of the nozzle greatly diminishes; a good deal owing to the fact that an excessive head, or more plainly speaking, a head out of proportion to the diameter of the nozzle, tends to scatter the issuing stream and cause it to meet with more resistance from the air than a jet of solid water issuing with a moderate head.

Adopting Mr. Box's formula we will work out the following, and see the result:

First—At what distance will a well-formed nozzle of 2-inch diameter throw a stream of water having an effective head of 200 feet?

Answer: $h' = \frac{200^2}{16} \times .0125$ or $\frac{40000}{16} \times .0125 = 31.25$.

Therefore, the height the nozzle will throw is 200—31.25, or 168.75 feet.

Second—Take the same nozzle, with a head of 450 feet, and the loss will be $\frac{450^2}{16} \times .0125$ or $\frac{202500}{16} \times .0125 = 158.20$ feet. That is to say, the water will be discharged to a height of 450—158.20, or 291.80, feet, instead of 450 feet, the theoretical height minus all friction due to the head.

(To be Continued.)

THE following is stated to be the composition of a number of Japanese alloys hitherto kept a close secret, and now revealed by workmen making them. The "shadko" is an alloy of copper and from 1 to 10 per cent of gold; the objects are placed in a mordant of sulphate of copper, alum and verdigris until they have assumed the coppered or blue-black hue of swordsheaths and decorative articles. "Gni-shi-buichi" is a copper alloy with 30 or 50 per cent of silver of the well-known gray color. "Mokume" is a compound of several alloys. About thirty plates of foils of gold, "shadko," copper, silver and the last-mentioned alloy are soldered together, holes are made, the plate hammered out and put in the mordant. The finest Japanese brass, "sinchu," consists of 10 parts copper and 5 of zinc; of bell metals, "karakane" is made of 10 parts of copper, 4 tin, ½ iron, 1½ zinc, the copper being melted first and the other metals added in the above order. Other proportions give inferior bell metals.

The Conservation of Intellectual Wave Forces.

TO THE EDITOR:—In your valuable paper our attention is often arrested by problems pertaining to light, vibration, electricity and magnetism—all interesting and stimulating to our conceptions of the material activities in the universe, with a constant desire to have them subserve the interests and progress of man. The mind is sometimes bewildered at the possibilities presented, and when revealed in glimpses of possible truths in new relations, abundant food is furnished for active reasoning, foresight and investigation, and with this thought in view, I desire to present to your readers a succinct account of some radical ideas and conclusions as reached by Solomon J. Silberstein, 311 East 74th street, New York, and set forth in a recent book (300 pages) under the title of "The Disclosures of the Universal Mysteries." I cannot undertake to cover the ground in this communication, but hope to be able to give tangible expression to some of the ideas advanced which will repay perusal, and, from a somewhat necessary fragmentary presentation, oblige the reader to imagine the argumentative links.

In the first place, Mr. Silberstein, as a basis for his theories, does not accept any deductions that relegate intelligence from the original and persistent energies of the universe. Absolute intellectuality is sole factor in the last analysis and is the only real existent element that was, is, and ever will be, eternal, without beginning and without end. Every object, all objectivity in the universe and particularized being, is but a chain of tendencies, activities, accentuating and perfecting themselves through the impartial impulses and vibrations originally set up in the formulative atom; adjusted and readjusted by accumulations in the transforming order of evolution, involution, and motor forces generated in the method, insuring continuous life and perpetuating activities. The questions at once arise: What hypothesis is most warranted in settling the question? Did matter, as we understand it in its incipient state, have motion, force or energy communicated to it from *outside*, or was such energy inherent in it? Has matter ever existed, commonly understood as extension, in an ever-present condition? As a further basis, Mr. Silberstein claims as co-existing with intelligence, an absolute essence, that is formless in itself, but partakes of the embryo character, and is, as it were, the offspring of the universe as a whole, characterized, as the medium between the absolute mind and actuated forms, the non-absolute forms, that appear and disappear, re-appear transformed, re-formed, some rising above the sub-conscious into the threshold of self-consciousness, entailing a conception of its own relation to the divine intelligence. "The intellectual being of the universe is conceived to be—the ideal concept of the universe as a whole. The intellectual universe, as a consequence, cannot be thinkable to exist or to be enclosed in any physical thing behind intellectuality. Intellectuality, therefore, has not any other attribute, nor any mode of matter and force, but pure absolute intellectuality, the pure mathematical bond of the universe as an intellectual substance in an eternal being, standing by itself, without change in all eternity. The extension, or matter and force, can not be an attribute of God as a unit in Him just as intellect (as Spinosa thought), but a separate creation made of Him. * * * Absolute intellectuality, which is not material, embraces all abstract images without end in one perfectly absolute generality, in the one intellectual being; so that in the knowledge of every one of the mental images in the absolute intellectuality is contained the knowledge of all mental images of eternal existence, and that every one of the mentally separate images are perfectly known and conceived one in the other in their mutual intertwined relation in the one pure absolute generality." The key to Mr. Silberstein's solutions appear to rest in what he calls the "centrality of motion," which in its ultra interior meaning expresses the innermost tender and spiritual waves of thought, the resultant of cogitation and a reflexion of the light of intellection in its infinite notation of infinite change in the vibratory action of related activities.

"Particularized compound objects are not emanated from the very light of the mind, from the essence of intellectuality; nor do they issue forth from the essence of the universe to assume an individual existence, so that the objective appearances should have an objective separated existence of any kind of any reality. But inasmuch as the essence of the universe issues forth from the very light of the mind, as a radiation of the intellectual waves or as a photographic image, its absolute emanation becomes a general activity in the universal essence; and by this general activity the universe is actuated. It vibrates in spiritual waves and reveals itself according to time and to place in particularization, coming one from the other and one after the other as they are conceived one in the other in the absolute mind, in the essence of intellectuality itself. * * * The physical waves which appear before us in the forms of particularized compound objects, in different states of energy, in magnetism, electricity, heat, light and so on, changing one into the other and balancing each other in time and place by a non-absolute existence in the objective world, are contained in and are nothing else but the spiritual waves of the universal essence, the substantiations of the general activity, in an absolute existence." The absolute mind embraces all that wisdom can conceive in one absolute generality; through the whole intellectual waves springs up the universe as a whole, its one generality, at once, by one eternal general and absolute emanation. The general emanation of all compound objects in general, as they exist in potency in the universal essence, is as absolute an existence as that of their existence in the absolute mind itself."

The science of geometry supposes a fixed point as a premise to its conclusions, and scientists reduce matter to elementary bodies or elements, upon which to base their conclusions in experimental philosophy, all of which answers a purpose as far as determining to what extent, and in what manner, their combinations can be made available for progressive action and economic use. But the truth remains, according to Mr. Silberstein, "that nature itself knows not of those elements which our scientists have invented, for it is one eternity, contained in one absolute essence, in which there is absolutely no change and no variation."

The excitations in the universal essence by the cogitations or vibrations of intellectuality express themselves at the crest of the spiritual sources or points of potential excitation in the first forms of primordial matter of atomic proportion, which points become centers of motion, following the laws of intellectuality, being equal to each other in quantity and in quality, equally distanced one from the other in their first formation only, but in their multitude of combinations, subtractions and additions, represent in their various combinations all the particularized beings and objects perceivable in the universe of objectivity as represented to our senses, but they are not properties of matter, but modifications of transformations in that general activity of molecular density, motion and change. It is in Mr. Silberstein's theory and explanation of motion and energy in the atom that he finds proof of nature's laws and evidences that upset many (not all) of Newton's affirmed laws of attraction and gravitation, and obliges him to pronounce them, as well as many other scientific conclusions, absolutely false. While it might require long and detailed extracts from his book to substantiate his statements conclusively to the reader of this article, a careful student cannot but be impressed by the arguments and facts advanced in his philosophy; and perhaps what he has to say about "matter and force" will cause a better understanding of his metaphysical and mechanical application. In this chapter he says:

"The general force which brings forth the atoms in their actual existence is the same force, by the same action or impulse, that keeps them in their state and form. The atoms, although they are indivisible and conceivable only by our intelligence, are still distinct dividuals, each of them separately occupying some space, and are, therefore, capable of being intellectually conceived as consisting of a number of constituents—of parts, that go to make up this individual body—the atom, since the space bounded by the atom can be conceived to be infinitely divisible. That force must be located, therefore, in the center of the atom, whence it exercises its binding influence on all parts equally. For the general force of transformation is not a material force; it is not produced in an object through its material formation after it is formed, that its exercise should be properly qualified to the whole mass or volume of that object, or to exercise its whole power in every particle of matter of that object alike. But it is a spiritual force, and remains always the same; its action or impulse is the spiritual vibration of the universal essence, which occupies no space, through which spiritual points are thrown off from their potential state—from their generality into their individualizations; and in that moment, when the spiritual points extend themselves in space, becoming individualized in the form of matter, the spiritual force remains absolutely the same in the absolute emanation, which is the intellectual light of the intellectual waves of intellectuality itself, which is never extensible.

"The impulse of the spiritual force itself is to transfer all objects from their generality, in which matter and force are absolutely one, into their individuality, in which matter and force are separately perceived, and, therefore, the force cannot be extended with the atom in space; it cannot fill up or occupy the whole volume of the atom, but it must remain in the absolute emanation and must be located in that spiritual point as it was before in its generality, before it becomes extension; that point I call the center, and that spiritual force which is located in the center I call—centrality. The definition of the word 'force' in my whole system is, therefore, the power of conservation in every body, which is the force of centrality. Its impulse is to keep the atom or the body in its peculiar state and form, and there is no other force in the center besides the centrality. We must, therefore, conceive the atoms in the first moment of their creation, being extended in all sides alike, as regular spheres, whose radii were equal. The force of centrality is the one tender or innermost force or principle in the universe which holds and correlates the universe together in one gradual, harmonious and eternal scale of creation, according to fixed, immutable and unvarying laws of nature, which are the laws of intellectuality, the God of the universe."

"The force of centrality, bringing forth the atom in its individual state, brings an excitement in each and every conceivable point or part of the body of the atom, producing thereby a vibration in all its parts. The excitement of the atom is the act of the influence or reflection of the force of centrality in the center through which the matter of the atom is acted upon; by receiving the actions of the force the matter becomes vibrating, producing the motion in matter. Thus, the force of centrality is the active force, while the force of motion is passive. As long as the force of centrality acts in the matter of the atom, there is motion in matter. Should, however, the force of centrality cease to exist, the motion, together with the matter, would, then, also cease to be in existence.

"The influence of the force of centrality, yielding and imparting itself to all parts of the atom, diminishes itself according to the square of the distance from the center. The atoms, although they are physically indivisible, because they are not composed from, nor can be divided into simpler forms of matter, yet, since they are distinct individuals, and extend themselves from their spiritual state—from the center—each of them separately occupies some space, they, therefore, consist of a certain number of constituents — or parts — however small, that go to make up this individual body—the atom—that it should be able to occupy a limited portion of space. So that we are able to draw imaginary circles in the body of the atom around the center till its circumference, the sphere nearest to the center, will be the smallest and the sphere bounded by its circumference the greatest. The centrality being conceived to exist in the center, its influence to keep the body of the atom in its individual state, in order that no particle of the body should remove from the center, exercises with its whole power in the parts of the first imaginary sphere, four times weaker in the parts of the second, nine times weaker in the third sphere, and the weakest at the circumference of the body. For the distance of the second sphere from the center is two times greater than the distance of the first sphere, the spherical activity in the second is, as a mathematical consequence, four times weaker. The third being three times greater than the first, the spherical activity must be nine times weaker, and so on; so that the influence of centrality divides itself in as ever so many parts. Hence the above law, that the influence diminishes according to the square of the distance.

"The vibration of the particles of the atom is quite the reverse; it increases according to the square of the distance from the center. It is the greatest at the circumference and nought at the center. * * * The particles of the body of the atom can never remove from the center to occupy a larger space, for the spiritual force of centrality bringing the atom in its individual state holds the body as such; from the moment the atom becomes extension it can extend no more or less than it is. Those particles, again, cannot keep their place, for the motion compels them to move. There must be, therefore, a generated resultant force, combined of the two, to regulate the power of the two forces. * * * Each and every particle of the circumference of the atom looking eastward has the tendency to move in a straight line eastwards. The other particles looking westward do the same in an opposite direction. The shape of the atom must be, therefore, changed into another form by such a mechanical way by its own impulse. While the parts of one side tend to move in their direction, the parts of the other side keep them back; and thus it is with all sides—the motion of all the sides incessantly jumps back to the center, bringing thereby a new excitement into the center. The centrality, therefore, changes its position in the atom, so that the shape of the atom is changed from a spherical one into an oval form, longer in one direction and shorter in the other, more massive in one end of the long diameter and thinner at the other."

In such a form the resultant force came into play, to bring the atom in a circular motion around its own axis. This resultant force is a mechanical result. The impulse of centrality is only to keep the body of the atom in its state, in order to be an atom in its certain volume and mass, no more and no less, and has entirely no power to attract any particle to the center. The first conception of matter and the first cause of the physical universe is positively the extension alone, caused only by the same force of centrality, and, therefore, no force of "attraction or gravity" in matter can be thinkable; for were any force of attraction or that so-called force of gravity in the center of the atom, or in the center of any body, then no extension could ever be possible in the universe; the property of extension, as well as its term, is positively contrary to the term and prop-

erty of gravity. The matter itself, from its very beginning till the highest development of bodies, possesses only the one and the first property of extension, to be diffused from the center into more space, not to be attracted to the center. Thus, the impulse of centrality, as it is not a force of gravity, is not a direct opposite force to the motion; it serves only as a resistance to it, and, in the same time, it produces motion. As a final result, an elliptical way is produced in the universal space with which the long diameter of the atom makes a certain angle, establishing two absolute universal laws in nature: The first law is that every individual object in the universe is in constant motion, inherent in itself, and the second law is, that the motion in every object must be modified in an internal double motion."

How these atoms meet and join others, forming compact molecules; how these spaces between the atoms and molecules represent different degrees of porosity, and the presence of the universal essence whenever matter can be postulated; how the atomic weights and the relation of the elements thereto are reduced to formulas only of molecular density and their influences; how the application of this theory of motion explains Kepler's laws, as well as the planetary motions; how every existing thing of the whole physical world, in whatever state or form it may be, possesses its own force of existence as its own property, or each of them possesses a part of that general force of universal existence, he epitomizes as follows: "Thus all objects of the world are in an eternal struggle of existence—in offensive and defensive states—in action and resistance to action." To see all these thoughts further elaborated, I would recommend the book itself, upon which the author has bestowed a life of laborious study.

EZRA W. KEELER.

The Great Northern Gold Field.

Written for the MINING AND SCIENTIFIC PRESS by ALMARIN B. PAUL.

When we take into consideration that the land embraced in the counties of Shasta, Trinity, Siskiyou and southern Oregon, according to the views of eminent geologists, was the first of the mineral ranges to raise above the ocean, and from the further fact of these localities being the seat of great volcanic action, we can begin to reason as to the cause of such a widespread quartz stratification and of the great golden possibilities of these northern sections when capital shall be found bold enough to delve deeper into the bowels of these mineral ranges. That age has much to do in the formation of metallic deposits and the maturing of them, no one in these later days questions, whether the mineral be gold and silver, copper or iron.

These northern sections, from unexplained reasons—notwithstanding their large outpourings of gold in the earlier days—for the past thirty-five years have received but little attention, excepting from the very few, in comparison to such sections, as are embraced in the counties of Amador, Tuolumne, Calaveras and Nevada. The "Mother lode" has its charm, and many believers, and while it is unquestionably an important and valuable mineral zone, it is not detracting anything from it to say there are others in California that with the same expenditure of capital in development, judging from surface indications of these parts, have equally as inviting an appearance. When it comes to the gold yield per capita in the past, and the quartz outcrop of the present, these northern sections are by no means inferior, and more than inviting for enterprising capital.

The great drawback to this mineral field has been lack of large capital—capital in proportion to the deposits of quartz veins to be found—and not to the lack of faith by the owners of mines, who lay by and hold on to their locations year after year in an abiding faith that in time the hidden treasure below will through some agency put them "on velvet."

When we view the awakening mining spirit and the strides made in the past ten years in improved machinery, in every department of mining, and the same advance in systems by which a high per cent of the ores' value can be extracted at a comparatively nominal expense, we feel as though we can say to the "hard-fisted" quartz prospector that your time is close at hand.

Speaking of mineral zones, from near Redding in Shasta county, and running northerly into southern Oregon, is a mineral belt fully sixty miles or more in width, with every elevated section filled with quartz croppings carrying gold, silver, copper and iron. Gold is generally the predominating metal, though at times it is copper, and in some localities are large iron deposits.

Commencing on the east side of the Sacramento river, and only about six miles above Redding, is the beginning of a belt of gold-bearing quartz. It is in this zone that are located the companies known as the Original Quartz Hill, the Calumet, Walkers, Reid Group, Old Spanish, Mammoth, Central, Hart's Texas Consolidated, Garfield, National, and possibly fifty others that could be named. There is but one property having any especial depth and this is the Texas Consolidated Co., better known as Hart's. Mr. R. G. Hart, president and manager, has been untiring in his labor of development, and for it deserves the greatest credit. Not over 200 feet in depth can be claimed by any of the others, and here the majority of lodes run from 3 to 15 feet in width.

The Texas Consolidated has a development of 1050 feet. This mine has been for years a paying property—first with a five-stamp mill, now increased to a twenty-stamp mill. It is now actively and prosperously at work, showing that development in depth is what this northern section requires to make it one of the great gold-producing parts of California. All of the above named mines and locations are embraced in a distance of, say, six miles in length and two miles in width, and this is but one of many similar zones.

On the westerly side of the Sacramento river, and parallel to the before-mentioned mineral range, and reaching westerly to Clear creek and beyond through Trinity county and northerly into Oregon, is a mineral belt of large proportions. In this section west of the Sacramento river, also some six miles above Redding, are the works of the Mountain Copper Co., Limited—an English company under the efficient supervision of Mr. A. J. Hill. This institution has become, in the short period of little over a year, one of the most extensive and enterprising companies in the State of California. The mine of the Mountain Co. carries some 15% of copper, with a fair value in gold and silver. The lode varies in width from 30 to 300 feet. It is an immense deposit, and yet not over 300 feet in depth.

Moving north towards Squaw creek there are quartz outcrops without number, and varying in width from two to forty feet; and yet, with the exception of the Uncle Sam, there is but a limited development in depth. In this section is the Balakalla group—an immense mineral deposit, having a trifling development, but showing a flattering outlook for profitable expenditure in works.

As to Siskiyou county, on all its higher ranges are quartz veins in any number, yet, save the Black Bear and Gold Run mines, there is but a limited development. As stated, this mineral zone runs into southern Oregon, and here there is less development than in the northern sections of California. As to Trinity county, it has its record as a gold-producing one, especially in gravel; and as all the gold comes from quartz, it may be considered a good quartz section. But save about French Gulch, where there are several fairly worked mines in depth, no large amount of work has been done.

No mine approximates development sufficiently to show its true value short of 1000 feet in depth, and there is no promising lode at the surface but what will be a paying proposition at some point of its 1000 feet development, and the sooner California miners realize this fact and impress it strongly on their minds, as do the English, the more successful in their mining ventures will they become. Some few have, and good returns have been their reward, and this fact should be an incentive for others. To thus develop lodes, I am aware, requires large capital; but a one-tenth interest in a property, having 1000 feet development, will have a greater value than has the whole vein with 100 feet development. Every proposition for development should be well considered by mine owners, as development only opens up the value of any quartz deposit.

The Congress, Arizona, Mines and Mill.

The Congress mines and mill are on the south side of the Date mountains, overlooking the Hassayampa valley, sixty miles south of Prescott, and seventy miles north of Phœnix, Arizona. The four miles of railroad operated from Congress junction, on the main line of the Santa Fe, Prescott & Phœnix railroad, to the mines and mill of the Congress Gold Mining Company, belong to the latter company.

The mines output daily about 110 tons of ore, the present milling capacity, and about 400 men are employed. In the mines and mill the men work eight and ten-hour shifts.

The underground developments are pushed constantly, the main shaft (on an incline of 22°), being 1750 feet deep; 600 feet east of the main shaft is a second one 1150 feet deep; 1000 feet west of the main shaft is a third, 850 feet deep, and which the management contemplate sinking to the 3000-foot level. Both the second and third shafts connect with the main shaft by drifts, on the vein from which stoping is going on.

The vein is a remarkable one in some respects, there appearing to be no break in it as far as development has gone, to the 1700-foot level. It dips at an angle of 22°, and the vein matter, which is a hard, white quartz, runs in marked uniformity of width, averaging about 20 inches. The main shaft is lighted by electricity. The trackage, on which the ore cars run up and down the incline, is of 40-pound railroad iron. Levels are run at every 75 feet. The ore carries pyrites of iron and no free gold, and the values have held about the same uniform figure throughout. The general run of milling ore averages about $20 per ton. Ores from high-grade streaks, running approximately $200 per ton, are shipped directly to the smelters. Besides the main vein, which thus far has been the principal producer, the company is opening two others, one above the Congress and one below, the latter being in the foot walls of the Congress, and parallel with it. To develop the lower vein a crosscut is being driven on the 1400-foot level, which is now in about 500 feet. It is believed that by thoroughly opening the latter vein, the capacity of the property will be doubled. All shafts have steam hoists; air drills are used in sinking and drifting.

VIEW OF CONGRESS, ARIZONA, SHOWING MINES AND MILL.

The mill has forty 850-pound stamps, 93 drops per minute, dropping 6 inches, crushing 110 tons of ore every twenty-four hours. The screens used are 20-mesh. Twenty concentrators are used; 75 per cent of the values are saved. The tailings run into settling tanks, from which 85 per cent of the water is pumped back and used again. From the tanks the tailings are run into beds and, when dried, from there to the cyanide mill, elevated to storage bins, and automatically dumped into a 100-ton roasting furnace. The roasted material is automatically dumped into a bin, from which it is elevated into the cyanide tanks. By this process about 90 per cent of the remaining 25 per cent of the ore values are recovered, making a total saving of about 97½ per cent of the gold values in the ore.

The future plans of the company contemplate the erection of a new mill on the same plan as the present one, for the purpose of increasing their milling capacity. In the proposed new mill, 1000-pound stamps will doubtless be put in. The concentrates are shipped to the Consolidated Kansas City reduction works at El Paso. The supply of water is pumped one mile, and raised 500 feet, to convey it over a range of hills to the property.

Congress, Arizona, April 14th, '97. WASCOTT.

Scientific Progress.

Watt and the Measurement of Power.

By WM. H. PREECE, C. B. F. R. S.

James Watt's greatest invention—which has been most prolific in exciting further improvements in the steam engine, and which has supplied the engineer with a new sense—is, perhaps, the "indicator." He also brought into use the term "horse power." Watt, in introducing the steam engine, found the chief competitor he had to meet was the horse. It worked the pumps in mines and brewhouses; it drew the ores to the surface: it was employed for grinding and for milling. It was clear that his customers would compare the performance of his engines with that of their horses. He determined by experiment that a good horse working continuously could raise 22,000 pounds 1 foot high in one minute. He thought he would go "one better," so he said, "I will call 33,000 pounds raised 1 foot high in one minute a horse's power." Thus he gave his customers the advantage of 50 per cent more work; but he did more, instead of compelling them to keep relays of horses each of which could not work continuously more than six or eight hours he gave them a machine which worked continuously throughout the twenty-four hours.

The above definition of a horse's power was singularly unfortunate. It means fifteen tons moved at a snail's pace. Few people can grasp the conception. We know what a man can do, especially when rowing a race, or when raising bricks. Going up a mountain at the rate of 1,000 feet per hour—a fair performance—he does about $\frac{1}{12}$ of a horse's power (H. P.) if he weighs 168 pounds. Working a tread-mill absorbs $\frac{1}{7}$ horse power, which is distinctly hard labor. If he runs upstairs at the rate of 3½ feet per second he does one horse power, and this is not good for his heart. We also know what a horse can do in drawing a cart or moving a canal barge; "550 pounds moved 1 foot per second"—the leisurely pace of a child walking—is more comprehensible than, and the same thing as, 33,000 foot-pounds per minute, and is now more frequently used, especially abroad.

But Watt was not the first to use the term "horse's power." Savery did this in 1702. "An engine," said Savery, "which will raise as much water as two horses, working together at one time in such a work, can do, and for which there must be constantly kept ten or twelve horses for doing the same, then I say such an engine will do the work or labor of ten or twelve horses." Watt, however, gave the unit a scientific character, and was virtually its founder.

He thus introduced the conception of power as the rate of doing work. His unit of work was 1 pound raised 1 foot high, irrespective of the time in which it was done; but by conceiving this being done in a unit of time he conveyed the idea of power.

Again he was anticipated, for Smeaton, in the Philosophical Transactions for 1759, in describing his experimental inquiry concerning the natural powers of water and wind, said: "The raising of a weight relative to the height to which it can be raised in a given time is the most proper measure of power." Watt did, however, introduce the term "duty" to determine the comparative merits of steam engines. It was introduced by him in Cornwall, and is often known as the "Cornish million," for he determined how many pounds could be raised 1 foot high by burning a bushel of coal in his boiler, and found that this could be expressed only in millions.

Watt's bushel was subsequently changed in England to 1 cwt. (112 pounds), and in the United States to 100 pounds. It has now become practically obsolete, for more effective and more uniform means are adopted to express the relative efficiency of engines.

The term "horse power" has probably seen its best days. It is gradually being displaced, and with the advent of the metrical system it will disappear. As a scientific term it has been much abused, and as a commercial term it conveys no meaning. Sir Frederick Bramwell wrote in 1883:

"A barrister lately said to the same writer of this report: 'You surely do not mean to tell me that you do not know what a horse-power is—you that have been a mechanical engineer all your life?' The answer given was: 'Indeed, I do not; there is a difficulty in the outset; what sort of horse power do you mean?' 'Why, I mean a horse-power.' 'I know you do, but there are five kinds of horse-power.' 'Five kinds! impossible; it can't be.' 'But there are; I will give you the names and the nature of them: (1) The real horse-power, the power of a horse, estimated to lift 22,000 pounds 1 foot high per minute. (2) That which in James Watt's time was called the 'nominal horse-power, a horse-power of 33,000 pounds raised 1 foot high per minute, which power he gave all his early engines, so that the purchaser, having one and a half times the power of a good horse, should not be in a position to complain of the engine as inadequate. This term nominal is now commonly confounded with the commercial horse-power, and the name, theoretical horse-power, is substituted to represent that which was received as the scientific horse-power of 33,000 foot-pounds. (3) The gross indicated horse-power. This is the whole power developed on the piston of the engine without any deduction for friction, which power, divided by 33,000, gives the gross indicated horse-power. (4) The net indicated horse-power. This is the same as the foregoing, minus a certain allowance for friction. (5) The commercial, or, as it is now frequeutly called, the nominal horse-power. This is a horse-power about which no two persons can agree.'"

Sir Frederick Bramwell might have added a sixth—viz., electrical horse-power, that which appears in the circuit, or electrical energy.

Is a horse power really a horse's power? Tredgold made it 27,000 foot-pounds per minute for eight hours. Rennie assumed 22,000 as correct. Beardmore had a horse weighing a little over half a ton which did 9000 foot-pounds per minute for hours a day. Morin made it 26,150 foot-pounds. Two horses will tow a canal-boat at 2½ miles an hour, while a steam engine of 10-horse power is needed to do the same work by means of a screw. Tramcars are drawn by two horses at a speed which the so-called 25-horse power motor can scarcely do. The horse is really a more efficient machine for a time than the engine, and its "pull" can be directly applied, but he tires and sickens and dies. He is better adapted to certain kinds of work. He can at times expend much more energy than the so-called horse power. At other times he is helpless and hopeless. Thus it appears clear that a horse power is not a horse's power.

The horse power is based on the units of pounds, feet, and minutes.

Scientific men are now universally using a system of units based on the "centimetre," "gramme," and "second"—hence called the "C.G.S." system, to distinguish it from the "F.P.S.," or British engineers' system.

In this system, the unit of work, viz., one gramme moved through one centimetre against unit force, is called very small, but 10,000,000 of these small units are taken and are called the "joule," and become a practical unit of work. Thus Joule's own mechanical equivalent, the work absorbed in raising the temperature of one pound of water one deg. Fahr. at or about its maximum density, indicated in the "F. P. S." system as 778 foot-pounds, is in the "C. G. S." system the work absorbed in raising the temperature of one gramme of water one deg. Cent., at or about the same maximum density, as 4.2 joules. Thus the joule is to the foot-pound as one to 1.356, and the horse power, instead of being 550 foot-pounds per second, becomes 746 joules per second. The joule per second, or the unit of power, has now been universally called a "Watt;" and thus in the new system the rate of doing work, that is, the power developed by the steam engine, or any other machine, or by any other process, mechanical or physical, is most appropriately indicated in units bearing the name of the Greenock inventor. The term watt was applied in 1883 by the late Sir William Siemens to the joule per second, but I had previously in 1881 at the Paris Congress proposed to apply it to 1,000 joules per second. Siemens' proposal has been preferred, and in consequence the practical unit of power comparable with the horse power becomes the kilowatt. Had my proposal found favor, the practical unit of power would have been the watt, and Siemens' unit would have been a milliwatt. I venture to think the acceptance of my unit would have hastened the departure of the term horse power.

Energy, though so protean in its character, retains its joule throughout all its changes. Every joule impressed on the surface of the ocean by the rays of the sun adds to the moisture of some cloud which, condensed into rain by contact with our cool highlands, feeds a river. The engineer directs this falling water through the blades of a turbine, and each joule that passes assists in rotating dynamos to excite strong electro-magnetic fields and powerful currents of electricity, which in their turn produce light, the intensest heat known, and chemical decomposition.

Thus in every stage of their transformations the joule remains the same mechanical unit, whilst the energy that it measures outproteuses Proteus.

The grand principle of the conservation of energy teaches us that no energy is ever lost. The total energy present assumes a form either useful or useless to man. The skill of the engineer is devoted to render that which is useless useful, and no one has helped him to do this more thoroughly than James Watt.

The watt is universal and exact; the horse power is not. The latter equals in

	Foot-pounds per second.
England	550.00
France	542.47
Germany	582.25

The foot-pound per second equals 1.356 watts. The horse-power, therefore, equals 746 watts. The watt equals 0.7373 foot-pound per second. The kilowatt, 1000 watts, equals 1.34 horse-power.

If, in order to obtain the value of the power, we divide by 33,000 the ordinary formula, $A\ P\ S\ n$ where A is the effective area of the piston in square inches, P the mean pressure of the steam in pounds per square inch during one stroke, S the length of this stroke in feet, and n the number of strokes per minute, we get it in horse-power. If we divide it by 44,238, we get it in kilowatts

Horse-powers multiplied by 0.746 are expressed in kilowatts; and kilowatts multiplied by 1.34 are expressed in horse-power. The new system is universally used by electrical engineers.

Names, when well selected, secure precision of language; a watt is a watt, and nothing else. A pound, on the other hand, may be either a force or a mass of inertia. Names fix ideas. Every electrical workman has a definite and clear conception of an ohm or an ampere. He requires no definition to impress them on his mind. The name alone conveys to him all he wants to know. They become fundamental ideas. There is no ambiguity, hence there is no difficulty either in teaching or in practice. The same benefits would certainly arise if we applied the term kilowatt to the unit of power. No one would have to ask, "What sort of kilowatt do you mean?"

THE diameter of Jupiter is about eighty-five thousand miles, or nearly eleven times that of the earth. Its volume is 1233 times that of the earth; but owing to its being of a less density, its mass or weight is but three hundred times the earth's.

Electrical Progress.

Double Trolleys for Street Cars.

The best electrical engineering talent was at one time divided as to how the current should be rendered available to the moving car, and some of the (now historical) most successful experiments involved the double-trolley system, with over-running trolleys. Under-running trolleys succeeded the over-running, but the difficulty and expense of insulating the positive from the negative wires, because of their necessarily close proximity, and some other causes, led to the abandonment of the double trolley system. The latter has its advantages, however, and these are appreciated in the city of Cincinnati, the only place in the world where the double-trolley overhead system is exclusively used.

The main advantage claimed for the double-trolley system is that it renders the car independent of the track for its motive power. One of the chief disadvantages is that the two sides of the circuit, being necessarily near together, render leakage a factor of greater importance to be dealt with. Mechanically, the system is undesirable, especially in localities where trolley lines cross or intersect each other, or branch.

It is clear that when two single wires cross each other there is but one intersection, but when two pairs of wires cross each other there are four intersections. The difficulty is really less a mechanical one than an electrical one in this case, but, however perfectly the problem may be solved in the future, the relative merits of the systems must ever be the same.

The inducement to return to the double trolley are, among others, that the latter is really cheaper to construct, that it renders the operation of the car practically independent of the condition of the track and that it averts entirely that alarming, but growing and insidious evil, electrolysis.

Great as are the advantages of the double-trolley system over the single (and it possesses some not mentioned here), its disadvantages outweigh them to such an extent that the electric railway fraternity will not make the change, nor the electrical engineering fraternity, recommend it unless this change is made compulsory by law.—N. W. Perry in Cassier's Magazine.

Calibration of Current Meters.

The February issue of the *Oesterr. Monatschrift d. Offentlichen Baudienst* contains an interesting account of the apparatus used by the Austrian Hydrographic Bureau for calibrating current meters of the Woltmann-Mill type, and determining constants for their rating. The tank is nearly 400 feet long and nearly 6 feet deep, entirely closed in a shed. On each side of the canal is a rail, so that a car carried on the rails runs directly over the canal. This car is propelled by electricity, and its speed can be regulated from about 100 feet per minute up to 1,000 feet. On the car is placed the recording apparatus, consisting of a chronograph, a speed-recorder, and a distance-recorder, all making electric records of the various data.

The current meter makes an electric contact for every fifty revolutions, while the chronograph marks seconds, and the distance is recorded for every ten meters; and, as all these appear side by side on the same strip of paper, the relations which the revolutions of the meter bear to the elements of time and distance may be fully investigated.

Refining Bismuth by Electrolysis.

It is reported that a satisfactory method of refining bismuth has been devised by B. Zakorski, who employed impure bismuth as an anode in an electrolytic tank with a solution containing nitric acid as an electrolyte. Carbon, pure bismuth, platinum, or other suitable material, may be employed as the cathode. A current density of 15 amperes per square foot of active bismuth

surface is recommended, and the density must not exceed 30 amperes. Pure bismuth is deposited on the cathodes, from whence it falls, or may be easily removed. It is then washed with dilute HNO_3, dried and fused. When the electrolyte has become too rich in lead, it may be freed from it by electrolysis, or the contained bismuth may be precipitated by metallic lead, and the resulting solution of lead nitrate utilized in any desired way.

Government Telegraph Lines.

A bill has been introduced in the Senate by Senator Kyle to provide for a Government telegraph system within the United States, to be under the government of a board consisting of the Secretary of State, the Secretary of War and the Postmaster General, and shall consist of four trunk lines connecting the northeastern, the northwestern, western and southwestern and the southern part of the United States with the city of Washington, and that these trunk lines shall be connected with lines and offices established at such cities, towns and places as shall be for the public interest for the time being; all to be extended and increased as Congress may from time to time provide money therefor.

This telegraph line shall be carried on and operated as a part of the postal system of the United States, and the rates for the use thereof shall be established by the above-named board.

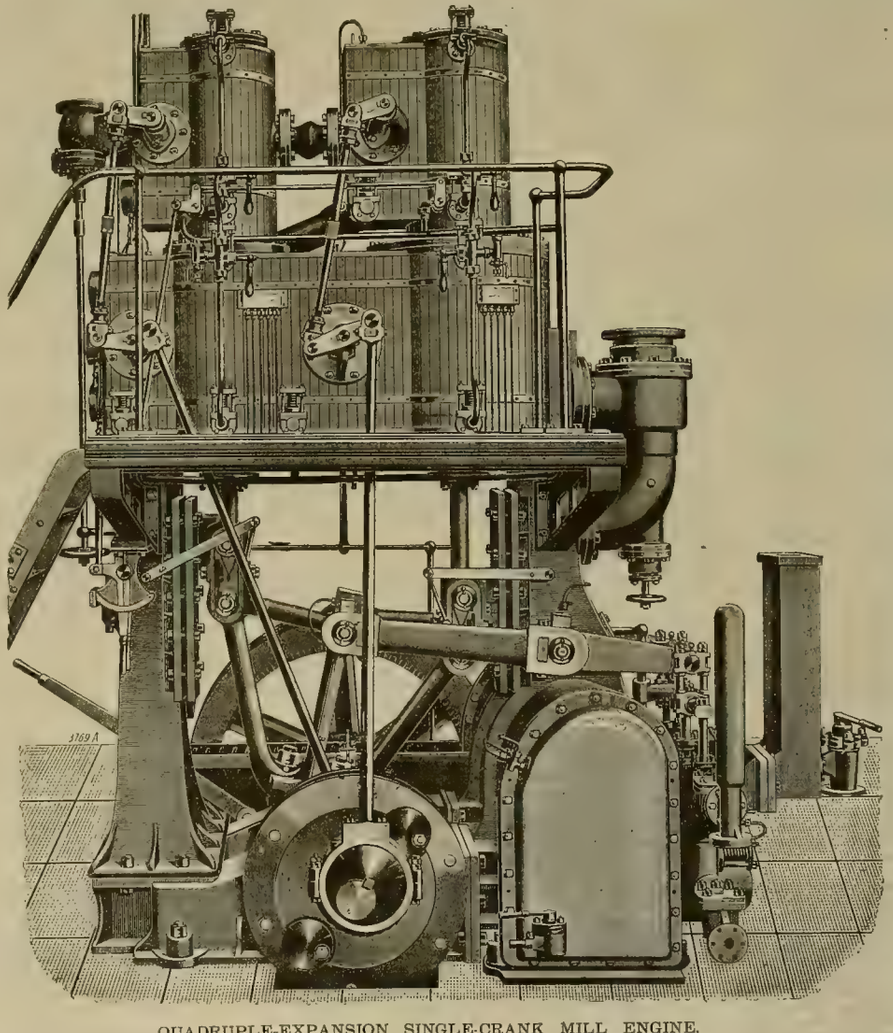
The bill further provides that there shall be no discrimination in the matter of charges and rates, with the exception of messages for the press, and in that case no publisher of any one newspaper or combination of newspapers shall be allowed better rates than any other.

It is provided that this Government telegraph line shall be constructed and kept in repair under the direction and superintendence of the Secretary of War and through the Corps of Engineers.

AMONG the many modern institutions of Japan, electricity very naturally takes a leading position. The absence of gas works in the country alone will account for the prominence which is bound to be given to this branch of the engineering industry. Here, where earthquakes and other seismic disturbances are so frequent, the impossibility of adopting a general system of gas piping throughout any large town is at once apparent. Then, again, Japan is well off for water power in many of its important centers, with the result that the cost of lighting or traction by electricity is reduced to a minimum.

Mechanical Progress.

A Hydraulic Pumping Engine.



At the Schmidtmannshall salt mine, near Aschersleben, Germany, a water-pressure pumping engine, on Kaselowsky's system, has been erected in the No. IV shaft. The chief difference between this and other engines of the same class is in the high working pressure adopted, so that only a small supply of water is necessary. The pressure of 3,300 lbs. to the square inch is obtained by a steam engine of 200-horse power, working differential pumps at the surface, and is transmitted to the engine underground by a pipe of 1.18 in. bore, having a pneumatic accumulator at either end of the line. In these accumulators the power water lifts a plunger of 6 in. diameter and 4 ft. stroke, against the resistance of a piston of 15 in. diameter moving in a closed cylinder overhead containing air, which is maintained by a compressing pump at 600 lbs. pressure per square inch. The ratio of the two pressures, 5.5 to 1, being nearly inversely proportional to the areas of the piston, 1 to 5.6, the load on each side of the accumulator is under ordinary conditions the same.

The pumping engine is a combination of two pairs of horizontal single-acting plunging pumps arranged duplex fashion, one pair being in the middle, while the other is at the end of the stroke, so as to insure a continuous flow in the rising main. The plungers are tubes of 4 in. inside and 7.33 in. outside diameter, closed at one end, which forms the pump piston, while the other slides through a packed joint on a central tube of 3.38 in. thick and 1.38 in. bore, through which the pressure water is admitted to the interior of the plunger during the driving stroke, the combination being essentially a hydraulic press with fixed ram and moving cylinder. The length of stroke is about 12 in. The plungers in each pair are coupled by side rods, so that the forcing stroke of one works the suction of the other, the pressure water being admitted and exhausted by a piston valve worked by tappets and levers from the connecting rods. A pressure equalizer is placed both on the admission and the discharge sides of the power water, which returns through a pipe somewhat larger than the admission (1.57 in. diameter) to the press pumps at the surface. The water is mixed with grease in order to diminish the frictional resistance. All the joints are packed with cup leathers, which keep tight, notwithstanding the extremely high working pressure.

Quadruple-Expansion Single-Crank Mill Engine.

The engine herewith illustrated was constructed by Fleming and Fergusen, Birmingham. Although it has four cylinders, it has only a single crank. It is of the vertical type, the cylinders being arranged in pairs tandem fashion. The high-pressure and second cylinders are placed respectively over the third and low-pressure cylinders; these cylinders are 9″, 12″, 16″ and 25″ in diameter, the stroke being 21½″. The two crossheads are connected by links to the top end of a steel triangular connecting rod. The valves for the high-pressure and third cylinders are actuated by an eccentric, cut-off being regulated by a sensitive shaft governor. English engine builders claim that this plan is superior to that of having the high-pressure valves alone controlled by the governor, as the early cut-off in the third cylinder checks any tendency to racing which might be caused by the steam already in the engine. A surface condenser was fitted, being cast in one with the back supporting column. The air, circulating and feed pumps are driven from an extension of the radius lever of the triangular connecting rod.

This engine is so designed that when the water supply is short, for condensing purposes, the engine can be converted into a compound high-pressure engine, of almost the same power, on short notice. To do this the valves of the upper cylinders are simply disconnected, leaving the two lower cylinders (16″ and 25″ in diameter) to do the work as compound high-pressure engines, the compressor being shut off through a double valve placed on the exhaust pipe, which opens to the atmosphere at the same time as it shuts to the condenser. It takes but a few minutes to change the engine from surface condensing to compound. On account of simplicity, economy, steady running and small floor space occupied, this type of engine is said to be well adapted for electric power stations. The engine runs at 160 revolutions, at which speed it gives 250 effective H. P.

QUADRUPLE-EXPANSION SINGLE-CRANK MILL ENGINE.

New Style Gallows Frame.

From the Isabella Gold Mining Co., Cripple Creek, Colo., Mr. Francis T. Freeland, the manager and engineer, sends a photograph of a gallows frame on the new main three-compartment Lee shaft, the sixth under steam there, from which the accompanying cut is engraved. It is of Oregon timber 50 and 64 feet long. The main frame (dark in cut), weighing seven tons, was framed on the ground and lifted at once, using one of the back legs temporarily as a gin pole, the other back leg being framed and ready to hoist; main tackle, six-ply 1¼-inch rope; secondary tackle, four-ply 1-inch rope; power, four heavy draft horses; gin-pole guys, old ⅞ wire rope secured to dead men. The arrangement of tackle gave a power of eighty horses on the load. The secondary tackle worked from a snub post. Four rolling hitches were used on the main draft line. It went up in six bites without a hitch.

NEW STYLE GALLOWS FRAME.

The collar is prolonged to the foot of back legs. The sway braces foot on a continuous bolted cross-sill. Every quadrangular panel is cross-braced with diagonal struts or ties. It is double-bolted throughout and the hog-chains have turn buckles. The sheaves are 6 feet 6 inches.

The frame is unusually rigid, has square joints, can be put together on the ground and raised in one piece, can be designed of any required strength and is cheaper than the prevalent styles of high frames.

SELF-PROPELLING fire engines are becoming the fashion. Boston has just added one to her fire-fighting equipment—not the first, by the way, that has been turned out in the United States—and it will probably not be long before other cities will follow suit.

Mining Summary.

CALIFORNIA.

Amador.

Ledger: The old Marklee mine, near Volcano, is soon to be reopened by a San Francisco company. This mine was worked down to a depth of 500 or 600 feet in the seventies, and ore to the value of about $1,000,000 extracted. It is believed that large masses of comparatively rich ore were left in the various levels, as too low grade to prove attractive at that time. A dump of some 10,000 tons is estimated to be worth $2 to $3 per ton, and can be milled at a cost not exceeding 75 cents per ton.

The Gover shaft has been put down to 1200 feet in depth. At this point the work has been devoted to cutting a station and running drifts and crosscuts. The ledge is reported to be very good indeed, in fact, better than heretofore encountered in the mine. The mine is at present being worked on the agreements secured from the lien holders and other creditors two years ago in July.

Butte.

In nine mines at and around Magalia and Forbestown 256 miners are at work—Pershbacker, 65; Princess, 15; Pomerat, 15; Matherson, 5; Bader, 10; Wylie, 12; Dix, 10; Goldbank, 114; Carlisle, 10.

Calaveras.

Prospect: The placer mines in the neighborhood of El Dorado are coming to the front with reports that are very encouraging. It is reported that excellent pay dirt has been found in the gravel operated by Pache & Bush.

The parties operating the Martin placer mine are putting in a water power hoist and machinery, and preparing to work the property on a large scale.

The Bessella mine, being worked by Oakland parties, can be successfully operated at a comparatively small cost. The tunnel by which the channel is at present being worked carries all the water off, requiring no pumping or hoisting. The quantity of gravel is very extensive and the prospects are better than they have ever been before.

Citizen: The Bald Hill mine at Albany Flat, owned by Fred Brunner of Angels, has been bonded for $3500.

The Rose Hill mines, near El Dorado, have been sold to Edward Hirschler of San Francisco for $5000. This group comprises about seventy acres, and includes a quartz vein that has been developed to some extent, and rich deposits of gravel. The purchaser will begin work on the gravel immediately. Water will be conveyed from Table mountain, which will necessitate the use of about 12,000 feet of pipe.

Chronicle: The Vair tunnel being run by the California Exploration Company has now reached a length of 600 feet. The air compressor and Burleigh drills were started up last week. Power is obtained from the Mokelumne and Campo Seco canal.

On the Bund mine sinking on the footwall is going on, the shaft having reached a depth of 240 feet. The vein at the bottom shows a width of 25 feet. Considerable water has been encountered.

The Sparrow Hawk and Calaveras Queen mines, on Esperanza creek, are showing up well as development work progresses. The mines have been bonded to a San Francisco company through Charles Pieffer and Frank H. Hall. A tunnel 225 feet in length has been run on the lead in the Sparrow Hawk and the pay chute has just been struck. There has also been two shafts sunk, one 65 and the other 25 feet in depth. It is the intention of the company to run a tunnel in from Esperanza creek, some 600 feet in length.

The same gentlemen have also bonded the Werle ranch mine to a San Francisco company, and work has been commenced on the property.

El Dorado.

(Special Correspondence).—The tunnel in the Lloyd property has gone beyond 225 feet and is cutting through a formation that shows encouraging prospects.

The drift north in the Empress Josephine property has passed the 45-foot mark and is in a good grade of ore.

The shaft on the Marguerite is down 50 feet on a 13-foot ledge of satisfactory ore.

Work is progressing rapidly on the Smith property and the developments are gratifying to the prospectors. This is in close proximity to the Lloyd, Empress Josephine and Gentle Annie properties.

At the Union property the tunnel is approaching the ntended limit of 500 feet.

At the Larkin mine C. H. Dunton is drifting for the east ledge on the 100 level. D. H. Jackson, the former superintendent and a large owner of stock, resigned because the company concluded to erect a mill when they had reached but 250 feet depth, and the shaft, he thought, should be driven 500 or 600 feet before talking of a mill.

In a mother lode section where miners of many years' experience are superseded by graduates of ninety-day observation studies, and whose deep mining does not go beyond their superficial experience, there are several illustrations within a small radius of Placerville. Yet people wonder why the much-vaunted mother lode is less productive in one county than in another, losing sight of comparisons in which experience, the best of skillful mining, and great depth are very important factors. In the outcome the county is damned and the San Francisco merchants throw up their hands in anguish, thinking they have been duped by designing people and inveigled into unproductive schemes of no merit, despite the fact that the mineral surveyor's lines have been stubbornly ignored. Men who know nothing of mining and are unwilling to trust to experienced men, and reluctant to dig deep into the earth, do themselves and localities better service by refusing to venture into unknown fields under the guidance of inexperienced and self-opinionated ninety-day graduates in the mining field.

Placerville, April 26th, '97.

Nevada.

A 10-stamp quartz mill has been ordered for the Kirkham mine at Nevada City, California.

Herald: The Spanish mine, near Washington, has resumed work and the mill is kept constantly running. This mine is worked principally from the surface in open cuts. Shafts are raised from the main tunnel, which is on a level with the top of the ore dump at the mill, and the ore, being stoped out by the use of churn drills, is run down these shafts, where it is received by a train of cars and carried to the mill. The loaded cars are run by gravity and a mule is used to draw back the empty train. From 130 to 140 tons of ore are run through the mill daily. Long strings of plates and sluices are used in saving the gold. Eight white men and six Chinamen is about all the labor employed to run both mine and mill.

Placer.

Sentinel: Extensive development work is in progress at the Black Oak mine, near Weimar. E. W. Chapman has taken charge and will thoroughly prospect the property. A shaft will be sunk near the lower tunnel to a depth of 200 feet. From this shaft the ledge will be crosscut and drifts will be run. A compressor will be put in to furnish power for running machine drills, and three shifts will engage in the work of sinking. Mr. Chapman has let a contract to extend the tunnel south 200 feet on the ledge.

The May Flower Mining Company at Forest Hill have commenced to build a flume to convey the water which they will use for hydraulicking next winter. At their drift mine the company is engaged running a bedrock tunnel to strike the channel in the Orono tunnel, 2500 feet east of the May Flower channel.

The big tunnel of the Eureka Consolidated Drift Mining Company, above Forest Hill, is now in 2010 feet. The rock at present is very soft and the outlook is very encouraging.

The lumber for the new 5-stamp mill and boarding house for the Belle Union mine has arrived at Weimar.

At the Retta quartz mine in the Westville district a shaft will be sunk on the ledge this season.

Sprague & Neal will open the old Blake quartz mine, near Succor Flat, this spring. They will run a tunnel in on the ledge.

Plumas.

Independent: The Thistle Shaft force has been lowering the water at the rate of about 15 inches in twelve hours.

It is expected that the water in the large Feather river ditch will be through in a few days, when the three large monitors in the Upper Dutch will be running. At present only one monitor is in use.

At Johnsville a contract has been let to drive 100 feet of tunnel at the Four Hills mine.

Shasta.

Searchlight: The Milkmaid mine, north of French Gulch, is working as many men as possible so as to open up ground enough to supply ore to keep the new mill running. It is the intention to put thirty miners at work as soon as working room for them can be opened up.

The Niagara mine at French Gulch has closed down temporarily. The company is undergoing a reorganization.

Free Press: Active operations will soon be resumed at the smelter at the old Afterthought mill, on North Cow creek. Late last fall a smelter of twenty-five tons capacity per day was erected, but owing to lateness in the season operations were abandoned. The development work at the mine continued. They have a 6-foot ledge of rich base ore carrying over 20 per cent in copper, together with good values in both gold and silver. The presence of much zinc in the ore makes it difficult to reduce.

A rich strike was recently made in the Delta mine on Dog creek, near Delta, owned by M. D. Butler and son, but now under bond to the Delta Mining Company of San Francisco. The company has been developing the property for some time past. There is a tunnel 300 feet in length upon the property. They began at a distance of 250 feet from the mouth of the tunnel to sink a shaft. At a depth of 40 feet they struck a fine body of ore which is very rich in sulphurets and galena.

The Crown Point Gold Mining Company are hauling ore from their mine on Muletown mountain to this city and shipping it by rail to the smelter at Keswick. Five carloads have already been shipped.

Siskiyou.

News: The McConnell & Quinn mine at the mouth of Humbug is being fitted up for the summer's work. This mine is operated by Chinamen on the percentage system.

The Pennsylvania placer mine, on the lower Klamath, has made the second cleanup of 100 ounces. This is one of the best equipped mines on the river.

A Portland company, representing large capital, are examining the placer mines of Oro Fino, with a view of making an offer for them.

The Classic Hill mine, on Indian creek, is being fitted up for the season's run. This mine is owned by Matthews and Vogan.

Dave and John Drake have recently made a rich strike at the head of Collins creek, in Oak Bar district.

I. N. Day, president of the Klamath Flume and Milling Company, is expected at Happy Camp to decide on the survey that will be adopted for their big ditch.

Journal: The B. Reider mine, on Shasta river, will probably be sold to a Boston company. Negotiations have been under way for some time.

The Bunker Hill mine, near Happy Camp, is in active operation, and the owners expect to do better than ever with the mine this season.

The high water in the Klamath at Ash creek troubled the miners very seriously, causing considerable damage and expense. The American Bar Company was obliged, from the great pressure on their wingdam, to fill the pit. This company works between forty and forty-five men, who have been laid off until the river goes down and the pit is pumped out.

The Mabel mine, on the divide between Oak Bar and Scott Bar, owned by Timmons & Chamberlain, will no doubt soon be sold to a company of San Francisco capitalists, and will then be worked on an extensive scale.

Journal: The Klamath River Flume and Mining Company intend carrying the water from the North Fork of Indian creek to their mine six miles above Happy Camp, a distance of fifteen miles. At the crossing of Ambrose creek, a siphon will be put in with a drop of 400 feet. They have a large tract of mining ground in the vicinity, which they have been prospecting for some time past.

The old Lost Chance mine, at Callahans Ranch, is being worked at present with quite a force of men.

Trinity.

Journal: At Deadwood the Brown Bear Company are working a larger force than for a year past and recently discovered a large body of ore in the old Last Chance drifts.

Gazear & Clements have struck a rich ledge on the Enterprise claim—small but rich.

The Blagrave brothers have struck a ledge on Donnelly gulch, supposed to be an extension of the Little Gem. They are running a tunnel to tap the ore body.

Cochran, Brady & Tourtellotte are working on the Lappin mine with good results.

Tuolumne.

The Tarantula mine, recently purchased by an English syndicate for the sum of $20,000, is turning out well. A 200-foot shaft is being sunk and a suitable hoist erected.

The Junction mine, under process of development under the management of W. H. Storms, is making a very encouraging showing. A vein varying in width from 14 to 30 inches assays well.

Independent: South of the Tuolumne river, on the Grant mine, owned by a San Francisco company, there is a shaft 225 feet, from which they have taken considerable money. At the present they are preparing to put up machinery to sink 1000 feet.

The North Star and Black Warrior, owned by D. R. Oliver of Stockton, is an old property that was worked years ago, but has been lying idle for want of capital to develop it until Mr. Oliver invested. At present he has a force of men employed, working three shifts, running a tunnel which is in about 220 feet.

Union-Democrat: At the Soulsby drifting and crosscutting is being done in the new shaft on the 200 level, while a crew of men are still engaged in sinking.

At the Black Oak the shaft is nearing the 900 level. The vein holds a uniform depth of 14 feet. Large quantities of ore are being shipped every day to the Selby Smelting Works.

At the Dead Horse quartz is being sent up from the 1500, that is as good as the mine ever took out. The shaft is still being driven down and sinking will continue until a depth has been attained of 1700 feet. The vein is large, and there is plenty of good ore in sight.

The ore body in the Lady Washington has enlarged, and a big output is shortly expected.

Drifting and crosscutting has been commenced on the 500 of the Rappahannock, and a full force will be put on sometime in the near future.

Supt. McDonald is working the Confidence full-handed, and beside the general underground workings is having systematic prospecting done for surface chutes.

The mill of the Belleview is still hung up, while the shaft is being run down another 200 feet. It has already neared the 900 level, with a rich body of ore in sight right along.

Driving ahead in the 1200-foot breast of the Kelz tunnel exposes better rock every shift. Other portions of the mine are being worked beside, and the 15-stamp mill is kept running.

Democratic-Banner: The first payment of $2000 on the Plummer gravel mine, above Columbia, has been made by T. C. Cox to the Plummer Bros. The area in gravel is large and prospects well. A ditch from the Stanislaus river, with a capacity of 1000 miner's inches, will be built.

NEVADA.

White Pine *News*: Freight teams keep rolling in from the railroad with material for the Star and Gray Eagle mines.

The new management of the Cainman mine are to run their works at the mine by electrical power, the waters of Murray creek to be used in generating the electricity. Work on the ditch has begun.

Dayton *Times*: Some time during the summer ore from the Logan & Hully mine, and also from the Mayday mine, in Como, will be treated by the patent pulverizing and concentrating process of C. V. Peck's at the Douglass mill. The ore from the Logan & Hully mine assays anywhere from $10 to $50 per ton. Some of it has been worked by different processes, but the full value has never been extracted.

Eureka *Sentinel*: This district has been famed for years as a great lead-smelting center, and the impression has gone abroad that only silver was found in the ores smelted. Now, as a fact, one-third or more of the precious metal produced has been gold, many of the mines producing gold almost exclusively. Hundreds of thousands of tons of ore have been worked in the district assaying $20 and upwards a ton in gold, a great deal of it running far above that figure. At the present time large quantities of ore are being taken out of our mines and sent abroad and sold, coming quite up to these figures in gold.

In White Pine county at Hamilton a great deal of ore is being taken out for shipment this summer.

Pioche *Record*: The Chainman group of mines at Ely are now in possession of the new owners, Lane and others of San Francisco, and active work has been entered upon. The waters of Murray creek will be utilized to generate electrical power for use of both hoist and mill at the mines. The ditch for this purpose is under construction.

LINCOLN COUNTY.

The report for the quarter year ending December 31, 1896, by the DeLamar Company, the last report made, shows that 20,677 tons of ore were worked through the mill, the gross yield being $575,462. From this there was deducted $77,435 as the cost of extracting; $22,436 for transportation, and $372,186 as the cost of milling, leaving a net product for the three months of $103,403.

OREGON.

Rogue River *Courier*: Thirty men are at work on the Pickett Creek Mining Company's placers. Most of them are engaged in digging the new five-mile ditch. Piping has been suspended for the season.

A prospector picked up a $140-nugget at the head of Jump-off-Joe last week. It was shaped like a piece of strap 4 inches long and rather thin.

The Alexander-Bent placers are running on full time on Galice creek. Two monitors are busy tearing down banks from 30 to 90 feet high.

The contract for running the 500-foot tunnel on the new Lewis acqueduct has been let to J. W. Ray for $2.25 a foot. A twelve-mile ditch will be dug this fall, after the clean-up. This ditch will connect the upper Grave creek placers with the Lewis diggings near Leland.

An old channel, rich in gold, crosses the Siskiyous at the head of the Althouse, near the California line, and has been traced across the Illinois valley in a northwest course, thence across Rogue river below the Sherer placers and thence into Douglas county, striking the rich diggings of Cow creek. In early days to strike this channel meant pounds, not ounces, of nuggets, but it takes digging and piping to uncover them now, although the old channel is exceedingly rich wherever dug into. Modern methods will make it yield more gold than ever in the near future.

Grant's Pass *Observer*: At the Lewis placer mine on Grave creek two 5-inch giants are in place, working alternately. Sixteen men are employed in and about the mine.

A large vein of ore has been cut through in the Free and Easy mine at Kerby at a 150-foot depth.

The old Hole-in-the-Ground property is being opened up by the A. J. Richison Mining Company, which has purchased the Hold Out claim and is getting the mine in shape for work.

Medford *Mail*: Work will soon be commenced on the mining ditch from the Saxe Creek falls to N. D. Young's placer mine, where a hydraulic plant is to be put in.

Work will soon begin on the Bart-Signoretti mine, owned by Purder & Stanfield, near Murphy gulch. A 200-foot working tunnel is to be run to tap the vein at a depth of 150 feet below the old shaft.

It is reported that the parties interested in the proposed big mining ditch from Evans creek to Loose creek are soon to let out the contracts for the building of it. The length of the ditch will be about forty-five miles and will have a capacity of 1500 inches of water.

WASHINGTON.

Importations of lead ore at Northport amount to 300,000 pounds a day. The duty collected is over $40,000 a month.

In the Lakeview Mining Company's property the ore is chloride and sulphate, bromide and quartz and chloride, carrying silver and some gold. The formation is a slate roof and porphyry foot wall, and the ore ledges are from 2 to 8 feet. There is on the Lakeview a 175-foot tunnel, with a 25-foot crosscut tunnel, a 140-foot incline tunnel and crosscut.

On the Whitecap mine, owned by Poorman & Hays, on Red Top mountain, there are two ledges. On one is an open cut 30 feet long and 10 feet deep, with a 5-foot ledge. The ore is siliceous, carrying gold, silver and copper.

The Anaconda mine, owned by the British Canadian Gold Fields Company, and the Detroit, owned by W. H. Kearney & Co. of Spokane, are adjoining properties to the Washington, and the ore characteristics the same. Development work is being pushed on the Anaconda under the direction of Superintendent McDonald. The tunnel now being driven is in 220 feet, and it is expected to crosscut the ledge within the next 10 feet and at a depth of 175 feet.

The Bald Eagle mines comprise a group of six claims, owned by Aug. Heinze—owner of the Trail smelter — and are on Chloride mountain. A 600-foot working tunnel has just been laid out to tap the ledge 300 feet below the surface.

Spokesman-Review: F. K. McBroom has ten men at work on the Big Iron mine, on the reservation. Over $4400 was spent on this property after last August. The claim is remarkable for its strong iron capping.

The Little Giant mine has been developed beyond the experimental stage, and improved machinery will be put in with which to break and hoist the ore in an 8-foot vein at the bottom of a 75-foot shaft.

ALASKA.

News: Cooks inlet received a black eye last season. The summer before reports were brought out by men who were considered trustworthy and competent that the Cooks inlet section was second only to the great Yukon. Many inexperienced men went in last summer and failing reported the country

worthless. A few, however, had faith in the discoveries. About a year ago the Excelsior Company chartered the steamer Excelsior from San Francisco to make a special trip to the inlet, and sent her off loaded to the guards with lumber, steel pipe, hydraulics, supplies and men. The cargo was discharged on the beach at Anchor point and all summer long improvements were made and developments prosecuted. Those comprising the company are Boston capitalists. The company was formerly known as the Boston-Alaska Mining Company, though now is spoken of as the Anchor Point Company, with R. A. Lane general manager. Their holdings consist of several hundred acres of placer ground at Anchor point and also a number of claims at the mouth of the Shuitna river near Tyoonock. The former is the scene of their developments at present. Last season ten giants were brought up and that number has been this season augmented by ten more. To furnish the quantity of water to operate these giants the company has constructed a dam across a ravine in the mountains, creating a reservoir. This was built last summer. Two miles of the ditch were dug last season, its dimensions being 3 feet deep, 4 feet on the bottom and 9 feet on the top. The contract on the remaining five miles yet to be dug has been let, and a force of eighty men went to the inlet two weeks ago on the Bertha, chartered for the trip. Two sizes of nozzles are used, according to the stage of water in the reservoir—one of 3 and one of 4 inches diameter. The claims owned by the company have a frontage on the beach of over two miles, the gravel averaging about 10 feet in thickness. But little stripping is necessary and but few large rocks or boulders have so far been encountered to harrass the work of the giants.

BRITISH COLUMBIA.

The following are returns of the ore production up to April 17, and they show that the yield is at the rate of nearly nine million for the whole year:

ORE EXPORTED

	Tons.
From Slocan via Kaslo	9,128¾
From Slocan via Nakusp	2,642¼
From Rossland via Northport	6,088½
From Rossland via Nelson	52
	17,911¾

Total value:	
Through Nelson custom house	$1 039,082.28
Through Revelstoke (Nakusp)	292,110.65
	$1,331,192.93

Average value per ton, $74.3195.

PRODUCE OF SMELTERS.
(Shipped)

	Tons.
Nelson (Hall mines) matte	561¾
Trail smelter matte	2,279¼
	2,840¾
Total value	$1,227,869.67
Total value of ore and matte expt'd	2,550,062.60

Ore shipments from Rossland during the week ending Saturday, April 17, were: Le Roi, 900 tons; War Eagle, 200; Iron Mask, 75; O. K., 32; total, 1,207. The O. K. mill treated 112 tons. These shipments bring the amount for the year to 17,103 tons, of which the Le Roi has contributed 12,012 tons; the War Eagle, 3,191, Columbia and Kootenay, 458, Iron Mask, 938; Jumbo, 91; Josie, 126; Cliff, 61; Red Mountain, 56; O. K., concentrates, 118; Evening Star, 21; Giant, 21; I. X. L., 12.

Kootenain: In Ainsworth district is announced the discovery, last week, of a fine body of ore on the east side of the lake, and one and one-half miles northeast of Blue Belle mine. It is a 6-foot ledge of galena ore, assaying forty-three ounces of silver and 50 per cent lead per ton.

There is reported the sale of the Twin claim to A. W. Morris, of Montreal, by McArthur and Strobeck for $35,000; $3,000 cash.

T. M. Gibson has purchased for his company the Mamie for $3,500 cash, from the Britania Mining Co., and the Lady of the Lake and Hamburg from O. Berg and Dan Clark for $8,000 cash. This company nows own a string of fine claims, and will put up machinery for the active operation of the Little Donald, as soon as the roads are in a condition to be used.

Spokesman-Review: Henry Croft of Victoria has closed for the Black Fox, Daisy and California, on the South Fork, for $30,000. The new owner will at once begin the construction of a concentrator.

A short time ago the Blue Jay claim near Vernon was bonded to a London company for $10,000, on which the owner, H. Latimer, has received the first payment of $2500, the balance to follow in six months. Work will be pushed ahead on this claim.

The Ruby Gold Mining Company received an offer from New York of $25,000 for four-fifths of the property. The offer has been accepted, providing the purchasers guarantee to do a certain amount of work upon the property every year.

A concentrator of 150 tons cepacity has been ordered for the Galena Farm, a Slocan property owned by a strong English syndicate. The mill will be in operation in the course of three months.

Fort Steele *Prospector*: The North Star mine produced and shipped during the year 1896 nearly 4500 tons of ore, which had a valuation of $225,000. At the present time the company has 3,000 tons of rich carbonates and galena at their landing on the Kootenay river and 3,000 more on the dump—6,000 tons that will average $60 per ton, or a gross valuation of $360,000.

There is no doubt that at least 200 mines in this district will become producers upon the advent of the Crow's Nest railway.

UTAH.

Salt Lake *Tribune*: In the syenite-dolomite contact, between Frisco and Copper gulch, and not more than three miles from the post-office, a lead, said to be 20 feet wide, has been struck, from which splendid samples of lead-silver ore have been taken.

An offer has been made to the owners of the Martha and Kate Sackett claims in Beaver Lake district, and if accepted, the purchasers will put up a small hoisting plant and prosecute development.

The Horn Silver is employing about 160 men. The mill is running steadily, and shipments of ore continue regularly.

At Price W. H. Culmer, superintendent of the gilsonite company, owning the Pariett mines, expects to put more men at work soon and renew shipments of gilsonite.

Mammoth *Record*: The contract for sinking another 100 feet in the Emerald shaft has been awarded. The shaft is now down 534 feet, and will continue to the 700 level, when a drift will be run to the vein.

The shaft which is being sunk 350 feet from the mouth of the Lower Mammoth tunnel, is now down 100 feet, and will be pushed down another 100 feet.

Work is to be resumed next week at the Sunbeam, and the shaft will be pushed on down.

Tintic *Miner*: Shipments from the district for the week are as follows: From the Bullion-Beck mine, 15 carloads of ore; Centennial-Eureka, 7 carloads concentrates; Swansea, 4 carloads ore; South Swansea, 5 carloads ore; North Star, 1 carload ore; Dragon iron mine, 3 carloads ore daily.

The newly incorporated Murray Hill company will commence sinking on their property in a few days. The property of the company consists of the Murray Hill, Sego Lily and Silver Dick claims, lying just east of the Rabbit Foot.

Arrangements are nearly completed for the commencement of operations on the Peru, and that work will surely begin about May 1st.

Secretary Cobb of the Triumph Milling Company advises us that the force at the mine has been increased, and that the development hereafter will be pushed faster than ever.

The Homestake people are taking out considerable good ore. They have also commenced sinking the shaft from the 300-foot level, and will carry it down to the 500.

Mercur *Mercury*: Enough ore is taken from drifts to run the Sacramento mill, and consequently stoping in other parts of the property has been discontinued.

Between thirty-five and forty tons of ore are hoisted daily at the Mattie mine. The workings are fast reaching forward, and are nearing the old Nimrod workings, but at a much lower depth.

At the Mollie Gibson, work on which is being pushed by Mr. Craft and associates, a drift has been run in a northerly direction from the bottom of the shaft, a distance of 45 feet, on a fine body of ore. A south drift will be run soon.

The Great Eastern Mining and Milling Company has let a contract to drive their incline tunnel, which is in 90 feet now, another 65 feet, and think to strike pay ore before the contract is finished.

Owing to the burning out of the shaft on the Searchlight, in the Sunshine end of the district, mining work on the property was discontinued; but now that the shaft has been retimbered, active development work has again been resumed.

Bingham *Bulletin*: Lively work has been done at the Winnamuck mine this week to prevent its flooding; but in spite of all efforts, it may fill to the 200 level. The occurrence is especially inopportune, as we understand parties are now en route from the East to inspect the Winnamuck and other Utah properties.

At the Phœnix and Coramandel sinking and raising are in progress to connect the tunnel level with the level 325 feet above for air and production. The work will be completed within six weeks, when the mines will be in condition to output 200 tons of ore per month.

R. H. Carr and Charles Jacobs have begun work on the No. 10 and '92, adjoining the Chicago, on which they have a bond and lease from the Heaston Bros.

Work on the Bingham tunnel will soon be actively resumed, with plenty of funds to complete it.

Eureka *Democrat*: It is the intention of the Orient Mining Company to start development work on the Golden Hope claim, the most promising ground in their group, soon after the 1st of May.

The Grand Central is still pushing ahead, and an excavation is now being made for a donkey engine, which is to be placed in the workings.

Some good-looking rock has been uncovered at the bottom of the Gen. Logan shaft, and the indications are favorable for a good strike in that property.

Arrangements are being perfected for the incorporation of the Lucky Boy group of mines, which are located near Silver City.

Silver City *Star*: The Treasure Leasing Company has let a contract for sinking the shaft on the Cornucopia 115 feet deeper. The shaft is now down 285 feet, and when this contract is completed the 400-foot station will be cut. A station will also be cut on the 300 level and a station pump put in to handle the flow of water which it is expected will be encountered.

M. D. Howlett of Eureka recently purchased a one-fourth interest in the Lucky Boy claim from H. F. Lockerby, and arrangements are now being made to incorporate the property.

IDAHO.

The Union Silver Star Company of Blacktail mountain will resume operations in a few days with a large force of men.

The American Developing and Mining Company is soon to put a force of men at work on the Bull of the Woods group of mines southwest of Gibbonsville. This property is famous for its mountains of low-grade ore, and it is among the probabilities that a reduction plant commensurate with the amount of ore in sight will be erected on it during the coming summer. Mr. MacDonald, the manager says that the American Developing and Mining Company is now in shape to adopt a more aggressive policy in every branch of its business than it has done in the past, and that it is not improbable that a stamp mill would be erected on the Bull of the Woods during the season.

In the Elk City country, on the Bitter Root divide, in 1895 a Chicago company put in a hydraulic elevator plant on American Hill, and last year they are reported to have taken out $1,000 in gold per day. A Butte company purchased last fall the Buffalo Hill placer property and have kept a large force of men at work all winter putting in a bedrock flume. They used 100,000 feet of lumber in its construction and have hauled in over the thirty tons of iron pipe and hydraulic equipment. The Ternan Hill property was also purchased by Butte parties a few months ago and with characteristic enterprise are going ahead to open up the ground and equip it with up-to-date improvements. The Moose creek placers have also passed into the hands of Eastern people and last fall they prospected for and found an old channel carrying the coarsest gold ever found in the Bitter Root country.

Silver City *Avalanche*: On the Morning Star a level has been started from the shaft during the past week, and will be known as the No. 5. The miners are working in good ore at that point.

At the Trade Dollar three eight-hour shifts are at work at the new shaft in the Blaine tunnel. The hoist is now enroute from the East and will soon be in place. The mill is running at full capacity, with regular bullion and concentrate shipments.

MONTANA.

Inter-Mountain: The Hope mine at Basin will be started under the superintendence of Arthur Bird. He is confident that within thirty days he can make the property pay a $10,000 dividend from the proceeds of a big body of ore which was uncovered just before the shut down. The proceeds are to be first applied to the payment of cost of mining and milling, and the balance to be applied to the payment of outstanding time checks amounting in all to about $5,000.

The Gold Coin mill is shut down for the present on account of new machinery being placed in position. The mine is working with a full force. Two shafts are being developed. One is down to a point where if the lead is struck again the company will have 200 feet of ore in sight. During the week General Manager L. U. Loomis and Superintendent W. T. Morgan bonded a group of six claims in the Royal district, for $40,000, and paid $5,000 down.

W. R. Moore, a barrister of Rossland, B. C., has secured a bond from G. W. Collins and J. T. White upon the Iron Clad mine in Lost Creek district. The bond runs for five months and calls for the total payment of $17,000.

Butte *Miner*: John W. Forbis, as receiver for the Butte & Boston properties, has paid out $56,000, or a 35 per cent dividend on debts of the old company, which amounted to less than $200,000.

In the Clipper mine at Pony a strike was made in No. 4 tunnel. At a depth of 1200 feet a large body of high-grade ore was struck, running from $80 to $180, on what is known as the Belle ground. The length of the tunnel is 1700 feet. This find has demonstrated the fact that what is needed in the Pony district is depth.

The Anaconda Company is moving the machinery from the Matte mine to the Orphan Girl, near Big Butte, where a shaft 1000 feet deep will be sunk on this silver property. It is reported that the company will develop several of the silver properties in this vicinity, as the ore carries silica, which is needed for fluxing purposes in reducing the copper ore from some of the big mines of the company.

NEW MEXICO.

Silver City *Enterprise*: D. B. Gillette, representing himself and others, has made one of the biggest purchases of mining property recorded for many years in the Territory. The property is the Pacific group of gold mines at Pinos Altos, nine miles from Silver City. The mines owned by Bell & Stevens, of Pinos Altos, included in the sale, are the Pacific Extension and Pacific No. 2 on the Pacific vein, the Grey Horse and Tip Top, parallel and adjacent to the Pacific claims on the west, the Ohio mine on the Mountain Key vein, the Mina Grande, Mogul and Kept Woman, on the Mina Grande vein; the Silver Rule, parallel and adjoining the Kept Woman on the west; the Little Chief and Annie mines, adjoining the Treasure Mining Company's property, on the Atlantic vein; the Mackinaw mill and mill site, in the town of Pinos Altos, and the Raymond mill and mill site, formerly known as the Smith & Ailman property.

In addition to the properties of Bell & Stevens, there is included in the deal the valuable mining properties of the Pacific Gold Company of St. Louis, at Pinos Altos, and the company's 20-stamp mill at Silver City. The amount paid for the properties is said to be $250,000, spot cash. The new owners have already taken possession of the property. It is expected that the new company will build a pipe line to bring water from the big springs on the ranches which they have purchased to the mines, and that a large reduction plant will be built at the mines. D. B. Gillette will take charge of the property as general superintendent.

At Pinos Altos the Treasure Mining Company has the usual complement of fifty men at work in the mine and mill.

At Santa Rita there are twenty men employed on the Driscoll lease assorting the old dumps.

J. B. Gilchrist has sixteen men at work upon his leased ground on the Guadaloupe, Chino, Oxide and Yosemite mines.

L. R. Munson has leased and bonded his copper mine, situated half a mile from Santa Rita, to N. S. Berray; consideration, $10,000.

Wm. Kieff is working seventy-eight men on the Othello and Desdemona claims. His shipments average over fifty tons per day. The shipments for March were seventy-eight cars of twenty tons each. The ore is a lead carbonate, running about 60 per cent lead and 10 to 15 ounces silver per ton.

ARIZONA.

Republican: The Black Warrior Copper Company has bonded the Gray Eagle, Blue Eagle and Black Eagle mining claims, from Sultan & Sidow. These claims are located ten miles north of Globe and two miles from Richmond Basin. The claims show an immense ledge of iron ore, which carries enough copper to pay transportation and smelting charges, together with some lime, and is almost free of silica. Contracts will be let immediately for the development of the claims.

The North American Exploration Company, who have a bond on the Continental copper mines, are greatly encouraged by the developments made, and Mr. Amster is instructed to push the work as rapidly as possible.

The reported strike of copper in Coconino county has caused something like a boom. Two hundred men have been working all winter, and results have been most encouraging. It is claimed that this is the only point in Arizona where self-smelting ores are found—the only place in the Territory where there may be immense deposits of lead and copper oxides to make possible local reduction works. Ninety-five per cent of the ores of Arizona are dry ores, which can not be worked alone. They have to be concentrated. The result is that from 15,000 to 20,000 tons of Arizona ore are shipped annually.

The Gopher mine, Big Bug district, has been sold by Mrs. Fanny Kautz to the Gopher Gold Mining Company; consideration named in deed, $196,750.

Final payment has been made on the Ophir mine, which is an extension of the Congress, E. B. Gage, representing the Congress Mining Company, being the purchaser, and E. Gillespie, R. H. Burmister, Len Hale, F. G. Parker and W. C. Bashford, the sellers; consideration, $30,000.

In Black Rock district, on the Hassayampa, Murphy & Hutchinson are working the Gold Bug mine with excellent results, taking out good shipping ore. The ledge is 3 feet wide.

Parties have taken a lease on Powell's Dark Horse and Right Bower claims—silver properties—and are taking out ore from them. The vein is 7 feet wide.

A large force of men is at work on the Texas Chief and Texas Prince, on which there is a tunnel 100 feet long. The ledge is from 2 to 3 feet wide and the ore carries gold and about 33 per cent in copper.

COLORADO.

Denver *Republican*: These figures show the production of Cripple Creek mines so far this year, estimating the remainder of the present month at the rate the ore is now coming out:

Month.	Tons.	Average.	Value.
January	18,000	$48	$ 864,000
February	18,500	48	886,000
March	23,500	45	1,057,500
April	17,500	60	1,050,000
			$3,877,500

During the same period of 1896 the yield was:

January	$ 460,000
February	508,280
March	534,000
April	435,000
Total	$1,937,280

Actual figures on the production are at all times hard to get. These are those conservative business men with millions at stake in camp have compiled for their own information and guidance. In every previous year in the history of Cripple Creek the first four months have been the worst of the twelve. The second four have always shown a decided gain in output, and the last four—September, October, November and December—have never failed to turn out more ore than the total of the eight preceding.

The Legal Tender, on Bull hill, is producing an average of sixty tons of ore per day, about one-third of which is smelting rock of an average grade of four ounces. The milling ore is worth from $15 to $30 a ton.

At Pine Creek a new plant of machinery will at an early date be put upon the Golden Scepter property, operated by Omaha and Denver parties.

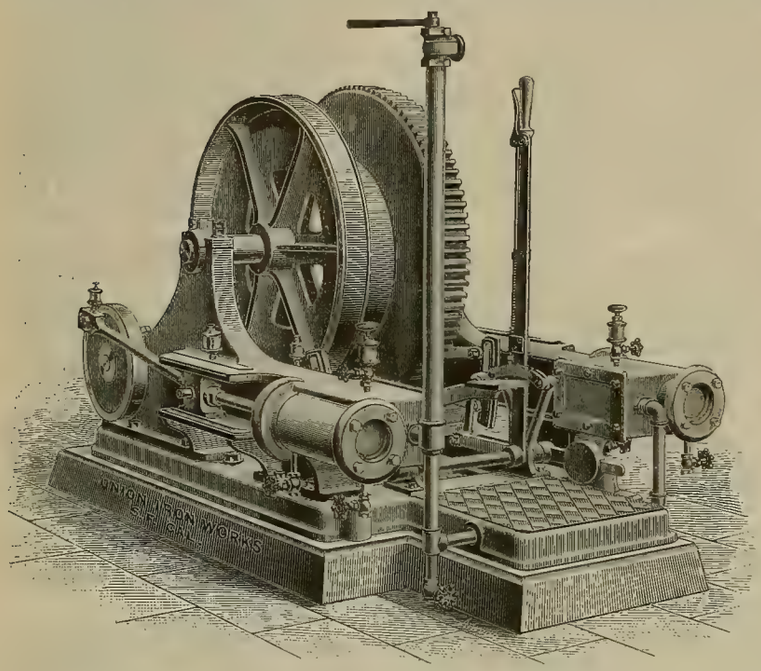
The Elk Park Mining and Milling Company has a force of men working on the two shifts in the Annie H. property. Sinking is being carried on in the shaft at a present depth of nearly 135 feet, with a 2¼-foot vein of yellow and gray copper.

At the Jessie Bartlett Davis property, on the northwest slope of Colorado hill, a tunnel is being run to cut the shaft, which is now in 135 feet, and another contract has been let to drive it 80 feet farther. The crevice matter of late shows considerable copper iron coming in.

A Chicago expert has been examining the Plateau mine, which has its shaft down 350 feet, and it is reported that the owners will sink it another 350 feet.

Word comes from Idaho Springs that a big strike has just been made in the Wilcox tunnel, operated by Rev. Wilcox of Denver, a blind lead measuring 3 feet wide, with values running from $30 to $150 per ton, being cut in the breast at about 1200 feet from the surface end.

At Breckenridge among the new projects for this season's operations are an electric power and ore railway company, a sampling works, a local custom gold mill, a 30-ton capacity cyanide mill for the Carrie group, a "quick drop" stamp mill for the Golden Eagle, a new 10-stamp battery for the Hamilton Company, a mill, and the installation of several river plant placer machines.



A Boston company has been formed to operate the Williams placer, in the Swan River district, during the season.

UNION IRON WORKS,

★ ★ 222 Market Street, San Francisco, Cal. ★ ★

MAKE THIS SMALL

DOUBLE CYLINDER SINGLE DRUM HOIST

HOIST FOR PROSPECTING.

For Prospecting Purposes or Underground Work,

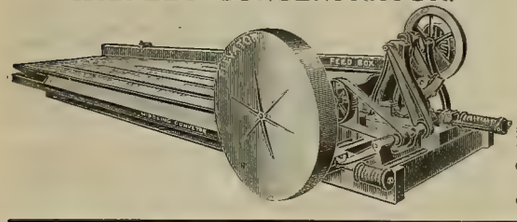
USING COMPRESSED AIR.

The entire hoist is self-contained, being mounted on an iron sole plate or bed which carries all the operating levers and provides a footboard for the operator. The engines are provided with reversible link motion and the drum with a broad strap brake, insuring safe and rapid work.

The general lines upon which this hoist is designed are neat, strong and substantial and all the operating parts are conveniently arranged.

The size herewith illustrated is the 4 in. x 10 in., rated at 15 horse power. The larger sizes, 8 in. x 12 in. and upwards are provided with post brakes.

The Mine and Smelter Supply Co., Denver, Colo.



THE LARGEST STOCK OF MINING, MILLING AND SMELTING MACHINERY WEST OF CHICAGO.

PIPE, PACKING, RUBBER BELTING, AND SUPPLIES OF ALL KINDS.

SOLE AGENTS FOR **WILFLEY CONCENTRATING TABLE,**

And claim for it BETTER work than any Concentrator made, with a capacity of from 15 to 25 tons per day of 24 hours. It is simplicity itself. No moving belts or intricate parts. Any one can learn to operate in an hour.

WILFLEY CONCENTRATOR.

For confirmation of all of the above we refer to Henry Lowe, Puzzle Mine, Breckenridge, Colo.; Mary Murphy Mine, St. Elmo, Colo.; W. E. Renshaw, Mayflower Mill, Idaho Springs, Colo.; H. E. Woods, Denver, Colo.

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.

This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly, [SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

PRICE, $450.00.

10 x 12 LIGHTNING QUADRUPLE FRICTION HOIST.

Coast Industrial Notes.

—Los Angeles now figures on 100,000 population.

—Indications point to a very large California fruit crop this year.

—Tracy, Cal., reports the discovery of natural gas there in paying quantities.

—Three locomotives are now in service on the new road building from Oakdale, Cal., into Amador county.

—Los Angeles cites the fact that Colorado has ten smelters and argues that one should be built in the southern California metropolis.

—The Pacific Improvement Co. is about to file a bid for the construction of the deep water harbor at San Pedro, Cal., inside the $2,900,000 appropriation limit.

—So far no provision providing for the abrogation of the Hawaiian reciprocity treaty is in the tariff bill under present consideration by the United States Senate.

—Yesterday took place the first shipment from this coast of fir lumber to Japan to be used in the manufacture of tea chests, the Victoria carrying 200 M. from Tacoma, Wash.

—The California Northern Railway Co., recently incorporated in Arizona, proposes to build a railroad from Kramer, Cal., on the A. & P. road, to Randsburg, twenty-six miles. It is stated that the line will be in operation August 1, '97.

—The proposition of settlement made by the bondholders of the Mount Lowe Railroad at Pasadena, Cal., has been accepted by a majority of the unsecured creditors and will probably be accepted by all. The plan is to reorganize the company with a bond issue of $550,000. The present bonded indebtedness is $500,000.

—The total number of vessels on this coast is 1651, including every kind of craft. Built in California, 804; Washington, 426; Oregon, 227; Maine, 83; Massachusetts, 35; Pennsylvania, 19; New York, 11; Alaska, 5; unknown or foreign, 20; Delaware, 5; New Hampshire, 4; Connecticut, 3; New Jersey, 2; Rhode Island, 2; Idaho, 1; Michigan, 1. The oldest listed vessel is the Oregon, built in Maine in 1848. The first one built in California is the Pike Co., in 1851; the next oldest the Eclipse, in 1852.

Commercial Paragraphs.

THE second edition of Catalogue No. 4 is just issued by the Union Iron Works, 222 Market St., San Francisco, in which the Union Improved Ore Concentrator is elaborately illustrated and described, containing much of practical interest to every mining man in connection with one of the most important processes connected with ore treatment.

THE Edison gold saving machine for placer mining, also designed to operate in connection with stamp mills, is being manufactured by the Edison Machine Company of Phœnix, Arizona. The managers state that they expect to arrange for the manufacture of the machine in Oakland, Cal. The chief points of vantage claimed by the builders is that it requires a minimum amount of water, which is automatically used over many times, and its lightness and simplicity make it adaptable to all localities. A very close saving is claimed for it.

THE Jeffrey Manufacturing Company of Columbus, Ohio, is out with its 1897 catalogue descriptive of chains and labor-saving devices. This catalogue is gotten up in handsome style and is one of the most complete of its kind published. The first part is devoted to illustrations of labor-saving appliances as applied to various industries, while the balance of the book is devoted to the illustrating of its various chains, sprocket wheels, cable conveyor fixtures, and general mill and factory supplies. It is a valuable reference book and its price lists are such as will be of interest to all using labor-saving appliances. Copies can be had by addressing the above company at Columbus, New York, Philadelphia, Chicago, St. Louis and Denver.

JOHN O. NORBOM, representing the Joshua Hendy Machine Co. of San Francisco, has a contract with Dier, Davidson & Russell, for the Tinhorn Quartz Mining Company, Fairview Camp, Okanogan county, B. C., for a mill, which will be working in sixty days and will have the largest capacity of any mill yet erected in British Columbia—sixty tons a day. The power will be supplied by a 120 H P. engine, which will enable the company to increase the capacity to 120 tons a day. The plant of the Tinhorn Company's mill includes a Corliss engine with modern steel boilers, a Hercules Improved Blake ore crusher, also Hendy-Norbom ore concentrators. The mill will be automatic. The plant includes an incline tramway connecting the ore bins at the mouth of the tunnel, the cars dumping ore automatically at the mill.

Recent California Mining Incorporations.

Gaston Hill Placer Mining Company, San Jose; S. P. Saunders, L. M. Simonton, J. R. Kocher, J. G. Jury, A. D. Dannes; capital stock $12,000—all subscribed.

Marklee Mining Company, San Francisco; T. Flint, San Juan, G. W. Root, H. Wilson, G. P. Rixford, W. C. Smith, San Jose; capital stock $100,000—$60,000 subscribed.

Little Butte M. and M. Co., Los Angeles; W. Gillelen, E. T. Earl, H. K. Gregory, E. L. Allen, Los Angeles; W. J. Clark, H. C. Oakley, Ontario; capital stock, $500,000; subscribed, $400,000.

Middlemarch Copper Co., Los Angeles; E. J. Gird, Tombstone, Ariz.; W. K. Gird, Chino; M. M. O'Gorman, H. B. Ellis, I. B. Hamilton, D. C. Morrison, Los Angeles; capital stock, $1,000,000; subscribed, $524,000.

Personal.

EMIL R. ARADIE has returned from South Africa and will superintend a mine in Sonora, Mexico.

W. S. BLISS of Carson has been appointed manager of the Chainman mines at Ely, Nevada, for the new owners.

LOUIS JANIN JR. sailed for Australia last Thursday and will be there, making Sydney his headquarters, for some time.

J. H. GILMORE has been appointed superintendent of the Mechanics' Fair, which begins at the Pavilion in San Francisco, August 17.

JOHN W. MACKAY will spend part of the summer at the Allison Ranch mine in Grass Valley, Cal., owned by him and James L. Flood.

R. T. BAYLISS, formerly manager of the Montana Company (the Drum Lummon) has been appointed consulting engineer of the Exploration Company of London, taking up much of the work heretofore done by Hamilton Smith.

S. L. THELLER of San Francisco has bought from A. B. Bowers all the latter's interest in his hydraulic dredge, so far as California and Oregon are concerned. The purchase price is said to be $250,000, which includes prospective judgments for damage suits instituted against various parties by Bowers.

W. WESTON, mining engineer of Cripple Creek, has returned from Georgetown, Colo., where he made an examination and report on the property of the Doric Gold Mines, Limited, for the London Company. He was accompanied by his colleague, Capt. Jno. D. Murphy, and the chairman of the company, Mr. W. E. Swanton.

DR. JORDAN, president of Stanford University, and one of the British-American Bering Sea Commission, recently delivered at Cornell University a lecture on the Alaska fur seal, in which he spoke in very harsh terms of the Paris tribunal under whose finding the present status of the seal question has been reached. He called it a farce; said it had brought contempt upon the name of arbitration, and declared that in the list of regulations drawn up by the tribunal for the preservation of the seals there was only one of any value whatever, that one, namely which provides for a revision of the regulations every five years.

PROF. A. C. LAWSON of the University of California has been named by the Board of Regents of that institution its delegate to the International Geological Congress at St. Petersburg, Russia, which will probably be the greatest gathering ever held of men distinguished in that branch of science. An attractive feature of the meeting is the unusually extensive excursions to take place before and after the meetings. These will be into Finland, the Ural mountains, the oil fields of the Caspian, parts of the Black sea and the Caucasus mountains. All these excursions will be made in special trains at the expense of the Russian Government. Prof. Lawson will take the opportunity afforded to look into the geological questions of the oil fields of the Caspian particularly, which are in many respects similar to those of California. Prof. Lawson has done good work while in California and will worthily represent the University.

Recently Declared Mining Dividends.

Homestake Mining Company, South Dakota, $31,250; payable April 25th.

The Anaconda Copper Company of Montana has announced its regular semi-annual dividend of 5 per cent or $1,500,000.

Alaska-Treadwell, Alaska, $75,000; payable April 28th.

Alaska-Mexican, Alaska, $18,000; payable April 28th.

The Anchoria-Leland Mining Co., Colorado, $6000; payable April 15.

The Calumet & Hecla Copper Mining Co., Michigan, $500,000; payable April 23.

The Portland Mining Co., Colorado, $30,000; payable April 15.

Galt Mining Co., Montana, $10,000; payable April 20.

Idaho, British Columbia, $25,000; payable April 25—a total to date of $175,000.

Morning Star Drift Gravel Mining Co., Placer Co., Cal., April 27, dividend No. 77, $5 per share; payable immediately.

Santa Rosalia M. Co., Mexico, 10 cents per share; payable to-day.

Situations Wanted.

SITUATION WANTED by a First-Class Electrician and Engineer,

Capable of developing and handling electric power and light plant. The applicant has a first-class reputation and can install a plant with as small amount of money as any one in this line of business. I want to deal with first-class parties only, as I work for an employer's interest. Address S, Mining and Scientific Press.

Expert Chemist, Assayer, Surveyor, (leaving college) understands mill work, cyanide process, smelting ore, etc., wants place. Salary secondary. Address "Miner," 518 Third Street, Oakland, Cal.

Experienced Physician and Surgeon

Wants engagement with mining company. Sixteen years' experience. Strictly temperate. Address "Bellevue," this office.

WANTED.

Old Iron Shafting,

5 to 15 in. Diameter.

Address "IRON," Mining and Scientific Press

WANTED.

Five-Stamp Mill with Rock Breaker and Two Concentrators.

All in First-Class Condition. F. o. b. steamer at San Francisco or Puget Sound.

ADDRESS: THE ALASKA MINER, JUNEAU.

WANTED.

Gold Mill, To Lease or Purchase.

On Mine or in Good Custom District.

Address "V," Mining and Scientific Press Office.

FOR SALE.

The four Boilers now in use at the Crown Mills, together with Fronts, Valves, Grate-Bars, etc., are offered for Sale.

Delivery can be made on or about the 1st of May. For further particulars, inquire of

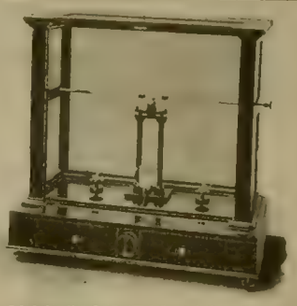
STOCKTON MILLING CO.,

STOCKTON..... .....CALIFORNIA.

FOR SALE.—A Well-Developed Gold Mine in This State.

Twenty-two hundred feet of tunneling done. Lots of ore in sight, with a 10-stamp mill now working. Map of property can be seen any time. Prefer to negotiate with intending purchasers and so save large commissions. Address Box 19, care Mining and Scientific Press, 220 Market Street, San Francisco, California.

STOCK IN THE



Copper King of Arizona

Can be had by applying to

C. W. BLACKBURN, Fiscal Agent,

BISBEE, ARIZONA.

☞Send for prospectus.

AINSWORTH NO. 043.

SENSIBLE TO 1-100 MILLIGRAMME.

Ten-inch beam on which you can weigh from 1-100 to 1 milligramme with a one milligramme rider.

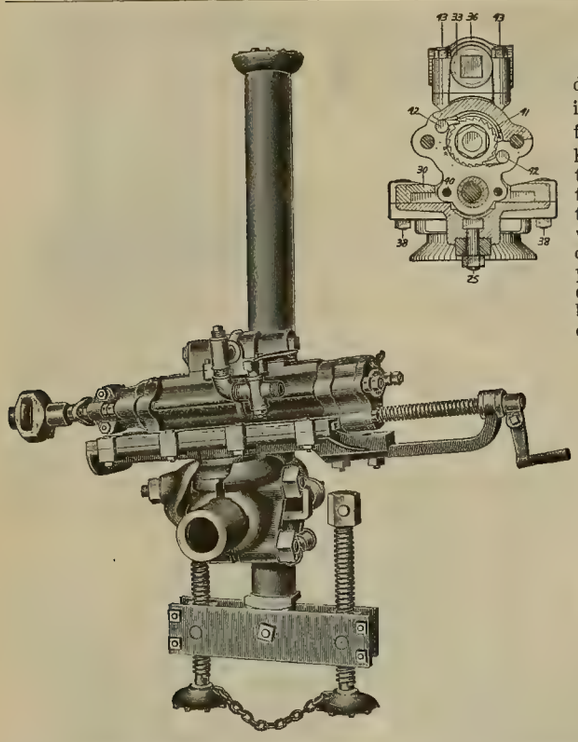
Works.....Cor. Kearny, Francisco and Bay Streets.

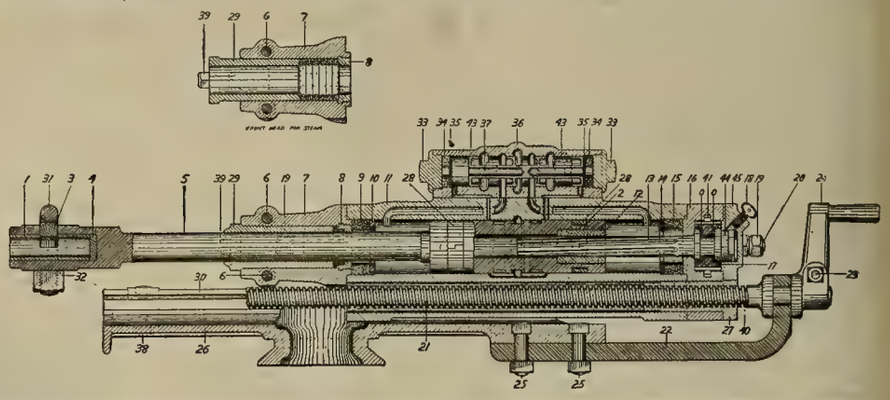


MINING AND MILLING MACHINERY.

DOUBLE CYLINDER SINGLE DRUM HOIST.

THE above form of Hoist has certain features of construction which make it superior to all others. It is mounted on a single solid base, with standboard for the operator. The engines are reversible link-motion and the drum is fitted with post-brakes and helical teeth, which assure quick and safe operation. The design is compact and superior and the construction strong and substantial. We furnish them either with or without clutch pinions. The above cut illustrates an 8½ inch by 10 inch. Other sizes in stock and built to order.

The Best Time to Advertise : :



In the MINING AND SCIENTIFIC PRESS is when you want More Business.

The Leyner Rock Drill.

The distinctive features of the Leyner rock drill are as follows: Perfectly balanced valve, instantaneous in action, permits a short stroke for starting holes or an uncushioned blow for hard rock; automatic safety rotating device that never breaks pawls, springs or ratchet teeth; front head gland, which has bearing entire length of front head; packing renewed without removing front head from drill, practically a new front head by renewing two pieces; piston forged from one piece of solid steel made especially for this purpose; tool steel piston bushing forged to exact size of mandrel; hardened tool steel thrust block for receiving end thrust of drill shank; hardened tool steel chuck keys; extra large wearing surface on guide shell or carriage; extra long feed screw nut, preventing uneven wear on feed screw; extra large U bolts; all wrenches of best drop forged steel, case hardened; every drill thoroughly tested before leaving the factory; column cups connected by chain, preventing their being shoveled up and hauled out with muck; ratchet and rifle bar, pawls and pawl springs can be removed or inserted by simply taking off back head cover without removing head from drill.

The Edw. P. Allis Company, Milwaukee, Wis., have the exclusive sale of the Leyner rock drill. Prices and information given by addressing them or their branch office, No. 9 Fremont street, San Francisco, Cal.

Electrical Engineering Co.,

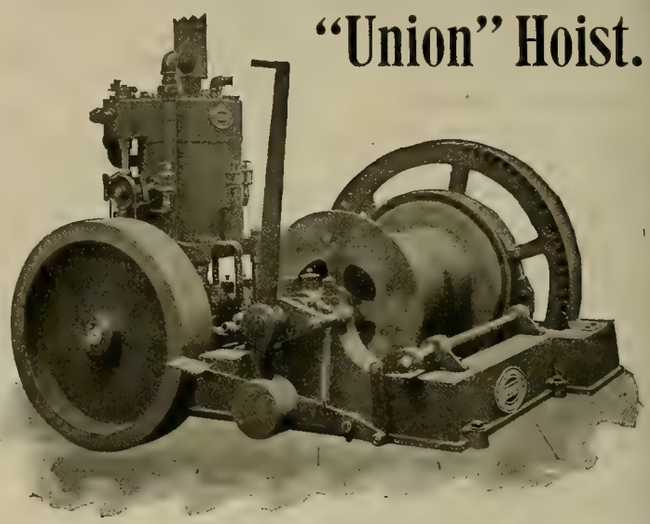
34-36 MAIN STREET,

SAN FRANCISCO, CAL.

Manufacturers of All Kinds of

Electric Machinery

For Mines, Mills and Hoists.



Girard Water Wheel Co.,

34-36 MAIN STREET,

SAN FRANCISCO, CAL.

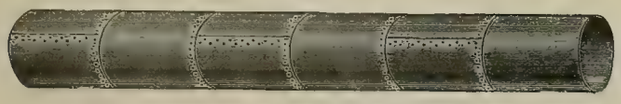
These wheels are durable, highly efficient, and are the only wheels which have perfect regulation, which feature makes them especially suitable for the operation of electric machinery.

"Union" Hoist.

The above cut represents our 10 h. p. Double Cylinder Engine of latest type, and Hoist combined on strong iron base. This hoist is designed to raise one ton 125 feet per minute from an inclined shaft, or 1500 pounds at the same speed vertical lift. The drum will hold over 600 feet of ⅝-inch cable. The outfit weighs 3500 pounds.

THE UNION GAS ENGINE CO.

—BUILD THE—



"Union" Gas Engines,

Which use either Manufactured or Natural Gas, Ordinary Stove Gasoline (Naphtha or Benzine), Distillate or Kerosene.

STATIONARY ENGINES for All Kinds of Work, Built in Sizes from 3 to 200 h. p.
"UNION" COMBINED HOISTS in Sizes from 2 to 40 h. p.
"UNION" COMBINED COMPRESSORS—20, 30, 40 h. p.
HOISTS and COMPRESSORS Can Be Built in Larger Sizes to Order.
"UNION" MARINE ENGINES, 4 to 200 h. p., of Single, Double and Four-Cylinder Types.
TEN YEARS' EXPERIENCE Building Gas and Oil Engines.
"UNION" ENGINES Are In Use All Over the United States.
"UNION" ENGINES Are Simple, Durable and Economical.

Assaying.—Part I—Gold and Silver Ores.
Third edition; Just Out. Rewritten and Improved by the Author, C. H. Aaron. Embraces 130 12-mo pages, with illustrations; well bound in cloth; 1896. Price, postpaid.....$1 00

Assaying.—Parts II & III—Gold and Silver Bullion, Lead, Copper, Tin, Etc.
Latest edition. Contains 161 pages with illustrations, and is strongly bound in cloth. Much of the original text is replaced by new matter. Price, postpaid.....$1 75

Notes on Assaying and Assay Schemes.
By P. De Peyster Ricketts, E. M., Ph. D., Professor in Assaying in the School of Mines, Columbia College, N. Y. Prepared with special reference to the wants of the student and practical assayer. Containing also Rules for the Examination of Mines, Assayer's Outfit, Treatment of Ores, etc. Fifteenth edition. 8vo., cloth.....$3 00

Prospector's Field Book and Guide.
By H. S. Osborn.....$1 50

A Practical Guide for Prospectors and Miners.
By C. W. Moore. With numerous illustrations.....$4 75

Roasting of Gold and Silver Ores and the Extraction of their Respective Metals Without Quicksilver.
Second edition. By Guido Kustel, M. E. Contains 156 pages, embracing illustrations of furnaces, supplements and working apparatus. Price, postpaid.....$3 00

The Lixiviation of Silver Ores with Hyposulphite Solutions.
With special reference to the Russell Process. Second edition. Completely revised. By Carl A. Stetefeldt. Price, bound in cloth.....$5 00

Modern Copper Smelting.
By Edward Dyer Peters, Jr. Seventh edition. Rewritten and enlarged. Profusely illustrated....$5 00

Electricity in Mining.
By Sylvanus P. Thompson..... 80 cts.

Practical Treatise on Hydraulic Mining.
By Aug. J. Bowie, Jr. On the use and construction of Ditches, Flumes, Dams, Pipes, Flow of Water on heavy grades, methods of mining shallow and deep placers, history and development of mines, records of gold washing, mechanical appliances, such as nozzles, hurdy-gurdys, rockers, undercurrents, etc.; also describes methods of blasting; tunnels and sluices; tailings and dump; duty of miners' inch, etc. Price, postpaid.....$5 00

Practical Hydraulics.
A book for Civil Engineers, Miners, Millmen, Hydraulicians, Mining Engineers and Irrigators. By P. M. Randall. Contains useful tables for ready reference, in which the results of abstruse calculations are all placed in a form so that one can find what he wants in a moment. For the engineer the principles, formulæ, coefficients, etc., are given; and for those not familiar with higher mathematics, examples, rules and tables are prepared. Is specially applicable to the Pacific Coast. Price, postpaid, $2

The Metallurgy of Silver.
By M. Eissler. Profusely illustrated.....$4 00

Manual of Mining.
For the use of Mining Engineers and Technical Schools. Treating of Preparatory and Exploratory Work, Methods of Mining, Hoisting Machinery, Pumping, Ventilation Shafts, Tunnels, Blasting, Timbering, etc., etc. By Prof. Magnus C. Ihlseng, E. M., Ph. D. Second edition, with Appendix. 500 pages, 8vo., cloth.....$4 00

The Explorer's and Assayers' Companion.
A third edition of selected portions of the "Explorer's, Miner's and Metallurgist's Companion." By J. S. Phillips, M. E. A practical exposition of the various departments of Geology, Exploration, Mining, Engineering, Assaying and Metallurgy. Price, postpaid.....$6 00

Aaron's Leaching Gold and Silver Ores.
By C. H. Aaron. The most complete handbook on the subject extant; 164 pages, octavo. Illustrated by twelve lithographic engravings and four wood cuts. Fully indexed. Plainly written for practical men. In cloth, postpaid.....$3 00

The Metallurgy of Gold.
By M. Eissler. Profusely illustrated.....$5 00

A Text Book of Mineralogy.
Based upon the System of Mineralogy of Prof. J. D. Dana. Embracing an extended Treatise on Crystallography and Physical Mineralogy. By Edw. S. Dana, Curator of Mineralogy, Yale College. With upward of 800 woodcuts and one colored plate. Seventeenth edition. 8vo., cloth.....$3 50

Notes on the Treatment of Gold Ores.
By Florence O'Driscoll, Associate Member of Institute of Civil Engineers. 8vo., cloth.....$2 00

A Practical Manual of Minerals, Mines and Mining.
By H. S. Osborn.....$4 50

Cyanide Processes for Gold and Silver Ores.
By E. B. Wilson, E. M. 12mo., cloth.....$1 5

Practical Metallurgy and Assaying.
By A. H. Hiorns.....$1 50

The Practical Metal Worker's Assistant.
By Oliver Byrne. Illustrated.....$5 00

Quartz Operator's Handbook.
By P. M. Randall.....$2 00

Assayer's Guide.
By Oscar M. Lieber.....$1 50

Assayer's Manual.
By Bruno Kerl. Illustrated.....$3 00

Metallurgy of Silver, Gold and Mercury in the United States.
Showing the latest practice pursued in American Metallurgical Establishments. With 186 engravings and folding plates, tables, etc. By Prof. Thos. Egleston, School of Mines, Columbia College. With corrections. Vol. I.—SILVER. 8vo.....$7 00

Metallurgy of Silver, Gold and Mercury—Continued.
Vol. II.—GOLD, MERCURY, Etc. Illustrated with 140 engravings and folding plates; 925 pages, 8vo., cloth.....$7 50

Manual of Determinative Mineralogy.
With an Introduction on Blow-Pipe Analysis (constituting the Determinative Part of Dana's Mineralogy). By Prof. Geo. J. Brush. Thirteenth edition, translated into the new system. 8vo., cloth...$3 50

Miners' Pocketbook.
A reference book for miners, mine surveyors, geologists, mineralogists, millmen, assayers and metallurgists. By C. G. Warnford Lock. 472 pages, illustrated, flexible leather.....$5 00

Skeleton Mining Report.
Of great practical value to miners and mine owners in making a comprehensive report on mining properties. Useful and convenient to mining engineers as a field notebook. Copyrighted by Bernard MacDonald, Butte, Montana.....50 cts.

A STEAM ORE STAMP.

One of the BONANZA MINES of the Black Hills was developed by a **TREMAIN STEAM STAMP MILL,** installed last summer at a cost of about $1600. After six months' run the superintendent wrote the following letter:

HILL CITY, S. D., Feb. 2, 1897.

Gates Iron Works, 650 Elston Ave., Chicago, Ill.—GENTLEMEN: It gives me great pleasure in informing you of our success with the Tremain Steam Stamp Mill which we have been running since last July. We have been running on hard, white quartz, some of it of a flinty character and a small portion of it slightly decomposed. We average about ten tons every 24 hours through a forty-mesh screen. If our financial standing had been a little better, so we could have put in a small engine and rock crusher, I am confident we could put through 14 to 15 tons in 24 hours. The wear and tear is considerably less than an ordinary stamp mill, it all being on the shoes and dies. The last we used of these were of the aluminum steel, which are the best wearing shoes and dies I have ever seen. The parts are all well made and durable, I having failed to see any weak point about the machinery.

We use one cord of pine wood in 24 hours, and run the mill with 70 to 80 lbs. of steam.

I have followed mining in connection with milling for thirty years and have never seen its equal for convenience, durability and cheapness. To parties wishing to purchase a quartz mill I cheerfully recommend the Tremain Steam Stamp Mill for its small cost, economy in operation and complete results of working. Very truly yours, [SIGNED] JAMES C. McDONALD, Supt. St. Elmo M. & M. Co.

This Mill has the capacity of a 5-stamp gravity mill and costs less than half to install. Automatic feeder of approved design. Weight of entire Mill 3300 lbs. Made sectional for mule-back transportation.

GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work rebellious ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Plata, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. 581,095.—RUBBER PEDALS—I. J. Willard, Sacramento, Cal.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

POWER TRANSMITTING MECHANISM.—Uriah Root, Coquille, Or. No. 581,012. Dated April 20, 1897. This invention relates to the class of power transmitting mechanisms. It consists essentially of a centrally pivoted lever, with means for operating it, links depending from the lever with swinging rods, ball and socket connections between the rods and the links and a shaft having cranks set at right angles, with connections between the cranks and rods. A centrally pivoted lever has pedals upon it to receive the feet and the central handle, so that it may be operated by both hand and foot power.

WAVE POWER.—J. M. Dyer, San Francisco, Cal. No. 581,021. Dated April 20, 1897. This invention relates to a means for applying the motion and force of the waves and in transmitting this motion and converting it into a rotary motion so that it may be applied to machinery for various purposes. It consists essentially of a float having a rigid arm or beam with which the float is slidably connected, the beam having a ball-bearing or universal joint at the inner end about which it is movable, guy ropes or chains connected with opposite sides of the float and diverging to the points of anchorage which are axially in line with the ball joint, a framework above carrying a driving shaft and connections between the float and shaft, so that the movements of the former will be transmitted to the latter. The power may be transmitted directly or by means of a pivoted lever carried on the framework, there being a connection between the float and the lever and also between the lever and the driving shaft.

RUBBER ATTACHMENT FOR PEDALS.—Frank J. Willard, Sacramento, Cal. No. 581,095. Dated April 20, 1897. This invention relates to a means for attaching rubber cushions or foot pieces to the pedals of bicycles. The object is to provide such a construction as will allow the rubber foot-pieces to be readily attached to or detached from the pedal. It consists essentially of a pair of rubber strips or pieces and frames exterior of and adapted to clamp the bases of said strips, each of said frames having a laterally projecting flange adapted to engage the edges of the pedal and a spring connecting the frames, whereby they may be stretched to fit the pedal and be held by the tension of the spring.

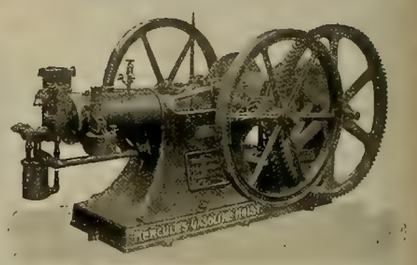
SECTION INSULATOR FOR ELECTRIC RAILWAYS.—Samuel L. Foster, San Francisco, Cal., assignor to the Market St. Railway Co., same place. No. 581,023. Dated April 20, 1897. This invention relates to those devices used on electric railways, especially of the overhead class, and section insulators, insulated crossings, frogs and switches, according to the particular use in which they are employed, all of them being in one form or another interposed in the path of travel of the trolley. It consists of section insulators and other devices interposed in the path of the trolley having a terminal member to which the end of the trolley wire is connected, said member having an inclined plane or planes diverging with respect to each other adapted to gradually receive or part with the bearings of the flanges of the trolley wheel before or after said wheel leaves or comes to its bearing on the wire, according as it may be entering upon or leaving the terminal.

The right of the advertiser to know the measure of his purchase in circulation is no less than the right of the publisher to know the weight of print paper received from the mill.

HERCULES GAS, GASOLINE AND DISTILLATE ENGINES.

HOISTING ENGINES, 2 h. p. to 200 h. p. ✦ STATIONARY ENGINES, 1 h. p. to 200 h. p. ✦ MARINE ENGINES, 2 h. p. to 200 h. p.

Our newly designed and perfected DISTILLATE VAPORIZER insures a saving of 50% on cost of running. Just ½ your expense SAVED BY USING A HERCULES in place of ANY other. We make no exception.



NEARLY 3000 HERCULES HOISTING, STATIONARY AND MARINE ENGINES IN ACTUAL USE. HIGH GRADE.

We claim full power, automatic and positive adjustment regulating speed and consumption of fuel in proportion to work being performed. No spring electrodes to burn out. All springs are outside. Point of ignition, speed and amount of fuel can be changed while engine is in operation.

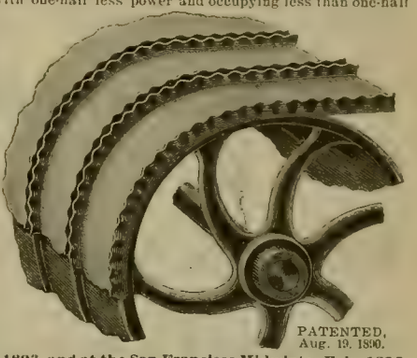
When Writing please mention the MINING AND SCIENTIFIC PRESS.



THE WOODBURY ORE CONCENTRATOR WITH IMPROVED BELTS

was awarded the Highest (Bronze Medal) Premium at Mechanics' Institute, 1890 and 1891. MORE THAN DOUBLE THIS CAPACITY with one-half less power and occupying less than one-half the space of any other concentrator. Built of best Steel and Wrought Iron. Strong and durable. Price $575 f. o. b. Send for Catalogue and Testimonials.

The annexed cut shows the belt in its improved form, which consists of corrugated edges, to form an expanding top edge. THE IMPROVED MACHINE HAS THE FOLLOWING MERITS: First—The Improved belts, which consist of seven, are constructed and arranged so as to allow each belt to receive a portion of the pulp in such a manner as to relieve the machine of its load, thereby giving it twice the capacity of other concentrators, and enabling it to work from 12 to 15 tons of ore per day. Second—The machine equalizes the load by several compartments, thereby working more regularly and with much less attention than is necessary to give other concentrators using wide belts. Each of the belts on this machine takes care of the pulp that is allowed to it in this way preventing the pulp from running to the lower side of it, as is the case when a machine becomes out of level where wide belts are used. Third—The belts run on a perfect line, needing no adjustment to prevent their running from side to side, as in other concentrators. Fourth—The belt surfaces are improved by indentations and corrugations, causing the Concentrator to save fine sulphurets and quicksilver, and perform close work. Fifth—The belts have fluted or corrugated edges, to form an expanded top edge, which effectually prevents from cracking. Sixth—The feed arrangement is perfect. Seventh—The machine is constructed of iron, with steel crank-shaft self-oiling boxes, and everything made in the most thorough manner, enabling it to run with very little attention or wear.

Geo. E. Woodbury,
Manufacturer,
141 to 143
First St.
San Francisco, Cal.

PATENTED, Aug. 19, 1890.

This Concentrator took the 1st prize at the San Francisco Mechanics' Institute in 1890, 1891 and 1892, and at the California State Fair in 1892; it took the 1st prize at the World's Columbian Exposition 1893, and at the San Francisco Midwinter Fair, 1895.

THE GUTTA PERCHA AND RUBBER M'F'G CO.

30 and 32 FREMONT ST., SAN FRANCISCO.

Spadone's Concentrator Belts. Patented.

The "SPADONE" Curved Edge Concentrator Belt is attracting much attention among mining men, its merits appealing to the millman of practical experience.

Illustration (Fig. 1.) shows a cross-section, and (Fig. 2.) shows the edge flanging outwardly as it passes over the pulley. This relieves the strain from the top and bottom of the edge by directing the strain automatically to the inside face surface of the edges. Heretofore all belts have been so constructed that when they pass over the pulleys or rolls, a direct strain comes upon the top or at the base of the edges, causing the edges to break away from the body of the belts in a very short time. *We avoid this Mechanical Defect by our Spadone Curved Edge.* Belts made to fit any machine—4, 5 and 6 feet wide. Prices and samples on application.

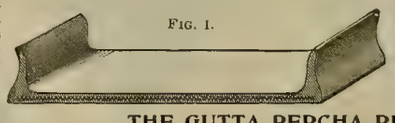


FIG. 1.

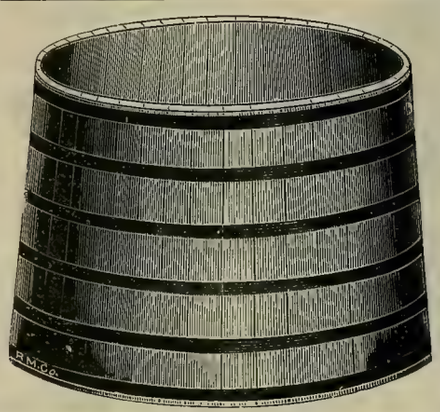
VULCAN ROPEWAY

—WITH—

AUTOMATIC ORE LOADER AND AUTOMATIC DUMPING DEVICE.

For Conveying Ore, Cordwood, Etc.



EMPIRE, NEVADA, April 17, 1896.

Vulcan Iron Works.—GENTLEMEN: The Ropeway furnished by your company to convey tailings from Morgan Mill to Mexican Mill, a distance of seven-eighths of a mile, is giving entire satisfaction. We transport 200 tons of tailings in ten hours; one man does the whole business, including elevating tailings from hopper in the ground, operating Vulcan self-loader, and attending to the Ropeway generally. The self dumper requires no attention whatever. The Vulcan loader I consider the best feature in the whole Ropeway, making it possible for one man to load 200 tons in ten hours.

Yours very truly, J. P. WOODBURY, Supt.

IMPROVED PORTABLE HOISTING ENGINES.

Improved Self-Contained Three or Five Stamp Mill,

Saves bill for heavy timbers, millwright and mechanics' labor, and a large amount of space. The term self-contained means a great deal for the mine owner, and can be readily recognized and appreciated in making an estimate for an ordinary plant when the comparative cost is considered.

FIRST: There is saved a large bill for heavy timbers, in many instances obtained at great expense and loss of time.

SECOND: The saving in millwright and mechanics' labor in framing and erecting.

THIRD: The large amount of space saved.

FOURTH: The great saving of freight,

Market Reports.

The Markets.

SAN FRANCISCO, April 29, 1897.

Jobbers continue to report a steady increase in the volume of goods going out on orders. The number of visiting merchants shows an increase. As yet very few changes have been made in prices of goods that will be affected by the tariff, owing to the uncertainty as to what modifications will be made by the Senate. The dry weather scare seems to have subsided, although it is admitted that many localities are greatly in need of rains; but others, again, can do without a precipitation for some time. At this writing fruit crop prospects are all that can be desired for a large outturn, while the cereal outturn promises over the average. Foundrymen and machinemen report active business in their lines, with orders running on every line of goods and machines in use. It is stated that fully 10 per cent more men are employed than at the corresponding time in 1896.

The local money market does not show any material change. The banks report a good supply of available funds with only a moderate inquiry for accommodation. Collections are said to be easy, with the retail trade owing less than usual at this season of the year. The banks hold to the opinion, unless the crops are injured, there will be quite a demand for money to move the crops, but there will be less storing by first hands. The latter will sell, provided prices for grain do not go much lower than are ruling now. There is considerable money coming in for putting into mines. It is stated that a large number of sales have been negotiated, while many others are under negotiation pending investigation. The decline in copper has caused some falling off in the inquiry for copper mines, but the inquiry for gold mines seems to be increasing. At the East the money markets work on easy lines. The renewal of gold shipments to Europe has not had any material effect on the situation there. The very large reserves, over $50,000,000, held by the Treasury, and the very large supply, over $80,000,000, in the vaults of the New York banks, admit of a large export movement. It is stated that the outward move is by importers to meet bills abroad. Our advices from Europe are to the effect that there is still a continued drain on England for gold, which keeps the premium for the yellow metal at strong figures.

New York Silver Prices.

NEW YORK, April 29. — Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	28 5-16	61¾
Saturday	28¼	61⅝
Monday	28¼	61 11-16
Tuesday	28 5-16	61 11-16
Wednesday	28 5-16	61⅝
Thursday	28 5-16	61⅝

	Copper.	Lead.	Iron.	Tin.
Fri.	11 25 @11 50	3 25	10 00@12 50	13 15
Sat.	11 25 @11 50	3 25	10 00@12 50	13 15
Mon.	11 25 @11 50	3 22½	10 00@12 50	13 15
Tue.	11 25 @11 50	3 25	10 00@12 50	13 25
Wed.	11 25 @11 50	3 25	10 00@12 50	13 30
Thur.	11 25 @11 50	3 25	10 00@12 50	13 35

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	15c Prem
New York Telegraphic Transfer	17½c Prem
London Bankers' 60 days	$4.87¼
London Merchants	$4.83
London Sight Bankers	$4.88¼
Refined Silver, per oz., 1000 fine	61⅝
Mexican Dollars	49@50

SILVER.—The market has held to fairly steady prices throughout the week. All advices from Europe are to the effect that the demand is slow and stocks are said to be accumulating. The only thing that keeps the market from going lower is the indifferent selling offers from America. With a selling pressure from this side, there is no question of lower prices than ever before known.

MEXICAN DOLLARS.—The market is slow from two causes. The first is that this is the wrong season of the year for much of a demand from the Orient, and the second is that the low price of exchange is against selling Mexican dollars. Exchange can be had at 49 cents, while the Mexican dollars would cost about 50 cents.

QUICKSILVER.—The market is quiet, but reported steady at quotations. Our New York advices state that quicksilver suffers somewhat in price from the weight of sharp competition, and sellers name a further decline. On April 24 lots of 100 flasks were quoted at $39 per flask and lots of 25 flasks at $39.25, while as low as 52 cents per pound was named on small jobbing parcels.

Our market is quoted at $40 for domestic consumption.

COPPER.—The market has held barely steady with us, owing to the low and weak markets at the East. New York advices state that, notwithstanding the heavy exports to Europe, stocks continue to accumulate, and in consequence there is some cutting in prices.

The local market is quoted as follows:

Ingot, jobbing	—@14¼
Ingot, wholesale	—@13½
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—In our market the demand for plate is light, owing to can makers' wants being supplied. Pig tin moves fairly at quotations. For a round parcel lower quotations could be secured.

We quote as follows in a jobbing way:

Pig, per lb	14½@ —
Plate, I C coke, heavy, per box	$4 05@4 15
" " " light, "	3 95@ —

LEAD.—There is nothing new to report and none expected until the Senate Tariff Committee reports the tariff bill. The consumption in this country is larger than last year, but fair, liberal supplies are against sellers.

Our market is quoted in jobbing lots as follows:

Pig	4 00 @ 4 25
Bar	— @ 4 50
Sheet	5 62½@ 6 12½
Pipe	4 87½@ 5 37½

SHOT.—The market is steady with only a fair jobbing demand reported.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do. " "	1 60

POWDER—The market is steady, with a large demand.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—The market is reported steady. The market is quoted as follows:

Refined, in car lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4¼

IRON.—There is nothing to report in our market outside of an increasing consumption. The East continues to report cutting by Southern furnacemen; but, notwithstanding it, trade is slow, owing to heavy orders having been placed a few weeks ago.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—Spot parcels and also near-by arrivals of foreign are unchanged. Domestic and coast coals are in fairly free offerings. The consumption of steam is larger than at this time last year.

We quote as follows:

SPOT FROM YARD—PER TON.

Wellington	$8 00@— —
Greta	6 00@ 6 50
Nanaimo	6 50@ 7 00
Cuiman	5 50@ 6 00
Seattle	5 50@ 6 00
Coos Bay	—@ 4 75
Cannel	8 00@— —
Egg, hard	12 00@13 00
Wallsend	6 50@— —

TO ARRIVE—CARGO LOTS.

Australian	5 50
Liverpool Steam	6 25
Scotch Splint	— —
Cardiff	6 25
Lehigh Lump	9 00
Cumberland	13 00
Egg, hard	10 00
West Hartley	6 50

COKE.—The market is quoted as follows:

Gas Companies'	— —		— —
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is easy.

Our market is quoted at 7½@8½c in a jobbing way. New York mail advices quote 7¼ 7¾c for Cookson's, 7@7¾c for Hallett's and 7c for Japanese.

NAILS.—The market is steady.

Wire, carloads, basis per keg			
" jobbing, " "			$2 25
Cut, carloads, " "			
" jobbing, " "			2 10

Chemicals.

Owing to the impression prevailing that the retroactive clause of the tariff bill will not hold, even if it is not struck out, and also that the House bill will be modified and not passed before towards the close of July, the market for about all kinds of chemicals is weaker. The East reports an easier market for all leading staples.

SPELTER.—The market is steady.

We quote our market in a jobbing way at 5 cents a pound.

NICKEL ANODES.—The market is easier.

PLATINUM.—There is a fair demand.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC. — The market is quiet at steady prices.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is easy.

We quote in jobbing lots at 50 cents per pound for ingots.

BISMUTH.—There is a fair demand.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is easy.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—The marketis steady.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is easy at 2½c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is easier at $1.70 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a light demand at 2½c a pound from stores.

NITRATE OF SODA.—Advices from the East report a firmer market for spot, but weaker for shipments and distant arrivals.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is slow and market easy at quotation.

NITRIC ACID.—Our market is reported easier from store at 6½c per pound in carboys.

We quote in a jobbing way at 1½c per lb for 66%.

BLUE VITRIOL.—Our market is weaker. We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, April 29, 1897.

The market under the lead of Con. Virginia sold down until the shares of that mine sold at $1.50—the strut points to which they were to go down. From this figure it began to recover making quite a move yesterday afternoon when they sold up to $1.85 on regular call. The points are out quite generally for Con. Virginia to sell at $2.50 or even higher a share. It is the belief with many that the inside pool has been steadily concentrating leading shares on the down grade from much higher figures than now rule. This opinion is based on the way in which the market is handled and also from well authenticated reports that large numbers of outsiders holding fair to good sized blocks of shares have either none or very few, and their holdings have drifted into strong hands. Aside from this the work in the mines is of such a character as to warrant asserting that in one or more mines it has been pushed in such directions that it would not take many days to show up considerable ore, notwithstanding strut reports put out by insiders and their "tools" or coppers" that there is no ore to be found. The history of the Comstock verifies the assertion that when the cry is "if they can only strike some ore" and the share market has been moving down for some time, the cry is made for the purpose of buying and not selling. The latter is down when prices are up and when ore strikes are reported. Gambling in mining shares is a veritable mint, but not to outsiders, but to the inside pool and mill owners. Continued low prices ruling for silver is against the management of the mines trying to get silver bearing ore, and in consequence the work done and that being done is with the view of showing up gold bearing ore which experienced Comstock miners assert is on a well defined lode to the west. There are some who affirm that gold bearing ore is also to the east of the lode. Aside from this when the powers that be are ready they can extract and mill at a profit the very large deposits of low grade ore, running from $8 to $16 and some $20 in quite a number of the mines. This ore being free milling can be made to pay dividends provided the mill rings or other persons do not appropriate the lion's share of the bullion. This, it is said, can be done without mine officials in this city having personal knowledge of it.

From the Comstock mines official letters report continued active work in Con. Virginia on several levels with the prospects on the north drift from the 600-foot upraise from the 1650-foot level, of quite a promising character. The writer's advices, while speaking favorably of the showing, are of such a character as to warrant the belief that it is not the intention to make public any information calculated to invite cupidity of outsiders at this stage of the game. As the drift is towards Ophir any improvement in it ought to have a favorable influence on the latter. The work in this mine on the 1000-foot and 1550-foot levels is practically unchanged, but it deserves watching. Some very good work is being done at different parts of the mine, which indicates more activity at early day, provided it is not stopped. In Ophir the west crossdrift on the 1000-foot is in favorable ground. Work on the central tunnel level is the same as reported last week. In the upraise they ran into 2 inches of fair grade ore. Work is continued in crossdrift No. 2 1000-foot level in Mexican. Nothing new is reported. In Union they are still going east from the workings on the 900-foot level. No change is reported in the east crossdrift from the Layton tunnel level in Sierra Nevada. From both Utah and Andes nothing important comes to hand. The Best & Belcher and Gould & Curry joint east crossdrift 800-foot level Bonner shaft level is being driven slowly ahead. In Savage there is no change in the character of the work or material encountered. The official letter from Hale & Norcross reports repair work whenever needed

Well Known Copper Mine
FOR SALE.
Mine well developed. Complete working plant. Situation and facilities first class. Address H. D. RANLETT, Ranlett, Amador County, Cal.

"It is character, not circulation, that some advertisers want."
Very well. The MINING AND SCIENTIFIC PRESS has both.

and also exploiting from the 900-foot level workings. In a west crossdrift run from an upraise they struck a small vein assaying mostly silver. No work in Chollar is reported. In Potosi they are still drifting south and having each week a few tons of ore assaying over $20 to the ton. It is the opinion that considerable ore can be extracted when desired. In Bullion work is continued on the north drift, while in Alpha slow work is being done in driving the west crossdrift on the 500-foot level. The past week 20 feet was made in the Con. Imperial, Challenge and Confidence joint west crossdrift. The distance in is over 1100 feet. From Crown Point, Belcher and Seg. Belcher the same old reports, with slight variations, come to hand. The joint work that is being done by Kentuck, Yellow Jacket and Crown Point on the upper level ought to give good results later on. In Overman work is continued on the 900-foot level. A few tons of ore are raised each week. From Caledonia and Alta nothing new is at hand.

From the Brunswick lode our advices are of a fairly favorable character. In Occidental they are sinking from the 550-foot level. This winze will be met by a drift on the 650-foot level. They are running a west crossdrift on the 550 foot level. In Chollar they are placing in position a larger boiler so as to prosecute work on the 600-foot level. When completed a south drift will be started from the shaft on that level in Hale & Norcross ground. Work on the 200-foot, 300-foot, 400-foot and 500-foot levels is practically the same as reported last week. More ore is being extracted, raised and sent to mill. Last week 232 tons were milled, which gave to the ton a battery sample assay of $17.01 in gold and 16¼ ounces of silver. The work by Savage, Gould & Curry, Best & Belcher and Con. Virginia is about the same as reported last week.

The market opened strong and active this morning under buying orders from Virginia City. In the Pacific board Con. Virginia sold at $2.15, but in the San Francisco board it sold at $2. The rest of the list sympathized. After regular session the market weakened off, Con. Virginia closing at $1.90 at noon.. At the 2:30 session it sold down to $1.80, but was firmer after Call. In Crown Point they are running a west crossdrift from a raise from the 800-foot level. On the 600-foot level they are saving a little ore. In Savage they are working on the 500-foot, 750-foot and 850-foot levels. In the Brunswick lode ground they have suspended work until about the last of next week.

The following illustrates the changes of the week:

MINES.	Apr. 22.	Apr. 29.

Who Sees Your Advertisement?

Is an important question. When asked for an "ad" demand proof of extensive circulation among probable purchasers.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from M. J. Williams and others, in the Galena Hill Mine, near Camptonville, Yuba Co., to deposit tailings in Eastman's Ravine; from Joseph Hustler, in the Hustler Mine No. 2, near Cherokee, Nevada Co., to deposit tailings in Shady Creek; and and from McGregor & Nix, in their mine near Cherokee, Butte Co., to deposit tailings behind the impounding works of the Spring Valley Mine, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on May 3, 1897, at 1:30 P. M.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from Charles and Ben Howlett, in the Howlett claim, near Columbia Hill, Nevada Co., to deposit tailings in Knapp Ravine, and from the Marguerite Gravel and Quartz Mining Co., in the Marguerite Mine in Eureka Mining District, Nevada Co., to deposit tailings in a ravine, gives notice that a meeting will be held at Room 59, Flood Building, San Francisco, Cal., on May 10th, 1897, at 1:30 P. M.

THE LOS ANGELES MINING BUREAU,
Cor. Temple and New High Sts., Los Angeles.

We have Eastern and foreign correspondents who are seeking good mining properties for investment. This Bureau will examine and report on mining properties in California, Nevada, Arizona, New and Old Mexico. Critical and accurate tests of ore made. Best references given. For any information, address DR. STEPHEN BOWERS, President; H. C. SIGLER, Secretary.

Assessment Notices.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No. 6) of .02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 22d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

SEG. BELCHER AND MIDES CONSOLIDATED Mining Company.—Location of principal place of business, San Francisco, California; location of works, Gold Hill Mining District, County of Storey, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 6th day of April, 1897, an assessment (No. 19) of 5 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 10th day of May, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on SATURDAY, the 29th day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

E. B. HOLMES, Secretary.

Office—No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

ESTABLISHED 1863

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class agency. We have able and trustworthy associates and agents in Washington and the capital cities of the principal nations of the world. In connection with our scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us enables us to give advice which will save inventors the expense of applying for patents upon inventions which are not new. Circulars and advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S. F.

MARGUERITE GOLD MINING AND MILLING Company.—Location of principal place of business, San Francisco, California; location of works, Auburn, Placer County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 12th day of April, 1897, an assessment (No. 6) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 237 12th street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 21st day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

F. METTMANN, Secretary.

Office—237 12th street, San Francisco, California. Office hours from 5 to 6 o'clock P. M. The Secretary will also receive payments from 12 to 5 P. M. at his business office, 225 Sansome street.

GOULD & CURRY SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 29th day of April, 1897, an assessment (No. 81) of 50 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 69, Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 1st day of June, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on TUESDAY, the 22d day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED R. DURBROW, Secretary.

Office—Room 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

PROPOSALS FOR CANAL.

Sealed proposals will be received at the office of the Southern California Power Company, Redlands, California, until May 15, 1897, for the construction of 3¼ miles of canal, on the north side of Santa Ana river, from the mouth of Bear creek to the mouth of Keller creek, San Bernardino county, California.

The work is mostly through granite rock and consists of tunnels, flumes and trestles. Over two miles of the distance is through tunnels ranging from 100 to 1600 feet in length. There are twenty tunnels in all.

Contractors may bid on the whole or any part of the work. Plans and specifications can be seen at the office of the company, or they will be sent by mail upon application if desired. Satisfactory references must be given by bidders as to their responsibility, and as a guarantee that a contract would be entered into, providing the bid is accepted. The company reserves the right to reject any and all bids.

Some Gravel Mining Methods.

Mining in California, both quartz and gravel, has given encouragement to invention in special lines. Probably more has been done for hydraulics than anything else that is of value to other industries. Here first the thin iron pipes came into general use for water under pressure. The necessities of the earlier hydraulic miner were such that he was compelled to resort to many devices that were new. Some stood the test, but many were partially or wholly failures. The sigmoidal wheel, which is such a valuable adjunct in hydraulics, is a California invention, and it is to be expected that with the use of the many supplies of water for generating electric power, as much advance will be made in the future as in the past.

In building up the present California system of hydraulic mining, now a standard the world over, from the use of the pan that would wash a yard of gravel in a day to the giants that will move 10,000 yards, many a plan for handling water was tested and found valuable or thrown aside as useless. Some, such as the use of the hose pipes, served their purpose for a time until supplemented by something better. Yet in a few small mines in the northern part of the State even to this day an old-fashioned canvas pipe may occasionally be seen. The rocker and pan are yet producing not a small proportion of the bullion yield of several counties.

STEAM SHOVEL AT HOLCOMB VALLEY MINE.

There was a time, particularly about the beginning of the second decade of gold mining in California, while most of the mining was confined to the low bars along the rivers, that many of the streams were lined with large current wheels used to raise water. Many hundreds of them were built along the Trinity, Salmon, Klamath and other streams, and the water, lifted to varying heights, was used for sluicing in the bars, and, in cases, for irrigation. Many such wheels are now in use in the streams that run through the arid but fertile country of Utah and Colorado.

In Siskiyou, on the Scott river, are some of these wheels, which are illustrated on this page. At W. T. Bennett's mine, at Oak Bar, three of these wheels are in place and furnish power for a pump and a hoist and raise water for sluicing. In this case the bedrock lies 22 feet below the river water level. In A. Brady's mine, at Scott Bar, the bedrock lies 16 feet below the water level, and a wing dam made of brush and earth encloses the mine. The gravel is handled by wheelbarrow. A dip wheel and a pump wheel are driven by the current of the river. Most of the material for making these wheels can be obtained in the neighborhood and at trifling cost.

The Holcomb Valley Mining Company's steam shovel, illustrated on this page, was built to meet other difficulties in handling gravel. This company—an English corporation—has been operating for several years in San Bernardino county, and has expended large sums in machinery and experimenting and prospecting. With the dredging machine or steam shovel fully 3000 feet of trench, averaging 16 feet wide and 18 feet deep, has been excavated. Water for sluicing was pumped from wells, but the quantity of gold in the gravel has been too small to make such expensive operations pay.

CURRENT WHEELS, BENNETT RIVER MINE.

CURRENT WHEELS, BRADY MINE, SCOTT RIVER.

Faith in Deep Sinking.

Much encouragement has been given to bolder ventures in the way of sinking shafts to great depths in California during the past year. Some weeks ago mention was made of the finding of larger bodies of good ore on the 2300-foot level of the Kennedy than had been found above. In the Gwin mine last week exceptionally rich rock was found on the 1300-foot level. In the Dead Horse ore in the lower levels is reported as good as ever found above, and preparations have been made to sink to 1700 feet. At a number of other large mines announcement has been made of intention to sink much deeper. In most of these mines the capital invested is local.

In the past California capital has sometimes lacked faith in the mines of the State and little was done to show what was below the surface. The whole State has been scoured over to discover mines without sinking. But now an era of deep mining in California is promised and, what is best, it will be inaugurated largely by local capital. Soon many of the deep shafts now sinking as ventures will develop big mines.

Coast Industrial Notes; Recently Declared Mining Dividends; Personal; Recent California Mining Incorporations; Commercial Paragraphs, 395. List of Patents for Pacific Coast Inventors; Notices of Recent Patents, 403.

The Denver Convention.

The committee appointed by the commercial bodies of Denver, Colorado, have decided to call the International Congress of Gold Miners to meet in that city July 8th, 9th and 10th. According to press dispatches, it has been decided to divide the meeting into two classes, partaking of a convention, and an exposition for the display of methods and processes that are of value to the working miner.

The basis of representation decided upon is thirty delegates at large from each State and Territory, to be appointed by the Governor, five from each county, five from each city, and one additional for each 1000 or fraction thereof. Properly managed and with good representation from the different States, the convention can do much good. It is to be hoped that the promotion element will not predominate. While advertising is a good thing, even in mining, it must be remembered that there are a number of mine owners in these Western States who do not consider it their only object in life to sell out. The educational features should be given due consideration, and, if that is done, the future conventions proposed will be better attended. It is to be hoped that California will be well represented.

The New Mining Law and District Recorders.

Secretary Sonntag of the California Miners' Association received last week from E. B. Maginnis, District Recorder of the Rand district, California, a letter asking for information as to the new mining law, as follows:

There are so many interpretations of the new mining law, to make it clear to myself and the miners here, will you kindly answer the following questions:

When does it take effect? When am I to turn over my books to the County Recorder? How about turning over books in thirty days, when law does not take effect until sixty days? The Rand district is in Kern and San Bernardino counties—to which County Recorder am I supposed to deliver my books? When shall I stop receiving location notices? If the books have to be segregated, where shall it be done and who shall pay for it?

Curtiss H. Lindley, of the Committee on Legislation of the California Miners' Association, in response to a request from Mr. Sonntag in the matter, writes as follows:

1. The act was approved March 27, 1897, and it takes effect at midnight of May 25th. No records made on or after May 26th in the district recorder's office will be valid.

2. The time within which the district recorder is required to turn over the books to the county recorder commences to run from the date the act "takes effect," which is equivalent to its "passage" in a legal sense. In other words, the district recorder should turn over his books to the county recorder on or before June 25th.

3. As Rand district lies partly in Kern county and partly in San Bernardino, I think the law will be satisfied by depositing the records with either county recorder, suggesting the one where the district recorder's office is situated, although this is merely a suggestion.

4. There is no law authorizing the records to be duplicated or segregated. The county recorder in whose custody the books are placed would be the lawful custodian and could issue certified copies although the location in question might be in another county. I do not see any serious difficulty in the situation at all as the deposit of the records with either county recorder will make them accessible and fix a legal depository.

The Increasing Gold Yield.

There can now be little doubt that the yield of gold for 1897 will show a considerably greater increase than did that of 1896. Last year the bulk of the increase in the yield over 1895 came from the United States. There were many things that tended to keep down the product last year, such as the Transvaal raid and subsequent troubles, the slump in West Australia and the fire in Cripple Creek. So far in 1897 nothing has happened in any part of the world to disturb the industry, and nothing is likely to occur, except it be trouble between the British and the Boer governments. Up to the end of March the yield of the Rand was 652,898 ounces, against 489,178 ounces for the first three months of 1896. If this rate is kept up to the end of the year, there will be an increase in the yield of the Rand alone of over $6,000,000. Whatever the disturbances, the yield cannot well be less than that of 1896.

Of all the gold fields of the world the Rand is the most uncertain in spite of the fact that the extent and value of its ore bodies are comparatively best known; and until the questions between the Uitlanders and Boers, particularly as to monopolies, are settled, and until it is decided who shall rule the Rand, the gold yield cannot be counted on with certainty. While under present conditions it is likely that more mines will be closed down, there are enough large properties being exploited, and upon which large mills will be erected within the next year or two to very largely increase the total yield. The Rand Mines, Limited, a company organized by the Exploration Company of London, controls, through subsidiary companies, nearly 1700 claims being developed, and upon which, up to the end of 1896, £2,226,102 had been expended. Upon only one mine has a mill been erected, but by March, 1898, there will be dropping on their properties 710 stamps according to present plans, and eventually 1300 altogether. While Africa will not do to conjure with on the London stock market, she will still be heard from for many years as a producer of bullion.

In the Australian colonies there is shown a healthy increase in the returns and everything tends toward still better reports before the end of the year. The product of the Bendigo district for the first eleven weeks of 1897 shows an increase over the corresponding period of 1896 of 4200 ounces.

The Russian output can hardly fail to show some increase, for considerably more interest is being taken in the gravels of Siberia and the Urals than before by representatives of foreign capital, and it is predicted that with the introduction of improved methods Siberian gold fields will make a wonderful showing. As it is, the crude methods of working the gravel are proof of their richness.

Into British Columbia a large amount of machinery is being shipped. This says more for that district than the sale of the War Eagle for nearly a million dollars, or the offer of a million pounds sterling for the Le Roi. The increase of the yield of precious metals in the Kootenay country has been steady and has not been forced by factitious methods caused by speculations or over capitalization such as has been the case in western Australia and South Africa.

In Colorado, at Cripple Creek there has been a very large increase; the superintendent of the Denver mint says that in January, February and March there was produced in all Colorado no less than 20 per cent more than during the corresponding period of 1896.

In California there can be little question as to the future. Conditions prevent much speculation and the amount of development work being done on business lines promise a continual healthy growth in the output.

If there shall be no troubles in Africa nor a European war the world's yield of gold for 1897 should exceed that of 1896 by $20,000,000 at least.

An Important Question.

At a recent meeting of the Executive Committee of the California Mines Association a committee was appointed to take action toward securing from Congress a further appropriation of $600,000 for impounding debris and the Anti-Debris Association was asked to name a similar committee to co-operate. The miners did so much in the last legislature for the drainage bill that it appeared then as if an era of good feeling between the miners and the farmers was being inaugurated, and that the two interests would in future act in harmony for the common good. However, in answer to the notification of the Executive Committee of the Miners' Association, the Anti-Debris Association state that they have been unable to get a meeting together to appoint the committee suggested. Meanwhile the Sacramento Board of Supervisors are causing the arrest of miners charged with operating illegally. There can be no objection to any just effort against anyone who violates the law, but the Federal statutes provide that such steps may be taken through the California Debris Commission. This body is disinterested and will see that the laws are enforced. Steps are being taken against ground sluicing, which is allowed under the present laws. This question would better be brought up in other shape. If it is proposed to make an attempt to hamper sluice, drift and quartz mining, as well as hydraulic, there will be arrayed with the hydraulic miners interests that will be heard.

The Board of Trade in Nevada City, Cal., issues a warning in resolutions adopted last week that should be given heed by the good people of Sacramento. They are in part as follows:

For years the mining interests of Nevada county were involved in litigation with the people of the valleys, resulting in decisions of the courts which have stopped hydraulic mining. And though such litigation proved of great injury to this county, said decisions have been respected in good faith by the miners of Nevada county.

And though said litigation separated for a time the business interests of Nevada county and Sacramento, yet in recent years the business interests of the two sections have been closely allied, old scores have been forgotten and harmony has existed, which was shown and may well be remembered, that in the recent session of the Legislature the representatives of the mountains came to the assistance of the valleys to pass the Dredger bill.

For years the people of Nevada county have been given the assurance by the representatives of the valleys that the litigation of the past was directed solely against hydraulic mining, and that no attempt would ever be made to interfere with any other kind of mining, either quartz, drift or placer; yet in the face of these promises made by the people of the valleys and accepted in good faith by the people of Nevada county, who have resumed their business relations with Sacramento, the supervisors of Sacramento county have brought suit in the Superior Court of Sacramento county against respected citizens of Nevada county and obtained a temporary injunction against them from mining by ground sluicing.

That we recognize in this suit which has been brought by the Supervisors of Sacramento county against citizens of Nevada county, a new departure in litigation, involving methods of mining which are perfectly legitimate and allowed by the State and National Government. This new issue involves all classes of mining, both quartz and drift, as well as placer mining, to which it is now directed, striking at the very foundation of the mining interests of Nevada county. And recognizing as we do, the decisions of the courts against hydraulic mining, we will not submit without a struggle, to a new step being taken to crush our mining interests, and will do everything in our power to protect them.

And be it further resolved: That in the citizens of Sacramento we recognize people who are and should be our friends, with whom we have close relations in business, which this litigation threatens to sever. That we do not believe that the people of Sacramento endorse or in any way support the action of the Sacramento Supervisors in bringing this action, believing that their action was induced solely at the instigation of well-known agitators who have for years made money out of both valley and mountains by stirring up litigation. And it is no more than right that we look to the conservative business men of Sacramento, to protect their own business interests, by protecting ours.

Concentrates.

BAKER CITY, Or., wants a U. S. assay office and should have it.

DURING April, 1897, local corporations paid $749,041 in dividends; $728,306 last April.

A COMPANY organized in Pittsburg, Pa., is preparing to work sulphur deposits in Lower California.

THE total production of copper in the world for 1896 is estimated at 370,000 tons, against 334,105 tons in 1895.

THE tariff bill being passed by the Canadian government provides for the admission of mining machinery free.

ANOTHER addition is being put in the De Lamar mill in Nevada, for more cyanide tanks which will increase the capacity to 500 tons daily.

THE railroad now building from Oakdale, Stanislaus Co., Cal., into Amador Co. will, it is expected, be ultimately extended to Mariposa Co.

THE Elkton Mining Company, of Cripple Creek, Colo., has invested part of its surplus funds in United States bonds of the face value of $100,000.

THE steamship Lahn, New York to Bremen, on the 4th took $1,500,000 in gold; the St. Paul, New York to London, on the 5th took 515,000 ounces of silver.

LAST week fifteen sacks of ore from the Anchoria-Leyland mine at Cripple Creek, Colorado, were shipped to Denver by express because of its high value.

THE Hampton Plains Estate Company in western Australia has offered a reward of £10,000 for the discovery of a payable reef on block 45, Hampton Plains.

IT is stated that work will commence in a few days on the proposed railroad from Kramer to Randsburg, Cal., and that it will probably be in operation by August 1st.

THE government statistics of the German Empire for 1896, show the following production in tons: Coal, 85,039,861; brown coal, 26,797,880; iron ore, 14,162,315; pig iron, 6,295,272.

THE Hall mines smelter at Nelson, B. C., is being enlarged to treat 380 tons of ore daily. A new blast furnace with a capacity of 250 tons daily has just been completed.

THE new shaft in the Utica mine at Angels Camp, California, for which ground was broken December 18th last, was down to a depth of 600 feet on the first of this month.

FARRON AND STAHLMAN of Salt Lake, who are developing the Adelaide copper mines at Golconda, Nevada, have been arranging for a site for a smelter it is proposed to erect there.

IN the tariff bill as presented to the Senate the duty on lead in ore is increased from one to 1½ cents a pound. The duty on quicksilver is reduced from ten to five cents a pound.

IT is thought that, when completed, the United Verde Copper Company's smelter at Jerome, Arizona, will be the second largest producer in America, the Anaconda of Butte, Montana, being the largest.

THE amendment to the mining laws of British Columbia, providing that aliens may not take up claims, has been passed by the legislature at Victoria. This does not apply to foreign companies, however.

THE cyanide-chlorination plants treating Cripple Creek, Colorado, ores are handling 500 to 600 tons daily and when the new mills being built are completed their capacity will be about 1000 tons to handle low grade ores.

CARDWELL AND BEMIS, who are interested in the development of the Meadow Lake mines, are asking the people of Truckee, Cal., to contribute toward building a road from that place, over which to transport the ore.

THE returns of gold bars received at the United States branch mint in Denver for the first three months of this year show a total valuation of $1,556,294.57, the largest quarter's business ever done there by some $500,000.

IN the down town and Carbonate hill basins at Leadville, Colo., which it is proposed to drain by tunnel, it is estimated that from 1891 to the turn of the strike in 1896, no less than 5000 gallons of water per minute were pumped.

THE coal production of Hungary amounted in 1896 to 4,970,000 tons, as compared with 4,651,400 tons in the previous year. The imports amounted to 1,701,800 tons, so that the total coal consumption of the kingdom was about 6,500,000 tons.

MORSE B. DAVIS, I. M. Jacobs and A. Binnard last week organized the Montana Smelter Company, for the purpose of constructing a smelter at Twin Bridges, for which twenty-five acres of land have been given by citizens of that place.

IN the Bendigo District, Victoria, Australia, the gold output from January 1st to March 6th of this year, is reported at 31,939 ounces against 30,423 ounces for the same period in 1896. The dividends paid from January 1st to March 6, 1897, amounted to £18,519.

LAST week no less than thirty-five locations of mining claims were recorded in Calaveras county. Until the new mining law goes into effect—May 26th—there will be an unusually large number of locations, many to avoid the $50 assessment work.

ALEXANDER BURRELL, the new manager of the Drum Lummon mine in Montana, announces that the 50-stamp mill will be started up again in a few days. The cyanide plant to work the tailings, with a capacity of 400 tons daily, will be finished in two months.

THE British Columbia Legislature has passed an act forbidding the employment of Chinese or Japanese underground, under penalty. Many mining towns in Kootenay have forbidden Orientals to cross their boundaries, and many have been sent back with threats.

THE Alaska-Mexican (Alaska) reports for March as follows: Period since last return, thirty-one days. Bullion shipment, $27,485; ore milled, 12,036 tons; sulphurets treated, 344 tons. Of bullion there came from sulphurets $12,817. Working expenses for period, $28,803.

THE report of the Rio Tinto Copper Company of Spain, shows that in 1896 the pyrites produced amounted to 1,437,332 tons, and the average copper contents somewhat above that of the previous year. The copper production at the mine was 34,501 tons, and the copper sales 30,685 tons.

A SECOND mining stock exchange has been formed at Spokane, Wash., under the name of the Spokane Board of Trade and Stock Exchange. It is proposed that mines listed shall be designated as "shipping" mines, "prospective" mines, or "prospects," according to their condition.

THE first regular mail service authorized for an entire year in Alaska has been contracted for by the Postoffice Department, the service being from Juneau to Circle City, 900 miles each way. The contract calls for one round trip a month, beginning July 1st, '97. The contract price is $7000.

AN English syndicate has purchased the Winnamuck Mining Company's property at Bingham, and have paid down $50,100 of the purchase price. This mine produced very large profits up to 1889, when the vein was lost. During the past year new men took hold and discovered large bodies of good ore.

THE cyanide plant being built by McCone, Woodbury & Cain at the Eureka mill, on the Comstock, will have a daily capacity of 130 tons. It is designed to work the tailings they have purchased, known as the Eureka mill tailings, Morgan mill tailings and those of the Nevada or Chollar mill, aggregating about 70,000 tons.

AT Winnemucca, Nevada, there arrived last week several teams with wagon loads of borax from southeastern Oregon, about 150 miles away. The teams will make regular trips from now on, and by taking freight for the northern country on the return trip will in a measure revive the old-time freighting business from Winnemucca.

THE United States Government has let a contract for a monthly mail service to the Yukon gold fields and application has been made to the Canadian Government at Ottawa to open up a service by the White pass at the head of Lynn canal. This would necessitate the building of a trail which, it is claimed, would be of value to the miners.

THE gold output of the Rand, South Africa, for the month of March was 232,066 ounces. This shows an increase of 21,066 ounces, as compared with the previous month's total, and an increase of 58,114 ounces, as compared with the corresponding month of last year. The output is a record one, exceeding last August's record by no less than 18,648 ounces.

THE Denver & Rio Grande people propose to build a spur railroad from the Leadville city freight yards to the mines, tapping all the large producers. When this announcement was made last week a vigorous protest was made by the owners and drivers of wagons which have been hauling the ores, and a committee was sent to Denver to ask the railroad people to reconsider.

IT is curious that $200,000 a ton is the favorite value put on ore in rich strikes all over the country this season. Below this the next figure is $20,000 and then comes $10,000, but no strikes are ever recorded of ore worth any sum between $20,000 and $200,000. A ton may contain nearly $600,000 worth of gold, if pure enough, and this gives a large field for changes in styles of stories.

THE tendency of the times is strikingly illustrated in the case of A. T. Hatch, till recently the greatest fruit grower in the great fruit growing State of California. About four months ago he failed, and recognizing the general trend of affairs immediately started on a prospecting tour, returning to this city last week. He hopes now to make another fortune in California mines.

THE British Columbia Legislature has passed an act excluding United States citizens from taking up mining claims in British Columbia. The act reads that no one shall be entitled to a free miner's license enabling him to locate precious metal claims unless he is eighteen years of age or over and is born a British subject, or unless he files a declaration of intention to become a British subject.

IN spite of all the newer and more advanced methods that are coming in, it is refreshing to note that the old styles of mining still hold sway in places and are adopted even by big companies. Last week the Reservation Star Gold Mining Company, owners of property in the Pierre's Lake district, in Idaho, sent up to their mines a force consisting of a man, a dog and a double-barreled shotgun to begin operations.

THE Elkhorn mine in Montana, owned by English people, has been for some time considered about worked out. The report for the past thirteen months shows that the mine produced during that period $411,945. Of this there was paid for wages and other expenses at Elkhorn $295,930; the output was 13,830 tons, and was treated in the Elkhorn mills. The mill product was 486,721 ounces silver and 340 ounces gold.

MANAGER D. B. HUNTLEY of the De Lamar (Idaho) mine reports for March as follows: Crushed during the month, 4420 tons. Bullion produced in the mill, $49,675; estimated value of ore shipped to smelters, $2628; miscellaneous revenue, $125; total produce, $52,428; total expenses, $38,678; profit for the month of March, $13,750; bullion and ore on hand and in transit, being result of general cleanup for the year, $10,085; total, $23,835.

SOME of the people of British Columbia are protesting against granting the request of the Duke of Teck Chartered Company to be allowed to administer the government of the Yukon country in Canada, after the manner of the British Chartered companies in other parts of the world. It is claimed that the people going into that country are capable of setting up a local government and managing their own affairs as loyal subjects of the Queen.

SINCE speculation and overcapitalization are dying out in mining, more interest is being taken in the expenditure of money in genuine development work. This most encouraging sign for the mines of the western part of the United States is the fact that so much money is being paid out for machinery, for that is the best indication that ore bodies worth working are being discovered and developed in greater quantities than for many years past.

THE Caledonia mine of Cripple Creek, sold by Mr. Stratton a short time ago for $50,000, and which has not been improved since, has been placed on the London market as the "Caledonia (Cripple Creek) Gold Mine, Limited," at £125,000 or $650,000. It is a very healthy sign for the future of legitimate mining in Colorado that this and similar schemes are being exposed whenever they appear by the newspapers of that State. The *Mining Investor* says that it is absurd to suppose that the mine is worth anything like what it is offered for.

ON April 16th a meeting of representatives of all the mining groups was convened at Johannesburg to consider a petition to be presented to the Volksraad on affairs of gold mining industry. The petition refers to the questions of railways, the dynamite monopoly, the Liquor law, thefts of gold, native labor, and other subjects. The industry has now united, and has formed a committee to deal with all questions in their entirety. On this committee both the Mining Chambers and the whole of the industry are represented. It was decided to agitate on constitutional lines with a view to obtaining a reduction of freight tariffs and of customs duties.

IN the Boss Tweed mine, at Mammoth, Utah, last week, a 4-foot ledge of ore, assaying 50 per cent bismuth, is reported to have been discovered. Of this the Eureka *Democrat* says: "About 500 pounds of float has also been discovered in West Tintic, which runs 43 per cent bismuth and 42 ounces in silver. A party will leave in a few days for the scene for the purpose of locating the ledge. There is no plant in the United States that can work this metal, and interested parties are now corresponding with the Welsh works at Swansea, with a view to securing a market. It is estimated that ore which carries 50 per cent bismuth is worth at least $2400 a ton."

THE report of the Franklin Mining Company of Michigan for 1896 shows that the mine produced 3,367,218 pounds mineral, which yielded 81.55 per cent, or 2,746,076 pounds fine copper. There were 135,156 tons rock hoisted and 122,079 tons rock stamped, the yield being 1.38 per cent, or 27.58 pounds mineral per ton stamped. The amount of mass and barrel work was 961,930 pounds. The total receipts were: For copper, $307,356; interest, $92; total, $307,448. Expenditures were: For running expenses at mine, $246,893; smelting, freight, insurance, etc., $39,897; total, $286,790, leaving a balance of $20,658. The average receipt per pound of copper was 11.19c.; mining expenses, 8.99c.; other expenses, 1.45c.; total, 10.44c., showing a surplus of 0.75c. per pound.

IN British Columbia the railways are getting very large subsidies not only in money but in agricultural land, and now comes Premier Turner proposing to grant to the Cassiar Central Railway all minerals in the land granted to it, whereupon there is considerable protest made. The Premier announces that the district is difficult of access, and by his Railway bill he places free miners in this position: They must conform to the mining laws of the province; they must give the railway company a one-half interest in any mineral property they discover within the railway belt; they must pay a royalty of 1½ per cent upon the net returns; they must pay $50 per annum for each claim held by them and $100 for every transfer of a mining claim; they must pay 50 cents per thousand for all milling timber used and 25 cents per cord for all cordwood used.

THE following figures of production for California for 1896 have been issued by the State Mineralogist: Gold, 831,251 fine ozs., $17,181,962; silver (coinage value, $422,468), commercial value, $219,123; chrome iron, 786 tons, $7775; mineral paint, 395 tons, $3500; antimony, 55 tons, $2300; manganese, 318 tons, $3400; magnesite, 1500 tons, $11,000; asphaltum, 19,000 tons, $62,000; marble, 7889 cu. ft., $32,500; sandstone, 58,000 cu. ft., $28,300; granite, 185,000 cu. ft., $278,000; lime, 20,275 bbls., $152,000; quicksilver, 30,000 flks, $1,020,000; copper, 1,992,287 lbs., $209,190; lead, 1,293,500 lbs., $33,571; platinum, 150 ozs., $2250; borax, 13,606,890 lbs., $680,345; coal, 69,449 tons, $158,135; gypsum, 1300 tons, $13,000; petroleum, 1,242,860 bbls., $1,242,860; slate, 500 squares, $3500; cement, 9500 bbls, $28,500; bituminous rock, 37,000 tons, $101,750; salt, 45,300 tons, $90,600.

IN this country, where there is not even a bureau of mines supported by the Federal Government, and the industry hardly recognized officially, it will be interesting to read the following item from the Australian *Mining Standard*: "It is gratifying to note that the Governments of Victoria and New South Wales have found no difficulty in federating over a homely matter of prospecting on the border near Cape Howe. Each Government has a party in the field, and the results are described as encouraging, so encouraging, in fact, that one of the most obvious difficulties which beset this form of State aid to industry has already cropped up. Some members of the prospecting party, to-wit, are making applications for the blocks they have helped to discover, and the problem as to who is to get the first benefit of the 'find' threatens to become a knotty one."

THE report of the Alaska-Mexican for 1896 shows that the total receipts from ore worked were $245,862; the expenses were $184,212, leaving a net balance of $61,850. To this is to be added $26,227 balance from previous year, making a total of $87,877. Dividends paid were $72,000, or 8 per cent on the stock, leaving a balance of $15,877 at the close of the year. Of the bullion obtained, $76,330, or about 31 per cent, was from sulphurets collected by concentration and treated by chlorination. The total quantity of ore taken out and milled during the year was 101,702 tons, and 1290 tons of waste rock were moved. The total development work amounted to 2395 feet. In drifting 500 feet on the vein, samples taken from every blast gave an average assay of $3.21 per ton. A large number of samples taken from faces of drifts gave an average of $4.74 per ton. The estimate of ore in sight at the end of the year is 607,266 tons, or over five years' supply for the mill.

THE Elk City country, on the western slope of Bitter Root divide, in Idaho, opened in 1860, produced a large amount of gold from placers. For the ten years between 1880 and 1890 the district was occupied almost exclusively by Chinese, who worked over the old diggings. About 1887 some white men from Cœur d'Alene entered the camp, jumped the best of the ground owned and worked by the Chinese, and took the matter into the courts. Judge Sweet in 1889 decided that aliens could not hold mining ground under the United States mining laws, and there was soon after a general exodus of Celestials from the mining camps on both sides of the Clearwater. Their places, however, were speedily filled by white people, and the result has been distinctly beneficial to that section. Syndicates of Chicago and Butte people have taken hold of some of the best of the old placer claims and are developing the ancient channel of American river. Many a placer claim in California is now worked by Chinese who could not hold possession.

SOME amendments to the new mining law of British Columbia, as finally reported, are as follows: The employment of females or children underground is prohibited. Chinese or Japanese may not be employed underground nor in caring for machinery. No wages must be paid to employes in or near places where liquor is sold. On or before January 16th of each year returns must be sent to the Bureau of Mines for the year of the output of mines and other information that may be required. Provisions are made for inquiry into accidents in mines and general rules are made for proper ventilation and to prevent the storage of explosives in mines. Each mine is to have a suitable device for thawing explosives and iron tamping rods are forbidden. Every working vertical shaft in which persons are hoisted or lowered, if over 300 feet deep, must have a safety cage and guides. Mine owners must assume the responsibility of lowering or hoisting men, or must prohibit it positively. Provisions are also made for proper timbering, ladderways, etc., and penalties are imposed for infraction of the regulations.

Practical Notes on Hydraulic Mining.*

NUMBER V.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Friction in Pipes.—This is a most important matter to those who are connected in any way with mining or other enterprises in which water is used under pressure, and very few miners are conversant with the principles relating to friction of water in pipes, etc. Most people connected with water supply have a knowledge of the fact that when large quantities of water are discharged from pipes of small diameter the pressure is greatly reduced, but few know how to arrive at a correct method of finding out the exact loss due to friction. Were it otherwise there would not be in evidence so many palpable blunders in the construction of pipe lines used for hydraulic mining and other purposes, and in many instances success would be the rule in place of failures, many of which are due entirely to errors made in bringing the water supply to the claim, and laying down pipes of too small diameter, thus reducing the effective head or pressure (in instances I have known) to less than one-half that available with pipe lines properly proportioned.

In a previous paragraph I stated that water flowing through pipes should not exceed 3 feet per second, or 180 feet per minute, and if all users of water for hydraulic mining or power purposes had their pipes of the correct diameter to insure a velocity not exceeding that named above there would be very little trouble, as both efficiency of water and economy in construction of pipe line would be attained.

It must be understood that the friction of water in pipes increases as the square of the velocity, and also depends upon the condition of the pipes—whether they are foul and rusty, or are new, or in good condition. Even the rivet heads in a pipe line of considerable length cause a good deal of friction and consequently loss of head.

There are several formulæ for determining the friction in pipes, but most all of them are difficult and too complex for ordinary miners. But Mr. William Cox, has simplified Weisbach's formula, and yet gives identical results. Besides it is easy to work out. It is as follows:

$H = \frac{L}{1200d} \times (4 \times V^2 + 5\ V - 2)$ when H = friction head in feet. d = diameter of pipe in inches. L = length of pipe in feet, and v = velocity of water in feet per second.

Example.—What is the loss in head of a pipe line discharging 400 miners' inches or 600 cubic feet per minute, diameter of pipe being 12 inches, and length of line 5,000 feet. We must first find the velocity in feet per second, and to do this we use a simple formula, given in remarks on velocity of water through pipes, in a previous paragraph, viz: Multiply number of cubic feet of water discharged per minute by 144 and divide the product by the diameter of the pipe in inches. Therefore in this case, velocity = $600 \times 144 \div 113.10$ the area in inches, or 763.9 feet per minute or 12.73 feet per second.

Now knowing the velocity, diameter and length, we will find H or friction head as follows:

$$H = \frac{L}{1200d} (4\ V^2 + 5\ V - 2)$$

$$\frac{L}{1200d} = \frac{5000}{12 \times 1200} = .3472$$

$4 \times 12.73^2 + 5 \times 12.73 - 2 = 709.86$ and this $\times .3472 = 246.44$ feet or friction head.

That is to say, if we had in this example a fall of 500 feet, and constructed a pipe line with pipes 12 inches in diameter, having a total length of 5,000 feet, our actual head of 500 feet would be reduced to $500 - 246.44$ or 253.56 feet, or putting it more plainly, we would have a pressure of 110 pounds to the square inch instead of 217 pounds, and this loss is due entirely to using pipes of too small a diameter.

Another formula I use, and which gives clear results, is as follows: $H = \frac{plcv^2}{2ga}$.

H=loss of head by friction in each 100 feet of pipe.

p=the perimeter, or circumference of the pipe in feet.

l=100 feet.

c=a variable coefficient from .00406 to .01338, according to the nature of the pipe, and velocity of water.

v=velocity of water in feet per second.

g=the acceleration of gravity, or 32.2 feet.

a=the sectional area of pipe in feet.

Example: A pipe line 5000 feet in length, of newly-riveted pipe, 20 inches in diameter, with a head of 650 feet between the supply and discharge ends, and delivering 400 miners' inches of water, what is the loss of head?

First determine the velocity, which is 4.58 feet per second, then $H = \frac{p \quad l \quad c \quad v^2}{2 \times 32.2 \times 2.181} = \frac{5.235 \times 100 \times .00506 \times 20.9}{140.456} = \frac{55.372}{140.456} =$ .394 feet, or .394 feet loss for each 100 feet of line, and there being 5000 feet of pipe, the loss will be $5000 \div 100 \times .394$, 19.70 feet, and the actual pressure head would in this case be 650 feet, less 19.70 feet frictional head, or 630.30 feet.

It is well to remember that it makes no difference whether the water is flowing up hill or down, or whether the pressure is great or small, the total friction will be materially the same, and that in wooden pipes the friction is nearly double that of iron or steel.

Loss of Head Due to Bends and Angles.—This loss is also an important one, and in many instances is great, owing to the number of sharp bends or changes in the direction of a line of pipe, carrying water for mining, or other purposes. In a pipe line there should be no bends having a radius of less than five diameters.

To calculate the loss of head due to the resistance of a right angle bend, the simplest rule is to obtain the velocity of water flowing in feet per second due to the head, and multiply the square of such velocity by .0152. For example: What is the loss of head due to the resistance of a 90 degree elbow, with water flowing at a velocity of 15 feet per second? Answer: $15^2 \times .0152$, or 3.42 feet.

Where the radius of the bend is greater, or more than five diameters, the head required to overcome the resistance can be found by multiplying the square of the velocity in feet per second by the number of degrees in the angle, and dividing the product by 88489. For example: Velocity 10 feet per second, what is the resistance of a bend having an angle of 120°? Answer: $\frac{V^2 \times 120}{88489} = .135$ feet.

When the radius is less than five diameters, the resistance would be as per following rule: Mean velocity squared, divided by 64.4 multiplied by the square of half the angle of deflection, multiplied by 2.06 times the 4th power of the same angle.

For fairly accurate results, this formula may be simplified by multiplying the square of the velocity in feet per second by C, C being equal to the following co-efficients for the various angles, viz:

C=.000109 for angle of 10 degrees.
C=.000466 " " " 20 "
C=.001134 " " " 30 "
C=.002158 " " " 40 "
C=.003634 " " " 50 "
C=.005652 " " " 60 "
C=.008276 " " " 70 "
C=.011491 " " " 80 "
C=.015248 " " " 90 "

(To be Continued.)

AT the present price of about 32 cents a pound, aluminum is cheaper than the same bulk of copper or brass. Yet 100 pounds of brass, or 250 of copper, are sold to one of aluminum. Manufacturers of the new metal disposed of 650 tons of it last year, but they are compelled to discover its novel uses. Aluminum has nearly displaced nickel in the arts, and it is in growing demand for cooking utensils, bicycle parts, plates for false teeth, handles for surgical instruments, a substitute for lithographic stones, non-magnetic electric apparatus and military accoutrements. Its lightness renders it peculiarly suitable for canteens, buttons and belt plates.

The Copper Queen Property, Arizona.

Bisbee is the seat of operations of the Copper Queen Consolidated Mining Company, in Cochise county, in the Mule mountains, thirty miles south of Tombstone and fifty-six miles southeasterly from Benson. It is within seven miles of the Mexican border. The mountains here are lofty, but not rugged, with a scant growth of timber. As shown in the accompanying illustration, the town occupies a position in a gulch, with less room than there is at Deadwood, South Dakota. The property of the Copper Queen takes up the entire slope of the mountain, on the south side of the gulch, extending for more than a mile along the trend of the mountain. The ore deposits follow the alignment of the gulch, the original discoveries having been made from out-croppings at the surface, at a point above the present location of the town. While the belt of copper ore appears to have a well-defined trend, the ore bodies seem to be irregularly formed, widening out into an immense pocket in one place, then narrowing down to a vertical vein in another.

The underground workings consist of two main shafts, 400 feet and 500 feet deep, respectively, from which levels have been run at each 100 feet, with very extensive stoping from each level. Within the various drifts and levels there are about forty miles of ore-car trackage. The two main hoisting plants handle 500 tons of ore each twenty-four hours.

BISBEE, ARIZONA, SHOWING PARTIAL VIEW OF COPPER QUEEN PROPERTY.

The smelting and reduction plant, which partially appears in the illustration, consists of three blast furnaces in operation, three copper converters and three revolving roasters. In the engine room are five engines, aggregating over 1000 H. P., operating the air drills, furnaces, converters and other machinery. A new upright engine is being put in to operate the converters. In the converting department the material is handled by hydraulic cars, instead of cranes.

A large percentage of the ores thus far has been partially oxydized, but at lower depths they become sulphides, which require some roasting. As both oxydized and sulphide ores are being produced, they are mixed in such a proportion as to produce about a 45 per cent matte, which yields to the converting process without roasting. The company makes use of the revolving roasters to some extent to desulphurize the more refractory sulphide ores. The average ore values, as they are mixed and smelted, run about 8 per cent copper, and the product of the converters is a copper bullion which is over 99 per cent pure copper. The product of the property, as now operating, is about two million pounds of copper per month.

The Arizona & Southeastern railroad, which runs from Benson to Bisbee, connects with the Southern Pacific at Benson and with the Nogales & Guaymas line at Fairbanks. While this road is operated separately, the stock therein is owned by the Copper Queen Company.

As an example of the liberal spirit which characterizes the Copper Queen management, it may be cited that it maintains an excellent free library for the use of the employes, as well as a well regulated hospital. The public school building of Bisbee, with

*Copyrighted by the Author.

grounds, was donated to the town by the company.

Messrs. Dodge and James, large stockholders in the Copper Queen Consolidated Company, who have long been heavy shareholders in the well known Detroit copper property at Morenci, near Clifton, have recently acquired possession of the remainder of the stock in the latter property.

At the Copper Queen property over 1000 men are on the company's pay-rolls, though a smaller number than this is constantly employed.

Adjoining the Copper Queen properties on the north are the fifteen claims of the Copper King Company, amounting to about 320 acres, which would seem to be in a position to hold the ore deposits of the Copper Queen in their trend eastward. The Copper King is but a prospect at present, though one that apparently justifies the hopes entertained by its promoters. A shaft is being sunk—now 90 feet deep—with good indications. The plans are to sink this and two other shafts to a depth of 500 feet. Surface indications and the location of the Copper King claims in their relation to the well developed mineral zone of the Copper Queen, favor the probability of success. The promoter of the new prospective mine is a stock company, whose directors are Messrs. B. C. Davis, W. H. Mack, Thos. F. Gaynor, Chas. R. Lee and Jere R. Fleet, with offices in Brooklyn, N. Y. WASCOTT.

Bisbee, Arizona, April 22nd, '97.

The Gold Belt of the Lower Colorado River.

"A dark-hued lizard on the dark-hued sand;
A rock, a short gray tree: above, an equal sky—
She sits and dreams. The whiteless blue of heaven
Comes down to meet the greenless brown of earth
And compasses her dream."

And this is Arizona and the desert bordering the Lower Colorado river of the West. And the languor of the dreamer is passing, giving way to the promise of a glorious future replete with success from energetic efforts. It is said "nature equalizes matter;" hence, because of the unkind physical surroundings peculiar to this region, it would appear compensation has been and will be had in the marvelous depositions of the precious minerals beneath the forbidding exterior. Values in gold, particularly, commensurate with the hardships and actual physical suffering endured in quest of the yellow metal in this dreary zone of desolation, have been and will be found. Of the many meritorious gold strikes now in the embryotic state of "prospects" and being worked from Ehrenbergh northerly to the vicinity of Yuma, on and along the Colorado and Gila rivers to southerly, we will not at this time touch. It is of those known to exist, actualities, tangible values in gold as found in better known prospects and mines, this letter will treat.

Beginning with the latest recorded and verified strike in the S. H. mountains, eighty miles northerly from the town of Yuma and thirty miles from the Gila river: Though having no personal knowledge of the strike at the King of Arizona, or locally called the Gleason group, yet from reliable authority and from samples of ore in hand we find a very peculiar and interesting new condition. The lode vein crops for three claims in length—4500 feet—and holds an average width of about 20 feet, in a diorite and porphyry contact. The great mass of the vein matter is a hard, reddish black, hungry-looking limestone, and a bluish and cream-colored sugar quartz 4 feet thick on the hanging wall threaded and shot with coarse gold of a value up to $1 per pound of rock. Again, the highest values in this free metallic gold are held in a yellow carbonate of lead and a matrix of "sugar quartz." Other samples are of a fine quartz conglomerate, through all of which iron as an oxide-carbonate and hematite appears. Along the cleavage of the rock strata of vein stuff occur seams of calcspar.

All of this matter is impregnated with coarse, visible gold, though in much of the dense limestone where no gold is visible even under the glass, string and shot gold is had from the hornspoon. I am creditably informed that the 4-foot pay streak will not run below $50 per ton and up to $2000 gold per ton, and the remaining 14 to 16 feet of width of vein spoons approximately to plate $8 to $12 per ton. Until the outcrop is broken it appears to be but ordinary "mal paies" (hard, black, porous lavas). Part of the vein is in high, serrated cliffs. Until a fresh fracture is made this appears to be valueless, volcanic rock. When broken it was first pronounced a black quartz; investigation shows it to be limestone. This emphasizes the writer's reiterated advice to desert prospectors to pass no defined ledge of rock without breaking samples for a fresh fracture, for the sunburned, sand-polished outcrop of all rocks looks alike in blackened, shining surface in the desert. It is enough to say the King of Arizona group is a tangible reality so far as extensive and high surface values in gold goes, and from a practical miner's standpoint this 4500 feet in length of regularly defined outcrop in a contact of primary rocks the future of the vein at depth is assured, presumedly with it precious burden.

Next in order of discovery is the La Fortuna, on the Gila river, near Yuma. This, from all accounts, is a huge "pipe vein" some 400 feet in length along the strike, all pay and 2 to 12 feet thick, that has attained a depth of 300 feet; and its record can be boiled down to the regular result in shipments of gold bullion from twenty head of stamps, running from $80,000 to $100,000 monthly. This holds in value and strength with depth.

Were these two late finds in Colorado they would long ere this rival the world-wide reputation of Cripple Creek. As it is, the La Fortuna is quietly pounding out fortunes every month and is simply a close corporate and quiet business affair; while in the really remarkable volume and values of gold in the King of Arizona, or Gleason group, local people of small means, having secured an interest, are putting in ten stamps thirty miles distant, at the nearest running water on the Gila river, and will make the mine purchase any additional plants required.

Let us see how Arizona and the desert compare with other and more favorably situated regions. In addition to the properties mentioned, we have the Harqua Hala with about $3,000,000 to its credit, now paying leasers handsomely, after the usual top-heavy English company shut down. Again, the Congress mine with no clatter, no blast of trumpet, sending out bullion regularly and at a depth of 2000 feet having ore blocked out for many years' work, to go through their 40-stamp mill. They have modern plants and methods in all particulars, and it is probably the equal as a dividend mine of any on the Pacific coast, and that means the world. The next in order is the old Vulture mine with $15,000,000 production from the surface zone, and to the 600 level. This has at last got into the hands of men with money and nerve to drive down to the lower ore zone, when this old producer will doubtless continue a dividend property for years to come.

I wonder if it ever occurs to some of our California mining men, when they condemn by wholesale the desert mines as mere surface or infiltration deposits, that very much the same talk held back developments and driving for the lower ore zone on the mother lode of California for many years, until men having the money and doing a little single-handed thinking on their own account solved the problem of permanent ore bodies of great magnitude below the barren vein matter of the surface ore zones and made the mother lode of California a synonym for great and lasting mines. Diamond Joe Reynolds did this on the Congress mine, which, by the way, was originally worked for the copper, and depth made of it a gold mine.

Pray, gentlemen, why should this happy condition be confined to northern California? However, this is a matter that will be defined in the early future, as this desert region bordering the Lower Colorado river is being thoroughly exploited by Colorado mining men who are corraling every tangible mining prospect of merit they can secure; and the energy, ability and nerve that have made Colorado what it is to-day will surely demonstrate more permanent paying mines in this region.

The Gold Rock of San Diego county, California, near Yuma, was condemned in its prospect state by at least two distinguished and able California mining experts, yet it appears to be doing pretty well with 60 feet thickness of $6 to $8 rock at the 300 level, and 120 stamps dropping. This, the Gold Rock—a segregation vein in porphyry—is certainly a property of merit and under competent management would never have got into the hands of a receiver. It was the old thing of "biting off more than you can chew." While forty stamps were making money, eighty stamps additional required some pretty low-grade stuff to go under the hammers to keep them all dropping. Then they started to economize at the wrong end by cutting down the pay of their millman—one of the best on the coast. He quitting, all sorts of tank men, crusher feeders and general mill swampers tried it a rattle and the tailings pond fattened, until the old millman was recalled at double his past salary. The Gold Rock is a good property.

The Senator mine (the old Buena Vista), fourteen miles north from Yuma, has a 12 to 40-foot vein at the 200 level, and 2 to 6 feet good pay. A mill will soon go up of twenty stamps, and the mine is regularly and systematically blocked out for stoping, with large reserves in sight. They are a mile from the Colorado river, in San Diego county.

To the contrary, Picacho district of San Diego county is erecting mills galore near the river's bank, with perfect confidence that mines must of necessity be found. Really, there have been more misleading reports from this district than any other in this lower desert country. They are not of the order of poor men's mines; they require capital to condition for successful work and the strictest economy of management. Excepting the Jaynes group, there is nothing demonstrated to be called a mine. There are many meritorious prospects in Picacho, of low-grade ores, but the wild, fantastic tales of 50 to 200 feet of $20 to $50 per ton rock are romances pure and simple. It is not the occasional hand samples of rich rock that make the value of a mine. It is what, day after day, in continual average of an ore body that the commercial value is found.

The "crosscutting of 50 to 200 feet of vein, and no walls," as reported, is eminently correct, as there are no walls defined and gouge-cased in the district, so they could not well be in sight. There are zones, by courtesy called veins of segregation, with no regularity of system through the district. In these zones occur thin seams of quartz, pinching and swelling from a "shoe string" to a few inches thick; also detached pockets of rich rock. It is what is known to the miner as "spotted," like plums in a pudding. Now, to get these rich seams and pockets close enough together to be able to work the entire mass, is the problem. This, in many instances, is assured, so far as surface prospecting shows. Again, capping of a brecciated conglomerate in a calcareous cement, generally, and gold-bearing in pockets, occurs in apparent flows having defined trends through the ryolitic rocks. The entire basin is made up of a jumble of porphyries, granites, slates, etc., with an occasional intrusion of igneous rock, protruding as peaks through the unsystemized mass. Much gold has been taken out in places, derived in the opinion of the writer from these rich seams and pockets of quartz. In some instances concentrators will be required to recover the gold values iron coated and scattered through the vein stuff.

The mines of this district are exceptionally easy of access, and the ore may be mined cheaply. The probable value of the ore will run from $2 to $10 per ton in gold. It is specially free. By modern methods, under competent economical management, with the favorable location—twenty-eight miles from rail facilities at Yuma and a navigable river for five miles and to the river bank—this district may be made a dividend producer.

Stories of large deposits of $50 rock and up result in harm. The posted mining man don't believe them. The novice, if of an economical (?) turn, does his own experting, builds castles in the air on the half-dozen colors of light gold in a pan test, really representing from $3 to $5 per ton and which he is assured is $20 rock. Getting to the end of his financial rope he is choked off with a curse on the gamble of mining, when really he has not used simple business discretion in his preliminary investigation.

There are up, and on the way, one 10-stamp mill and six other mills, by one company, and not one foot of ground regularly blocked out for stoping. It is true, probably, as claimed that considerable development in a small way has been done by nature in the cutting of gulches through and across these ore zones. Yet a mining man would like more tangible values actually susceptible of measurement in sight than are found in a few shallow shafts and surface trenching.

This in a nutshell is the condition of Picacho district to-day. There are extensive bodies of low-grade gold ores with a friable gangue, and a straight-away free-milling amalgamating rock that may be mined, handled and reduced at a specially low cost, after the first expense of the installation of the required hauling and reduction plants.

Do not infer that these are all of the mining camps of the Lower Colorado river. There are many properties being worked and some now under bond to Colorado people that will be heard from in the early future. Reference is here made only to the better advertised camps. There is no boom on, but the burning of powder and breaking of ground is going on from above Ehrenbergh to the Sonora line, bordering the Lower Colorado, to an extent not known of before even in old Yuma, by a working, not a jawbone fraternity, having faith in their holdings.

Systematic prospecting of this desert region now nor at any time has been made. The country formations are the most promising and fruitful, and the Colorado river from the Grand Canyon to its mouth is highly mineralized on both sides for many miles back, and its vast possibilities have hardly been touched. More earnest prospecting has been done the past two seasons and the result is partly outlined above. The man with money has his agents in the field, and the dawn of a grand future for desert mining is here. A plain statement of facts that may be proven is of more ultimate value than the hysterical statements of stray news reporters, who enthusing on a hand sample of gold rock run to adjectives and gush when writing of this region. TAYLOR D. MACLEOD.

Yuma, Arizona, April 25th, '97.

What Slip of the Wheel Means.

On steamships one often hears the expression "slip of the wheel." Now the meaning of this may be explained in a very simple manner. It is the difference between the actual distance run and the distance that would have been covered had the propeller acted upon a solid substance instead of a fluid. In other words, the expression may be understood as the lost motion of the propeller. It is usual to allow a certain number of revolutions to the propeller or paddles to the mile, and at the end of a stated time the estimated distance run by the ship, according to the number of turns made, is compared with the actual distance run by the ship according to observation of the heavenly bodies or by the patent log, and the difference between these two records is expressed as a percentum, and entered in the log book as "slip of wheel." Retardation by reason of head winds and high seas comes under the head of slip. For example: If the distance run according to revolutions is 100 miles, and the actual distance run is 75 miles, the slip of wheel is 25 per cent.

Mining Summary.

CALIFORNIA.

Amador.

Republican: At the Valparaiso they are working the rich ore extracted during the last three weeks. This ore is of the black metal, arsenical sulphurets variety. It is not free milling rock.

At the Union Consolidated ten stamps of the mill were started a week ago on ore taken in excavating for a station at the 500-foot level. The rock is an improvement upon the ore met with in the levels above. Twenty men are now employed about the mine and mill, and the number will soon be increased, as it is the intention to run the mill to its fullest capacity as soon as the 500 level is opened up.

It is reported that the Muldoon mine has been bonded to San Francisco parties for $5,000, and that $2000 has been expended thereon. Work is expected to commence at an early date.

Dispatch: The Argonaut Company has levied an assessment of 5 cents per share. They are at work upon the foundation of a 40-stamp mill and are pushing the work as rapidly as possible.

At the Wieland they have struck the gouge ledge at the 500-foot level, and have a better looking ledge than was encountered at the 300 or 400-foot levels.

Ledger: At the Black Prince the new machinery has been placed and two shifts have been kept at work. Ore has already been shipped for treatment.

Drifting continues on the Anita, running north to tap the ore chute on the Shober ground, and they have run the west drift about 200 feet.

At the Good Hope drifting has been stopped and the work of sinking has been resumed.

At the Kennedy a contract has been let for the new hoisting works to be placed over the north shaft.

The DeWitt mine, adjoining the Amador Queen mine on the west, is running a shift day and night to tap the ledge.

On the Amador Queen the erection of the new hoist has been completed. The shaft is down 520 feet.

Five concentrators were put in the Quartz Glen mine at Rich gulch last week.

The company who have been working the Del Ray under a bond have been actively engaged in exploiting with quite a large gang of men. At the 150-foot level they had good ore. The company have taken up the bond and are now proprietors of the mine. They propose to continue active operations on a more extended scale.

Butte.

Register: At the Magalia or old Pershbacker mine there are sixty-five men employed. They are running north on a new lead, running southeast on one channel, and also cleaning up the old works. The north channel leads toward the Princess channel.

There are fifteen men employed on the Princess mine and the pay gravel is good.

The Pomerat quartz mine, which has been bonded to S. H. Jackson of Chico, gives employment to fifteen men and the rock taken out is rich in free gold.

The Orleans quartz mine, near Coutolenc, has been bonded to San Francisco parties, who will begin work at once.

On the Matherson quartz mine five men are employed.

Ten men are employed in the Bader mine.

In the Ethyl or old Wylie mine three shifts are employed and twelve men are at work.

Ten men are employed in the Dix mine, on Butte creek, and six men are at work in the Best mine, on the same creek.

At Nimshew the Butte Creek quartz mine is about to be opened and a number of men will be employed.

The Nimshew Gold Mining Company, Geo. C. Higgins superintendent, is sinking a shaft to tap the old Blackleg tunnel and are also opening the Emma mine.

It is reported that the Kane mine, near Inskip, has been bonded to Goodall, Perkins & Co.

Peter Woods is working his mine on Scott's bar, on Butte creek, and is taking out good pay gravel.

Calaveras.

Chronicle: P. L. Sherman is developing the Paragon group of mines, near West Point. They are the Paragon, Mountain View, Bullion, Tip Top and La Palomacita. They are so located that all may be worked from one cross formation tunnel. This proposed tunnel, when in a distance of 1200 feet, will cut all the above leads giving vertical backs of from 200 to 500 feet. At present the work consists of the extension of three tunnels, which will tap the La Palomacita, Mountain View and Bullion lodes at depths ranging from 150 to 250 feet vertical, and when these veins are cut drifting will be prosecuted north on each vein, where greater backs will be had. A 10-stamp mill is now being constructed.

Amador *Dispatch*: The Gwin mine has struck some very rich ore in the 1400-foot level. One piece was taken out last week that had over $500 worth of gold in it. The streak of this rich ore is not wide and varies as it goes, but seems to run along the whole length of the vein.

Citizen: The Scieffard mine, near the Kentucky House, was bonded last week to the Western Mining Company of San Francisco, of which Claus Spreckels is one of the shareholders. The ledge was discovered about a year ago, when a shaft was sunk on the vein to a depth of 55 feet and a tunnel run for 180 feet to tap the ledge.

The Gillen placer mining claim, situated at Spring gulch, east of San Andreas, is being prospected by a mining company from San Jose with a view of taking a bond on the property.

El Dorado.

(Special Correspondence). — J. W. Armstrong has just started two shifts on the old Plymouth property, one mile northwest of Kelsey. In the sixties this mine had a 4-stamp mill in operation, and produced considerable money from surface cuts. The present company will sink deep and give the property a fair test.

M. A. Murphy has bonded the Old Judge mine, near Kelsey, to F. W. Beardslee, J. C. Shepardson and a party from Los Angeles, who speak of immediately opening the property.

Gilson, Sutherland & Company are about to erect a 10-stamp mill on their extensive gravel plant at Grizzly Flats.

The Grand Victory Company are about to increase their motive power, and are adding new pumps in connection with new boiler and compressor works.

Goulee and Hilbert have reached 40 feet on a 3-foot ledge of ore that yields a good mortar test. The shaft is on the vein. The property is in Kelsey canyon, near the village of the same name.

George Thorsen, a successful prospector, is running a surface cut and tunnel on a 20-foot ledge, on a property adjoining the Kelsey Gold and Silver mine. The ore and gouge matter all yield a fair prospect of free gold.

Thirty tons of ore, crushed at the new custom mill, from surface cuts on the Lloyd property, yielded 300 pounds of rich sulphurets and $21 per ton in free gold.

Placerville, May 3, '97.

Republican: It is reported that the Pocahontas mine at Logtown will start up soon. This is one of the oldest quartz mines in the county, and has been very rich. It has been idle for years, except two or three months last summer.

The Channel Bend mine, where a company has been exploring a body of gravel on a bench of the American river, northest of Georgetown, shut down this week.

But little work is being done at the Grand Victory at present, as the mine is flooded with water. About the first of the month the miners drilled into a seam from which water was forced out like a hydraulic through the drill hole. Since that time the pumps have been unable to control it, and water has risen from the 300-foot level to within 70 feet of the top. The two pumps, throwing 12 or 13 inches of water, at first lowered the water, but when nearing the lower levels could make no impression on it.

Kern.

Californian: At Havilah, McNulty and partners have bonded the Hart mine to a San Francisco company.

John Hays, one of Kern's most successful mining men, has some leasers working in the Ophir and Canty mines. Both are making a good showing.

Shipsey and Moore have made a good clean-up from the Marguerite. The seams are about 12 or 14 inches.

Mr. Coulson, representing New York and Pennsylvania capitalists, has purchased the Rotschford and New World mines. The latter was owned by G. Miller of Havilah. There is considerable development work to be done. A tunnel of 800 feet must be run on the Rotschford and one 400 or 500 feet on the New World. If Mr. Coulson's expectations are realized he will have a 20-stamp mill running next spring.

On Piute mountain the Bright Star mine has been sold to an Eastern capitalist.

A number of small claims have been sold in Kelsoe canyon.

Mariposa.

Gazette: Near Hornitos within the past couple of weeks operations have been commenced on three different mining properties. Several men were put to work at the Campodonico mine. The Mt. Gaines mine, which is reported to have recently changed hands, has a force of men at work on it. The Barcroft mine, another of the mines which is reported to have been sold recently, is being operated.

The California Exploration Co. has purchased the Virginia mine, that has been in litigation for over eighteen years, and is proceeding actively to develop it.

Nevada.

H. H. Beck has sold the Reno, Nev., Reduction Works to W. H. H. Graves of Oakland and B. A. Cardwell of Salt Lake City, who propose to enlarge and remodel the plant. It is expected to employ fifty men. B. A. Cardwell is interested in the Meadow Lake mines, and says that the ore can be worked at a cost of $5 or $6 a ton. His process is to crush the rock with rollers and concentrate, from which he says he can save 96 per cent of the assay value of the ore by melting it. He wants to build a wagon road to Truckee.

Transcript: Arrangements are being made for working the Pittsburg mine on an extensive scale. It has been pumped out to the 600 level, and in a short time the water will be down to the 800 level, when the work of sinking the shaft deeper will begin. An air compressor plant for running drills will be put in. There is a ledge on the 600 level from which quartz yielding well has been taken.

Union: In a few weeks the Nevada County Electric Power Company will undertake their scheme of working the South Yuba river bed. The water of the river will be diverted into the company's flumes, which will permit of working nearly the whole of the four miles of the river located by the company down to bedrock. For several years past considerable portion of the river has been worked by Chinamen under lease. Superintendent DeSabla frequently imposed more severe conditions upon them, but they found it profitable even after paring a very liberal royalty to the company. They never worked the river, however, to bedrock, where it is expected to be found the richest.

Tidings: At the Pittsburg mine the water has been lowered, so that the 700-foot level will be uncovered within a day or two. When the 800-foot level is reached, sinking will be resumed. Besides that, a large force of men will be put on to open out the various levels of the mine.

Placer.

Sentinel: At the Chicago drift mine, owned by G. L. Threlkel, a body of gravel has been encountered.

At the Haskell mine, near Auburn, gravel was reached in the face of the bedrock tunnel last week.

The Laird gravel mine, near Loomis, employs twenty men. The gravel mined is bringing good returns. The Laird, the Chicago and the Haskell mines are all supposed to be on the same channel.

Waugh, Walker and Duryea are developing the Lady Hanson quartz ledge, two miles northeast of Auburn.

A corporation has been formed of Placer county people to reopen the old Dardanelles mine, which has in its long history produced over $2,500,000 as a drift and hydraulic mine.

At the Gold Blossom mine, at Ophir, owned by Charles F. Reed, and which has been paying very well for some time, arrangements are being made to sink a double-compartment shaft to a depth of 1000 feet.

Plumas.

Independent: The Little Jamison Company contemplate adding twenty stamps more to their mill, making a total of thirty stamps.

The Plumas Eureka mine will start in crushing ore as soon as the snow is gone.

At Johnsville the Claybank tunnel will be run ahead towards the north side of Bald mountain, where it is generally believed the Thistle Shaft channel lies buried.

There has been let a contract to run 400 feet of tunnel into the Glazier mine on the Nort Fork.

James H. Challen, superintendent of the Topaz Centennial mine, also the Golden Ancient Channel and the Yellow Jacket mines, has two shifts driving forward the tunnel in the Topaz, which, when advanced 600 feet, will it is expected strike the rich gravel channel in that property. Work on the Golden Ancient Channel and the Yellow Jacket properties will be commenced as soon as the snow is off, when it will be practicable to get on the ground with mining supplies, etc.

San Diego.

Ramona *Sentinel*: At Julian a strike is reported in the Richmond mine.

The Ranchita mine is turning out high-grade ore.

Mr. Jacoby has let a contract to run a 250-foot tunnel on the Tom Scott mine.

Shasta.

Free Press: At the Niagara mine extensive preparations are being made to resume operations. The O'Neil tunnel, which is now in 2700 feet, is being extended, and by the first day of May a large force of miners will be put to work getting out ore. The ledge is 4 feet in width. On June 1st the mill of eighteen stamps will be started. The workings on the O'Neil level are now in 700 feet from the surface. By running a tunnel about a mile in length the ore chute in the O'Neil tunnel could be tapped at a depth of 1500 feet; but as this would be very expensive, a hoisting and pumping plant will probably be put in. The Niagara Company has recently been reorganized. The syndicate of Dutch capitalists which formerly controlled the property has sold out to a number of people in San Francisco.

Sierra.

Messenger: Isaac Copeland is about to commence operations at the Independence quartz mine on Wolf creek.

The California Debris Commission has received an application from M. J. Williams and others to mine by the hydraulic process in the Galena Hill mine, the tailings to be deposited in Eastman's ravine.

The mill at the Northern Bell mine started again last week, and several men were put to work.

Siskiyou.

Journal: The Hunter & Simmons claim at Hawkinsville is still worked with good success, the big pump at Shasta river keeping their ditch at the top of the hill supplied for operating the giants.

The Gold Ball mine, near Sawyer's Bar, is still idle and probably will be for some time to come, until the difficulties which it has been under for a number of months past are finally settled.

The Salmon River Ditch and Mining Company are at work at their big hydraulic mine near Sawyer's Bar. They have handled a large amount of gravel already this season, and it is reported are doing well. This mine is fitted up with modern machinery and has an electric plant.

Work has been commenced again on the Greenhorn blue gravel mine, and the shaft will soon be free from water to permit sinking down to bedrock.

The Black Bear mine, owned by John Daggett, is now in operation, with about ten men employed.

Wm. Bennett has four mines in operation now, and is doing very well with all of them.

News: The fine weather has started a number of prospectors out in the mountains to look for ledges, some of whom have already made promising locations. The best reports come from Cherry Creek and Oak Bar districts, although there is considerable activity in other districts.

James Morrison arrived in Quartz valley last week and is making preparations to start up work in the quartz mine owned by Abram Erno and himself.

Dave McCook of Humbug district has uncovered an 18-inch ledge in his Mount Shasta mine.

Trinity.

Redding *Free Press*: The Brown Bear mining property at Deadwood is being cleaned up and prepared for the inspection of parties contemplating its purchase. The mine is now in such a shape that to further develop it a very long tunnel must be run or a hoisting plant erected, requiring the expenditure of a considerable sum of money. Of late years lessees have worked about in the upper workings, taking out small bodies of ore, which was milled at the company's mill.

At the Altoona mining operations will soon be resumed. Since the day the mine was flooded the Cornish pump has been constantly throwing a 10-inch stream of water. The water is being gradually removed from the mine; but if Mr. Williams finds the work progressing too slowly he will immediately order a huge Dow pump shipped from San Francisco. Everything will be placed in readiness to resume operations on a large scale as soon as the mine is dry.

Journal: A company proposes to sink one or more shafts in Weaverville basin to test the question whether or not there is a deep channel of pay gravel there. A subscription paper for stock has been drawn up and will be circulated. It is estimated that the cost of the necessary machinery and labor to sink the first shaft would be about $3000. The machinery once purchased, the cost of sinking succeeding shafts would be much lessened.

At the Nash deep gravel mine, on Coffee creek, owned by an English company and superintended by Mr. Maitland, the long bedrock tunnel has been finished and a long flume will be built.

At Carrville work on the Strode mine has begun for the summer; ten or fifteen men are employed and the mill is now running.

On the old Bloss & McClary placer mines Jas. Eligh and partners have been working steadily all winter and have taken off a large amount of gravel, and still have a long sluicing season ahead.

Tuolumne.

Democrat: At the Black Oak sinking in the main shaft, which is nearing the 800 mark, goes on day and night, and when that depth is attained new levels will be run. The major part of the ore comes from the 700, where a 10-foot ledge of well-defined ore is being stoped out. Ten stamps are being added to the mill. The cyanide plant, with a capacity of thirty tons per day, will soon be in operation. A contract has just been let for a six-drill air compressor to supplant the old inferior one. Forty men are employed about the mine.

At the Rappahannock the shaft has attained a depth of 650 feet. It will be driven down to the 1000-foot mark without a stop. On the 600 level a station is being put in and a level run to the ledge.

The Punch Bowl gravel mine, on Table mountain, is having a quarter-pitch incline shaft run down on the rim to tap the main channel.

Independent: The Golden Rule is reported to have struck a vein of rich ore.

The Dutch mine crosscut, on the 300 level, shows up a vein with 18 feet of pay ore.

The Rosedale gravel mine, near Jamestown, has been sold to G. Leeney and M Price.

The Queen mine, at Stent, is being worked by a San Francisco company, which has bonded the property.

The Alameda mine is sinking in its main shaft and has encountered some rich ore during the past week.

The Grey Eagle mine at American Camp, which was bonded some time ago to M. Page & Co. of San Francisco, was started up last week with Mr. Page as superintendent. Five men are at work.

The Green mine, near Confidence, has been bonded by A. P. Minear.

The Providence mine, on the north fork of the Tuolumne river, has struck an 8-foot vein which shows up well in free gold.

The mill at the Norwegian mine is nearing completion and will shortly be put to work crushing the ore now being taken out.

The Columbus mine, in the Cherokee district, is drifting on the 200 level under the superintendency of J. E. Summers. Good ore has been encountered.

The Confidence mine is getting its plant into working condition. New mortars and a rock crusher are on the road, and will as soon as possible be placed in position. A contract has been let to sink a 100-foot air shaft at $3.50 a foot.

The Tarantula mine has its new snaft down 40 feet. The ledge is increasing in size and value.

The Omega mine, owned by Ayres & Bradford, and adjoining the Rawhide No. 2, has been sold to the Jumper syndicate for $40,000, $10,000 of which has already been paid.

NEVADA.

Reno *Gazette*: In Humboldt county the Barber Canyon placer mines, near Dun Glen, are still being worked with success. The working force was increased to forty men last week.

Jonas Nelson is working one of the old silver mines in Antelope district on shares. He made a shipment of ore to the Selby Smelting and Lead Company last week, which runs about 110 ounces of silver and 40 per cent lead.

The Thornton Brothers, who discovered a rich lead in an old abandoned mine at Unionville last winter, assaying from $300 to $900 in gold, have recently erected a 2-stamp mill near the mine, and commenced crushing ore.

The Blackbird Mining Company have ceased operations on their tunnel, which was run a distance of about 450 feet to tap the ledge at a depth of 80 feet below the lowest workings, but thus far have been unable to strike the ledge, which, no doubt, is due to a "fault" or "dip" in the vein. Mr. Strong, the superintendent, has gone to Detroit to consult with his company as to the advisability of continuing further explorations.

Placer diggings were recently discovered near Rabbit Hole, thirty miles north of Lovelock. The owners of the many claims have subscribed for making a ditch to carry water to the grounds, six miles.

The Quong Foo Placer Mining Company of San Francisco began active operations at Rock Hill, near Mill City, May 1st, under the supervision of J. C. Jones of Ione, Cal.

At the Adelaide copper mine, south of Gol-

conda, owned by an English company, the vein has been cut at four different points and discloses a body of ore of a uniform width of 40 feet. Thirty-five men are sinking a double compartment shaft 300 feet in depth and when completed active operations will commence with 150 men.

The Foltz placer mining property, south of Mill City, was bonded to Messrs. Humphreys and Griffin last week for $20,000. They are endeavoring to place it with a Denver company, who will operate it on a large scale in the event of their purchasing the property.

White Pine *News*: Several men were put to work grading roads and millsite at the Chainman mine last week, preparatory to bringing in the necessary machinery.

Work was started up on the Millionaire mine the first of the week.

The machinery for the mill of the Ben Hur Mining Co. has arrived and will be erected immediately.

The Steptoe mine in the Shell Creek range of mountains, east of Ely, the property of the Brim Bros., Salt Lake City, is among the rich lead propositions in this vicinity. The ore vein is well defined, about 2 feet thick and carries 73 per cent lead with occasional stringers of almost pure metal.

Gold Creek *News*: On April 28th the water stood at 14 feet at the tower in Little Sunflower reservoir. This represents more than 100,000,000 gallons impounded, or about one-eighth the capacity of the reservoir. The water now covers about seventy-five acres and extends back over a half mile to within 100 feet of the dike on the west. This water all comes from the lower part of the watershed. As yet there is no water flowing through the intake ditch from the three upper creeks. The work of puddling and strengthening the banks still goes on.

OREGON.

Grant's Pass *Observer*: The Black Gold Channel Mining Co. of Foots creek has expended several thousand dollars during the past few months in new ditches, pipe and flume. Piping is being carried on with a 350-foot pressure. The new flume is 5x3 feet in size and 1300 feet long, and there is 3000 feet of tunnel on the bedrock in the old channel.

The Gold Dust mine on Grave creek is being cleaned up. The proprietors, Hale Bros., Willke & Porter, intend digging another ditch 5 miles long and 4 feet on the bottom, which will give them water for nine months.

Rogue River *Courier*: The Pickett Creek placer mine, owned by John, Judson, Owensby and Keith, is piping night and day. The old channel overlooked by miners for forty years is now being tapped, and prospects rich in fine gold.

A 5-stamp mill arrived last week from San Francisco for the Jewett mine. When running, this mine will employ from 15 to 20 men.

Grant's Pass *Mining Journal*: Two big mining ditches are being constructed from the east fork of Pleasant creek to the new hydraulic mines near the mouth of Jamieson gulch.

Work will soon be commenced on the mining ditch from the Saxe Creek falls to N. D. Young's placer mine, where a hydraulic is to be put in.

On Grave creek and its tributaries there are twenty hydraulic plants, most of which have made profitable seasons.

WASHINGTON.

Spokesman-Review: James Crawford will resume work on the Morning and Evening properties for the Pierre's Lake and Flat Creek Mining Company next week. This contract calls for three shafts, each 50 feet deep, at various points along the vein.

The Clyde-Mohawk Mining Company of Spokane will also put a force of men to work on their properties on Touloo mountain. This is the second property placed under active development work in this camp during the present month.

At Chewelah the Spokane Copper Mining and Milling Company will do considerable work on the Grand and Magnus the coming summer.

J. H. Watts of Salt Lake City, on behalf of an Eastern syndicate, has taken a bond on the Hopeful, Montana and Concord mineral claims, in the Methow district, the consideration being $75,000, one-tenth of the consideration being paid.

BRITISH COLUMBIA.

(Special Correspondence).—In the last six months over 2000 miner's licenses have been taken out in Westminster district alone. As there are some nine recorder's offices, at the same rate there would be 18,000 or 20,000 persons who have taken out privileges to prospect in that period. Double or treble that number in the Province had before that period secured their licenses. Last week in New Westminster there were 148 miner's licenses issued and seventy-seven claims recorded.

In Lillooet the new ledge of the Alpha Bell proves to be 20 feet wide. The Alpha Bell is situated on Cayoos creek a few feet from the Golden Cache. A gang of men are stripping the ledge.

On the Athabasca, a free milling mine in Nelson district, 260 feet of tunneling has been done and nearly 100 assays made of the rock. The last three assays at a depth of 200 feet as shown by the certificates, run as follows in free gold: $127.80, $164.07 and $192.75. In sixty days a stamp mill is to be erected.

The shaft on the Silver Tip mine, Taxada island, midway between Vancouver and Victoria in the Gulf, is down 90 feet, showing 4 feet of high grade ore containing from 9 to 15 per cent nickle and $25 in gold.

The snow is rapidly melting off the mountains in Harrison Lake country near Westminster City and the Indians have consented to take in white prospectors. A gang of men have started for the Fire Mountain prospect which is said to be the biggest strike made here for years. Two fissure veins run parallel in this mine and are cross-cut at intervals by other veins where the rock is rich. The tunnel has been driven in 100 feet.

Vancouver, May 1st, '97.

Spokane *Chronicle*: In the Cariboo gravel mines of the Horse Fly Company, under the management of John B. Hobson, the machinery for the 10-stamp mill for crushing the cemented gravel is on the ground and a crew of carpenters are at work. The mill will be completed and started in about six weeks and the mine will be opened up. The main tunnel will by that time be pushed in sufficiently to keep a supply of gravel for milling.

Rosslander: Superintendent C. P. Robbins reports that eighty tons were shipped the past week from the Iron Mask. In a couple of weeks the connection will have been made with the old workings and the output of the mine will be more than doubled.

A strike was made in the War Eagle last week which the management consider to be of considerable importance. On the 125-foot level, where the east and west drifts intersect the vein there is ore on the face of both drifts, which are 120 feet apart.

The Sovereign mine, owned by Peterson and Ryan, has been bonded for $36,000 to A. W. Morris of Montreal. The Sovereign is located on Lookout Mountain, near Trail. The ledge has been tapped by a tunnel of 120 feet and the mine is fairly well opened.

Spokesman-Review: In the Ainsworth district the Mile Point is putting in expensive machinery and working a crew every day. The mine is under bond to an English syndicate for $40,000.

Twenty men are at work on the Tariff sinking a shaft.

The Black Diamond and Little Phil are working thirty men and are shipping ore regularly. New drill and compressor plants have been ordered for these mines and will be erected as soon as the railroads can land them.

The No. 1 is working twenty men in the mine and concentrator on pay ore.

The Jeff Davis is sinking a double compartment shaft, which is now down 35 feet. A drill and compressor plant has been ordered by this company.

The Highland mine has been working a crew for some time and arrangements are making to put in a concentrator.

Ten or fifteen men were put to work on the Twin this week. The Twin was practically sold last week for $35,000.

T. M. Gibson, representing the owners of the Black Diamond, Little Donald and other claims, recently purchased the Lady of the Lake, Hamburg and Sovereign for a consideration of $8000 cash. The Mamie was also purchased by the same parties for $3500 cash.

A 100-foot contract has been let on the Star claim and as the shaft goes down, the showing, which is a good one, continues to improve.

At New Denver several deals have been made of late, among them the Bachelor and Get There Eli groups, on Twelve Mile, to G. A. Farini, London, England, for $12,000 and $12,500 respectively; the Palmita, on Carpenter creek, to E. C. Clarkson of Toronto, for $20,000; the Heather and Heather Fraction, to Vancouver parties, for $10,000, and the Hyderbad, on Ten Mile, to a Vancouver company, for $18,000.

UTAH.

Mammoth *Record*: It has been decided to abandon the North Swansea Tunnel Company project, which had in view the running of a tunnel through the mountain north of Robinson.

The Sioux mill, which is being operated under a lease by Payton & Bacorn, is now running at its full capacity on Ajax ore. It is probable that 1500 to 2000 tons of this ore will be run through before a start will be made on the Sioux product.

The Opex shaft has now reached the 500-foot level and drifting has been commenced.

Shipments from the camp for the week have been as follows: Carisa, four cars; Mammoth concentrates, four cars; Ajax, five cars.

Bingham *Bulletin*: The new owners of the Winnamuck will carry out the plans of the old company in regard to deep working.

Col. O. B. Hardy last week transferred to Chicago parties his entire interest in the Bingham Copper Company's property, and resigned his offices as president and manager.

Silver City *Star*: The ore body recently struck on the 265-foot level of the Morning Glory is said to be improving in character.

A strike of high grade ore was made in the Boss Tweed this week, assays showing 42 per cent bismuth.

The Olson Bros., who have a bond on the Governor for $20,000 have begun work on the property.

The Buckeye records two strikes this week; one on the 270 level and the other in the shaft at a depth of 350 feet. The ore from the bottom of the shaft shows 8.5 ounces silver and $22 gold, while the body of pyrites which was also encountered in the shaft, shows 13 ounces silver. The ore from the 270 level runs over 100 ounces silver and 10 per cent copper.

The week's shipments were as follows: From the Bullion-Back mine, fifteen carloads ore; Bullion-Beck mill, ten carloads concentrates; Centennial-Eureka, five carloads ore; Eureka Hill, five carloads ore; Uncle Sam, two carloads ore; Carisa, four carloads ore; Ajax, five carloads ore; Mammoth mill, four carloads concentrates; Sioux mill, two carloads Ajax concentrates; South Swansea, five carloads ore; Dragon Iron mine, three carloads ore daily.

MONTANA.

Butte Miner: The Diamond R. Mining Company is to build a concentrator at Neihart, for the reduction of its own and custom ores. Ira Myers, president of the company, reports that the company will build a non-freezing flume from main Belt creek. The concentrator is to have a capacity of 100 tons daily.

Clark, Renshaw and Dunbar are working on Dr. Mitchell and Mr. Hennessy's Pierre claim in Granite county under a long lease. They have undertaken to drive a 400-foot tunnel under the old workings of the mine, which in former years yielded high grade ore that was shipped out.

The Butte and Boston is gradually increasing its force at the Blue Jay, Gray Rock and Silver Bow mines. At the East Gray Rock pump stations are being cut on the 700 and 1400-feet levels, and development work is also in progress on the north vein. The south vein is given over to different parties of lessees from the 800-foot level to surface. It is stated that the shaft, which is 1450 feet deep at present, will be sunk deeper as soon as the new station pumps are put in.

At the Original mine sinking will be completed to the 1000 level in a few days, where a large station will be cut. From this point as well as from some of the large stations above, cross-cutting will then commence on an extensive scale.

The Clipper group of claims, at Pony, owned by Collins & Morris, employs twenty-five men doing development work. This number will be increased when the weather and roads improve, so that ore can be hauled to the company's 20-stamp mill at Pony.

Inter-Mountain: The Anaconda Company will this year start up the Union Consolidated silver properties northwest of Walkerville. Some of the machinery has already arrived and new buildings will be erected. It is understood the shafts in the property will be developed to a great depth and that the product of the mines will be used for fluxing purposes at the smelter.

W. A. G. Birkin, who worked the Pennington group of mines at Pageville with poor success during the past year, has bonded the Clear Grit and Sunrise mines in the Mayflower district from Knight brothers and Jesse Johnson, in the alleged sum of $100,000, of which the small payment of $750 is to be made down.

The deal for the transfer of the Mayflower group of mines near Norris, was consummated this week in Butte between A. G. MacDonald of Norris, and Frank J. Turner and J. J. Broughall of Butte, by which the latter acquire full title. The properties show sufficient development to warrant the erection of a mill in the near future.

IDAHO.

Spokesman-Review: At Camp Jerome the Early Bird Mining Company are preparing to sink an additional 100 feet on their property.

Placer mining is being carried on rather extensively at present, while the snow is on the mountains.

WYOMING.

One hundred mining locations have just been made for a St. Louis company at the head of the Popo Agie river in Lander county. The locations cover a field of cement, which contains gold in paying quantities. The deposits were found three years ago and since that time numerous tests have been made of the ore, with favorable results. The St. Louis company will develop the property on an extensive scale.

A dispatch from Otto states that C. W. Forester and W. H. Page, who have been prospecting near the mouth of the Big Horn canyon, report finding an immense ore body carrying gold. No lead has been discovered, the ore, which appears to be a granite formation, lying on the surface in a blanket over a territory half a mile wide, extending from the foothills to the top of the mountain. The granite is not very hard and the ore can be taken out with picks. The discoverers have forty tons out ready for shipment when the roads are in condition to allow it. The ore is said to be of like character to that found at Ragged Top, the new Black Hills camp.

COLORADO.

Republican: At Cripple Creek the Bull Hill tunnel is to be started up by a new company to be formed on the mutual investment plan. A compressor plant is to be put on, and the company purposes subleasing the several veins that have been cut by the tunnel in its completed length of 900 feet.

Overproduction is the cry heard everywhere now. As a sample, the Florence works have more than 2000 tons of ore on hand, and it was given out ten days ago that they did not want any more rock for some days still to come. The works at Gillett have a steady supply from producers under contract, and for a year or more have not gone into the market. The Brodie plant last week refused to purchase 300 tons, and again refused a lot of double that size. Miners have an idea that there is something of a preconsidered plan on the part of the mill men in refusing ores, so that an advance in treatment charges can be made. An informal gathering of some of the big producers was had on April 17th to examine into this matter. It was contended that present prices afford ample profit, and any raise in price would meet with opposition. There was also some talk of subscribing toward the construction of another mill that should be run upon a co-operative basis.

In the Goose Creek district a mill is to be erected to work ores of low grade.

Lind & Anderson shipped fifty tons to the mills this week from their lease on the south end of the Dante, and are in shape to keep up the production at this rate.

The St. Louis tunnel, being run into Tenderfoot hill from the head of Spring creek, at 300 feet from the mouth has cut a wide phonolite dike that gives assays up to $10 a ton.

The machinery for the Pony Express is being placed in position and will soon be ready for work.

Since taking the old Blue Bird shaft back from the lessees the company is getting out ore at a good rate and shipping an average of fifty tons a week.

Work has been resumed on the Golden Gate tunnel, being run by the company of the same name into Raven hill from the head of Squaw gulch.

At Ouray in the Gustan in Red Mountain district two weeks ago the vein of good ore averaged from 1⅛ to 2 feet in width, and since then it has been growing wider, until now the width of 9 feet is being worked.

The O. and N. tunnel has lately developed a larger body of ore, and this will necessitate the addition of a larger force being employed.

W. C. Newell will start the new machinery plant on his Grouse mountain tunnel tomorrow, and expects to push the bore with three shifts and two air drills.

The Santa Rita has disclosed a new ore chute in a drift run 100 feet south from the 250-foot level. The ore is eight inches in width, and from assays shows an average volue of $100 a ton.

At Aspen in the San Jacinto the ore uncovered last week forms a body 8 feet wide and runs from 125 to 250 ounces silver to the ton. The lessees, Brown and Caley, anticipate putting three shifts to work immediately.

The Melton mine, near the Lead King has been working steady all winter, and while no rich strikes are reported they are producing a fair grade of copper and lead ore.

The Inez is the only mine in the district that has been pushing development work with improved machinery. The principal work on this mine has been in driving a tunnel to strike the Black Queen contact on Sheep mountain. They are now in over 1,000 feet, and all indications point to a near approach to the ore.

The Mollie Gibson mine is now pushing work on the thirteenth level south to connect with the Argentum-Juniata, and is doing considerable work north of the Silver King shaft and making regular shipments.

The Argentum-Juniata continues to make steady shipments of sixty tons of 100-ounce ore.

At Lake City James Lindsey let a contract for driving 400 feet of tunnel on the Superior and Worldbeater at Carson camp.

Superintendent W. Arnold of the Aliunde Consolidated Mining Company reports that all the levels are being extended on the Colorado Central mine westerly into virgin ground, all showing more or less ore.

Orson E. Clark is having a group of mines developed in East Argentine district that produce silver and gold.

The Dubois Tunnel Company has let a contract to drive their tunnel 150 feet at $18 per foot. This tunnel is now in the hill 436 feet.

The Rico smelter, idle for two years, is to be remodeled and constructed on the plan of the Walsh smelter at Silverton.

NEW MEXICO.

Silver City *Enterprise*: The Santa Rita camp has been a steady copper producer during the past eighteen months. Until within the past two months most of the product was derived from assorting the old dumps, some of which were thrown out by the Spaniards a century ago. The Driscoll Mining Company has twenty-three men now employed assorting these dumps. Some of the ore found is very high grade, containing a large proportion of native copper.

J. B. Gilchrist is producing and shipping to the reduction works about 200 tons of copper ore per month from his leased property, the Chino and Guadaloupe claims.

Mayfield and Baker are developing their property adjoining the Santa Rita Company's mines, and are extracting and shipping sufficient copper ore to pay for development work.

Brunswick and Manzanares, of Las Vegas, are making preparations to work their placer claims on an extensive scale. These mines are located on Whitewater. The mines have been worked intermittently for twenty-eight years past.

At Pinos Altos five shafts, each 1000 feet in depth, are to be sunk immediately by the recent purchasers upon the Mina Grande and Ohio mines, and (three shafts upon the Pacific vein) one on the claim formerly owned by the Pacific Gold Company, one on the Pacific Extension, and one on the Pacific No. 2.

The Treasure Mining Company is remodeling its mill upon the Atlantic mine.

ARIZONA.

The mines and reduction works of the United Verde Copper Company at Jerome are at present employing over 500 men and handling approximately 400 tons of ore a day. The principal shaft is about 500 feet deep and from different levels tunnels have been driven, and the underground workings are extensive.

Reports come from Casa Grande that the copper mines twelve miles south of that place are improving fast. Mr. Hanover, formerly of Globe, is superintendent. These claims were bonded by Messrs. Mayhew, Stiles and Ulloa, some months ago, to St. Louis parties for $50,000. Development work was commenced immediately and a smelter is now to be constructed.

Phœnix *Republican*: The Old Dominion has been closed down a week. This is already felt by the merchants of Globe, but no one entertains a suspicion that such a condition will prevail for an extensive period. Freight teams are still engaged in hauling coke and wood, and twenty-five men are retained at the mines. Mr. S. A. Parnall, secretary of the Old Dominion, says he has instructions from Boston to say nothing in regard to the company's plans, but also received a dispatch from one of the members at Chicago saying he might disclose the reason for the suspension of operations, but prefers to remain quiet until further instructions reach him.

At the United Globe nearly 250 men are working at $3 a day in the mines and at the company's smelter.

The Middle March Copper Company has been formed to prosecute work in the Dragoons. It is understood the company intends beginning active work on their property shortly.

The Dragoons are receiving much attention from prospectors, and the results are very encouraging. Several copper propositions have recently been uncovered.

The Montezuma Mining and Milling Company will work gold claims in the Huachucas belonging to Henry Forest.

Scientific Progress.

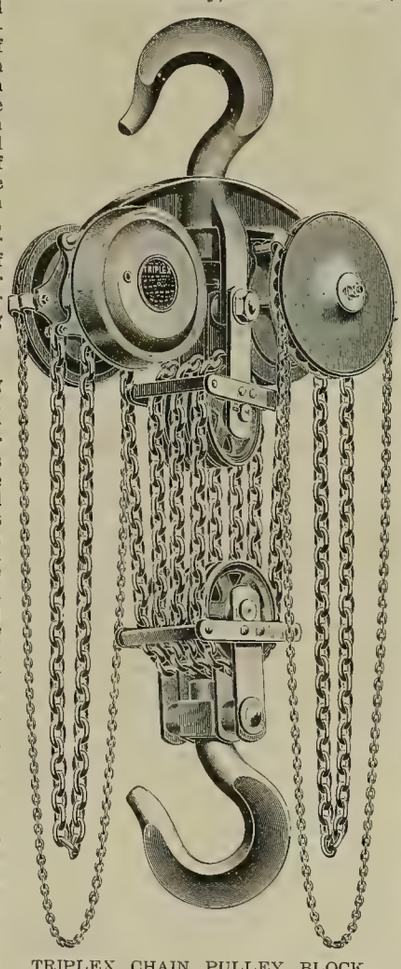
Making Large Diamonds.

Consul Germain of Zurich, Switzerland, writes as follows of Moyat's claims of making large diamonds:

Diamonds of a very small size have been produced artificially heretofore, but no one has as yet succeeded in producing large ones. Mr. E. Moyat claims to have discovered a new process by which to produce diamonds of large dimensions. In principle, his process is about the same as the one already invented by others, and that is to obtain crystallized carbon out of iron and coal, by means of high pressure and high temperature. Yet there is some improvement in the Moyat process as regards the technical operation. Pulverized coal, iron chips, and liquid carbonic acid are placed in a steel tube and hermetically sealed. The contents are then subjected to the action of an electric arc light by means of two electrodes introduced into the tube. The iron liquefies, is then saturated by part of the pulverized coal, at the same time the liquid carbonic acid evaporates, thereby creating an enormous pressure on the mixture of iron and coal. This pressure again considerably increases the dissolution of the coal in the liquid iron. While the mixture is cooling, the carbon crystallizes partly in the form of a real diamonds and partly in the form of similar stones. These crystals are then segregated by dissolving the iron in diluted muriatic acid. The mixture, by the above method, remains under high pressure during the operation of the electric current, while by other methods the pressure is obtained later on only by means of the rapid cooling process of the crucible.

THE by-products of the Pittsburg Gas Works, says the *Post* of that city, pay the expenses of that profitable establishment, and leave its receipts for gas clear gain. Concerning by-products of other industries, it is said that those of oil refineries are both profitable and valuable; and the molasses of beet sugar, once considered and treated as comparatively of no account, now supplies very considerable quantities of potash and alcohol. Oleic acid, a residue of stearine making, is now utilized in soap making. The mother water of salt works furnishes much useful material; the soapy liquor in which raw wool has been washed is made to produce large quantities of grease, known as "Rheims grease," for soap making, and, in fact, nearly half the weight of some fleeces is of a substance which, treated with an acid, gives the Rheims grease.

THE researches and experiments of Messrs. Broca and Richet have led them to the conclusion that the cerebral nervous system is incapable of perceiving more than an average of ten separate impressions per second. After each excitation of the nerves a period of inertia follows, lasting about one-tenth of a second, and during this period a new impression cannot be made. According to the same authority, a person cannot make more than ten, or, at the most, a dozen, separate voluntary movements of any kind in a second, although the muscles, independently of the will, are capable of making as many as thirty or forty.



PLATINUM is pre-eminently the metal of the chemist, both in analytical and industrial operations. No chemical laboratory is complete without a varied assortment of platinum apparatus, and fortunes are annually invested in platinum retorts for the commercial concentration of oil of vitriol. Chemical operations alone consumed until within a few years the bulk of the metal produced. The dental and electrical industries are said at present to consume, in the United States alone, more than half of the world's supply of platinum. In the manufacture of artificial teeth platinum pins are used to fasten the porcelain teeth to the supporting plate during the process of baking the porcelain. Platinum is the only metal available for this purpose because of the high temperatures required.

FOR years manufacturers of brass and bronze castings have been greatly troubled with the apparently unavoidable tendency of copper to become porous when put in the mold. Practical foundrymen have long discussed this tendency, which has been made important by the fact that it is quite a drawback in work for electrical purposes. Various alloys have been tried, but these all injure the purity of the casting. It is now announced that Edison is paying some attention to the subject, and experiments in this line are now being made in Pittsburg.

Mechanical Progress.

Triplex Chain Pulley Block.

When the Triplex chain block was first introduced a report was published of tests made by Prof. R. H. Thurston, of Cornell University, to determine the

TRIPLEX CHAIN PULLEY BLOCK.

relative mechanical efficiency of various types of chain blocks in use, showing it developed an efficiency of 79.5 per cent. Two new sizes of the Triplex block have recently been produced capable respectively of handling loads of sixteen and twenty tons. The accompanying illustration shows the design of these blocks. The construction consists in placing a yoke on the upper hook, each end of this yoke carrying a Triplex mechanism of two tons capacity and each mechanism being operated by an independent hand chain. The two slack ends of the hoisting chain are attached respectively to the two Triplex hoists. The first loop of this chain then passes around the driving sheave in each hoist and thence over two sets of intermediate sheaves, one set carried in the frame of the bottom hook and the other set in the frame connected directly with the shank of the upper hook. The number of parts of chain is such that the maximum load on each part does not exceed two tons. In like manner the maximum load on each hoist is limited to two tons, and this is the limit of load carried by each arm of the yoke. All the remainder of the load is suspended directly from the shank of the upper hook. Still greater compactness and from 18 to 20 inches additional headroom can be obtained by omitting the upper hook and crosshead and building the block into the trolley of a hand crane or overhead tramrail system.

The Compression of Air for Power.

TO THE EDITOR:—In planning for the compression of air, the first thing should be to select that air most suitable for the purpose. Ordinarily this is given no attention, and the air is drawn direct from the engine room, which is very injurious, as such air is rarefied by the heat from the boilers and engine, steam pipes, and so on. Vapors of escaping steam and dust particles are generally abundant, hence air should not be drawn from the engine room, but from some cool and clean place. The north side of a building is generally shaded, and near the eaves is as free from dust as any place to be found. The air can be led under the floor in tight conductors, which should be made of such material as is a non-conductor of heat. And at times of the year when water can be had of a cooler temperature than the air it is a good idea to subject the air to a very fine spray, which will assist to cool the air as well as to wash out fine dust which might be drawn in. Air should be drawn in the cylinder as cool as possible, and this is secured only by admitting it in a solid, undivided mass. And for this reason the ordinary poppet valves are open to much objection, as such valves are closed by springs, and to insure closing at all speeds the springs must have considerable strength; hence it shows a great resistance to the inflowing air and deprives the operator of the power he should have. While we do find now and then a machine which has a mechanical valve which works similarly to the famous Corliss valve, which works very perfectly and gives a free, unobstructed inlet, in my experience I find the mechanical valve the only one suitable for air compressors, not showing any favors to special builders. Again, I find people using water in their air cylinders, which is very injurious, and which no man will allow if he understands the compression of air, as it robs the owner of power and is an injury to his machine. To be sure, we have some makes that have no water jackets and have no other means of cooling; but if you have such you had better throw them away, as they are a bill of expense. And, again, the lubrication of air compressors does not receive the attention it should. We find some using oils that are gummy and gritty, some of low test, and so on, with no thought, apparently, as to the proper amount. An oil which might do quite well on steam is not suitable at all for air. Get an oil of a high test, solid body, free flowing, and free from any gummy or mineral substance. ENGINEER.

Angels, Cal., May 1st, '97.

Gas Engines for Mining.

While the manufacturers of gas engines located east of the Rocky mountains are waiting to be educated up to the fact that they are producing machinery that can be used to great advantage in mining operations, their competitors on the Pacific slope are busy turning out engines for almost all kinds of mining service. The western manufacturer, in his enterprising work for expansion of trade, has realized the fact that there are many instances in mining practice where a gas engine makes an efficient and cheap power producer. It is true that he has comparatively near him many mines at which steam engines would be very expensive on account of the cost of fuel, but the eastern manufacturer has the advantage of more nearby mines in which gas engines can be used to advantage at parts of the workings where steam is impracticable and compressed air and electricity cannot compete on account of higher cost of installation. Besides, the eastern manufacturers of gas engines can get almost, if not quite, as low freight rates to many of the mines of the Rocky mountain regions as can their Pacific slope competitors. It is true that many mining men look on the gas engine with suspicion. They treated compressed air machinery in the same way, but both of these have won a big place in the mining industry. It is sheer nonsense to say that a gas engine is as efficient and cheap as a steam engine at coal mines, where fuel is cheap and power must not be conveyed long distances under ground, but even at many coal mines there are points in the workings where pumping and haulage must be done mechanically, and while the amount of coal available is considerable, it is not large enough to warrant the installation of either steam, compressed air or electric machinery, even if the use of steam is practical.

To sum the matter of gas engine service up, we append the following list of cases in which they will be found both economical and efficient:

For hoisting, hauling, and pumping from dip workings distant from the main openings; for running isolated ventilating machinery, and for isolated pumps for water supply at mines not equipped with electrical plants, and where the installation of an electrical plant would be inexpedient.—Colliery Engineer.

Electrical Progress.

The Future of Electro-Metallurgy.

John B. C. Kershaw has completed a series of articles in the London *Electrician* on the present development of the art of electro-metallurgy, and in the last speaks of the most probable lines of future development.

In his resume he shows that in all branches of electro-metallurgical activity Germany and the United States have a large lead—Germany having 38 and this country 37 establishments, all told, engaged in this branch of industry, with England 27 and France 18. If the value of the product were considered instead of the number of establishments, the United States would stand easily first with a large margin to spare. In the electrolytic production of copper this country has double the number of establishments credited to Germany, and nearly as many as all other countries combined, and in output it largely exceeds of all the others.

As to the future of the copper industry, Mr. Kershaw thinks that an enormous expansion would follow the general adoption of bimetallism.

As for aluminum, he believes that it must remain an electro-metallurgical product, but that the sulphide may replace the oxide as an ore.

He thinks the aluminum industry is already established upon a firm basis and bids fair to be a permanent one. He thinks it is handicapped, however, in competition with other metal by the fact that it is much weaker than steel and dearer than copper and brass. He looks to a cheapening in the cost of production and an improvement in the purity of the commercial article as being vital to any great expansion of the industry.

Of the future of the alkali and bleaching compounds he is not very certain. Rival chemical processes already in the hands of powerful trade organizations will be strong competitors, if not successful ones, of the electrolytic methods.

The manufacture of chlorates by electrolytic methods, he considers, has a bright future, and that they will eventually supplant the chemical methods. Electrolytic gold and silver recovery, he also thinks, will in the future be the method most employed.

The production of zinc, sodium and potassium must, he thinks, be the result of electrolysis in the future rather than of purely chemical methods.

The Hermite sanitation process, he thinks, will not survive, since deodorization, and not sterilization, is alone

effected thereby, and this is not enough.

The production of ozone, however, by silent electrical discharge he regards as a permanent industry, and hydrogen gas as a by-product in electrolytic methods will receive more attention if a use for that gas is found.

But perhaps the brightest future as cast by the horoscope is that in store for the electrolytic white lead industry.

THE "telescriptor" is the name given to a recent invention, for which is claimed the power of transcribing messages sent over a line, the object of the invention being to furnish expeditiously a permanent record of such messages as are ordinarily sent by 'phone. It is claimed that the scheme can be applied to existing telephone systems, so that, for example, a correspondent in San Francisco wishing to communicate with his Sacramento office would simply call up the Sacramento end on the 'phone; then, by switching the circuit over on to the sending apparatus, which is described as being in the form of a typewriter, and operated in the same manner, he writes out his message, which is printed at the Sacramento end. The specific advantages claimed are that the message is furnished in permanent form, and communication is much more expeditious than by telegraph, since it is direct, there being no delivery at a central office and subsequent handling by messenger boys.

A Great Mining Triumph.

Capt. J. R. DeLamar, of New York City, is one of the largest owners and workers of Gold Mines in the world. After the most careful investigation he purchased in August, 1895, two Griffin Mills, and his report is so remarkable as to demand the careful attention of every one interested in Gold Mining.

We give it in his own words.

NEW YORK, Jan. 9, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—The two Griffin Mills have been in operation now for 90 days on the hardest rock, with the exception of corundum, that I have ever met during my mining life. They have taken the rock direct from the breaker and they average about 25 tons to each machine, 40 mesh fine, without elevating or bolting. We simply put a ¼ mesh screen around the Griffin Mill, and the stuff comes out 40 mesh fine or over, which makes it an excellent pulp for leaching by cyanide or chlorination, therefore we have concluded to order **10 more Griffin Mills**. We have tried high-speed rolls and dry stamps, and after looking into the Huntington Dry Pulverizer, the Natrod Pulverizer, the Stedman Pulverizer, the Frisbie Laeger, the Cook, and various other dry pulverizers, unhesitatingly recommend your Griffin Mill to any one.

Yours truly, (Signed) J. R. DeLAMAR.

HOW 10 GRIFFIN MILLS WORK.

DeLAMAR'S NEVADA GOLD MINING CO.,
SALT LAKE CITY, UTAH, Nov. 24, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—In answer to your inquiry as to what the "Griffin Mill" is doing at our DeLamar Mill, DeLamar, Nevada, we beg to state that we often run 410 tons per day with 10 of your mills in operation, and on one occasion these 10 mills produced 408 tons in one day. I have no hesitancy in stating that they will regularly produce at least 30 tons per day each on our ore, which is extremely and unusually hard.

Yours very truly, H. A. COHEN, *General Manager.*

These strong letters coming from such representative men are conclusive evidence that we are right in claiming that the "Griffin Mill" will produce a larger amount of finer pulp at less cost than any other stamp or pulverizer made.

Let us send you a free copy of our illustrated pamphlet, which will tell you all about the Mill and bring to you other evidence of its great achievements.

BRADLEY PULVERIZER CO., 92 State St., Boston, Mass.

DYNAMOS FOR ELECTRIC LIGHTING.

D. D. WASS, Electrical Engineer, 56 First Street, San Francisco, Cal.

Situations Wanted.

Expert Chemist, Assayer, Surveyor, (leaving college) understands mill work, cyanide process, smelting ore, etc., wants place. Salary secondary. Address "Miner," 518 Third Street, Oakland, Cal.

Experienced Physician and Surgeon
Wants engagement with mining company. Sixteen years' experience. Strictly temperate. Address "Bellevue," this office.

PROPOSALS FOR CANAL.

Sealed proposals will be received at the office of the Southern California Power Company, Redlands, California, until May 15, 1897, for the construction of 3¼ miles of canal, on the north side of Santa Ana river, from the mouth of Bear creek to the mouth of Keller creek, San Bernardino county, California.

The work is mostly through granite rock and consists of tunnels, flumes and trestles. Over two miles of the distance is through tunnels ranging from 100 to 1600 feet in length. There are twenty tunnels in all.

Contractors may bid on the whole or any part of the work. Plans and specifications can be seen at the office of the company, or they will be sent by mail upon application if desired. Satisfactory references must be given by bidders as to their responsibility, and as a guarantee that a contract would be entered into, providing the bid is accepted. The company reserves the right to reject any and all bids.

SOUTHERN CALIFORNIA POWER CO.
By HENRY FISHER, President.

Well Boring Wanted.

Proposals are invited from those having suitble tools, for sinking one to ten prospecting holes in cobble and boulders to bedrock, from two hundred to three hundred feet deep.

Particulars on application to

A. LUNDBERG, Vallecito, Cal.

WANTED.

Five-Stamp Mill with Rock Breaker and Two Concentrators.

All in First-Class Condition. F. o. b. steamer at San Francisco or Puget Sound.

ADDRESS: THE ALASKA MINER, JUNEAU.

WANTED.

Gold Mill, To Lease or Purchase.
On Mine or in Good Custom District.
Address "V," Mining and Scientific Press Office.

STOCK IN THE

Copper King of Arizona

Coast Industrial Notes.

—The Pacific Sheet Metal Works of this city have established a branch plant at Los Angeles, Cal.

—The S. F. and Yokohama Transportation Co. is the name of a new steamship line to be put on between this port and Japan.

—The California Powder Co. has bid one dollar a pound on a proposed government contract for 40,000 pounds smokeless powder.

—At Gallup, N. M., on the 3rd, was sold the Atlantic & Pacific Railroad for $12,000,000 to the Atchison, Topeka & Santa Fe R'y Co.

—The Los Angeles Board of Education asks the City Council for $337,900 for new schoolhouses or additions to the present buildings.

—U. S. senatorial action on the tariff seems to make certain the fact that citrus fruits, wool and hides will be scheduled in the tariff bill.

—The Los Angeles Water Company is reported willing to sell to the city for $3,000,000. The city engineer reports that to develop a new system would cost about $4,500,000.

—Several hundred men find present employment on the sixty miles of railroad now building along the south bank of the Columbia river from Astoria, Or., to Goble, there connecting with the N. P. R. R.

—Canadian salmon canners in British Columbia claim that the proposed Canadian duty of one-half a cent per pound on fresh salmon will make them move their plants to the State of Washington. Forty-five cannery men, employing 2500 fishermen, are now doing business in British Columbia.

—In the new tariff bill as handed in from the Senate Committee the drawback on tin is retained. All coal is subjected to a duty of 75 cents per ton, except that it shall be 60 cents per ton on coal imported from any country that does not impose higher rates of duty than those named in the tariff bill.

—On the Valley railroad the grading on the Visalia route as far as Reedley is completed, and grading commenced below Kings river. Tracklayers have finished their work to Kings river. Surveyors are at work in the Tejon Pass, where it is reported that a road from Mojave to Bakersfield, Cal., to connect the Santa Fe and the Valley road will be begun.

—The Mexican Land, Navigation & R'y Co. is the name of a new corporation in the City of Mexico with $1,000,000 capital, with nearly all the stock in the hands of Pearson & Son of London. The proposition is to drain the valley of Mexico, and build a railway "from some suitable point on the National Tehuantepec road to a desirable point in the State of Vera Cruz."

Recently Declared Mining Dividends.

The Ontario Mining Company, Utah, $15,000; payable April 30th.

The Gold Coin Mines Company, Colorado, $20,000; payable May 1st.

Idaho, British Columbia, $25,000; payable April 26. Total to date, $175,000.

Reco, British Columbia, $50,000; payable May 1. The total to date is $187,500.

Le Roi, British Columbia, $25,000; payable April 30. The total to date is $375,000.

Pennsylvania, Grass Valley, Cal., 5 cents per share; payable May 5.

Personal.

JAS. D. HAGUE has returned from New York city.

GEO. E. AMES of the Union Iron Works is back from a business visit to the City of Mexico.

LEO VON ROSENBERG of New York is in Colorado on professional business. Later he will visit the Pacific coast.

J. O. HARRON, general manager of the Parke & Lacy Co., is making an extended business visit to Central America.

CAPTAIN J. W. PINDER, who has lately been appointed engineer in charge of the Gold Creek, Nevada, placers, is in San Francisco for the purpose of purchasing machinery.

C. W. FIELDING, one of the directors, and Mr. Wright, who will succeed Alexander Hill who has resigned the management of the Mountain copper mines of Shasta county, will soon arrive at Keswick, Cal.

Recent California Mining Incorporations.

Dardanelles Cons. Mining Company, Auburn; L. L. Chamberlain, B. B. Deming, C. A. Bilkey, C. Tuttle and E. F. Wright; capital stock, $100,000.

Clover Flat G. M. Co., Eureka; capital stock, $6400—all subscribed.

Salmon River Belcher M. Co., Yreka; capital stock, $500,000—$300,000 subscribed.

Winona Mining Co., S. F.; capital stock, $100,000; $25 subscribed.

Commercial Paragraphs.

THE Fulton Engineering and Shipbuilding Works have a contract for a new hoisting plant on the north shaft of the Kennedy mine, Amador Co., Cal.

W. H. EMANUEL, Denver agent for the E. P. Allis Company of Milwaukee, and for the Rand Drill Company, Chicago and New York, says: "During the past thirty days I received more inquiries about machinery than during the same period of time for the past five years, and have made more sales than we have made in the same time for many years. I think the trade in mining machinery during the next six months will be the heaviest in the history of Colorado."

WANTED.

Old Iron Shafting,

5 to 15 in. Diameter.

Address "IRON," Mining and Scientific Press.

THE LOS ANGELES MINING BUREAU,

Cor. Temple and New High Sts., Los Angeles.

We have Eastern and foreign correspondents who are seeking good mining properties for investment. This Bureau will examine and place choice mining properties in California, Nevada, Arizona, New and Old Mexico. Critical and accurate tests of ore made. Best references given. GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work rebellious ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Plata, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. For elegantly illustrated descriptive books, free, of mines in Colorado, send to

Smith Striking Stamp Mill.

Springer Ore Concentrator,
Truax Ore Cars,
Rock Breakers, Hoists, Etc.

Why the Springer Concentrator is the Best:

It will do more and cleaner work than any rubber belt machine.
It weighs only one-half as much as some of the six-foot concentrators.
Is the most simple in its construction of any machine in the market, and only one-third as many pieces in it as in some of the others. Was invented by an old miner of forty years' experience handling every known concentrator on the market.
Should any piece need repairing, it can be removed without disturbing any other part of the machine.
Can be set up by any inexperienced miner.
Its distributor is perfection itself, distributing the pulp evenly over the entire surface of the belt.
Grade of shaking frame can be changed while the machine is running at full speed.
It is the strongest, lightest running and most inexpensive to keep in repair of any
Will save more of the fine slimes than any other machine.
Is cheaper than any other six-foot machine, costing only $350.00 f. o. b. cars or boat, San Francisco.
Will handle the pulp from five stamps better than any other Concentrator.
Has adjustable eccentrics, and any length of stroke can be had, thereby giving different speeds per minute.
The belt is very durable, being made of No. 3 Canvas, woven especially for the Springer concentrator.
This machine requires so little attention that one man will easily attend to a dozen of them.
It has a solid rubber flange, which no other canvas belt has.
Wear and tear upon this machine is not one-third as much as upon some of the other concentrators.

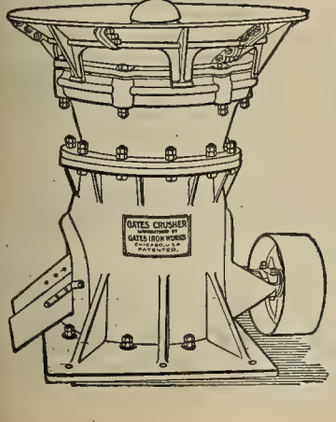
ASPEN, COLORADO, April 8, 1897.



The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles. This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly,

[SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

Market Reports.

The Markets.

SAN FRANCISCO, May 6, 1897.

General trade is reported only fair, not coming up to expectations. This is said to be due to tariff delay in Congress, causing a feeling of uncertainty as to the probable outcome and also when the bill will become law. The proceedings so far, in both branches of Congress, are convincing evidence that tariff legislation is controlled largely by sectional interests, and therefore it is difficult to forecast the bill that will finally pass. Until the business interests of the country see in what shape the bill will pass, trade and general speculation will be more or less lifeless outside of their normal conditions. The very heavy importations, with more to come, of foreign goods and raw material that will be affected by the tariff will hang as an incubus over the markets until the bulk is absorbed. Iron workers continue to report good business in structural and railroad material and also in machinery chiefly for mining purposes.

The local money market is practically unchanged. There is plenty available funds for city purposes but it is difficult to secure loans on country property. This it is stated will change when confidence becomes stronger and tariff and financial legislations are of the past. It is reported in well informed circles that at the next regular meeting of Congress the monetary system of this country will come in for legislation. If these reports prove to be correctly founded then there will intervene another period of uncertainty. Remittances to the East are not quite so heavy and with our fruit crop coming in the premiums or eastern exchanges ought to go down. Sterling bills are weak and lower in the absence of much of a demand. This weakness will probably interfere with gold shipments from Atlantic sea ports. These shipments aggregate nearly ten million dollars at last advises received. There were free withdrawals from the Treasury which reduced the reserve below $150,000,000, notwithstanding the extraordinary large sums held in banker's vaults. With us there is a continued enlarging demand for gold property. The buyers represent eastern and European capital. It is stated that both undeveloped and developed property is wanted, but chiefly the latter. Reports are current that three or four heavy transactions are pending with a strong probability that at least three will be closed at an early day. One of them is for an Arizona gold property. We are also informed that for the last year there has been some quiet buying of large silver producing mines—chiefly in Mexico. Advices from every gold producing district on this coast are quite encouraging.

New York Silver Prices.

NEW YORK, May 6. — Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	28 3-16	61⅝
Saturday	28 3-16	61½
Monday	28 1-16	61
Tuesday	27 15-16	60¾
Wednesday	27 15-16	60⅞
Thursday	28	61

	Copper.	Lead.	Iron.	Tin.
Fri	11 @11 25	3 20	10 00@12 50	13 30
Sat	11 @11 35	3 15	10 00@12 50	13 25
Mon	11 @11 25	3 20	10 00@12 50	13 20
Tue.	10 87½@11 12½	3 20	10 00@12 50	13 25
Wed	10 75 @11 12½	3 22½	10 00@12 50	13 20
Thur.	10 75 @11 12½	3 22½	10 00@12 50	13 20

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	10c Prem
New York Telegraphic Transfer	12½c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.83
London Sight Bankers	$4.88¼
Refined Silver, per oz., 1000 fine	61
Mexican Dollars	49@50

SILVER.—The market sold down up to Wednesday, when a slightly stronger tone set in. The lower prices were induced by the light demand abroad and also the placing in London of Indian Council bills at lower prices. A further decline was prevented by a mintage order from France. This order, although not large, had the effect of bringing in other orders, which steadied the London market and caused it to sell fractionally higher. Freer shipments are being made from Atlantic seaports to Europe. The last steamer for the Orient took out $110,000 in silver bullion, of which $97,000 was for Bombay and the remainder for Hongkong.

MEXICAN DOLLARS.—The market continues dull at quotations. The last steamer for Hongkong took out 13,362 dollars in Mexican and 23,750 in sols.

QUICKSILVER.—The market is strong at an advance of 50 cents. About all the odds and ends have been cleaned up, both here and in New York. Shipments by water the past week to Mexico aggregate 120 flasks. The Senate tariff bill reduces the import duty.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—The markets at the East have continued to shade off, with selling orders for future delivery reported on the New York market at less than ruling for spot. The production in this country seems to be in excess of the consumptive demand, notwithstanding it is increasing in this country and continues quite heavy abroad. The consumption on this coast shows an increase. Sheet and bolt can be shaded on quotations.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—The market is weak at quotations for both pig and plate. The bulk of the demand is over for the season. The East reports a weak market for pig at the decline, owing to the lower price for silver bullion.

We quote as follows in a jobbing way:

Pig, per lb	14c@ —
Plate, I C coke, heavy, per box	$4 00@ 4 15
" " " light, "	3 90@ —

LEAD.—The market, in sympathy with the East, is lower. Corroders are using more both here and at the East, but the available supply is ample for all requirements. It is said that concessions can be had on our quotations.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—There is a fair jobbing demand.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—An active demand is reported from the mining camps, which keep the factories running to full capacity.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—There is a continued fair shipping demand. By the last steamer for New York via Panama the shipments aggregated over 85,000 pounds.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—In our market the consumption continues heavy, with some shading in price. The East reports the markets unsettled with Southern furnacemen fighting for a stronger footing in the Northern and Central States. In this they are favored by reduced railway freights.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—The market is practically unchanged. Shipments to arrive are in excess of the corresponding time last year, but this does not appear to affect prices, which continue steady.

ANTIMONY. — The market is weak and quiet.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7½c for Cookson's, 6¾@7½c for Hallett's and 6¾@7c for Japanese.

NAILS.—The market is lower.

Wire, carloads, basis per keg	....
" jobbing, " "	$2 15
Cut, carloads, " "	....
" jobbing, " "	2 05

PLATINUM.—There is a fair demand.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC. — The market is quiet at steady prices.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is easy.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

The market for nearly all kinds is unfavorably affected by free imports, owing to fears of increased duties. The uncertainty regarding the bill has an unfavorable effect. From New York our advices are as follows:

Crude brimstone is a shade easier, with unmixed seconds offered at $19.50 on spot and $19.25 to arrive, and thirds about 75c less. Chlorate of potash, yellow prussiate of potash and oxalic acid were reported to have been sold at a fractional concession from the prices generally quoted, and the market for these as well as for some other chemicals appears weaker under the influence of late heavy arrivals. Nitrate soda on spot met with fair sale at $1.90 in lots of 1000 bags, and $1.92½@1.95 in smaller quantity. Future shipments are still quoted at $1.75@1.85, according to position. No changes of importance were noted in prices of other chemicals, and the business passing is of very ordinary character all through.

SPELTER—There is a fair movement at a shade lower quotations. Our Eastern advices state that smelters avoid selling competition so as to enable the combine to maintain prices.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—There is a slow demand.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is weak at quotations.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—The market is firmer with a good export movement.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is easy at 2½c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steadier at $1.70 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a light demand at 2½c a pound from stores.

NITRATE OF SODA.—In our market there is nothing new to report.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is weaker at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is slow and market easy at quotation.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steadier from store at 6½c per pound in carboys.

BLUE VITRIOL.—Our market is easy.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, May 6, 1897.

The market continues to act as if it is under strong manipulation, with Con. Virginia in the north end and Confidence in the Gold Hill group the leaders. The former has been making steady advances since it sold down to about $1.05 a share. After each upmove it has not fallen back to the lower figure from which it moved, except once, when it touched $1.50 twice; but the last time it did so the price advanced to over $2.50 a share. The remainder of the list sympathized, particularly the shares of adjoining mines. The shares of the middle shares, under the lead of Chollar, advanced in sympathy, but when it came to falling back they seemed somewhat demoralized. The writer is informed that there is still lacking a feeling of confidence with the public. Chronic traders follow the market by buying when signs of strength are in evidence, and sell when the market looks top heavy. A large majority of persons who gave attention to the market deal in wheat futures, owing to the better opportunity of making quick turns, while the moneyed public do not operate, although a large class of them glance over prices to see if there are indications of a deal. With these, and we might say with the large majority of business men, a genuine deal would be hailed with undisguised favor, but little deals of a few dollars do more harm than good. It has been the history of the mining share market that when the shares of any mine was advanced to $40 or $60 a share and under active trading, general business and speculation revived. Whether we will ever witness such figures again is a disputed point with outside traders, but there is one thing quite certain, they are not likely to come while the general business and financial conditions of the country continue at present low ebb. Experience has taught that there must be active trading at higher fluctuating prices at speculative centers in securities dealt in before a successful large-sized deal in mining shares can be carried out. The public have been upset too much already for it to come in at high prices, even with the showing up of a good-sized body of ore, unless they become crazily enthused by seeing free speculative movements at the East in railroad and industrial securities, and also improving business with merchants and manufacturers.

The news from the Comstock mines continues to report active work in several mines, but in other mines it is being prosecuted in a half-hearted, kill-time kind of way. So far as can be learned, the work is not calculated to show up a large body of ore, at least not at this stage of the game. What may be done later, it is stated, depends largely on whether the conditions favor a good-sized deal in mining shares. Attention centers largely on the work in Con. Virginia on and around the 1650-foot level towards the Ophir line. This attention is doubtless the more marked owing to a double compartment shaft having been sunk there, and experience has taught that this is done only when everything warrants the belief of the existence of a good-sized ore body. The last official letter filed in this city confirms the statement made by the MINING AND SCIENTIFIC PRESS that they had got into 4 feet of high-grade ore. The superintendent writes that the average assays were $200 a ton, at the time he wrote his letter, in the face of the upraise from the 1650-foot level. He also wrote that a good quality of ore was showing north and south in the upraise. At other parts of the mine active work is still the order, with some degree of interest being centered on the 1000-foot and 1550-foot levels. They extracted and raised last week forty tons of ore, assaying over $137 to the ton. Advices from Ophir state that they are still prosecuting work on the 1000-foot and Central Tunnel levels. They run through streaks of low-grade ore- In working west on the 1000-

foot level of Mexican they continue to pass through streaks of quartz giving low assays. In Union the work is to the east on the 900-foot level. In Sierra Nevada they are still going east from the Layton Tunnel level. In the east crossdrift in Utah they pass through clay seams and lines of quartz. In the joint east crossdrift of Best & Belcher and Gould & Curry, from the 800-foot Bonner shaft level, last advices stated they were in soft porphyry. As this is said to be favorable, it would seem to be about time to stop the work. In Savage no change is reported in the work or material encountered. No work is being done in Chollar. In Potosi they are still prosecuting work on the tunnel level. No change is reported in the work in Bullion and Alpha. The long west crossdrift run jointly by Con. Imperial, Challenge and Confidence is being pushed slowly ahead. No change is reported in the material run through. There is some interest manifested by the more experienced miners in the west crossdrift that is being run by Yellow Jacket, Kentuck and Crown Point. From the latter mine nothing new comes to hand, but so far as that is concerned, the same remarks can apply to the work in Belcher, Seg. Belcher, Overman, Caledonia and Alta. No mention has as yet been made of the ore strike reported to have been made in the first two mines some time ago. It looks as if they are still after shares of the mines in that end, and to officially report an ore strike or to give particulars regarding work would probably interfere with the game.

From the Brunswick lode we are not advised of any material change in the general situation since last week's review. The joint work of Con. Virginia, Best & Belcher and Gould & Curry is being closely watched to see if the ore found farther north extends to these mines. The impression prevails that it not only does, but it will be found richer and in larger quantity, when desired by the inside pool. In Savage they encountered every indication of an ore vein, but the work was either stopped or else turned. In Chollar they have about completed erecting a new boiler. When this is down, work will be resumed in Savage and also in Chollar on the 600-foot level. On this level a south drift will be run. They are still stoping ore in the 200-foot and 400-foot levels. On the 300 foot level the work is largely exploiting, as it is on the 500-foot level. Over 200 tons of ore were raised last week, assaying over $22 in gold and 20 ounces of silver to the ton. The work in Occidental is confined to the same levels and directions reported last week. The material encountered does not show any essential change.

The following illustrates the changes of the week:

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

APPARATUS FOR COOLING, AERATING AND EVAPORATING FLUIDS.—Richard G. Sneath, San Francisco, Cal. No. 581,439. Dated April 27, 1897. This invention relates to an apparatus which is especially designed to cool, aerate or evaporate fluids such as water, milk, cream, salt brine, saccharine water, or any other liquid which can be thus operated upon. The invention consists of a sluice having a perforated bottom, a closed chamber beneath the sluice, a passage through which air is supplied to the chamber under pressure so that the liquid flowing in the sluice is constantly acted upon by jets of air passing the perforated bottom, this chamber having a trap or seal at one end to prevent the escape of air and having a discharge passage at the bottom of the air receiving end through which the liquid is delivered.

BICYCLE BRAKE.—William and William S. Valentine, Lewiston, Cal. No. 581,444. Dated April 27, 1897. This invention relates to an improved brake to be employed particularly in conjunction with bicycles so that the brake may be used without friction and injury to the tire. It consists of a groved disk securely fastened to the spokes of the wheel, a lever adapted to fit into the groove of the disk and so fulcrumed to the fork of the machine that by means of a connecting rod and compound lever upon the handle bar the brake may be applied at any time, the pressure of the shoe or lever in the grooved disk being sufficient to regulate the speed of the machine.

Assessment Notices.

THORPE MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No 6) of 02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 41 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 23d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 41, Phelan building, San Francisco, California.

SEG BELCHER AND MIDES CONSOLIDATED Mining Company. Location of principal place of business, San Francisco, California; location of works, Gold Hill Mining District, County of Storey, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 6th day of April, 1897, an assessment (No. 19) of 5 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, No 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 10th day of May, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 29th day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

E. B. HOLMES, Secretary.

Office—No. 309 Montgomery street, Room 50, Nevada block, San Francisco, California.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

MARGUERITE GOLD MINING AND MILLING Company.—Location of principal place of business, San Francisco, California; location of works, Auburn, Placer County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 12th day of April, 1897, an assessment (No. 6) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 237 12th street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 21st day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

F. METTMANN, Secretary.

Office—237 12th street, San Francisco, California. Office hours from 5 to 6 o'clock P. M. The Secretary will also receive payments from 12 to 5 P. M. at his business office, 225 Sansome street.

GOULD & CURRY SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 29th day of April, 1897, an assessment (No. 81) of 20 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 69, Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 1st day of June, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on TUESDAY, the 22d day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

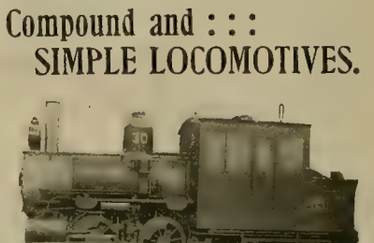
ALFRED K. DURBROW, Secretary.

Office—Room 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

Cheap Power!

SAVE MONEY BY USING
—THE—
"DANIEL BEST"
Crude Oil Engine.

This Engine can be operated on either Crude Oil, Distillate, Gasoline, or Kerosene. **It is the cheapest power on earth** and is not tied to any one kind of Oil, but can use any kind that will make gas and is not handicapped by being compelled to use a certain Oil. Do not forget this when in need of an Engine.



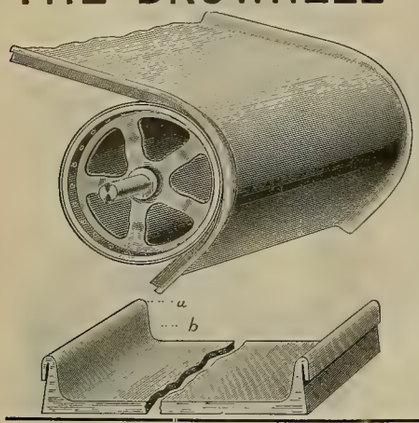
We guarantee our Engines to work perfectly on California Crude Oil, or Distillate, or any other kind of gaseous Oil; we however prefer CALIFORNIA CRUDE OIL, from Coalinga, Fresno county, for the reason that gas from Crude Oil will produce more power from the number of feet of gas used than from any other Oil, and it is also a natural lubricant as well, the valves being always lubricated sufficiently to prevent them from sticking, thus assuring greater durability of the working parts than it otherwise would be in using dry gas. And another advantage we claim is, that danger from explosions is reduced to a minimum, there being no accumulation of gas, but is used by the Engine as fast as it is generated and hence is absolutely safe. The following is a test that we made with one of our Five-Horse Power Crude Oil Engines, running ten hours on the different gas oils:

California Crude Oil, 40 grav	7½	galls. at	5c.	$.37½
Distillate	40	"	7½ "	8c. .60
Domestic Coal Oil	40	"	7½ "	12½c. .93¾
Gasoline	74	"	8¾ "	15c. 1.31¼
City Gas	1000	feet,		2.00

We manufacture all sizes from two-horse power up, and will guarantee that our Engines will run cheaper and are more simple in construction, have fewer parts and hence are more durable than any other Gas Engines on the market. Seeing is believing; don't take our word for it, but come and investigate for yourselves. You can always see one in operation at our works. We will be pleased to see you and will at all times take pleasure in showing them up. Our Engines are specially adapted for running well and mining machinery—in fact, for any kind of power desired. We are the pioneers and first inventors of Crude Oil and Distillate Engines. **We always lead and never follow.** Send for Catalogue and Price List of the only genuine Crude Oil and Distillate Engine made.

The Best M'f'g Company,
SAN LEANDRO, CAL.

FOR SALE.
Compound and : : :
SIMPLE LOCOMOTIVES.



First-Class Condition—several with but few months use. **Standard gauge. Fuel** hard or soft coal, coke or wood. Weight in working order, 56,000 lbs. On drivers, 40,000 lbs. **Cylinders**—single expansion, 13 in. by 16 in. stroke; compound, 9 in. and 15 in. by 16 in. stroke. **Driving wheels** 42 in diameter, steel tired. **Driving wheel base,** 5 feet. **Tank capacity,** 750 gallons. **Westinghouse Automatic** air brakes.

Road changed to electricity. Subject to any inspection desired. Offered at greatly reduced prices. For sale exclusively by

FITZ-HUGH & COMPANY,
1634 Monadnock Building,
CHICAGO, - - - ILLINOIS.

THE BROWNELL "PATENT LIP" FLANGE FRUE VANNER BELTS.

It has taken years of ceaseless testing and experimenting to produce the superior belt which we now offer, with elastic flanges and pliable body reinforced with specially woven duck. Every belt is manufactured by experienced workmen, and carefully tested on machines especially built for that purpose; consequently we are to-day manufacturing the best belts that mechanical ingenuity, combined with honesty of construction, can possibly produce.

SUPT. OFFICE WILDMAN GOLD MINING COMPANY,
SUTTER CREEK, AMADOR CO., CAL., Feb 22, 1897.

MR. JAS. S. BROWNELL, 132 Market St., San Francisco, Cal.—DEAR SIR: Replying to your favor of the 18th inst., will say that in the two mills operated by this company we have nineteen of your Patent Lip flange concentrator belts in use; some of them have been in constant use for the past two years and have given entire satisfaction. I know of no better flange for a side shake machine.

Yours truly, JOHN ROSS JR., Superintendent.

MEXICAN MILL, EMPIRE, NEV., March 28, 1897.

MR. J. S. BROWNELL, San Francisco, Cal.—DEAR SIR: For some years we have used three different styles of belts on our Frue vanner at the Mexican mill, and for smooth working and endurance the Brownell Patent Lip flange belt has proved its superiority over all others, and I unhesitatingly recommend it to all who are using Frue machines.

Yours truly, EUGENE MAY, Foreman.

For any information regarding Frue Vanner or Belts, call on or address

JAS. S. BROWNELL, Western Agent FRUE VANNING MACHINE CO.

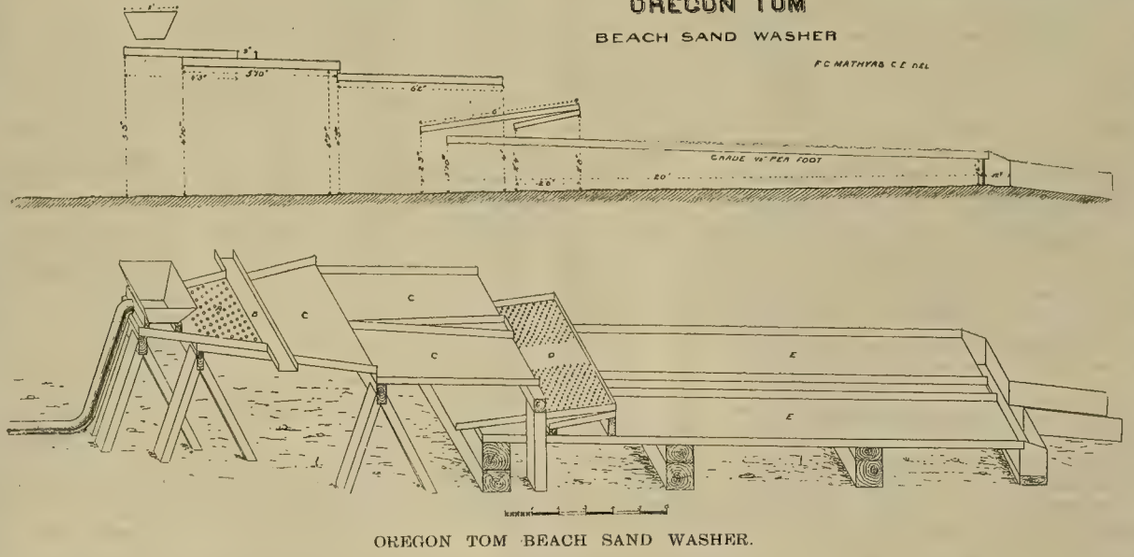
The Mining of Beach Sands.

The saving of fine gold in beach sand and in many other deposits inland has long been a problem with the gravel miner. In Humboldt county beach mining has been conducted since the early days almost without interruption, and almost invariably without much success. The failure to save the gold has been due mainly to the fact that the gold is "scaly;" yet year after year mines are being worked with old processes tried over again, or new methods. Often considerable sums are expended in exploiting new gold-saving devices.

Aside from the fact that the gold is nearly always scaly, and consequently washed down by the water to the sea and refuses to settle in the riffles, there is a very large proportion of black sand in the gravel. The specific gravity of this black sand is so great that it settles in the riffles, filling up the interstices; and after the first few hours, or in cases a few days' run, no gold can settle on this account. Black sand has often been found the cause of the great difficulty in saving fine gold where it was found in large quantities in other gravel mines in the interior.

It is often pointed out that exceedingly fine gold—as fine as one thousand pieces to one cent—is saved in the beach mines of New Zealand, and that therefore the gold in Humboldt county should be saved. It may be said in answer to this that in nearly all cases where the fine gold has been saved without much difficulty, it has not been of a scaly nature—that is, the particles, however small, have been in the shape of little nuggets.

In saying that all methods so far tried for saving scaly gold are failures, it is not meant that no gold is saved. Many of them save quite a percentage of the gold; but although beach mining has been carried on since early days and in many places, from Mexico to northern Alaska, it has been successful only in working the richer spots. No method has been found for working rapidly and saving at the same time such proportion of the gold as is usually saved in the hydraulic mines.



The immense deposits of beach sands often in high banks carrying large amounts of gold offer a large reward for any one who may discover a process for working them on a large scale. So far the most successful plants for working these sands have been modifications of the old-fashioned "toms," or other small sluices used for washing gravels. There are illustrated on this page two of these "toms," used on the Union mine in Humboldt county.

OREGON TOM, UNION MINE.

ORDINARY TOMS, WITH PLATES, UNION MINE.

OREGON TOM BEACH SAND WASHER.

In the northwestern part of Colorado, and in Wyoming are many thousands of acres of shallow deposits of sandy gravel lying upon clay bottoms and containing gold in paying quantity. These deposits have not been made by rivers, but are lacustrine. They vary in depth from 1 or 2 feet to as much as 25, but average about 7 or 8. In one district in Routt county over 100,000 acres have been located within the past four years. The gold generally is evenly distributed and exceedingly fine, actual count showing that the number of particles required to make one cent in value being over 1000 on an average. Yet of this gold a far larger proportion is saved than of the "scaly" beach gold, because it is in the shape of exceedingly small particles, showing that it has not been subject to the flattening process of most gold that has been moved far.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Oregon Tom, Union Mine; Ordinary Toms, with Plates, Union Mine; Oregon Tom Beach Sand Washer, 405. Cross-Plowing in an Egyptian Field near Cairo, 408. An Egyptian Fellah and His Team Plowing for Wheat on Land Moistened by the Overflow of the Nile; An East Indian Plowing Scene—Preparation of Rice Ground with a Yoke of Black Water Oxen, 409. Pair of 30x72 In. Direct Acting Hoisting Engines Built by the Union Iron Works, 411.

EDITORIAL.—The Mining of Beach Sands, 405. Mineral Product of California for 1896; New Capital and Increase of Yield; The Foreign Investor's Opportunity, 406.

MECHANICAL PROGRESS.—The Use of Compressed Air for Mining Purposes; A Novelty in Row Boats, 412.

SCIENTIFIC PROGRESS.—Photography in Natural Colors; Testing a Water Supply; Fluid Air for Industrial Uses, 413.

ELECTRICAL PROGRESS.—Mysteries of Nature of Light and Electricity; Electricity in War; The Use of the Overhead Trolley; Spectographic Analysis; The True Path of the Current; The Development of the Electrical Industry, 413.

MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 414-5.

THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 426.

MISCELLANEOUS.—Concentrates, 407. Some Colorado Concentration Methods; Strength of Building Stones; In Other and Older Lands, 408. Practical Notes on Hydraulic Mining; Africa's [illegible] Yield; Blank Forms for Quartz Location Notices, 410. California Asphalt in Glasgow; Direct Acting Hoisting Engines; [illegible] Platinum; "Rare Earths," 411. [illegible] Accounts; Of Commercial Importance [illegible]; The Debris Troubles; Silver with the Gold, 416. Coast Industrial Notes; Personal; Recent California Mining Incorporations; Book Notices; Recently Declared Mining Dividends, 418. List of U. S. Patents for Pacific Coast Inventors; Notices of Recent Patents, 419.

New Capital and Increase of Yield.

Estimates as to probable increase in the yield of mines in most districts are based, in nearly all cases, on the increased amount of work done, the increased amount of capital interested, or the increase generally in activity in the industry. The fact that the results of this work may not be apparent immediately is generally lost sight of. In California, during the past five years, a great deal of capital has been invested in mines and expended in development, which has not produced a dollar of bullion in return to the owners, and will not for some time. In Amador and Calaveras counties are over a dozen large mines, upon which work has been going on for years. Some are erecting mills, some are still sinking, and one or two, like the Gwin, have begun to crush ore. All told, upon these mines, nearly three millions of dollars will be expended before returns are made. The fact that for several years the expenditure of money in new ventures in California has been far out of proportion to the increase in the gold yield, instead of being a discouraging sign should be looked upon as evidence that the industry of mining is being developed carefully and conservatively, and that the increase of the gold yield will be healthy.

Even if many times as much capital as has been offered had been invested in mining in California during the past two years, the increase in the output of bullion would not have been in proportion.

There is always a tendency to make a stock job out of the mines in any district. Since the beginning of the increased activity in California mines all the conditions for such speculation have been unfavorable and the industry has been conducted mostly by small companies or individuals, upon business lines.

Into western Australia there was lately a very great influx of capital, yet the output of gold was very small. Through speculation a great many lost money but the mines are rich and the output in time will be very large. The attempt to open up the mines with a rush was a failure.

Mineral Product of California for 1896.

State Mineralogist Cooper has sent to the printer Bulletin No. 12 of the State Mining Bureau, giving by counties the amount and value of each of the substances mined or quarried in California in the year 1896. An abstract of the tabulated sheet shows the following division of products:

Precious Metals	$17,604,026 30
Metallic Substances (including the Precious Metals)	18,937,793 00
Non-Metallic Substances	1,415,993 00
Hydrocarbons and Gases	1,777,340 00
Structural Material	2,160,272 00

The total value is $24,291,398.

The following table gives the figures for 1895 and 1896:

ARTICLES.	Amount. 1895.	Amount. 1896.	Value. 1895.	Value. 1896.	Increase.	Decrease.
Antimony, tons	33	17	$ 1,485 00	$ 2,320 00	$ 835	
Asbestos, tons	25		1,000 00			$ 1,000
Asphaltum, tons	25,525	20,914	170,500 00	362,590 00	192,090

It will be observed that the net increase of product of all articles was $1,446,734 and that the increase of the gold yield alone was $1,847,245.

The largest falling off was in structural materials, amounting to no less than $553,483. This was, of course, due to the small amount of new buildings erected on account of depression in business. Altogether, the mining industry makes a better showing than any other in the State. The decrease in the output of quicksilver does not show any failure in the product of the mines, which, it is well known, could be made to produce much more if the demand required it.

The better prices for asphaltum that have prevailed here have made a large increase in the value of the product, while the amount of output has decreased. As to petroleum, it will be seen that while there has been a very slight increase in the number of barrels produced, higher prices have prevailed and made it worth more than the output of 1895 by $180,558.

Of the articles in which there was considerable falling off are silver and lead. Much of this is due to decreased output of the mines on the western slope of the Sierra Nevada, in Inyo and San Bernardino counties.

The output of copper increased from 225,650 pounds in 1895 to 1,992,844 pounds in 1896, due mainly to the opening of the Mountain copper mines of Shasta county.

The Foreign Investor's Opportunity.

The mine owners in this State come in for considerable criticism, if not abuse, from promoters for asking prices that prohibit sales for their mines. The trouble is not so much that the owner asks more than the mine is worth, but that in asking simply a reasonable price for it he leaves the poor promoter no opportunity to pile on fees and commissions. Many of the large producing mines in California—nearly all of them, in fact—have been examined by experts for foreign capital within the past three or four years, but no sales have taken place. For many of them, offers have been made by the most reputable of foreign syndicates, looking for good investments. Generally speaking, they expect much less interest return beside the capital of their investment, and so are in a position to offer good prices. The fact that their offers have been declined is the best proof that the California miners have acquired faith in the permanency of their ore bodies in depth.

It would appear that the best opportunities for foreign investors in California will be for some time in taking hold of prospects and developing them. Unless they acquire more faith in the mines of the State faster than they have been of late they are apt to be left behind in the race by local capital.

It is noticeable that people from the Eastern money centers of the United States do not care for this kind of investment. When looking for mining property they generally ask only for mines that are developed and producing. They are very poor prospectors, and would rather gamble on something else. The Englishman is a born gambler, and only asks a fair chance for his money. However, he has been too busy playing Africans and Westralians of late to pay much attention to other districts; but as he needs a new field now, it is as likely as not that he will overcome his mistaken idea that Americans are too smart, and try California.

Concentrates.

In the oil fields near Florence, Colo., there are seven holes being drilled.

The Eureka mine at Murray, Idaho, has been jumped by a brother of one of the owners.

Press dispatches announce a strike in the Buckeye mines in the Pine Nut district, Nevada.

A suit involving the interest of some 500 people in town lots in De Lamar, Nevada, is on trial at Carson.

Books of the mining recorder at Bingham, Utah, show that there are over 9000 locations in the district.

In California gold nuggets the average percentage is said to be 88 per cent gold, and 12 per cent silver.

A nugget of gold weighing five pounds has been found in the Ybarra mines at Calamilli, Lower California.

California's "gold crop" for '96, commands the admiration of the world. It is a big advertisement for the Golden State.

C. D. Lane and associates have purchased an interest in the Eureka mine at Cerbat, sixteen miles north of Kingman, Arizona.

The Portland-Alaska Company at Berner's Bay, Alaska, is putting in a wire tramway 9200 feet in length with one span of 1263 feet.

The Point Loma oil well in San Diego county is down 1116 feet and the formation is said to be similar to that in the Los Angeles oil fields.

The Anglo-Mexican of Mexico, owned in London, reports for March the output: $40,390 bullion, $2040 concentrates, 3060 tons, 27 days' run.

The Chicago people who recently purchased the Vulture mine in Arizona, are preparing to erect a 100-ton cyanide plant to treat the tailings.

Leadville, Colo., is now daily producing 1000 tons of ore. Gold, silver and lead to the value of $200,000,000 has been produced from that great carbonate camp.

Last week in Boston a sale of 10,000,000 pounds of Lake copper was made at 11 cents by the Calumet & Hecla and other companies for May and June delivery.

The annual report of the Victor, Colorado, mine, shows that since the organization of the company the average cost of producing $1 worth of gold has been 37 cents.

In the deepest parts of the Grand canyon of the Colorado river are bodies of copper ore, but it is at present so inaccessible that little inducement is offered to exploit it.

In southern Oregon most of the hydraulic mines have closed down a month earlier than usual, but owing to better plants for working the season has been satisfactory.

Rev. J. H. Weber, assisted by three other divines, on the 6th inst., at Russell Gulch, Colorado, formally dedicated "to the Lord" the Bon Ton mine, and the proceeds thereof.

The deepest mine in Colorado is the Geyser, at Silver Cliff, in Custer county, in which the three-compartment shaft is timbered to the depth of 2425 feet perpendicular.

At Midway, in British Columbia, fifty claims were recorded last week. Into all the newer parts of the Kootenay country, and especially the east, hundreds of prospectors are going.

The owners of the Rawhide mine in Tuolumne county, Cal., are having experiments and tests made to determine whether to put up a concentrating plant or a cyanide plant of 100 tons capacity.

The Brickyard Mining Company is arranging to erect a mill on its property at Mercur, Utah. The leaching plant will have a capacity of 200 tons daily, and the stamps will be able to crush 400 tons.

The La Grange Hydraulic Mining Company, in Trinity county, Cal., is about to put in a siphon pipe line across Stewart's Fork, 2000 feet in length. The pipe will be 30 inches in diameter.

Ore producers in Utah have been notified by the railroads of a raise of $2.50 a ton on shipments to outside points. This makes the rate $9.50 to Denver and Pueblo and will seriously affect the industry.

The Calumet & Hecla, Mich., management propose sinking three shafts on the Osceola amygdaloid. James Hoaston, from Montana, son of the Calumet & Hecla's superintendent, will have charge of the work.

The trails to the Yukon placers are reported to be in most wretched condition, and a number finding the difficulties of taking their outfits in have turned back, selling their supplies for whatever they could get.

It is probable that the Le Roi mine, of Rossland, B. C., will soon pass into the hands of London people who have been trying to purchase it for some time. The price offered, according to one of the principal shareholders, is £1,000,000.

A contract has been let for the construction of the new plant of the Montana Smelter Company, at Twin Bridges, Montana, and it is expected to be ready for work within ninety days. Its capacity will be thirty tons daily.

A new Colorado law provides that a fee of $10 shall be charged all new corporations on capital of $50,000 or less. In excess of that fifteen cents shall be charged on each $1000 of capital. A similar law has long been ingeniously evaded in Montana.

The only cinnabar mine being worked under the British flag is at Lake Kamloops in British Columbia. It was opened last year, and a furnace with a daily capacity of thirty tons purchased in San Francisco has been erected and was fired up April 1st.

Felix Julian de Noraubert has brought suit in the United States courts in Denver, Colo., against Fred Beaudry to recover $32,500 commission for finding a purchaser for placers at Junction City, Trinity Co., Cal., purchased by a French company for $500,000.

Near Lovelock, Nevada, in Rabbit Hole district, the placer miners bring water through a seven-mile ditch and are sluicing gravel hauled by teams about a quarter of a mile, but on account of the scarcity of water they propose putting in a pump and engine.

E. B. Jennings of Table Rock, Jackson Co., Oregon, upon whose farm coal has been found, has bonded his property to capitalists who have paid $1000 down and agree to pay $50,000 if, upon sinking, developments are satisfactory. Preparations are being made to sink 800 feet.

A few days ago a member of the Colorado Springs Mining Stock Association was suspended for overcharging a client in a small amount, and at the same time three other members were expelled for cutting commissions.

The fifth annual convention of the Western Federation of Miners began in Salt Lake City, Utah, last Monday. The president of the Federation, Edward Boyce, of Wardner, Idaho, advised each union to organize a rifle club, and in two years thus have 25,000 armed men.

The report of the director of the mint shows that during the month of April the total coinage at the United States mints was $10,410,580. Of this amount $8,000,000 was in gold, $1,535,000 in silver, and $74,680 in minor coins. Of the silver coinage $1,400,000 was in standard dollars.

Morella, Mexico, reports that a copper mine near Ario, in the State of Michoacan, has been sold to English capitalists for $400,000 in gold, and that the Todos Santos gold mine, in San Jose de Garcia district, Sinaloa, has been sold to the Anglo-Mexican Mining Company for $82,000 in gold.

At Phœnix, Arizona, the Chamber of Commerce is at work on a proposition submitted by Charles E. Majors, representing capitalists of Rochester, N. Y., whereby the donation of 200 acres of land convenient to the Santa Fe and Southern Pacific railways will secure the building of a smelter.

The alien clause of the mineral land act has been defeated in the British Columbia Legislature by a vote of 13 to 12. The proposal to deny aliens the privilege of prospecting in the British Columbia mineral fields was intensely unpopular in the mining districts, and it was condemned by the government.

The annual report by the directors of the Tharsis Sulphur & Copper Company for the year 1896, shows that the total quantity of mineral raised at the Tharsis, Calanas and Lagunazo mines in Spain, during the year, was 557,557 tons (exclusive of 48,357 tons of cupreous sterile), against 612,483 tons in 1895—a decrease of 54,906 tons.

For the third time a portion of the dam built by the Ohio Gold Mining Company across the San Joaquin river, about three miles above Millerton, Cal., has been washed away. The dam was built to turn the stream through a channel constructed around a section of the river bed, where, it is believed, there are rich deposits of gold. In another month work of washing would have begun.

A London syndicate has purchased for $500,000 the group of mines composed of the Idaho, Alamo, Cumberland, Concentrator and Tramway, near Three Forks, B. C., from A. E. Humphreys, J. D. Farrell and M. D. Moore of Spokane and W. C. Yakeys of Detroit, Mich. These are mainly silver producers and the Idaho has paid to date $225,000 in dividends.

A law recently enacted by the New Mexico Legislature makes it impossible to do "lead pencil assessments" in that Territory, and this law will result in a good many locations changing hands at nominal prices. Ninety days will be allowed in which assessment may be done, and it is a misdemeanor, punishable by fine and imprisonment, to lap new claims on older locations.

United States engineer officers are in Colorado to select a reservoir site in that State, and will then go to Wyoming. The cost of construction will be paid by the Federal Government. It is believed that the Colorado reservoir site will be selected on the South Platte. The National Government will construct these two reservoirs, but the States must do the ditch building and furnish the water supply.

The Ferreira Company, one of the largest Rand, South Africa, companies, reports for the year 1896 that the quantity of ore crushed was 120,762 ton, which yielded 99,315 ounces of gold of the value of £355,031. The profit on the treatment of tailings amounted to £100,461, whilst the sum obtained by sale of concentrates amounted to £71,344. The cash profit for the year was £346,008 and £171,000 was paid in dividends.

The mining fever has reached the ministry in British Columbia. Rev. G. R. Maxwell, Presbyterian, is president of a mining company. Rev. F. Yolland, Revelstoke, is a mineral assayer. Rev. Father Emmeul is shareholder in a score of mines, and Rev. R. R. Maitland, the most prominent Methodist minister in the province, is to abandon the pulpit altogether and embark in mining.

The new Canadian tariff law admitting mining machinery free of duty is very broad. Following is the language of the special section: "Machinery of a class exclusively used and required for mining, smelting or refining purposes, and also all materials for the construction of such machinery in Canada to be free for that purpose—the whole to be subject to regulations to be made by the controller of customs."

According to the message of President Diaz, of Mexico, there were applied for 5800 mining titles under the new law of 1892 up to the end of 1896. Of these 2183 were in Sonora. The total exportations of mineral of all kinds, including gold, silver, copper, lead, coal, marble, etc., for 1896-97 reach $71,000,000. Of the nearly $6,000,000 of gold exported, Sonora furnished $3,227,338. The gold and silver production of Sonora for 1896 will show at least $6,743,980.

The Galt Company, in Montana, has an ingenious contrivance for protecting the mines against fire. A door of boiler iron has been placed in the tunnel, about 50 feet from its mouth, fixed with a weight to make it close automatically. A ¼-inch rope holds it open, being drawn through the main building outside and fastened where it can be cut at a moment's notice. This rope, in case the main building should take fire, will burn off, or be liberated with a knife, in time to close the door and preserve the air in the mine free from smoke. The miners can find easy exit through the other outlet.

The new mining law of Utah went into effect last Monday, and, as provided in the California law to go into effect May 26th, all locations must be recorded with the county recorders. The new Utah law provides that each corner shall be marked substantially, and that within ninety days after location $50 worth of work must be done. A determined opposition to this law has developed among the miners, and at a meeting in Silver City it was resolved to fight it in the courts, on the ground that it is in conflict with the Federal statutes.

The sixth report of the Ontario, Canada, Bureau of Mines states that there was an increase in the number of mining locations sold and leased of 218 acres, of lands sold and leased 13,685 acres, and an increase in receipts from sales and rentals of $22,644. During the year 22 charters were granted under the Ontario Joint Stock Companies act, the aggregate of their capital being $12,775,000. In the first quarter of the present year, however, 33 mining companies have been chartered, with a total capital of $26,665,000. With regard to the production of gold the remark is made that it has considerably increased, but that the encouragement lies mainly in the extent and promise of development work going on. Nickel and copper production was about the same as last year.

"Gilsonite" is so named after S. H. Gilson, of Salt Lake City. The mineral is also known as Uintaite. It is described as a variety of asphalt, H. 2-2½, Sp. G. 1.065-1.07; color black, brilliant and lustrous; streak rich brown; brittle fracture conchoidal; a nonconductor of electricity, but electrically excited by friction; fuses in candle flame, burns with bright flame like sealing wax, and like latter takes sharp impression from seal; by distillation gives off small quantity of white, dense oil, and some gas; dissolves in heavy oils and fats; soluble also in alcohol, but not readily in ether or turpentine.

Reports come from the Drum Lummon mine at Marysville, Mont., that the great old property is not exhausted, and that new ore bodies have lately been discovered. The mill has been closed down for some time at the recommendation of A. T. Bayliss, who lately resigned to take charge of the mining work of the Exploration Company. In the meantime the cyanide plant of 2100 tons daily capacity to work the old tailings is being put up, and exploration and development work is going on. To the mining industry all over the coast the success of old producers that have been reported worked out is of more importance than anything else in giving encouragement to capital.

The premier of Western Australia in a campaign speech lately which was mostly taken up with matters connected with the mining industry said: "During the last few months what is called a slump has been on in the market, which means that the people in England are not sending money out so freely as they were some time ago to carry on mining in the colony. But I am glad to say that the colony's good fortune has not forsaken it, for very rich discoveries of telluride and refractory ores have been made at Kalgoorlie. A parcel of 512 tons of this refractory ore was sent to the Dry Creek Smelting Works in south Australia some time ago, and returned 11 ounces to the ton, equal to £20,000, while another parcel of fifty tons from, I think, the Boulder Main Reef mine, some time ago, yielded 10 ounces to the ton."

United States production of copper for the first quarter of 1897 was 1229 tons larger than for the corresponding period of 1896. Exports of copper from this country for the first three months of this year were 2383 tons greater than during the first three months of 1896. From January 1st to March 31st, American production amounted to 118,135,360 pounds of fine copper, and exports to 66,615,360 pounds, so that the exports were equal to 56.38 per cent of the total production during the period mentioned. These heavy shipments effectually prevent any serious accumulation of stocks at this centre, and the distribution of supplies going to Europe from this and other sources, indicate a rapidity of absorption through foreign channels. The magnitude of European consumption continues to furnish the most vital support the market has. In the past two years the stock of Chili copper in Liverpool and Swansea has decreased 19,120 tons in the face of the enormous shipments from this country, and the stock of Chili now at those points is only 18,790 tons on May 1st, inst.

The report of the expert, C. W. Goodale, made to the reorganization committee of the Butte & Boston Company of Montana, last August, has been published by the Boston *News Bureau*. It shows that the amount of ore extracted from the Silver Bow mine up to the suspension of operations in February, 1896, was 601,665 tons. The percentage of copper was 8.47 in 1893; 6.12 in 1894; 4.14 in 1895; 4.69 in 1896, with mining cost figured at $3.78 per ton, which includes cost of exploration and developments. The ore in sight is placed at 45,000 tons, valued at $88,750, with a possible addition of $10,000 in undeveloped reserves. It is safe to assume that the valuable ore above the present bottom of the mine would yield at least $125,000 above all costs. From the Gray Rock group of mines shipments to the company's works have amounted to 172,593 tons, with percentage of copper 8.10 in 1893; 8.25 in 1894; 6.60 in 1895. Net value of ore in sight may be placed at $1.74 per ton on 16,909 tons, or $29,421, with possibility that under favorable circumstances this could be increased by $45,000.

The Supreme Court of the United States has handed down a decision in the Colorado case known as the Rico-Aspen tunnel case. The decision apparently settles the controversy, not only of that particular case, but between the tunnel-site owners and subsequent locators of veins along the line of the tunnel-site or on its territory. The decision of the Supreme Court settles the contention that a tunnel-site locator has the right to possession to every blind vein which crosses the line of the tunnel within 3000 feet of its face, which was not discovered when the tunnel was located; provided, that the tunnel-site owners have prosecuted the work on the tunnel with diligence. And the discovery of a lode or vein from the surface after the location of the tunnel will not deprive the owner of the tunnel of any part of the vein; and, provided further, that he has diligently prosecuted his work on the tunnel. The decision also settles the right of the owner of such tunnel to locate 1500 feet along the vein, and this location may be made partially upon one side of the point of discovery of the tunnel, or entirely upon one side.

The annual report of the New Elkhorn Mining Company for 1896 shows receipts from Leadville mines, £8238; Montana mines, £82,330; interest, etc., £114; total, £90,742. The expenses were: Leadville mine, £11,214; Elkhorn mine, Montana, £59,168; London office, £3709; taxes, etc., £578; total, £74,669. This left a balance of £16,073 profit. In their Elkhorn mine in Montana the work shows 99 feet shaft sunk, 129 feet winzes, 751 feet drifts, 267 feet crosscuts. The average cost per lineal foot was: Shaft, $26.11; winze, $7.99; drifts, $5.76; crosscuts, $7.32. The total rock raised from the mine was 13,330 tons, divided as follows: Dry ore, to mill, 11,513 tons; sold to smelter, 554 tons; second-class ore to dumps, 143 tons; surplus in stock, 166 tons; waste sorted out, 1454 tons. The ore sold to smelter showed by assay 85.6 ounces gold, 90,787 ounces silver and 149,367 pounds lead. The net value was $50,356, or $90.86 per ton. The mill statement shows 13,762 dry tons crushed and 13,718 tons panned, the stamps working 315.38 days and the pans 357.63 days. The average saving was 92.3 per cent. The average duty per stamp per day was 1.75 tons. The bullion product was 340 fine ounces gold and 486,721 fine ounces silver. The average price received for silver was 66.95c per ounce. This would give an average value per ton of ore crushed of $24.19. The cost per ton for mining was $12.39 and for milling $7.17, a total of $19.56, leaving a profit of $4.63 per ton.

Some Colorado Concentration Methods.

Written for the MINING AND SCIENTIFIC PRESS by PH. REARDEN, Superintendent Abbott Quicksilver Mining Co.

Among the many kinds of gold and silver ores of Colorado there are very few real free gold propositions. All run more or less, as depth is gained, into sulphurets, containing iron, copper, lead, zinc or tellurium, and occasionally metallic arsenic. Consequently the study and practice of concentrating these sulphides are growing very fast and with very satisfactory results. Almost all mills have some system of concentration, either below the plates or directly below the crushing machinery.

The writer has had some experience in the tellurides and sulphides of Boulder county and Cripple Creek, the gold-bearing sulphides of Summit and Gilpin counties, and the gold, silver, copper and lead-bearing sulphides of the San Juan, and has had practical experience with many kinds of bumping tables, shaking tables, Frue vanners (both smooth and corrugated), Woodbury vanners, Triumph vanners, Monell vanners, Lurig vanners, the Ogden table, and jigs of several varieties and circular revolving buddles. I find that in nearly all the mills that I have seen there is not enough importance given to frequent and perfect sizing of the product before it goes to the concentrating machines, and also a disposition to pulverize the ores far too fine, to make a close saving, as in the ordinary stamp mill. I cite an instance where, in a mill of which I had charge, I had been crushing with stamps through a 40-mesh battery screen and amalgamating. Our loss per ton ran from $2 to $4. We changed to 20 and then to 16-mesh, put in two hydraulic sizers, and the loss never exceeded $1.25 and was frequently less than 25 cents per ton, on the same ore as run through the 40-mesh screen. This ore was an iron sulphide carrying a small percentage of zinc. We saved by concentration about all the gold and silver that would not amalgamate. Our product always had less than 8 per cent silver and 8 per cent zinc and about 40 per cent iron in it; and smelters gave us rates as follows—10 per cent silica and 8 per cent zinc was the neutral basis: Smelting charges, $6 per ton, and also 15 cents per unit for silica in excess of 10 per cent, with a rebate of 15 cents per unit for iron in excess of silica, and charges of 50 cents per unit for zinc in excess of 8 per cent. Ours being a clean product, we were paid 15 cents per unit for 30 units of iron, which amounted to $4.50, which, deducted from $6, left total smelting charges of $1.50 per ton. We could mine and mill, with our capacity of 35 tons daily, ore that contained only $3.50 per ton in gold and silver. The entire expense of milling this ore did not exceed 60 cents per ton with steam power. The fuel bill amounted to 30 cents per ton of ore milled.

Another instance, where we were milling an ore containing 5 per cent lead, 10 per cent zinc and 7 per cent copper and iron, all in sulphides: We crushed, first, with a Blake crusher to about 1 inch diameter, then passed through one set of 14x30-inch Cornish rolls, crushing to 6-mesh fine. All ore that did not pass the first 6-mesh revolving screen came back to the rolls again, then was carried by elevators to the revolving trommels or screens; first 6-mesh screen delivered the screened product to jigs with 4-mesh screens; the next sizing screen was 10-mesh, which delivered its product to jigs with 8-mesh screens; next sizing screen was 16-mesh, which delivered its product to jigs with 12-mesh screens; then all material finer than 16-mesh went to hydraulic sizers, making one class 20-mesh and one class 30-mesh fine, which were sent to separate jigs, and all material finer than 30-mesh was classed as slimes and sent to circular revolving buddles, where the mineral remaining in the pulp was about all taken out, 80 per cent of which would pass 100-mesh assayers' sieve. The tailings were then allowed to run away. In this case the maximum loss was less than $1 per ton, and generally about 50c. The product contained less than 8 per cent silica and less than 8 per cent zinc. We were paid for all the gold, silver and lead in the ore and given free treatment by the smelters. The jigs were ordinary three-compartment Hartz jigs, with slight modifications, running very much faster than the old style of working, and each jig handled about sixteen tons of pulp per twenty-four hours, making all the product through the screens. The buddles or slimers were circular revolving tables, 20 feet diameter, with bed of best Portland cement, revolving once per minute. The pulp and clear water were introduced to the machines somewhat differently from the usual practice. The buddle made a finished and a half-finished, or middling, product. The middlings were discharged into the boot of a small belt and bucket elevator, which raised it up to the feed box and sent it again over the buddle. By this process there was scarcely any loss of slimes and a clean product always obtained. All the concentrators should automatically discharge the finished product into one large tank, divided by a partition in the middle and not over 2½ feet deep, so that water could be drawn off and the product shoveled onto a draining floor while the other one is receiving the product from the machines. Where there is no shortage of clear water a continuous discharge from the jigs may be made by leaving the jig gates partly open; and in cases where there is a shortage of clear water the excess clear water may be raised from the product bin either by elevators or pump and used again in the batteries or rolls, and by putting in a simple device to separate the clear water from the tailings at least 50 per cent of the tail water from the jigs and buddles may be utilized over and over.

The hydraulic sizers were conical-shaped, with point down. All pulp and water passing were compelled to go to the bottom and there separated, where the coarse ore passed out and the overflow going through another hydraulic sizer, the coarse ore passing out at the bottom and the slimes overflowing and going to the slime machines. I would consider no hydraulic sizer a good one that did not have a partition from the top to very near the bottom, thus causing every particle of pulp and water to pass under the partition or cone, causing a complete submersion of all metallic particles. I have seen a valuable product building up like foam on top of an open sizer, which came in contact with the air and would not sink again, consequently flowed off with the surplus and tail waters.

If in either the iron, lead or copper sulphides a complete separation of quartz from the ore did not occur in the ore passing the coarsest screen, I should recommend that the tailings be recrushed to pass through a screen fine enough to insure perfect separation, then sent to the sizers and machines. In some mills it is the practice to regrind all the tailings. No canvas plants are required where ores are treated by the above described processes. Three men per shift will easily handle a fifty-ton plant, viz., one man on the rock breaker, one on the jigs and slimes and one on the motive power and shoveling product from the receiving bins to the draining floor, which should be made of good, tight flooring, with slope of 4 inches in 10 feet towards the receiving bin. The practice of drying the concentrates sent to smelters has been largely abandoned, there being far less loss in handling in bulk or sacks a semi-moist product that if it were thoroughly dried. If the product is desirable, there is very little if any trouble with the smelters about moisture.

Jigs should have one tight and one loose pulley, so that they could be stopped or started instantly without interfering with the other machines, and should have graduated eccentrics to regulate the strike from ⅛ to 1 inch, and should have cast iron discharge gates to regulate the discharge, and may be either double or single jigs. Sizers may be made of iron of any size from 1½ to 8 feet in diameter at the top, or may be made of lumber at the mill. A good carpenter will make one of the smaller sizes in a day.

The best buddles are made of iron entirely, excepting the bottoms of the launder boxes and the cement floor or bed. They are single or double-decked, and each 20-foot buddle will handle with ease twenty tons of pulp per day.

Sulphur Creek, Cal., April 24th, '97.

Strength of Building Stones.

The work being undertaken by the State University of California, under the direction of Professor A. C. Lawson, in examining into the building stones of the State, has created considerable interest in that industry. The following data is given as the crushing strength of American building stone:

From Lee, Mass., come some of the strongest marbles in the world. They will bear a weight of 13,400 pounds to the cubic inch.

The strongest American limestone comes from Kingston, N. Y., and will stand a pressure of 13,900 pounds to the cubic inch.

Tuckahoe marble will bear 12,950 pounds to the cubic inch, and that is more than the red granite of the Bay of Fundy region will stand, its limit being 11,812.

The trap rocks of New Jersey and the dolerites of Staten Island are the strongest stones in the United States, their crushing resistance being 24,000 pounds to the cubic inch.

Rhode Island granite crushes at 17,750 pounds to the cubic inch, that of Virginia will bear 21,250 pounds to the cubic inch, and that from the quarries of Maryland 19,750. The New England granites vary somewhat from these standards, but not greatly.

In Other and Older Lands.

Irrigation in California is a present and pressing problem engaging the attention of trained practical men throughout the commonwealth. All that modern thought and improved mechanical device can do is being used in the correct solution of this important matter. In sharp contrast with this twentieth century method of dealing with this question is the style still in operation in other and older lands, as depicted in the three accompanying illustrations, of irrigation methods and results in some of the famous old lands of the earth.

In the upper view on the next page the Egyptian fellah, who is yoking up his cattle to continue his plowing of land left moist by the receding Nile, is all unconscious that forty centuries are looking down upon him from the summit of the pyramid. The state of his mind is reflected in the rudeness of the character of his tool. Forgetful of yesterday, regardless of to-morrow, he has lost even the ambition of his forefathers, and is content to relieve his stomach from the pangs of hunger and save his back from the throng of the Turkish tax collector, and, accomplishing this, he has little thought beside. Egypt was once the granary of the world, and, even with the rudest appliances, produced a considerable surplus. The old implements and methods prevail, but the old spirit and industry are gone. Only about half of the arable land of the rich Nile valley is now under cultivation. The richest land lies waste. The stimulus to effort is gone. The Turkish yoke has ground the life out of the people. Turkish taxation takes the farmer's product about as fast as he can bring it forth.

CROSS-PLOWING IN AN EGYPTIAN FIELD NEAR CAIRO.

The Egyptian plow shown in the engraving is better than the Asiatic model shown in the larger view on the next page, because it is something of a mold board, which half turns the soil; but it is a very rude affair at best, as can be seen in the smaller view on this page, where a combination ox and camel team is cross-plowing. In the distance are seen the date palms for which Egypt is famous, and they are the chief source of wealth to the country, which, however, goes to the exchequer of the rulers, for the date palm is singled out as a bearer of heavy tax burdens. So heavily are these trees taxed that often the poor fellah, finding that his tree will not bear him a crop large enough to pay the tax, cuts it down, thus ridding himself of the tax evil, as the man got rid of the rats by burning down his barn.

On the dry uplands the camel and dromedary are at home; on low, swampy land the bullock is the recourse of the cultivator. The lower picture on the next page shows a couple of Hindoos discussing the behavior of the off ox, whom no amount of prodding seems to

keep up to his place. The scene is the margin of a river, where the large area of overflowed land offers good field for rice growing. The climate is shown by the semi-tropic vegetation and the decollete costumes of the men. The rudeness of the plow corresponds to the forms already shown in previous pictures of Oriental farming, and the intellectual and social standing of the operators is quite in keeping with the plow. The picture, apart from its picturesqueness, is a sermon on the worth and services of civilization.

These views show forcibly the contrast between the darkness which still prevails in the old lands and the enlightenment of the newer and more progressive nations They show that in countries whose monuments were reared before the dawn of history there is darkness now—the darkness of lost arts and bare survival of primitive industries—which is almost incredible, in view of the progress on other continents of new-found arts and progressive industries. Why has there been this decadence? Why have these lands and peoples either stood still or retrograded through all the centuries of the present era?

Practical Notes on Hydraulic Mining.*

NUMBER VI.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Hydraulic Motors, Water Wheels, Etc.—There is no power easier handled or less complicated than water power, and it would take too much space to give in detail a history of all the various forms of motors, but I will endeavor to describe the particulars and efficiency of the most popular methods.

The power of a fall of water is easily calculated, and is found as follows: Multiply the number of cubic feet per minute by the weight per cubic foot, or 62½ pounds, and the product by the fall in feet, then divide by 33,000. For example: What is the horse-power in a body of water equal to 60 cubic feet per minute, or 40 miners' inches, having a fall of 200 feet? Answer: $\frac{60\times62.5\times200}{33000}=22.72$ H. P., which is the total power in the water, and from this result allowance must be made for friction, etc.

Another easy method of calculating the power is to remember that one cubic foot of water flowing per minute and falling 1 foot is equal to .0016098 horse-power, and that one miners' inch falling 1 foot is equal to .0024147 horse-power. These multipliers will give result equal to about 85 per cent of the theoretical power.

Example 1. What horse-power can be obtained from 40 cubic feet of water per minute falling 300 feet, using a motor giving about 85 per cent efficiency? Answer: $.0016098\times40\times300=19.31$ H. P.

Example 2. What horse-power can be obtained from 100 miners' inches of water falling 60 feet, using a motor giving about 85 per cent efficiency? Answer: $.0024147\times100\times60=14.48$ H. P.

The most common forms of wheels used by many miners are current or bull wheels, undershot wheels, breast wheels and overshot wheels. The efficiency of these various wheels vary about as follows: Current or bull wheels, 20 to 50 per cent; undershot wheels, 27 to 35 per cent; breast wheels, 45 to 60 per cent; overshot wheels, 60 to 75 per cent. The next class of motors includes the various forms of turbines, of which there are numerous varieties, many of them giving as high as 85 to 87 per cent.

Approximate and simple rules for finding quantity of water, height of fall and horse-power developed at an efficiency of 75 per cent are as follows:

Quantity of water in cubic feet per minute is found by multiplying the horse-power by 706 and dividing the product by the fall in feet. Example: How much water is required with 200 feet of a fall to develop 10 horse-power, using a motor giving 75 per cent efficiency? Answer: $10\times706\div200=35.3$ cubic feet per minute, or about 24 miners' inches.

To find how much fall is required to generate a required horse-power, with a known quantity of water, multiply the horse-power by 706 and divide by the quantity of cubic feet per minute.

Example: Having a supply of 60 cubic feet per minute, and requiring 20 horse-power from motor giving 75 per cent efficiency, what fall is necessary? Answer: $20\times706\div60=235.3$ feet.

To find the horse-power in a fall of water when the fall and quantity are known, multiply the number of cubic feet per minute by the height of fall and divide by 706.

Example: Having a fall of 100 cubic feet per minute, and a fall of 75 feet, what horse-power can be obtained from a motor giving 75 per cent efficiency? Answer: $100\times75\div706=10.6$ H. P.

Should the motor be of a class that would give only 65 per cent efficiency, such as most overshot wheels, it is necessary to use 815 as a multiplier instead of 706.

Current or Bull Wheels.—To calculate the horse power of a current or bull wheel, it should be understood that in all such motors the velocity of the periphery of the wheel, or, more plainly speaking, the number of feet per second the rim of the wheel is traveling, should never vary much from half the velocity of the stream, or half the velocity due to the head of water. In this class of wheels the diameter is seldom less than 6 feet, or greater than 16 feet, and the number of floats 7 to 13. The inclination of floats from radial lines should be between 20 and 30 degrees, depth of floats from 10 to 16 inches, and they should be immersed for about one-half their depth.

The horse power of this class of motors is found by the following formula:

$H=.0028\times V\times M\times A\times(V-M)$.

$M=V\times.55$.

x=cosine of angle between the floats, multiplied by the radius minus the radius, or the distance below a horizontal line produced from under the extremity of the vertical float.

Where H=horse power.

V=velocity of current in feet per second.

M=the mean velocity of the periphery of the wheel in feet per second.

A=the immersed area of the floats in square feet

To obtain the angle between the floats, divide 360 (the number of degrees in a circle) by the number of floats on the wheel.

Example: A current or bull wheel, 16 feet in diameter, having 12 floats, each of which are 8 feet long, with a maximum immersion of 15 inches, what is the horse power of the wheel, when the stream has a velocity of 7 feet per second?

Answer: Angle between floats $=360\div12$ or 30 degrees. x = the cosine of the angle of 30 degrees, or .86603 × by the radius or 8 feet = 6.92824 — the radius, 8 feet = 1.0717 or 12.86 inches. This is the distance that the second float will be above the horizontal line produced from under the extreme edge of the vertical float, thus showing that although the maximum immersion of any of the floats is 15 inches, the adjoining floats would be 12.86 inches higher, and to get at the area of the immersed floats, the depth of the second float will be $15-12.86=2.14$ inches, and and the area of the three immersed floats $=15+2.14+2.14$ inches, or 1.606 feet multiplied by length of floats, or 8 feet=12.84 feet area, and the velocity being 7 feet per second, M or the mean velocity of the periphery of the wheel $=7\times.55$ or 3.85 feet per second.

V M A V M

Now, $H=.0028\times8\times3.85\times12.84\times(7-3.85)=3.49$ H. P.

Undershot Wheels.—To determine the horse power of an undershot wheel, with a rim velocity equal to about one-half, or .57 times the velocity due to the head of water, or $.57\times\sqrt{2gh}$. Where g is the acceleration of gravity, commonly taken as 32.2, and h is the head of water in feet above the bottom of the wheel, $H=.00066\ Q\ h$ or $\frac{W\times h}{30000}\times0.35$.

$$Q=\frac{1511\times H}{h}.$$

Where h = head of water.

Q = quantity of water in cubic feet per minute.

W = weight of water in pounds.

H = effective horse-power.

Example: What horse-power is obtainable from an undershot wheel, with about 35 per cent efficiency, using 1500 cubic feet per minute, with a head of 2 feet? Answer: $H=.00066\times1500\times2=1.98$ H. P., or $Q=\frac{1511\times1.98}{2}=1496$ cubic feet per minute.

Breast Wheels.—The following calculations will explain how to arrive at the effective horse-power of breast wheels:

Low breast wheels: $H=.00104Q\times h$. $Q=\frac{961\times H}{h}$

or, $H=\frac{W\times h}{33000}\times0.55$.

High breast wheels: $H=.00108Q\times h$. $Q=\frac{928\times H}{h}$

or, $H=\frac{W\times h}{33000}\times0.60$.

Where Q=quantity of water in cubic feet per minute.

h=head of water in feet.

H=effective horse-power.

W=weight of water in pounds.

Example 1. A breast wheel 16 feet in diameter, using 1500 cubic feet of water per minute, under an 8-foot head, what will be the horse-power of the wheel? Answer: $H=.00104\times1500\times8=12.48$ H.P.

Q h

Example 2. How much water will be required under a 10-foot head to generate 25 horse-power, with a breast wheel 21 feet in diameter? Answer: $Q=\frac{961\times H}{h}=\frac{961\times21}{10}=2018$ cubic feet per minute.

In either of the above cases if the wheel takes the water above one-half its diameter, of course the power would be increased, and calculations should be made by using the formulæ given for high breast wheels. For example: A wheel 22 feet in diameter, using 500 cubic feet of water per minute, under a head of 16 feet (that is to say, the water goes into the buckets at a point 16 feet from the bottom of the wheel), what horse-power will the wheel give? Answer: $H=.00108\times500\times16=8.64$ H. P.; and

$$Q=\frac{928\times8\ 64}{16}=500$$ cubic feet per minute.

Africa's Steady Yield.

In spite of the fact that London speculators have run down the price of shares in African gold mines, the industry managed by the engineers probably without much regard to the price of shares, shows a healthy growth. The following table shows the output each month since January, 1892:

Month.	*1892.* Ozs. dwt.	*1893.* Ozs.	*1894.* Ozs.	*1895.* Ozs.	*1896.* Ozs.	*1897.* Ozs.

Blank Forms for Quartz Location Notices.

Recent inquiry for a satisfactory blank for a quartz location notice, to conform with the new mining location law, results in our proffering the following, which have been gone over by a prominent practical miner, an experienced mining engineer and a leading mining lawyer:

FIRST OR PRELIMINARY NOTICE OF DISCOVERY AND LOCATION OF ..... QUARTZ LODE MINING CLAIM.

..... Quartz Lode Mining Claim,
..... Mining District,
..... County,

State of California.

The undersigned, who ..... citizen.. of the United States, or ha.... declared ..... intention to become such citizen.. and ..... of lawful age, hereby declare and give notice to all persons concerned that ..... ha..... discovered, within the limits of the claim hereby located, a vein or lode of quartz or other rock in place bearing ..... and other precious metals. That the course of said vein or lode, as near as can be ascertained from present development, is northwesterly and southeasterly. That ..... ha.... this ..... day of ..... A. D. 189.., discovered and located, and do.... hereby locate and claim, under and by virtue of the provisions of Chapter Six of Title XXXII of the Revised Statutes of the United States, and acts amendatory thereto, and the laws of the State of California, a mining claim upon said vein or lode to be named the ..... quartz lode mining claim, extending from the point of discovery (where this notice is posted on a substantial monument) along said vein or lode ..... feet in a ..... direction to a ....., and ..... feet in a ..... direction to a ..... and ..... feet on either side of the middle or center of said vein or lode at the surface, comprising in all ..... feet in length along said vein or lode and ..... feet in width, with all the rights and privileges as to surface ground and veins, lodes or ledges within the boundaries of said claim and otherwise, and the metals, minerals and valuable deposits of every kind contained in said veins, lodes or ledges, or within said boundaries, which are given or allowed by the provisions of the laws of the United States aforesaid or by the laws of the State of California.

The said mining claim hereby located is situate in the ....., mining district, County of ....., State of California, and is situated .....

.....

.....

.....

The adjoining claims, so far as known, are the ..... claim on the ...., the ..... claim on the ..... and the ..... claim on the ..... And ..... hereby further declare and give notice:

1. That the name of the lode or claim hereby located is the ..... quartz lode mining claim.
2. That the name.. of the locator.. .....
3. That the date of the discovery is .... A. D. 189..
4. That the length of the vein is .....
5. That the width of the vein is .....
6. That the general course of the vein is .....
7. That this is the first or preliminary notice.

The undersigned intend.. to hold this cl im under and in accordance with the provisions of the laws of the United States and of the State of California, and to record this notice in the office of the Recorder of said County within twenty days from the date hereof, as provided by law.

Dated ....., 189... and signed:

.....
.....

Locator.. and Claimant..

CERTIFICATE OF LOCATION.

FINAL OR COMPLETED NOTICE OF LOCATION OF A QUARTZ LODE MINING CLAIM.

.....Quartz Lode Mining Claim,
.....Mining District,
.....County,

State of California.

The undersigned, who ..... citizen.. of the United States (or ha.... declared ..... intention to become such citizen..) and ..... of lawful age, hereby declare.. and give.. notice to all persons concerned that ..... ha.... discovered within the limits of the claim hereby located a vein or lode of quartz or other rock in place, bearing ..... and that on the ..... day of ..... A. D. 189.., ... did locate and claim, under and by virtue of Chapter Six, Title XXXII of the Revised Statutes of the United States and the laws amendatory thereto and the laws of the State of California, a mining claim upon said vein or lode to be named the ..... Quartz Lode Mining Claim.

That thereupon ..... erected at the point of discovery a substantial monument or mound of rocks and posted thereon a preliminary notice containing the name of the lode or claim, the name of the locator or locators, the date of discovery, the length, width and general course of the vein, and a statement that said notice was a first or preliminary notice, and within twenty days from the date of such discovery did record a copy of said preliminary notice in the office of the county recorder of ..... county.

And the undersigned locator.. do.... hereby certify:

1. That the name of the lode or claim is the..... Quartz Lode Mining Claim.
2. That the name.. of the locator.. .....
3. That the date of discovery and posting of notice was the..... day of ....., A. D. 189..
4. That the claim so located extends along said vein or lode..... ..... feet in a ..... direction and ..... feet in a ..... direction from the point of discovery where said preliminary notice was posted, and is ..... feet in length along said lode or vein and ..... feet in width, being ..... feet on each side of the middle of the vein at the surface.

That said claim is distinctly marked upon the ground so that its boundaries can be readily traced by a substantial monument or mound of stone at the point of discovery, and by ..... at each end of the claim upon the lode or vein, and at each corner of the claim, the exterior boundaries of the claim as marked by said monuments being as follows, to-wit:

Beginning at.....

.....

.....

.....

.....

.....

.....

.....

.....

That this claim is in the ..... mining district, county of ..... State of California, and is situated

.....

.....

.....

5. That this certificate is the final or completed notice of location of said ..... claim, and that the locator.. of said claim ha.... since the date of the discovery and location thereof done and performed or caused to be done and performed labor to the value of at least fifty dollars ($50).

That the nature of such labor was.....

.....

and that the reasonable value of said labor was ..... dollars ($.....).

Dated ...., A. D. 189.., and signed

.....
.....

Locator.. and Claimant..

STATE OF CALIFORNIA, } ss.
COUNTY OF..... }

..... being first duly sworn, says that he is of lawful age and .....

..... a citizen of the United States and is ..... locator.. and claimant.. of the quartz lode mining claim mentioned and described in the foregoing certificate of location and ..... person.. whose name.. ..... subscribed thereto as such locator.. and claimant.. That he knows the contents of said certificate and that the matters and things therein stated are true.

Subscribed and sworn to before me this ..... day of ....., 189..

[SEAL] .....

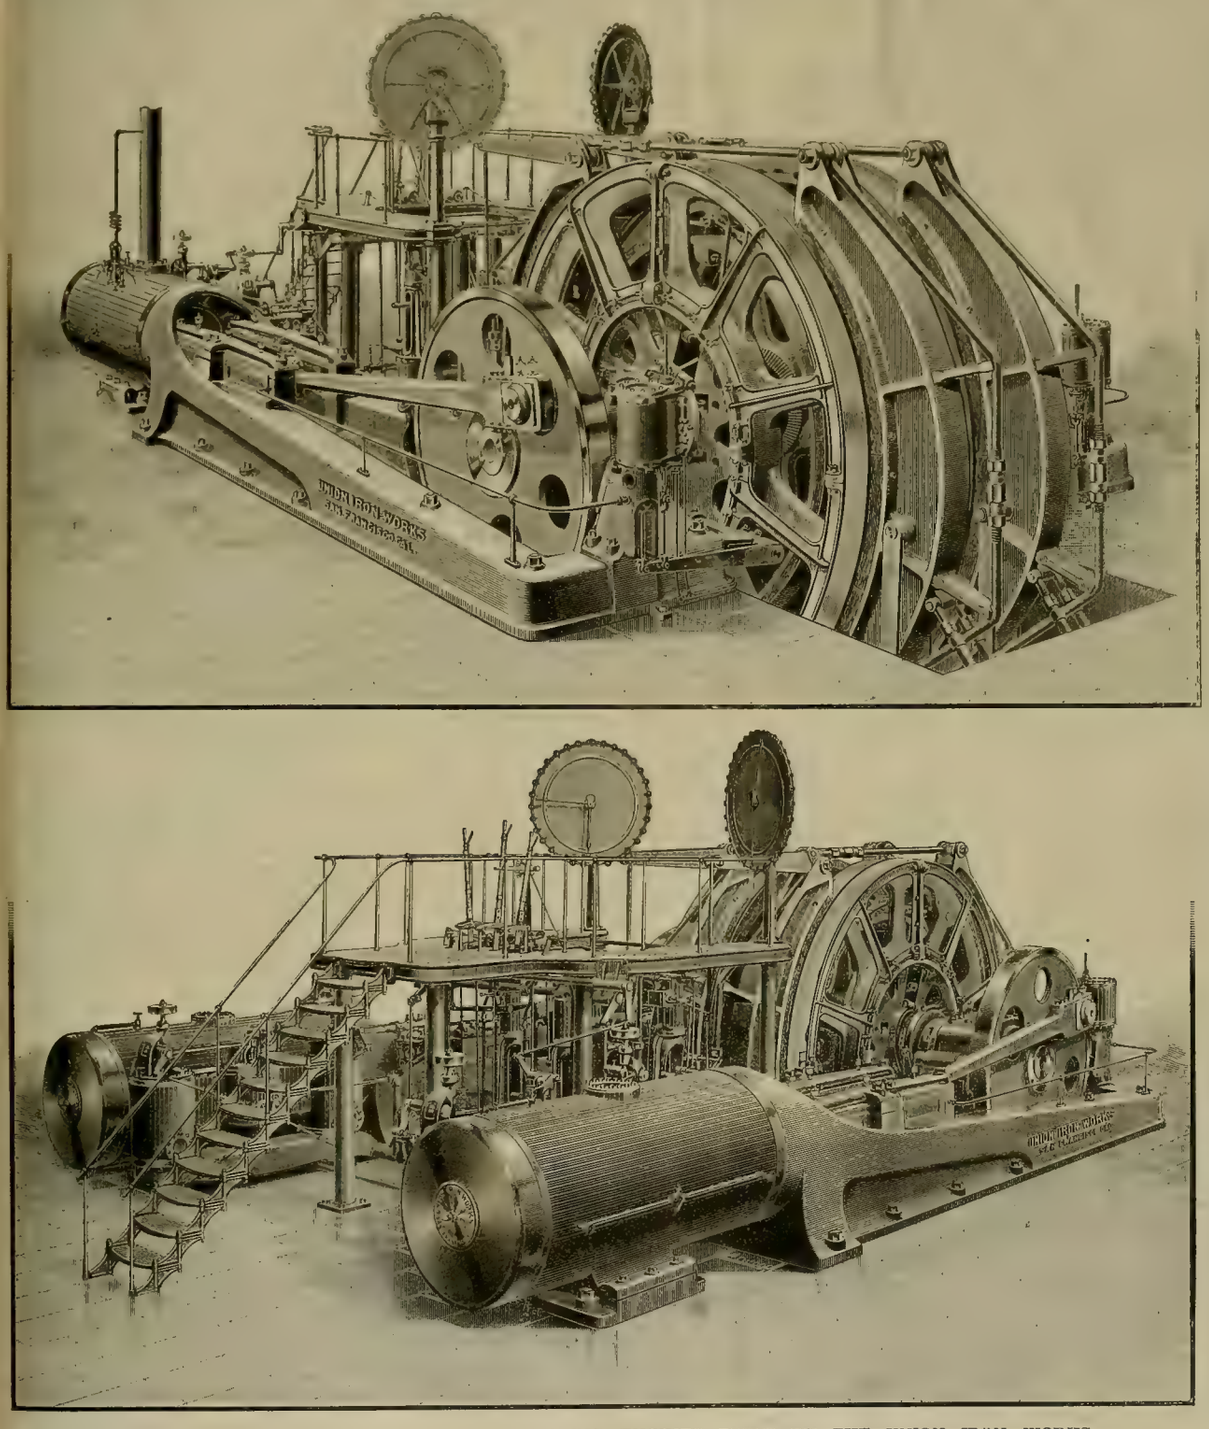
In and for the county of ....., State of California.

The above forms have been prepared with intelligent care, adapting to the requirements of the new State law, the

standard Montana form, which has been in use fifteen years, has passed the Washington departments in over four thousand patent cases and has been through the United States Supreme Court several times. In the form for the first notice it will be noticed that the passage customary in this State is omitted, which claims water and timber "as given by law," for the reason that neither of these is now given or ever was given by either the national or State mining law. Our codes already provide the only way in which water rights may be acquired, and the act of June 3rd, 1878, provides for timber grown on public mineral land. No additional rights to wood and water can be acquired by posting the quartz location notice, and any attempt to do so is useless.

The first lines in the body of the notice recite the compliance of the locator with the statutory conditions, which will enable him to locate a quartz claim at all. He must be a citizen and he must discover mineral. It is especially necessary that he thus qualify himself. The new State law makes the location notice prima facie evidence of the facts therein recited. In the preliminary notice under the State law, the filling of all the blanks would not be entirely necessary, but the new law requires that this notice be recorded; and Section 2324, Revised Statutes U. S., says: "All records of mining claims hereafter made shall contain the name or names of the locators, the date of the location, and such a description of the claim located by reference to some natural object or permanent monument as will identify the claim." Another part of the same section prohibits the enacting of any location laws limiting or omitting these provisions. The term "adjoining claim" is of value, definitely showing what the locator intended to take up, and a recent court decision seems to almost require it.

The above is not submitted as being perfect, but in response to a general demand it is published in a hope that it will prove generally satisfactory.



SEVERAL BLOCKS of the streets of Glasgow, Scotland, are to be paved with California asphalt for the purpose of giving a thorough trial. Glasgow manages its municipal affairs better than most cities.

Direct Acting Hoisting Engines.

Herewith is illustrated a pair of 30 in. x 72 in. direct acting hoisting engines, lately built by the Union Iron Works of this city for the Anaconda Copper Mining Company of Montana. These engines are intended to embody all the very latest improvements that experience and practical working have demonstrated as valuable in this class of machinery. The brakes, clutches and reversing gear are arranged to be operated by compressed air or steam, by means of auxiliary cylinders which are under full control of the engineer, stationed upon the elevated platform shown, insuring the most rapid work with absolute safety.

The center bearing usually employed has been dispensed with in these engines. The shaft is hollow forged steel and of ample strength and stiffness to withstand any strains that can be brought to bear upon it. All reciprocating parts are of steel and are as light as consistent with the duty required. The strains due to contraction and expansion have been eliminated in these engines, as the cylinders are of the "overhung" type, their weight being taken by a guide saddle, which admits of free longitudinal movement, due to expansion, causing no strain on bed plate or foundations. The cylinders are steam-jacketed and fitted with valves of the Scott & O'Neil balanced type, provided with Corliss releasing gear and hand cut-off, enabling the engines to be run economically with reference to the work to be performed. The bed plates are a modification of the Porter Allen type, heavy and substantial, with large foundation base and anchor bolts.

These engines, before being shipped, were tested at the Works, and from their action and the ease with which they were handled it is confidently expected that this type of engine will be adopted by the company for all their deep working. A duplicate of this engine has also been furnished the Homestake Mining Company of Dakota.

PAIR OF 30. IN. X 72 IN. DIRECT ACTING HOISTING ENGINES BUILT BY THE UNION IRON WORKS.

Rapid Tunneling.

In response to a request from the MINING AND SCIENTIFIC PRESS, Mr. Robinson of the Hexter mine at Mokelumne Hill has furnished the following interesting data as to the driving of their tunnel:

I have run the Hexter tunnel very rapidly, considering the hardness of the rock the tunnel passed through. It was a very hard syenite rock, often requiring twenty-four hours to drill one round of holes in the face of the tunnel, which, when fired, broke an 8x8 opening. This I timbered with 10x10 Oregon pine timber, leaving a tunnel 7 ft. x 6 ft. 4 in. x 5 ft. I use a compressor, driven by water power, 400 feet head. My average speed has been 40 feet per week, completing the drainway and boarding it, thus preventing the waste water from flowing over the track. It was my practice to pay the workmen a bonus of $11 per running foot for all over 40 feet they drove per week, but only one month did they earn a bonus. That month they made 195 feet. In the aggregate they did good work. The machine men were never allowed to hammer their drill, as is the habit of mining when it sticks. Thus I was enabled to keep my machines in first-class condition, never requiring to send them to the shop for repairs. My plan is to spring the holes before charging. Fire the relief and bottom holes first, reserving for the last the roof holes. In this way a square, clean break is effected and the roof is not shattered, and all danger of dropping stones is obviated in a great measure.

Some mining man has said that a tunnel or shaft can be sunk through hard rock as cheaply but not so rapidly by means of hand drills as by machine drills. It is not so. For instance, with me the ditch broke and for one day I was compelled to resort to hand drills, and not to exceed 8 inches of tunnel was made that day.

What I have performed in a few months in this hard rock with machine drills would have taken as many years to have accomplished with hand drills.

W. T. ROBINSON, Supt. Hexter M. Co.
Mokelumne Hill, April 26th, '97.

ACCORDING to the recently published report of the Russian Department of Mines for 1895, the production of platinum for that year was 9700 pounds, a decrease of 1700 pounds from that of the year preceding. The production of all other mineral products showed a decided increase, except that of gold, which decreased slightly. The largest relative increase was in mercury, the production of which, 500 tons, was more than twice that of the previous year.

THE laboratory at Cornell University has many "rare earths." A recent inventory disclosed that of didymium, which sells for $7 an ounce, Cornell has 300 ounces; of cerium, quoted at $6 an ounce, 400 ounces; of lanthanum, worth $35 an ounce, 30 ounces.

Mechanical Progress.

The Use of Compressed Air for Mining Purposes.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

It was my intention when first invited to read a paper here on Compressed Air, to deal with the subject of "Power Transmission by Compressed Air," inasmuch as that particular theme is just now the subject of much speculation among engineers, and of much interest to power consumers, but upon reflection it appeared to me to be a better plan, and one which would help you the most, to discuss that use of compressed air which at present most vitally affects our own interests, namely, its use in our mines.

All of you, as engineers or spectators, in travelling through the mining counties of this State, will have occasion to observe the use and abuse of compressed air in many of its more important applications, and you will feel much more at home with the subject on such occasions after listening to a paper directed to that particular end than if a general subject, such as "Transmission," was dilated upon with no particular plant in this State to offer as an object lesson.

It is not my purpose to belittle the service which is rendered by that incomparable, mysterious power which we call electricity, although I may claim that it has usurped the legitimate place of compressed air in many instances. There is no conflict between these two great agencies. Each has its proper and legitimate field of usefulness, independent of the other, and it is easy for an intelligent engineer to recognize these separate rights, and in proportion as he does, so will his work be successful. A small portion of the territory of these powers seems to overlap and it is there that we hear the noise and confusion of disputed title, and many in the midst of this turmoil lose sight of the great independent domain of each which required development and which will yield rich return to the earnest student and worker.

Compressed air is the only power which is alone sufficient to supply all the power needs of an average mine. For lighting purposes from five to ten per cent may, if required, be converted into electricity for that purpose. Where steam or water power is used, fifty per cent or more is converted into compressed air, and five to ten per cent into electricity for lighting. Where electricity is used, from fifty per cent to ninety per cent is converted into compressed air, the remainder being directly used for lighting.

The reason for so great a conversion of other powers into compressed air lies in the fact that generally one-half the entire power is absorbed by pumps, underground hoists and rock drills. The two former, in nineteen cases out of twenty, are actuated by compressed air, and the latter always. It is true that both the hoists and pumps may be run by electricity economically, but as yet there has not been produced a rock drill actuated by electricity, which has been a success, and inasmuch as air is required for rock drills, and as they consume more than the pumps and hoist as a rule, the mine management generally concludes to use air for all three kinds of work rather than introduce two kinds of power service underground.

I am perfectly aware that my statement regarding the failure of electric rock drills may be disputed by manufacturers of the so-called article, or by electrical enthusiasts, but notwithstanding all that, shall maintain my statement true, and it will receive the support of the larger electrical concerns.

It is true that electric drills have been made by two or three firms and on the shop floor they drill very nicely, at the rate of 2 inches per minute, in medium granite, for the first 2 feet. From that point on to 4½ feet, the average depth of a blasting hole, their drilling capacity deteriorates very rapidly.

The air drill does from three to four times the work easily.

The claim for the electric drill is that it consumes but one-third the power. This is true, but if it takes three of them to do the work of one air drill, the wages of six men will have to be balanced against the wages of two men and the extra power consumption. The latter equals perhaps the pay of one man, so that to do the same work with the electric drill would cost twice more than for the air drill.

There are other considerations, however, independent of this, which militate against the electric drill, viz., that it will not stand the dust, mud, water, hammer beating and general rough usage, and again, it would be necessary to introduce a ventilating system for fresh air, as well as to expel smoke, where electric drills are used, while with the air machines their exhaust furnishes all necessary fresh air and ventilation.

It needs no great discernment to see, therefore, that the simplest and most desirable proposition, and the one involving the least machinery and transformation of one power into the other, is compressed air, which exchanges from five to ten per cent of itself for lighting purposes only, while any of the others must make exchange for at least fifty per cent of air and the lighting beside.

I have assumed, of course, that the cost of any of these powers delivered to the mine was equal, and the motors which absorbed them were the most efficient for the purpose.

All things being equal, then, I assume from what I have seen of the various requirements of a mine for power purposes, and for the reasons given before, that compressed air is the ideal power for general mining purposes. With varying conditions, however, it is simply a matter of combining and comparing the cost of fuel or water, repairs, interest on the plant, insurance and taxes, in order to select the proper general power, and should comparisons be nearly equal, then general utility, simplicity and safety should decide the choice.

When the preponderance of evidence is for any one of these forms or power it requires no skill to make a selection, but when all things are equal as to cost and maintenance, or nearly so, in bringing any of the powers to the mine, then I wish to show why compressed air should be the choice without hesitation, and after the choice is thus made, how to use it so as to justify the choice.

Compressed air has been abused in its use most shamefully, and until recently none of its friends has been able to be seen or heard, so intensely has the interest of the world been centered upon the marvelous results of the investigation in the electrical phenomena. The mysterious has such a fascination for the ordinary mind, and the meteoric developments of electrical science have followed so thick and fast and in so many fields of usefulness, that the average individual could be stampeded into the electrical camp by a mere mention of the name of this most elusive fluid. Now there has come a breathing spell, and the advocates of compressed air are calling attention to the fact that compressed air, properly generated and applied, owns a place in the economies of the day, and this they propose to maintain.

Compressed air has been generally understood to be a most expensive form of power, and has been given sufferance only because of its utility, since for underground work it really has no rival at any price. Because the laws of compression and expansion of permanent gases belong to the realm of higher mathematics few understood what they were dealing with, and many of these, unable to overcome the freezing of their motors, did as the public generally did, viz., used the air at practically full stroke and threw away all the intrinsic energy of the air which we can develop by expansion. Theoretically, they thus threw away two-thirds of their power, and practically about three-fourths. Ordinary direct acting pumps and rock drills do not even have an efficiency of 25%. No small wonder, then, that the wood piles have dwindled rapidly away and small power results been produced. Everything was sacrificed to utility, and compressed air did not take its proper rank until engineers began to realize that it must be used expansively. To use air in an ordinary direct acting pump is equivalent to throttling a head of water to one-fourth of its spouting velocity to accommodate the speed of a wrongly geared water wheel.

I fancy that most of the trouble on the whole subject has arisen from a misconception of what compressed air is in a power sense.

Many believe that the power of the engine which compresses the air has been stored in the compressed air, and the more steam they give the engine, and the harder it worries and flurries, the more work the air should finally yield up. They cannot understand that a pound of compressed air at the same temperature contains the same intrinsic energy, no matter what the pressure is, and this is originally contained in the atmosphere before it is compressed at all. This being the case, no matter what power was expended to compress 1 pound of air to say 90 lbs. gauge pressure, it will have at the same temperature but one intrinsic potential stored within it. Temperature is the head—if I may use a term applied to water; from it comes the power. If by reason of a physical condition—viz., pressure—1 pound of air is allowed to fall from a height represented by a temperature 60 to one lower, represented by say —60, that 1 pound will generate 184.93 foot pounds of work, through every degree it falls, and so on until it reaches —461, the absolute 0, which is the bottom where in theory air has neither pressure nor volume, and its work is done. The total intrinsic energy is always 184.93 multiplied by the number of degrees the 1 lb. of air is distant from —461 degrees Fahr.

This 184.93 is simply the 778 which represents the foot pounds of work in one British thermal unit, multiplied by 0.2377, which is the specific heat of air at constant volume; that is to say, it is the fraction of a B. T. U. necessary to raise 1 pound of air 1 degree. The quantity of heat, therefore, necessary to raise the temperature of 1 pound of air from absolute zero to 60 degrees Fahr., which represents a distance of 521 degrees, will be 184.93 multiplied by 521, which would be 96,348.52 foot pounds, which represents the intrinsic energy of 1 pound of air at 60 degrees Fahr. This, of course, presumes that no heat will be either lost or gained by radiation or otherwise during the expansion of air, and this sort of expansion is called adiabatic.

The center of the earth is the absolute 0 of water-power, for there water has no weight. This corresponds to the absolute 0 of air, and every pound of water at the same distance, measured in pressure, from the center of the earth, has the same potential, and independent of its temperature, just as 1 pound of air has the same potential at the same distance, measured in temperature, from its absolute 0, independent of its pressure.

The sea level for water corresponds to the atmospheric line for air, for at these points neither will manifest motion or power. Suppose the land and water to be on a level, we could not then use any of the potential in the water, unless by some mechanical device we continually created a shaft, whose depth we would call pressure, below the sea level for the water to fall into and generate power, and it matters not how much power it requires to maintain this shaft at any depth, 1 lb. of water dropping into it will always yield up the same fraction of its total intrinsic potential. The same with air; at the atmospheric line we cannot avail ourselves of its potential, so we use a mechanical device called a compressor to prepare a shaft, as it were, which we also call pressure, whose depth we measure in degrees of temperature, and no matter how much power it takes to maintain this condition of affairs, 1 lb. of air dropping into this shaft will always give out the same fraction of its total intrinsic energy. I hope I have made the idea clear that I wished to convey, viz., that in neither case did the resultant power depend for its measure upon the mechanical means which caused its activity. Consequently, in compressing air the energy stored in the compressed air is not a definite function of the power required to compress it, but is a definite function of an ideal compression we call isothermal, with an empirical index determined by practice.

In order to show you by some calculations that the intrinsic energy in the air is independent of its pressure and that no matter between what points of pressure you expand the air, there will always be enough power in the air left to account for its total intrinsic energy, viz., 96,348.52 foot lbs. at 60 degrees Fahr. This will show you at the same time why we depend upon the pressure to put the air in a condition to realize a portion of its intrinsic energy for work.

Taking, for instance, 1. lb. of air at 100 lbs. gauge, and at 60 degrees Fahr., if allowed to expand adiabatically to atmospheric pressure, it will produce work, and consequently lose part of its heat, and we find that its temperature, after expansion has taken place, is:

$$173.96 \text{ degrees Fahr.} \quad \frac{T}{To} = \frac{(P)}{(Po)}^{\frac{Y-1}{Y}}$$

The drop of temperature is:

$$173.95+60=233.95 \text{ degrees;}$$

and as $778\times0.2377=184.93$, the work of adiabatic expansion is:

$$184.93\times233.95=43,264.37 \text{ ft. lbs.,}$$

this being the *useful work.*

The adiabatic work of expansion from 173 95 degs. Fahr. to the absolute 0 would be $184\ 93\times287.05=53,084\ 15$ ft. lbs.

Total 96,348.52 ft. lbs.,

which is the total intrinsic energy; that is to say, we have utilized 45 per cent of the total intrinsic energy.

Next, taking air at 10 lbs. gauge, the temperature after adiabatic expansion to atmospheric pressure is 12.9 degrees Fahr., and the useful work of expansion is:

$$184.93\times72.9=13,481\ 39 \text{ ft. lbs.}$$

The adiabatic expansion from —12 9 degs. to absolute 0 would give:

$$184\ 93\times448.1=82,867.13 \text{ ft. lbs.}$$

Total 96,348.52 ft. lbs.,

i. e., the total intrinsic energy, and the useful work is here 14 per cent of the total intrinsic energy.

It is hardly necessary to say that these figures are theoretical, because, in practice, part of the work of expansion, and consequently part of the heat, is absorbed by the friction of the piston in the cylinder, and lost by radiation from the various pieces of the machines.

We see, therefore, that the only portion of the intrinsic energy of air that is practically obtainable is the expansion work which it does above atmospheric pressure, *i. e.*, that the pressure of this air must be raised above the pressure of the atmosphere.

(To be Continued.)

A NOVELTY in the way of row boats is being made by a company in New York City. The boats are made of waterproof canvas and rubber, in four distinct air-tight compartments. While said to be not easily punctured, if that should happen the manufacturers say a boat full of water will sustain in safety all who can get in it. They are regularly made in four sizes, 7 ft. to 16 ft.; they have wood or air cushion seats as desired, with metal row locks and wood base, buckled into an upper air chamber. It is said that two or three of these boats of ordinary size can be carried in an average traveling trunk.

Scientific Progress.

Photography in Natural Colors.

Frank H. Mason, United States Consul at Frankfort, Germany, thus describes Chassagne's discovery: But it remained for a French savant, M. Villedieu Chassagne, of No. 40 Avenue des Ternes, Paris, working out a theory suggested by Dr. Adrien Dansac, to find the real philosopher's stone, and to produce, by purely chemical means, on sensitized plates, paper, or films, photographs showing the actual colors of the subject as they appear in nature. The process of M. Chassagne, to which he has devoted many years of study and costly experiment, is exceedingly direct and simple in its practical application, and may be briefly described as follows:

An ordinary sensitized gelatin plate is first treated by immersion in a colorless solution of certain salts, the secret of which the inventor has not yet revealed. This plate, being exposed in a camera, receives a negative impression, and is developed, fixed, and finished in the ordinary manner, producing a monochromatic negative precisely similar in appearance to any other. That is to say, the treatment of the dry plate by the mysterious liquid of M. Chassagne reveals no visible effect in the appearance of the negative which is produced therefrom.

From this negative there is then printed, by the usual process of contact and exposure to light, a positive, which may be made on sensitized paper, or film, or glass gelatin plate, which has been likewise treated before printing with the same colorless and unexplained solution. Thus far, all is monochromatic, and does not differ in appearance from any ordinary negative and the paper print or transparent positive made therefrom. The miracle now appears in the fact that the treatment of the negative plate and positive print with the limpid solution has imparted to the latter the occult instinct of selective absorption; in other words, the power to absorb and assimilate from solutions of the primary colors the exact quantity and proportion of each tint that is required to produce all the hues and gradations of nature.

The positive is now passed successively through three colored solutions—blue, red, and green—and from these it takes up by absorption the proportionate amount of each color that is required to give the colors and gradations of tint which were present in the natural subject of the photograph. If this photograph is a portrait, the flesh tints become warm and vital, the colors of the eyes, hair, and every detail of hue and texture in the costume, jewelry, etc., are faithfully reproduced. If the subject is a landscape, the sky becomes blue or gray as in nature, the grass and all the elaborate gamut of green, brown, and purple shadows, which occur, for instance, in a wood or group of trees of different species under strong sunlight, are brought out with marvelous fidelity. Such a positive, printed on glass as a transparency, hung in a window and studied from behind with a strong monocle, produces the effect of looking upon the actual landscape. Paintings, either in oil or water colors, are reproduced so literally as to fairly deceive the eye, in all except size, the photograph copies being, of course, generally much smaller than the originals.

From this brief description it will be obvious that the discovery of M. Chassagne is embodied in the chemical composition of the four liquids, one of which is colorless, one blue, one green, and the other red. The process of using these liquids, which is so simple as to be within the easy reach of any professional or good amateur photographer, has been patented in all civilized countries where patents are granted, but the composition of the liquids is thus far a secret, and is not described in the applications.

In view of the importance of testing a water-supply, especially for nitrites that may indicate contamination, the following is noteworthy. Zambelli recommends the colorimetric method for determining nitrites. A reagent is made by dissolving 2 grammes of sulphanilic acid and 2 grammes of phenol in 50 cc. of equal parts of sulphuric acid and water. A measured quantity of the solution to be tested is placed in a flask, and 2 or 3 cc. of the above solution added. In ten to fifteen minutes the solution is made just alkaline with ammonia; if nitrous acid be present a yellow coloration will be produced. This color is matched by repeating the reaction, using a standard solution of silver nitrite.

Fluid Air for Industrial Uses.

Charles deKay, United States Consul-General at Berlin, writes of the new method invented by Linde for producing fluid air cheaply.

Hitherto the classic example of a method to liquefy air and obtain oxygen has been that invented by Beatty and Cailletet in 1877. With their machine, one began with carbonic acid gas. By means of a pump, this gas was condensed in a tube, round which lay water at 10° to keep the tube cool. The carbonic acid gas, being reduced to a very low temperature, passed from the first tube into another chamber with a tube in it, and in so doing fell to a lower temperature. Into this second tube was pumped at high pressure ethylene gas, which, in turn, fell to a low temperature, owing to the coldness of the carbonic acid gas bathing the tube. The ethylene gas was then passed from the second tube into a third compartment and fell further in temperature in so doing. The third compartment had likewise a tube with an air pump attached. Into this third tube was pumped oxygen gas and from the ethylene gas bathing it the oxygen gas reached a temperature of 192° below zero. Finally, the oxygen was let out into a fourth compartment, in which was a fourth tube. The air pump attached to this fourth tube having filled it with condensed atmospheric air, the latter was so reduced in temperature that, when it in turn was released from the tube, its cold was 273° below zero, and it appeared in the form of drops like water.

This product, which is called liquid or fluid air, has a milky appearance from the presence of some carbonic-acid gas, bubbles constantly, and from its enormous cold emits a smoke or cloud like the top of a very high mountain, and will only gradually resolve itself again into air when exposed to the ordinary atmosphere.

Fluid air costs about 10 marks (say $2.25) for 5 cubic meters reduced. The new method is the invention of Professor Linde, of Munich. It produces the liquid for 10 pfennigs (say 2½ cents) for 5 cubic meters, and it yields the product either as a gas or fluid, as one wishes. This is one of the most ingenious pieces of mechanism recently known; its chief feature is its economy of working, for it uses air to refrigerate air. After the pump has worked for a certain time, one turns a cock and the liquid air runs out at a temperature of 273° below zero.

In Professor Linde's method, an air pump of 5-horse power condenses air to a pressure of 200 atmospheres; this air passes down a spiral tube and is let out in a chamber, causing great cold; then it rises and passes on the outside of the spiral tube, bathing it and thus cooling the new air that has been pumped into the tube to take its place. This cooled air follows on into the chamber, expands and again lowers its temperature, then passes on up around the same spiral tube; but as its temperature has become much lower, the new air in the tube is still further refrigerated. This circulating process goes on, until the new air pumped into the tube reaches the expansion chamber at a temperature of 273° below zero, when it drops into the chamber in the form of liquid. Thus the air, steadily cooled, is made to refrigerate the newly pumped air more and more, until the necessary degree of cold is attained.

Another idea, which may or may not be an improvement, is to have the pump and all parts of the machine kept very low in temperature.

Air in the cheap, portable form of a liquid rich in oxygen can be used for many purposes in manufactures and the trades. The discovery of a cheap method may be of importance to American manufacturers.

Electrical Progress.

Mysteries of Nature of Light and Electricity.

It has been announced that Dr. P. Zeeman of the Amsterdam University, while working at Leyden, discovered that the lines of a metallic spectrum are broadened when the source of light is in an intense magnetic field. The experiments of Dr. Zeeman were most rigorously and accurately conducted. Both emission and absorption spectra were examined with a large Rowland grating spectroscope, and the results were marked and certain. The meaning of the fact is clear to those versed in electro-optics, and, indeed, some such broadening had been predicted by several physicists, and sought for by others. Dr. Lorentz of Leyden, from theoretical considerations, ventured the prediction that the light at the edges of the broadened lines will be found to be polarized. This was completely verified by the experiments of Dr. Zeeman. The discovery will probably substantiate the hypothesis that radiation is due to the motion of electric charges, whether free or associated with the vibrating molecules of the luminous body. It has seemed more and more likely, as knowledge of ether-physics has advanced, that radiation could not be excited by the motions of the inert molecules of matter, but must of necessity require their electrification. The new facts apparently demonstrate that this is true, and throw another ray of light upon the still obscure subject of the mechanism of radiation. Of course, the principal bearing of the discovery is upon the theory of light. It is a step toward more complete knowledge of the means by which the particles of a body at high temperature disturb the adjacent ether. It contains also the germs of conclusions regarding the nature of radiating and absorbing matter which may go far toward extending our knowledge of molecular and ether-physics. There is little doubt that the solutions of the two mysteries, the nature of light and of electricity are destined to be simultaneously attained.

Electricity in War.

In the way of torpedoes, dirigible and otherwise, considerable progress has been made, so that the torpedo is now probably the most effective instrument of destruction that can be employed in offensive warfare. Against this weapon no armor plating is effective and other means of defense have been necessarily resorted to. Of these the searchlight is doubtless the one most relied upon. But this is by no means the only role in which electricity will appear in the next great war. Triangulation by means of the Fiske electric range finder now enables a gunner to plant a missile with great accuracy upon an enemy's fortress or his man-of-war, and other devices, notably of the type of Prof. Badt's electro-magnetic sentinel, will give warning even in the darkest night or the densest fog of the approach and exact position of any man-of-war.

During the past few years the United States Engineering Corps at Fort Wadsworth have been engaged in accurately plotting the approaches to New York harbor, so that the positions of all buoys and landmarks are accurately known. The elevation of each gun required to drop a projectile upon any one of the plotted points would, therefore, in the case of war be no longer a matter of experiment, and doubtless the same is true of other harbors abroad.

With electro-magnetic sentinels judiciously placed in the approaches to a harbor at a distance too great for the invader to reach the city with shells, almost the exact position of an invading vessel, the direction of its course and its speed would be known during the darkest night as well as in the brightest day.

Americans have been constantly reminded of their barbarity in permitting the use of the overhead trolley, and have been told of the greater civilization of the countries of the old world, where no such unsightly intrusion is permitted; but the trolley now seems to be making its inroads in France and Germany with remarkable rapidity. Even in Paris overhead wires are being talked of for the transportation facilities of the coming exposition of 1900, and in the provincial cities of France, as well as in the great majority of the cities of Germany, the American system seems to have gained a firm hold. That the overhead wire is unsightly is not to be denied, and ultimately, no doubt, it will have to give way to some less objectionable form of power communication; but that it is a necessary intermediate stage of the solution of the rapid transit question must be admitted, whether the admission be welcome or not.—Cassier's Magazine.

W. N. Hartley and H. Ramage have recently examined a large number of ores and minerals by means of spectrographic analysis. Most notable is the wide distribution of gallium, which was found in 68 out of 168 specimens, occurring in most magnetites, bauxites and blendes, and nearly half the clay ironstones and manganese ores. Rubidium appears to be even more widely distributed, occurring in most iron ores. Indium was found in thirty minerals, including all the carbonates of iron and tin ores and most blendes. Thallium, while less widespread, was frequently found. Iron and sodium were found in every specimen and potassium in all but two, one a blende and the other a tin ore. Calcium, copper and silver were found in all but a few cases. Such a wide dissemination of gallium and indium is unexpected, and the same might be said of silver. Among metals not looked for by the authors, titanium is known to be found almost universally, and possibly the same is true of gold.

Houston and Kennelly have lately presented to the American Philosophical Society an elaborate paper, in which they have sought to demonstrate that the insulating substance surrounding an electric conductor is the true path of the current. The Edison Company of New York is reported to be substituting the Thomson mechanical wattmeters in place of the old chemical meters. Following out the interesting experiments of Becquerel, which showed that certain salts of uranium, after exposure to sunlight, emitted radiations which, like the Rontgen rays, were capable of effecting photographic sensitive plates through intervening opaque substances, Professor McKisick of Auburn, Ala., as the result of numerous experiments, announces his belief that the Becquerel ray is the connecting link between the ordinary light and the Rontgen ray.

The development of the electrical industry and popularity of the pneumatic bicycle tire have so largely increased the consumption of India rubber without any increase in the sources of supply as to make the question of how to meet the demand an exceedingly serious one. That this situation will stimulate the inventive faculty to supply an artificial substitute there can be no question, and should success be met with the prospective rubber famine will be a blessing. There have been many rubber substitutes, and while some of these meet some of the requirements, they have so uniformly failed to meet others that the announcement of a new one, however well indorsed, fails to create a ripple in the rubber market.

Mining Summary.

CALIFORNIA.

Amador.

Record: At Oleta good rock was struck in the 450-foot tunnel at the Monte Christe mine last week. This proves that the mine is quite extensive. Mr. Dillon intends to build a new mill at once and begin crushing ore on a large scale.

The directors of the Potazuba Company held their regular monthly meeting this week, and call No. 8 of 3 cents per share was levied on the subscribed stock. Sinking at the mine is going on rapidly. During the last twenty days, since sinking began, the shaft has been put down 40 feet and is now 285 feet deep. The ledge still continues in the bottom and the prospects at the mine are good.

Dispatch: The Iron Mass mine, near Volcano, owned by A. B. McLaughlin and others, is showing encouraging prospects. A steam hoist will at once be put up and the shaft sunk to the 1000-foot level.

At the Gwin the rich rock still holds out, and the returns from the mill are very encouraging. The Gwin will pay a dividend for April in excess of the one for March.

At the annual meeting of the stockholders of the Union Consolidated Mining Company the following were elected officers: President, Capt. Matson; secretary, G. E. H. Baker; treasurer, J. B. F. Davis.

The excavation for the foundation of the new mill at the Argonaut will be finished in a week, when the work of laying the concrete foundation will begin. The ore still yields well.

Butte.

Register: At Enterprise the Red Point mine, under the management of Josiah Champion, is rapidly being developed. The tunnel is in 570 feet on this mine and drifts are being run in two directions from the face of the main tunnel, while an upraise of 400 feet will be made.

Mr. Murray, who has recently bought the Alm Brothers' mine, will soon put up a 5-stamp mill.

At the Chrystal Hill mine the 5-stamp mill is running steadily and crushing good paying quartz.

Calaveras.

Prospect: At the Burgess mine, which is being operated by the California Exploration Company, the work of sinking progresses steadily and a depth of 180 feet has already been reached.

The Pine Log, near Copperopolis, is working thirty men, and the 20-stamp mill is running day and night. Last month a dividend of $8000 was declared.

The 700-foot mark has been reached in the shaft of the Thorpe mine, at Fourth Crossing, and preparations are under way to run a level to cross-cut the vein. When that is done, sinking for another 100-foot stretch will be renewed.

The shaft at the Bund mine, between Fourth Crossing and Altaville, is down 274 feet and sinking still continues. At a further depth of 26 feet it is the intention to run a level, cross-cutting the ledge. The 200-foot level shows a vein 25 or 30 feet wide.

On the Wells mine, at Fourth Crossing, nothing is at present being done, the Exploration Company having relinquished their bond.

Some rich rock was struck in the Esperanza mine, at Mokelumne Hill, recently. The company are still engaged in sinking their three-compartment working shaft, which will be pushed to a depth of 1000 feet.

A 4-stamp mill is being put up on the Edna mine, in Spring Gulch, and new buildings are being erected. The mill will be used simply for testing the ore as sinking progresses. It is the intention of the company to go down 1000 feet.

Page Cutting, of Murphys, has bonded to Rigney, Blanding and Howk his gravel mine, the Round Butte, in Table Mountain district, for one year, for $3000, $500 of which amount was paid.

The interest of Reed, Solinsky and Reddick in the Lafranchi mine, at West Point, is bonded to J. A. Faull, for one year, for $3000.

The old Calaveras quartz mine, near Sheep Ranch, is to be reopened, and the work of pumping the water out of the old works is in progress. The property has been bonded to a San Francisco company. The mine has been idle for eight or ten years, notwithstanding that over $60,000 were taken out, with no deeper development than 600 feet. It has a 12-foot ledge of high grade ore. The company proposes, when the water will have been pumped out, to put up good, substantial machinery and drive the shaft down to a depth of 1000 feet.

Ledger: The Paragon, Mountain View, Tip Top, Bullion and La Palomacita locations near West Point are being opened up. It is proposed to run a 1200-foot tunnel which will tap them all. At present three tunnels are being extended into the Bullion, Mountain View and La Palomacita, and a 10-stamp mill is being erected, and 1200 feet of pipe is being laid to bring water.

Chronicle: Another large body of good ore has been found at the Gwin, this time on the 1400-foot level. Although it is not as rich as that taken from the 1300-foot level last week, still it is remarkably rich ore and will probably go away up in the hundreds per ton.

In the Steep Gulch mine on French Hill, owned by M. Nunes and C. Murphy, there has been a tunnel run in from the gulch which taps the lead at a depth of about 30 feet, at which point it shows a width of nearly 5 feet.

Toda and Schrack are still at work on their mine, which is situated on Toda ranch. The bedrock tunnel has now reached a length of 700 feet and it is expected to tap the gravel channel any day.

The hanging wall vein in the South Paloma shows up at a width of 5½ feet. The shaft is down 560 feet. Forty feet more will be sunk, making 600 feet, when stations will be cut and the work of cross-cutting will be commenced.

Inyo.

Register: L. F. J. Wrinkle went north last week to buy the Confidence and Mendocino mines, Funeral range, northeast of Panamint. The present owners are offered, for the two, $100,000, a guarantee that $100,000 worth of work will be done, and one-fifth of non-assessable capital stock.

Wm. Birchim will shortly begin developing his silver mine, the Indian King, east of the White Mountain summit.

Operations at Copper Mountain were scheduled to begin May 1st. Heavy storms have damaged the water ditches greatly, and repair work will be the first thing in order.

Nevada.

Telegraph: A crushing of eighty-nine tons of ore has been completed from the Wisconsin mine near Grass Valley. The result was $30 per ton, or $60 per load. The ore crushed came from the No. 4 level north, and the ledge is a good-sized one and there is a great deal more of the same quality in sight.

Union: A contract has been let for sinking a shaft on the Reddick mine on the Blue Tent road above Nevada City 430 feet.

Thomas, Curtis, Griffin and Horrell have leased the gravel mine at Randolph Flat. The tunnel is now in about 1500 feet.

A contract has been let for sinking the shaft at the Independence mine another 100 feet. Chavanne and Fricot are developing the property.

There has been struck a fine body of ore in the Massachusetts Hill mine in the shaft at a depth of 1300 feet. The vein is 3 feet in size, of fine quality milling ore, and has every indication of permanency. The company has been prospecting the Massachusetts Hill for over a year with indifferent success. They had every confidence that they had a good mine could they but discover the pay chute.

Placer.

Argus: A large force of men is working on the dam at Canyon creek for the Gold Run Mining Company.

At Weimar the Belle Union mine is to be equipped with a rock-breaker, self-feeder and concentrator. They intend running a ditch from Joe Brown Flat for water supply.

Sentinel: W. B. Lobner, H. S. Tittle and J. Zuver of Auburn have secured a four-year lease on a quartz ledge below the Georgetown road about one mile from Auburn. The ledge is from 3 to 4 feet wide.

James R. Hines of Weimar has been prospecting his Yellow Jacket ledge. The vein in some places is 16 feet wide.

Since the snow has melted at Westville work has been resumed at the Herman mine with a force of twenty-eight men. The company are preparing to use compressed air conveyed from a power plant four miles distant.

The Hidden Treasure Mining Company has purchased ninety tons of 30-pound steel rails. The rails are the same size as the ones used by the Nevada County Narrow Gauge Railroad. The rails will lay 2¼ miles of track and will be used in the main tunnels of the company's mines. The Glen Gravel Mining Company has purchased 3000 feet of rails to be shipped at the same time.

Plumas.

National Bulletin: J. F. Cummings and V. B. Allen, of San Francisco, are prospecting the Bushman gravel mine, north of Emigrant hill, owned by Goodwin and Thompson, and bonded for a limited period to the parties named. The mine is undeveloped, but indications point to a good property. Fine prospects have been found, and the channel is traceable a long distance.

Independent: Plumas T. Turner has started a tunnel to tap the gravel deposit in Union Hill, on the north side of Onion valley. This locality for many years has been the subject of speculation and favorable mention, but the task of exploring it was beyond the means of local miners.

San Diego.

Ramona *Sentinel*: R. Melrose has leased the Old Blue mine and is driving a tunnel.

The Ready Relief mill is running on fifty tons of Redman rock that assays well. Bailey Bros. are working one shift in the Ready Relief and two shifts in the Redman.

Mr. Tainge, of the San Diego mine, is soon to return with machinery to handle the water in the mine.

Shasta.

Free Press: Extensive preparations have been made at Keswick for the reception of the directors of the Mountain Copper Company, who will visit the property this week. A general cleaning up of the property has been made. Two furnaces have been running steadily, but during the directors' visit all three of them will be in operation. A new locomotive for use on the Iron Mountain railway has been ordered, and when delivered there will be four in use. This will necessitate the employment of more miners in getting out a larger quantity of ore to supply the ore trains and the smelters.

Searchlight: Director Chas. W. Fielding of the Mountain Copper Company has arrived from London, and is now at Keswick and Iron Mountain. With him is Louis T. Wright of London, who will succeed Alex. Hill as general manager of the company's properties. Mr. Hill will devote his entire energies to the development of the Balakalla group, which he recently bonded, and where a force of men are now engaged in opening up the ore body.

Siskiyou.

Journal: In the Steamboat mine, on McAdams Creek, under the supervision of Superintendent Brokaw, the machinery is excellent, and will, no doubt, keep the mines clear of water which has been a great drawback in working the property in the past.

The Chinese Company, at Hamburgh Bar, who are working the old Garrett mine, are accomplishing some good work. They have had very little trouble this spring with high water after the first freshet, when a portion of their dam was carried away.

The Nannetta B. mine, on Thompson Creek, which is owned by the Colorado Company, is still being successfully worked. This plant is one of the best in the county.

The Seattle placer mine, in the same locality, may be started up again, as the owners were put to a considerable expense in fitting it up. This is the old Shinar mine, which was always considered a good property. It was sold to the Seattle Placer Mining Company a couple of years ago for $10,000.

Vogan & Matthews will work the Classic Hill mine, on Indian Creek, near Happy Camp, this season.

The Klamath river dredger is now a few miles below Oak Bar. The dredger has been at work almost continuously since it was first built, which is a good indication that it is a paying proposition. At the time the dredger was built many old miners were skeptical as to its practicability on such a turbulent stream as the Klamath.

The Bunker Hill mine, near Happy Camp, is being worked this season with renewed energy.

A large pump from mouth of Barkhouse Creek, Klamath river, is to be used at the Greenhorn blue gravel mine, which it is expected will be able to handle the great amount of water in that claim at present. Hunter and Smith have been troubled considerably by water since reaching a depth of over 90 feet in the shaft. As soon as the water can be kept out, they will be able to reach the blue gravel at bed rock, over 110 feet below the surface.

News: The Horse Creek Mining Company have their ground stripped off and have made a partial cleanup, which shows a good yield of coarse gold.

The Salmon River Hydraulic Mining Company are extending their ditch about a mile further down the river for the purpose of working a low bar.

Golden and Eveleth are running a new tunnel on the Brown Bear and expect to strike the ledge in a short time.

The Black Bear Company will drive a new tunnel to tap the ledge at a lower point than has ever before been reached. The owners of the mine have profited greatly by the new wagon road which enables them to get heavy machinery to the property, which it was impossible to handle by pack trains. The mill has been running steadily on ore of good grade. About a dozen Chinamen are employed in the mine.

William Klein is taking good pay from his hydraulic mine at Sawyer's Bar, and makes a rich cleanup about once a month.

Chris. Jensen is piping on McKinney Creek with good prospects. He has plenty of water.

Tuolumne.

Independent: At Columbia D. Harrie and J. Lenox of Oakland are making preparations for opening up a gravel mine on the south fork of the Tuolumne river, at the mouth of Clark's gulch.

Work on the Sunset mine has been resumed. The machinery is now on the ground.

At the Alabama mine very high grade ore has been struck in the incline shaft. The vein is quite large and gold shows up freely to the naked eye.

An increased force of men will be added to the working of the McKenna mine in a few days.

Union Democrat: At the Rawhide the main shaft is down now nearly 1100 feet, with sinking going steadily on. Most of the ore sent up for reduction comes from the stopes between the 1000 and 900 and 900 and 800-foot levels. A big force is drifting north on the 800-foot level.

The shaft in the Alabama is now down 245 feet, and being driven a foot deeper every day by the contractors. A water station has just been completed at the 200-foot level.

Placer mining at American Camp, eight miles above Columbia, is picking up briskly. Within a radius of a few miles from that point are a number of good properties that will yield well when properly worked.

A few miles above the Camp is a section known as the Philadelphia Diggings, which is reported as very rich. A Stockton company are acquiring a number of claims in the district, and are spending considerable money for the purpose of securing water with which to wash their gravel. The preliminary surveys for a ditch have been made, which will carry a steady supply of water from the Stanislaus river.

The old Riverside mine, four miles above Italian Bar, on the Stanislaus, has been bonded to a syndicate who propose to commence active operations immediately.

The Gray Eagle, at American Camp, will soon be running full blast. A 6-foot vein in slate has been uncovered.

The Royal mine, at Experimental gulch, has a small force of men at work and from developments is proving a good proposition, with 5 feet of free milling quartz.

The Omega gravel mine, owned by C. W. Ayers and S. S. Bradford, has been sold by them to a Scotch syndicate for $40,000, of which $10,000 has already been paid, and the remainder will be forthcoming shortly. The property is situated on Table mountain, between the Alabama and Rawhide. Operations on an extensive scale will be commenced at once.

Yuba.

Nevada *Transcript*: The tunnel at the Good Title mine is in 600 feet, and the shaft from the tunnel is down 160 feet. In the shaft a few days ago a large shoot of rich ore was struck. The ledge is 11 feet 8 inches wide. There is also another shoot of ore coming in. A run of four days with the 5-stamp mill yielded $1500. The owners of the mine have located six more claims in the vicinity. They will put up a 20-stamp mill soon and work the mine on an extensive scale.

NEVADA.

Walker Lake *Bulletin*: At Silver Peak, in Chiatovich's tunnel, the ledge started on a month ago is looking and producing well. The pay streak is 6 feet wide. In ten days the ground will be opened so that stoping on the ore will commence, when a few men can keep the 10-stamp mill running.

The Valcalde Brothers are running the O'Hale mill on ore from their mines and are doing well.

The owners of mines in the White mountains, above Fish Lake valley, are to begin work as soon as the snow goes off.

Elko *Free Press*: At Tuscarora the Dexter has moved its cyanide plant to the De Frees mill across the valley.

A rich strike is reported made in the Coptis, owned by the Dexter Co. It is reported that the company will put up a 10-stamp mill.

Work has begun on the Young America East; probably will begin on the Poorman June 1st.

Pioche *Record*: Last fall the old Pacific tunnel, east of the Meadow valley divide, was opened up and work on it pushed to reach the Yuba vein. The porphyry dike was reached but no ore found, and the first workers gave it up. Later the work was prosecuted by V. Lloyd and J. Cook, and drifting was begun, which, after running something like 100 feet, developed a bunch of galena ore, rich in silver.

The extreme southern part of Lincoln county, that bordering on the Colorado river, will this summer experience a mining boom. Three mills are in operation at El Dorado canyon and points below, on ore from lode claims which heretofore have claimed the bulk of attention given to mining in that section, and all are doing well.

The Temple Bar Con. Mining Company, organized in San Francisco under the laws of Arizona, is formed to work placers in the Colorado at Temple Bar. The company's property embraces 1700 acres. A 600-horse power engine will be erected for pumping purposes. It will be the largest in the State for hydraulic purposes and will lift 17,000,000 gallons of water every twenty-four hours. The water power will be 125-foot head, and the company expects to work from ten to fifteen hydraulic giants. An electric plant will form part of the machinery put in, and all the machinery will be located on the Nevada side.

Gold Creek *News*: Captain Pinder is expected back from San Francisco next week with machinery for the hydraulic elevator which will be placed in Hope gulch. Sluicing will begin in Hope gulch. This ground was nearly all washed over by Penrod years ago. It is the plan to run through the old tailings and to wash down the hill slopes that were left. The sluice boxes are elevated to a height of 40 feet and have a fall of 7 feet in 160. At the end of the box are 40 feet of tables for catching the black sand that goes off in the tailings. These tables are about 12 feet wide and have 4000 augur holes filled with mercury.

Silver State: About Ely and Cherry Creek, in White Pine county, everything is picking up on account of the revival in mining.

The Star and Gray Eagle properties at Cherry Creek are being improved extensively. Pumping and hoisting works are being erected and a concentrator will go up soon. The pump will be the largest in operation in the State, having a capacity of 3000 gallons a minute.

The Newton Dunvan mine of Kinsley has about 1200 sacks of low-grade ore out for shipment, and should the returns meet with their expectations the owners will continue extracting ore for shipment.

A 5-stamp mill is to be put up shortly at the Ben Hur gold mine, twenty-five miles from Cherry Creek.

The Chainman mine at Ely will have a good-sized mill soon. Bids are now out for hauling 132,000 feet of lumber. If present intentions are carried out an electric light and power plant will be erected and operated in connection with the mine and mill.

Lyon County *Times*: Nearly all the machinery has arrived for the Peck plant in the Douglass mill.

It is reported that Spragg & Martin have sold their copper mine in Mason Valley for $13,000, to the same parties who bought the Dobbins mine.

The work of running the tunnel on the Dobbins copper mine in Mason Valley is progressing. The new company has four men at work, and the whole tunnel is said to be in first-class copper ore.

OREGON.

Rogue River *Courier*: Marteen Brothers cleaned up last week on the Althouse and got $3000 from the sluices.

Crow & Taylor will ship another carload of ore from Merlin to Ashland on the 10th.

Horner and Savage of the Seattle Dredger Co. are out on Silver creek looking up placer interests. A survey will be made and ditches dug this season.

River bar mining will soon be in operation if the dry weather keeps up, though there is more snow in the Siskiyous than usual at this time of year.

The Coast Range Mining Co. is putting in a pumping plant near Woodville.

The Hampton-Lewis placers are operating two giants night and day with sixteen men.

Grant's Pass *Observer*: Fox & Co. are working on a copper deposit near Waldo that promises well.

Belding & Dowell's 5-stamp mill is running on good ore from their Green's creek mine.

Copper ore that carries from $3 to $8 in gold is reported found near Browntown by Smith & Thurshburger.

The Rocky Gulch Co. made a partial cleanup last week which was very satisfactory. They will have plenty of water to run nearly all summer.

The new 5-stamp mill at the Jewett mine will be ready to start up in about ten days.

They have about 200 tons of ore on the dump ready to haul to the mill.

Baker City *Democrat*: The Elkhorn Mining and Milling Company has been incorporated to acquire the Snow Flake, Big Spring, Calumet, Monitor, Gold Bug, Hecla, Silver Bug, Tip Top and Willamette mineral claims in Baker county; capital, $1,500,000.

The shaft on the Con. Virginia is down 55 feet, and the depth attained for the month was 75 feet. Sinking will continue for an indefinite period.

WASHINGTON.

Spokesman-Review: The Bridgeport Mining and Milling Company will push development on their Mineral hill properties in the Okanogan this coming season. The tunnel already started and in 65 feet will be continued into the mountain for 1500 feet, which will give a vertical depth of 800 feet.

BRITISH COLUMBIA.

(Special Correspondence).—Boring for coal has been suspended in the immediate vicinity of Vancouver. The seams found within a thousand feet of the surface were but a few inches thick. In the meanwhile metal mining is being carried on practically in the city itself. Ore has been located at Lynne Creek, North Vancouver, carrying values to the extent of $27 in copper and gold.

Nothing is talked about on the Seaboard just now but the free milling propositions owned by Vancouver people. There are many smelting prospects at Vancouver's very doors, but they are not in good favor just now and it is next to impossible to dispose of treasury stock for development work. On the other hand, the free-milling properties are no sooner stocked than there is a rush made for shares before the price is raised.

In Lillooet the road to the Golden Cache mines is built, and the mill plant is in process of erection, while the Alpha Bell and Gold Weef propositions are being developed with abundance of money in the treasury from the sale of stock.

Vancouver, May 8th, '97.

The shipments of ore and matte from Kootenay, notwithstanding the difficulties encountered, are gradually coming up. For the week ending May 1, the shipments showed a value of $48,863.74, swelling the total amount for the year to $2,641,291.68, an average of $660,322.92 per month. The following table gives the sources for the year to that date:

ORE EXPORTED.

	Tons.
From Slocan via Kaslo	9,798¼
From Slocan via Nakusp	2,642½
From Rossland via Northport	6,479¼
From Rossland via Nelson	52
Total	18,990¼

Total value—	
Through Nelson custom house	$1,104,184 32
Through Revelstoke (Nakusp)	292,110 65
Total	$1,396,294 97

Average value per ton, $73,526.

PRODUCE OF SMELTERS (SHIPPED).

	Tons.
Nelson (Hall mines) matte	582
Trail smelter matte	2,319¼
Total	2,901¼

Total value, $1,241,995.71; total value of ore and matte exported, $2,641,291.68.

Spokesman-Review: It has been definitely decided that the Le Roi smelter will be built by the Le Roi Company, instead of by a new company to be made up of individual members of the Le Roi and outside individuals. This will call for heavy expenditures out of the Le Roi treasury for several months, aggregating about $100,000. Still it is expected that the company will continue to pay its regular monthly dividend of $25,000. In addition to this the company has cut out a great deal of development work in the mine, and will improve its plant by putting in additional machinery. With its new machinery, just put in complete working order, the Le Roi mine can hoist 500 tons of ore daily.

In the Fort Steele country the North Star will ship 6000 tons of carbonate ore this season. The sulphide ore is not being taken from the mine. The carbonates which will be shipped will probably average 62 per cent lead and 40 ounces of silver to the ton.

The expected exodus to the North Fork of Salmon river has commenced. From ten to twenty people leave the cars daily at Gillam's and strike into the mountains.

Largely owing to the promised building of the Crow's Nest Pass Railway by the Canadian Pacific people, the rush of miners, prospectors and capitalists to the Fort Steele country this year will almost amount to a stampede. Bonner's Ferry is one of the chief outfitting points for the camp, and although the season has hardly opened, parties arrive here almost daily and leave for Fort Steele over Wild Horse trail, which is easily fifty or ixty miles the sortest route.

The Rico, which has paid $187,500 in dividends, is now developed about 6000 feet in the seven tunnels. Thirty men are employed in extending all of the tunnels. The concentrator and tramway recently ordered will be finished by September 1. The tramway will be a mile aad a quarter in length. When the concentrator and tramway are completed they will commence to mine the vein on the original discovery. This vein will average 12 feet in width on clean and concentrating ore.

A sixty-ton concentrator has been ordered for the Jackson mines in the Slocan. George Alexander and his associates are owners of the property.

ALASKA.

News: In the Berner's Bay district the Julian Company put up a 10-stamp mill last season and since the first ton of ore was milled they have had an exceptional run of prosperity, saving the three months' shut down this winter necessitated by a shortage of water.

This season two other companies are beginning operations in that district. The Portland-Alaska Company, at the head of which is L. Nicolai of Portland, is erecting a 10-stamp mill on the Horrible group, the mill timbers and machinery being already on the ground.

A mining man of Butte, Montana, has purchased the Greek boys' property, and under the management of D. E. Lutes is preparing to build and equip a 10-stamp mill.

In the Sum Dum district the Sum Dum Chief Mining Company has a force of men at work on their new mill and tramway, which they hope to have completed and ready for ore by the first of July or August.

In Silver Bow basin at the Nowell placers the two giants that were in use last season will be employed this summer. The same company will operate their 20-stamp mill as soon as the tramway leading to the mine can be used.

The Alaska-Juneau Company, purchasers of the Campbell mill of thirty stamps, will run steadily during the summer and a very large amount of development work will be done by the company. A diamond drill will be employed in prospecting the ledge at a low depth, it being the intention to sink several holes at least 1000 feet deep.

On the Webster property men have been employed all winter driving tunnels and blocking out ore, and their mill will also be set to work at an early day.

The Ebner Gold Company's plant is the only one in the basin which has run during the winter. The capacity of the Ebner mill will be doubled within the next ninety days, the additional machinery having already been ordered. By the middle of June the entire basin will be a beehive of industry and will afford employment to 300 or 400 men.

IDAHO.

Spokesman-Review: The superintendent of the Hiyu mine in the Florence district in his report to the directors states that there is ore enough in sight to run a 10-stamp mill for two years. The work of development is being pushed with six men employed. The directors say that they will have a mill on the ground inside of three months.

Silver City *Avalanche*: The Trade Dollar Company has secured a 90-day extension of time upon its bond on the Alpine group, belonging to Lewis & Nichols, and will continue development work.

UTAH.

Salt Lake *Tribune*: At Marysvale, in the New Crystal Company's property, the incline has been run 350 feet on the ore chute, the ore showing a valuation of $4 in gold, 30 ounces silver and 30 per cent lead, and spreads out blanket-like between the porphyry and quartzite, and at times is as much as 5 feet in thickness. Ore is now being extracted and shipments will begin in a short time.

At the Webster the pushing of the main tunnel, which has now penetrated the hill 1650 feet, continues, and a large amount of ore is exposed, which shows 25 ounces silver, 23 per cent lead and gold of the value of $2 per ton. The property is owned by W. R. Hearst and others, and is managed by R. C. Chambers.

Charles D. Hank and others have secured an option on the Chattancoga, and will begin prospecting the ground at once.

Kramer and Botboldi have secured an option on the Great Western, owned by Henry W. Lawrence, and developments will continue throughout the season.

A lease and bond has been secured on the Argonaut placer at Bingham by Matthews, Bolton and Peterson, who will proceed at once with the sluicing of its sands. The bar covers twenty-three acres, and spreads out over Carr Fork. The bond is fixed at $20,000, while the holders have five years in which to close the deal.

Reports from the Sioux-Ajax tunnel are that it has now penetrated the zone to a distance of 2360 feet.

Mammoth *Record*: The new East Tintic Railway is now hauling about 200 tons of ore a day from the Mammoth mine to the mill, which amount exceeds the regular shipment of the mine since the road has been built.

Bullock & Radcliff have resumed work on the Annie Laurie.

Supt. Toll of the New State is ordering the machinery for a steam hoist which is to be put in at the property.

Mercur *Mercury*: Smith, Blake and associates are figuring on securing a lease on the Sunshine mine and mill, and, if successful, will have the property in operation in less than a month. These gentlemen were among the first to apply the cyanide process.

The La Cigale property continues to improve. The vein has grown larger and richer as depth is attained until now the width of the vein in the lower levels is not known and will not be until it is crosscut.

Hereafter the cleanup at the Geyser-Marion will be made every fifteen days, and it is expected that the total output will be $18,000 per month. It takes $5600 of this for the payroll and $1000 or $2000 more for cyanide, zinc, coal and various other necessary expenses.

A favorable change has occurred in the Daisy incline, now down about 300 feet. The ore has made into the footwall to a depth of at least 4 feet, adding that much to the width of the ore body.

The Brickyard north drift is now in about 200 feet and the good ore still continues.

Tintic *Miner*: Shipments from the district for the week are as follows: From the Bullion-Beck mine, 10 carloads ore; Bullion-Beck mill, 15 carloads concentrates; Centennial-Eureka, 1 carload ore; Uncle Sam, 4 carloads ore; Mammoth mill, 7 carloads concentrates; Utah, 3 carloads ore; Lakeview and Stockton, 1 carload ore; Swansea, 3 carloads ore; South Swansea, 5 carloads ore; North Star, 3 carloads ore; Black Dragon, 1 carload ore; Dragon iron mine, 2 carloads ore daily.

The Sioux-Ajax tunnel people are preparing to put in an air compressor at the Sioux mill, and will hereafter furnish their own power to the drills in the tunnel.

The lessees of the Cleveland mine at Mammoth commenced work on the property Saturday. The work is being done through the Sioux-Ajax tunnel.

Joseph Gerber and Jacob Hupfer have sold the Hungarian mine to Frank Knox for $15,000—$1000 down and the balance in payments to be completed in a year.

A large amount of native silver is coming out of the winze from the 1000-foot level of the Beck. The winze is now down over 50 feet below the 1000-foot level, and there is no sign of the end of the ore body.

A lease and bond will be given this week on the Black Jack and Tidal mines belonging to L. E. Riter, and development will be commenced at once.

MONTANA.

Miner: A big strike has just been made in the Anderson mine on the Parrot flat, near the Glengarry, and the mine which has been merely a promising prospect up to this time is now one of the producers. A vein of ore from 3 to 8 feet wide was cut through recently on the 200 level. The ore is of good grade and carries gold and silver as well as copper.

The Bannack Gold Dredge Company has improved their plant which is at work in Grasshopper creek. The placing of the plant at the stream where it is located has cost the company about $200,000. Last year nearly half that amount was, however, secured in gold from the bed of the creek.

On the Alice properties in Walkerville the monthly output is about the same as last month. About 300 men are employed in the mines and in the mill and there is no probability of that number being cut down in the near future.

Inter-Mountain: Judge Knowles decided a question of general interest to mining men Friday in the United States District Court. The suit was that brought by Anton Baum and others against Ross Deegan, an application for an injunction to restrain the defendant from working a mining claim in Jefferson county. The vein passed from the Buzz lode, cutting the side line, into the adjacent Amazon. On its dip it is so inclined that eventually it passed into the Buzz, although its apex was in the Amazon. The rule generally believed to prevail is that a miner may follow the vein on its dip outside the side line, if it goes there. In the case in controversy, however, the end lines of the Amazon, in which is the apex of the vein, are not parallel, one of the side lines being 85 feet longer than the other.

Judge Knowles held that the right to follow outside the side lines exists only when the end lines are parallel.

The owners of the Amazon, Baum et al, had obtained an injunction against Ross Deegan, the owner of the Buzz, to prevent him from taking any ore out of the vein that apexed in the Amazon. Judge Knowles discharged the injunction. It is understood that an appeal will be taken to the Circuit Court of Appeals at San Francisco.

COLORADO.

Denver *Republican*: The settlement of the pumping proposition in the down-town district of Leadville is of much more importance than appears on the surface of the detailed agreement published, as it means the development of a section of territory that has been only partially prospected heretofore and which promises to go far toward extending the gold district from the Little Johnny on the north to the Big Johnny on the south, a distance of between seven and ten miles. The district that will be drained includes everything from the Pendery fault on the east to California gulch on the south and west, and Stray Horse gulch on the north, and within this territory are located the Penrose, Bon Air, Welden, Bohn, Northern and Sixth-street properties, which are all producers of good ore, and will this year greatly increase the product of the camp.

Another important effect upon the Leadville mining district will be the development of the territory south of California gulch. Parties are now looking over the ground preparatory to sinking two shafts in the section south of the gulch. It is expected that it will be necessary to sink 600 feet before reaching the rich ore chute that is known to cross California gulch, and the money necessary to develop the ground is already subscribed in the event that it is decided to commence work.

At Ouray a rich strike has been made in the Commodore Foote. The vein consists of a rich body of native and brittle silver and chlorides. The vein at the opening was about 15 inches wide.

The new strike at the Guston turns out to be a wonderful find. The miners are now working in the new ore body, which is about 12 feet in width.

New prospects and mines are being opened up almost every day, and the miners are fast getting out of town and into the hills.

Arrangements are being made to resume work on the St. Paul mine, above Red Mountain. A contract will be let at once to sink the shaft 200 feet.

There were shipped from this station during the month of April 155 cars of ore, a shortage of seventy-five cars from the shipments made during the month preceding. This is accounted for owing to the regular spring condition of the Sneffels and Bachelor roads.

At Yankee a party of Eastern men who have been spending several weeks looking over the district, have taken options on several mining properties, and will at once start the erection of a new 50-ton daily capacity concentrator, which will have sufficient power to be increased at any time to 100 tons daily. The mill will be built near the mouth of Cumberland gulch, affording a down-hill pull from the mines in Silver Creek, Cumberland and Warsaw gulches.

It is the intention of the Standard company to shortly begin the erection of a large mill for the treatment of their ores.

At Idaho Springs in putting through an upraise at the tunnel of the Lamartine mine the body of lead ore has increased both in size and value. This body of ore is independent of the mine proper, where the force of miners has been increased to 150 men. Almost every one of the levels being worked is producing an exclusively smelting ore.

The Amazon and Crœsus mines, near the Dove's Nest on Seaton mountain, are being started up this week. They are among the oldest locations in the State.

At Cripple Creek the best as to the output give 14,000 tons handled by the process plants, 1500 by the stamp mills and 6000 tons by the smelters, making a total of 21,500 tons of an aggregated value of $1,075,000. The mill ores were distributed approximately as follows: Metallic extraction works, 6200 tons; Colorado-Philadelphia, 4300 tons; Gillett and Brodie, 1400 tons each; Page mills, 700 tons; stamps, 1500. These figures give the ore an average value of $50, a slight increase.

The manager of the Orpha May gives the April production at thirty broad-gauge carloads, or 600 tons, of an average value of $50. Work on the ore from the shaft bottom has commenced, the drift having been extended 40 feet from the 480-foot point.

Station for the third level from the main shaft of the Gold Coin at 330 feet depth has been completed, and drifting commenced. During the week the mine outputted 290 tons of the usual average of $35.

The Castle Creek Tunnel and Power Company are about to let contracts to drive the tunnel and also the make upraises, about 2,000 feet in all. By reason of the fact that the tunnel has not been worked for three years, a considerable amount of work is necessary to clean it up. The company also owns the Castle Creek electric light plant, and improvements will be made on this property, which will thus enable them, in addition to supplying electric light to the city, to furnish electric lights for the mines belonging to the company, and also power to run an underground hoisting plant.

The new company working the Squaw Mountain tunnel under bond and lease, now has two machine drills working in the breast, and is making 12 feet a day. The tunnel is now 1,600 feet in. Production from vein No. 4 and its cross-vein is going on heavily. Last week eighty tons were shipped, and returns show half of it to have had a value of $180 a ton, and the remainder was $40 ore. It is the expectation to make a second shipment of about 100 tons before the end of the present month.

At Fairplay the old Beaver Creek Placer Mining Company has been rejuvenated under the name of the Fairplay Hydraulic Mining Company, by Senator Reuter and others, with J. H. Abeel as superintendent. The company has 1,000 acres of good placer ground and pipes its water from Mosquito creek to the Beaver ditch, which supplies the workings with a big force of water. The company will employ from thirty-five to forty men this season on the works.

The annual report of the Pharmacist shows that during the year the company has expended $30,000 in sinking and equipping the new shaft and in opening the mine, and has cleared in addition sufficient to lift the indebtedness of the company, about $11,000. The year closes with the property entirely out of debt and with one of the best equipped mines and best opened ore bodies in the district.

In Clear Creek County on the Bellevue-Hudson mine on Columbia mountain, the vein has widened out to 13 feet 6 inches in thickness. The shaft has reached a depth of 600 feet from the surface and 125 feet below the level of the tunnel. A tunnel from the base of the mountain is in contemplation. Shipments of the ore, which is of a good grade in silver, are regularly made.

NEW MEXICO.

Silver City *Enterprise*: At Mogollon in the face of the main adit level of the Confidence mine a large body of ore has been encountered which is of higher grade than the ore recently milled. The vein at this point is 12 feet in width and the ore body over 4 feet wide and increasing in width.

On the Maud S a body of high-grade ore has been struck on the 375-foot level. Another strike has been made on the 150-foot level and is supposed to be the upper portion of the ore body found below.

John T. Mitchell who came from Denver to expert the Tellurium mines on Little Dry creek has secured an option on the property and will commence work immediately.

ARIZONA.

Phœnix *Republican*: Downes & Burke of Huachuca have bonded their mine.

The Excelsior Mining Company at White Hills, has recently erected a 40-stamp mill on their property.

In the Russellville district in Cochise county the old Peabody mine, which has been a large producer, was some months ago bonded to Fiege & Joerss and since rebonded by them to a Philadelphia and English company. The company has purchased a diamond drill and will thoroughly exploit portions of the Peabody ground which have never yet been opened up.

Prescott *Courier*: In the northern part of the Territory there are sixteen men at work in the Minnehaha and Bismuth claims, upon each of which 500 feet is to be sunk. The Minnehaha has a double compartment shaft, the Bismuth a single.

A cyanide plant is to be put in to work over 400 tons of tailings from the old Fortuna mine. Men are now at work erecting this plant. The Fortuna mill will start up in a few days.

Nogales *Oasis*: The Empire Smelting Company have got into place the two hoists on their mines—the Flux and Hardshell. It is the intention to have a month's supply (2,400 tons) in the ore bins at the smelter before blowing in, so when the fire is again lighted a long run can be made without running short of rock.

From Mine to Mint.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia.

The great increase in the production of gold in recent years is not attributable alone to the discovery or opening of new fields. It is largely due to the use of better business methods in the working of time-honored processes, but more largely to the introduction of new means of extraction, which, whether worked alone or in combination with the old, make it possible to treat with profit immense quantities of low-grade ores in known deposits of so-called refractory ores which have hitherto defied profitable treatment.

If space permitted, it would be interesting to take a glance at the whole field of gold getting, but it is hoped that some notes on the later and perhaps the coming methods of extraction may prove useful.

It is likely that the stamp mill and amalgamator process will survive as long as we have free milling ores. But the day of letting rich tailings go to waste has passed or is rapidly passing away.

The Robinson mine in South Africa furnishes an admirable illustration of what modern methods can accomplish in supplementing the stamp mill.

In 1893, 94,842 tons of ore were worked—first by the familiar method of stamping and amalgamation. The yield from the stamps was $1,885,583. The tailings, instead of being allowed to go to waste, were passed over Frue vanners, by which sulphurets to the amount of 2714 tons were obtained. These concentrates were roasted, treated by chlorination, and yielded $219,514.

The tailings from the concentrators, amounting to 55,200 tons, were passed on to the cyanide works, where gold to the amount of $289,722 was recovered. A statement of these returns would show:

	Per ton.
From mill	$19.88
From chlorination	2.32
From cyanide	3.05
Total	$25.25

It will be seen that more than 20 per cent of the returns came from the tailings treated by modern processes, and that these added 27 per cent to the output from the stamps. These results should be very suggestive to mine owners.

It would be a platitude to say to any intelligent mining man that no one process is suited to all ores; but it has not been so well understood that no single process is likely to afford the largest possible returns from any one ore.

The concentrates in the case of the Robinson mine were collected at very low cost while the tailings were passing from the stamps to what would have been the dump. Yet they yielded $80.88 per ton by chlorination. The tailings from the Frue vanners cost nothing for crushing, yet they yielded more per ton than some ores profitably treated in this country.

The chlorination process has found its way into quite extensive use in the United States, and much more may be expected from it when, as is hoped, water power expended in the electrolytic decomposition of common salt for the production of chlorine may dispense with the transportation of chemicals to remote regions. This seems to be one of the possibilities of the future.

The limitations of the cyanide process are beginning to be understood and its possibilities will become more apparent as this knowledge is extended. Its failures are what might have been expected with the experience of to-day. That it has a brilliant future no one can doubt who has kept pace with recent developments. It is suited to but a limited class of ores, yet these are plentiful. The ores of the Mercur mine in Utah would be valueless for treatment by any other known process. It is best suited for silicious or limestone ores, in which the gold is finely divided. It will make a fair extraction from pyritic ores in which oxidation has not begun. It is suited to old tailings weathered and leached by rains, and to new tailings where the leaching is made too slow by slimes. Any difficulties here are likely to be mechanical ones.

It is not suited to ores carrying coarse gold, as the time required for solution is too long. It has not been successful with ores carrying copper, which seem to have a destructive action on the cyanide solution. Partially oxidized pyritic ores or tailings must be rich enough to pay for a preliminary alkaline leaching.

A comparatively simple chemical examination will determine the treatment best suited for any gold-bearing material, and many an expensive mistake has been made by subjecting a valuable ore to a treatment admirably adapted to some other and quite different mineral deposit.

It is now fully understood and appreciated that oxygen enters as a necessary element in the reaction by which gold is dissolved by potassium cyanide.

Efforts are being made to supplement the cyanide solution with oxidizing chemical, but while much may be hoped from experiment in this direction there is as yet no assured success to note.

(To be Continued..)

Shaft Sinking Accounts.

There are being sunk at the present time in California more shafts to considerable depths, from 500 to over 2000 feet, than ever before in the history of mining in this State. Data as to the cost is of value in making up estimates, but of this very little is available, mainly because such a small proportion of the mine managers have time to keep or appreciate the value of segregated accounts. In no part of the world has more been done toward developing the best of modern methods of mining the precious metals than in California, but probably in no other important mining field is so little attention paid to the keeping of accounts. The main value of detailed statements of costs of all kinds of work about a mine is not in that it is a check upon leakage, but as a guide for future work and as a reference. No mine owner or manager who has looked into the affairs of any old mine but has bewailed the fact that so little data is available, not only as to costs but as to what work has been done.

Mark B. Kerr, superintendent of the South Paloma mine in Calaveras county, has sent some data as to the details of cost of sinking 550 feet on that mine. It will be seen that the average cost per foot was very low. This was due in large measure to careful and economical management. The size of the shaft is 5x7 in the clear, with one working compartment and a ladderway. The power used was steam. The timbers are of Oregon pine and 12x12 inches in size:

Wood (20 cords per hhd. ft. @ $4.50 per cord	$ .90
Candles	.20
Powder and fuse	.50
Top labor	2.50
Timber and lagging	2.00
Oil for light	.05
Engine oil	.05
Steel and charcoal	.05
Management and office	2.25
Water for boiler and air blower	.20
Mine labor (contract)	7.00
Total per foot	$15.70

Of Commercial Importance.

DEPARTMENT OF THE INTERIOR, UNITED STATES GEOLOGICAL SURVEY, DIVISION OF MINING STATISTICS AND TECHNOLOGY.—WASHINGTON, May 8, 1897.

I have received the following cablegram from Coolgardie, West Australia, to which I beg to call your respectful attention and trust that our American mining machinery will be exhibited in a manner creditable to the country and profitable to our manufacturers:

"Kindly distribute among American manufacturers: International Exposition gold mining machinery under Government auspices opens Coolgardie, October 1st. (Signed) Williams, Secretary, Coolgardie."

Very truly yours, DAVID T. DAY, Chief of Division.

What a Good Many Say.

THE MINING AND SCIENTIFIC PRESS is the best and has the largest circulation of any mining journal in the world. No practical miner should be without it.—Colfax, Cal., Sentinel, May 7.

The Debris Troubles.

(From our Special Correspondent.)

The much advertised difficulty at the Red Dog and Goodwin gravel mines at You Bet, in Nevada county, has stirred up considerable ill feeling throughout this entire section of country. The Anti-Debris Association, or to be more precise, some of its officers, have succeeded in making themselves quite obnoxious, and the result of their work forebodes serious consequences unless the prudent measures sought to be pursued by wiser counsel should succeed in its honest efforts to adjust the difficulty.

A committee of five gentlemen from the Sacramento Chamber of Commerce met a like committee from the Board of Trade of Nevada City to visit and examine the operations and methods at the above named properties. Mr. S. K. Thornton, vice-president of the State Miners' Association, who happened to be in Nevada City on business connected with the Association, and a representative of the MINING AND SCIENTIFIC PRESS temporarily here, were invited to accompany the committees. Arriving at the mine the committees found that a "spy" had already preceded them and endeavored to serve injunction papers issued from the Superior Court of Sacramento county, but failed because of his inability to find the owners of the properties. Had his efforts not been futile his work would have precluded the possibility of affording the committees an opportunity of carrying out the purpose of their visit.

The facts of this case can be briefly stated. These people at You Bet have for three years operated in these claims by the sluicing process. Their blasts generally were in short drifts of from 10 to 15 feet and 8 to 10 feet crosscuts. The amount of powder used was from ten to fifteen kegs (twenty-five pounds each), and not 3000 pounds as charged. There was no evidence of monitors now or in the past.

In addition to this it may be stated that their work would naturally be a matter to come under the supervision of the U. S. Debris Commission, whose agent is almost constantly in the neighborhood.

The waters from the mine flow through a river bed filled with tailings from the upper hydraulic works which had been accumulated previous to the Sawyer decision, and during the rains and present dissolving snows in the mountains these tailings are naturally carried along and serve to a large extent to increase the limited debris from the present ground sluicings in the mine. And yet, in spite of all the interference of these natural elements, the law-abiding miner is prohibited from pursuing his vocation. The writer heard the agent of the anti-debris people acknowledge that he had never been refused admission to the mine, whether at night or in the day, and that he had always been the recipient of courteous treatment.

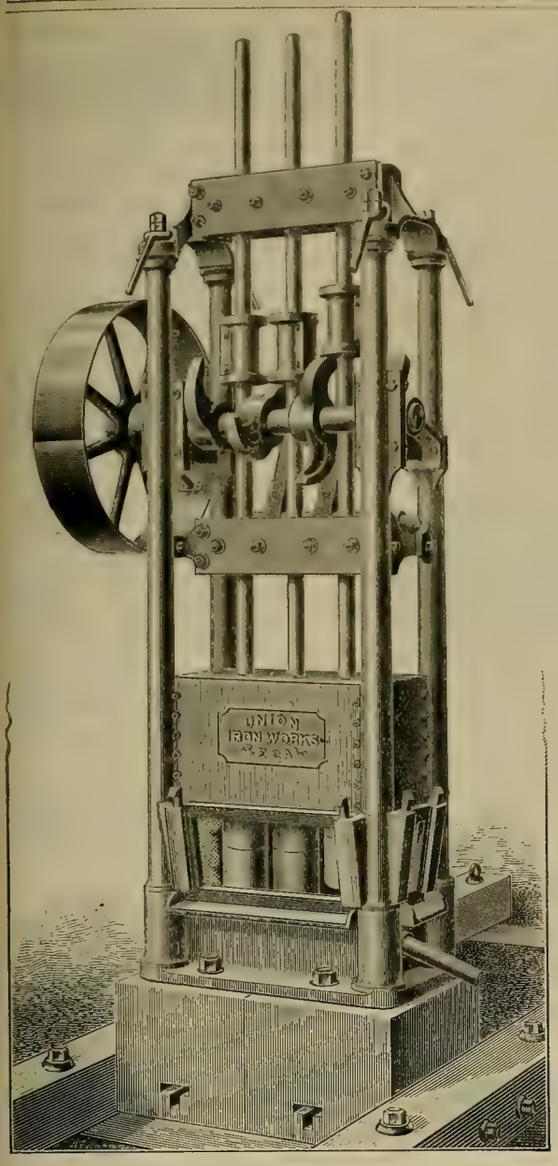
In giving this unbiased and truthful statement of facts the writer desires to add that the several owners declared to the committees their constant observance of the law in their case, and that their work was always open to inspection to officers of the law and to interested people. These gentlemen command the respect of the community throughout the county, and their frank and honest countenances stamp upon them the character of honor and uprightness.

This last measure of persecution should be speedily visited by an adjustment due a law-abiding body of men, and the proper reparation should be made on the part of a few who, like pariahs, seek to thrive by imposing upon valley people's credulity. Neither the mountain people nor the valley folks can stop the springtime melting of the winter snows, nor the flow of the waters from never-failing springs adown the hillside, carrying with them the detritus in their pathway. Adding this to the sluicing of gravels, but bearing in mind the long and winding way through which they travel before reaching the valleys, the careful observer will find the waters presented in an original condition of clearness and fitness for culinary and drinking purposes, despite the efforts of a few who cling to a losing cause that would live only to bring business stagnation in its possible success. J. F. L.

Nevada City, May 17, '97.

Silver With the Gold.

The complaint against the Mint statistican, Charles G. Yale, as made by the *Chronicle* and other journals of the State, for not recording a heavier percentage of silver with the yearly product of the precious metals of California, may have a very good effect, even if it does redound on the millman and lighten into correctness the work of the Mint statistician. The controversy will do good by way of awakening the gold miners of California to the fact, which for years I have been trying to impress on their minds, that in working the free gold milling system, composed of stamps, silver plates and concentrators, that too large a percentage of silver is lost. It is a well settled fact in the minds of investigators that the average value of silver does not reach to exceed 10 per cent, and yet there are many mines that will run from 15 to 30 per cent, but we do not get it by a long shot—not 25 per cent of it.



We will now do some figuring on this basis and see the result: Mr. Yale gives the total yield of gold for California at $17,181,582. Ten per cent of this amount would be $1,718,158.20, and 25 per cent of this amount saved will be $429,538.50. Mr. Yale gives as his estimate $422,453.60, and I think his figures are as near correct as it is possible to have them. It must be remembered that there are various chlorination works in various parts of the State, working sulphurets, not one of which, as far as I know, first extract the silver contained therein prior to chlorination. Consequently, all the silver is lost. Now for the question of silver in our California gold mines. Some twenty-five years ago the question was agitated as to the average percentage of silver in the gold mines of California, and from data gathered carefully to settle this point the following table was made up from the many assays of ores from the various parts of the State, which table was compiled, I believe, by Prof. Henry G. Hanks:

Gold. Per Cent.	*Fineness.*	*Silver. Per Cent.*	*Fineness.*
75.86	758.6	20.67	206.7
86.57	865.7	12.33	123.3
86.87	868.7	12.33	123.3
88.75	887.5	8.88	088.8
89.10	891.0	10.50	105.0
89.61	896.1	10.05	100.5
90.01	900.1	9.01	090.1
90.33	903.3	6.80	068.0
90.70	907.0	8.88	088.0
90.90	909.0	8.70	087.0
90.96	909.6	9.04	094.4
92.00	920.0	7.00	070.0
92.70	927.0	6.90	069.0
93.53	935.3	6.47	064.7
96.42	964.2	3.50	035.8

This list shows an average of 9.41-100 per cent, taking the entire State. Now, calculating on this basis, and that I am right in estimating the percentage of silver saved, the result then would be $401,946.49, which is $20,317.11 less than Mr. Yale's estimate. These figures prove two points: First, that Mr. Yale's estimate is approximately as correct as it is possible to have it, considering the difficulty the Mint statistician has in getting even the gold product, and, secondly, that not over 25 per cent of the silver contained in the ores is saved. In many of our mills labor is figured down to hardly a fair living rate, and yet silver is allowed to go to waste, and, in some instances, in value more than the whole mill labor bill. Capitalists are satisfied to get 10 per cent yearly on their mining investments, and yet, in some instances, run 5 per cent a month off that might be saved, as well as a given percentage of gold more. There are two important individuals for mining operations—the millman and the assayer. One tells the value of the bullion he gets from a given quantity of ore, and the other can tell you what you don't get. All mills have the former, but too few the latter—the sequel is clear.

Coast Industrial Notes.

—The orange shipments from Riverside, Cal., in April amounted to 121,593 boxes, and a total for the season of 614,890 boxes, or 2157 carloads of 20 tons each.

—Langstaff and Wilson are putting in an electric-light plant at Forest Hill, Cal. In addition to furnishing light, they will have a plant for the manufacture of ice.

—A franchise is being sought in Los Angeles for an electric railroad on San Pedro street to a point beyond the city limits, and it is expected that the road will before long be extended to San Pedro.

—At a meeting of the city trustees of Sonoma, Cal., last week a special election to vote on the question of bonds for the municipal water works was called for June 14th. The sum asked for is $22,600.

—An electric line is to be built connecting the Garlick power plant at Copley, Cal., with the National mine and mill at Old Diggings, three and a half miles, being the third mining plant in that district to be run by electric power from Copley, ten miles from Redding.

—It is estimated that there are now growing in Orange county over 7000 acres of sugar beets, and the indications are that in a few years this large acreage will be materially increased. The Chino factory has contracts for 4000 acres and the new Alamitos factory has about 3500 acres.

—W. A. Clark, who is building the Los Alamitos sugar refinery, in southern California, is in Paris, and a letter from there states that he has purchased a tract of 31,000 acres for a coffee plantation from President Diaz, in Mexico, near Vera Cruz, and will establish a line of steamers and form a colony down there.

—C. W. Leighton of Chicago has leased several thousand acres of land near Tampico, Mexico, for American capitalists, who will put the entire tract in sugar beets. They will establish a beet sugar factory near there. They claim that with the cheap labor of Mexico and the richness of the land they can make big profits in their enterprise.

—Senor Romero, Mexican minister at Washington, publishes an estimate of the money circulation of Mexico, in which he states that the five authorized banks of emission in the republic have issued $40,000,000 in notes, of which $36,000,000 are guaranteed by credits in possession of the banks. Then the banks have also in possession $45,000,000. With that there is in circulation about $106,000,000, or $8.35 per capita.

—By June 1st, as at present arranged, a line of steamers will be in operation between Oakland, Cal., and Sacramento river points, running to within twenty miles of the State capital. Negotiations are also pending for the establishment of a line to operate on the San Joaquin river. Docking privileges will be established at the foot of Alice street. Warehouses will be constructed and connection made with the Southern Pacific tracks on First street.

—The latest census taken by the Mexican Government showed a population of 12,570,000, an increase since the last census, seventeen years previous, of 2,663,000, or 26 per cent. With the introduction of modern methods, the better education of the common people, and the better sanitary conditions, insisted upon by the Government, the growth of Mexico would be faster during the next seventeen years and greater progress would be made. The cattle and fruit industries have made rapid strides, and the transportation of oranges over the Mexican Central road has increased 100 per cent every year during the past three years. The mining business is an important factor and to-day some of the largest smelters in the world are located in Mexico. No retaliatory measures are anticipated on the part of the Mexican Government on account of the new tariff, which is unfavorable to Mexico, as to the duties on cattle and hides.

Personal.

HAMILTON SMITH is expected in Butte, Montana, shortly.

C. W. WHITE has been appointed general manager of the coal department of the Anaconda Copper Mining Company at Belt, Montana.

PRINCE PONIATOWSKI, president of the California Exploration Company, has gone to London on business connected with that company and the Sierra Pacific Railway, and will return about the end of June.

IN recognition of the good work done by Prof. A. C. Lawson the Board of Regents of the University of California have created a new chair—that of mineralogy—to which he has been appointed professor. He remains also as associate professor to Dr. Joseph Le Conte in geology.

EX-VICE PRESIDENT STEVENSON and Messrs. Wolcott and Paine, the other two members of the International Bimetallic Commission, sailed from New York for Havre, France, last Saturday. They will first visit Paris, then London, then Berlin, their object being to secure the consent of all the European nations, or as many of them as possible, to the holding of a conference of the nations in regard to an international agreement as to the coinage and ratio of gold and silver.

THE LOS ANGELES MINING BUREAU,
Cor. Temple and New High Sts., Los Angeles.

We have Eastern and foreign correspondents who are seeking good mining properties for investment. This Bureau will examine and place choice mining properties in California, Nevada, Arizona, New and Old Mexico. Critical and accurate tests of ore made. Best references given. For any information, address DR. STEPHEN BOWERS, President; H. C. SIGLER, Secretary.

For Sale at a Bargain.

One new GOLD KING AMALGAMATOR—never used. Apply to Marshutz & Cantrell, N. W. corner Main and Howard streets, San Francisco, California.

GOLD QUARTZ MINE fully equipped with all required machinery and water power and reservoirs, situated on 40 acres of mining property in El Dorado county, to be sold at a bargain. Principals only apply to Thos. R. Church, 1016 Franklin St., or A. M. Ebbets, 109 Sacramento St., S. F.

PROPOSALS FOR CANAL.

Sealed proposals will be received at the office of the Southern California Power Company, Redlands, California, until May 15, 1897, for the construction of 3¼ miles of canal, on the north side of Santa Ana river, from the mouth of Bear creek to the mouth of Keller creek, San Bernardino county, California.

The work is mostly through granite rock and consists of tunnels, flumes and trestles. Over two miles of the distance is through tunnels ranging from 100 to 1600 feet in length. There are twenty tunnels in all.

Contractors may bid on the whole or any part of the work. Plans and specifications can be seen at the office of the company, or they will be sent by mail upon application if desired. Satisfactory references must be given by bidders as to their responsibility, and as a guarantee that a contract would be entered into, providing the bid is accepted. The company reserves the right to reject any and all bids.

SOUTHERN CALIFORNIA POWER CO.
By HENRY FISHER, President.

For Placer Mining.

THE EDISON GOLD SAVING MACHINE.

The Most Complete Machine in the World for

GRAVEL WASHING.

Guaranteed to Save Every Particle of Flour and Flake Gold, and Floured Quicksilver.

WILL HANDLE 3 TONS OF GRAVEL PER HOUR.

Minimum power and water required. Requires but one handling of gravel. By motion of machine water is returned and used over and over again. Light, durable and easily transported. Simple in construction and inexpensive.

27,028.—DESIGN FOR CUFF—F. Young, Knights Landing, Cal.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

REVOLVING SPRAY APPARATUS.—G. A. and R. F. Dunn, Dinuba, Cal. No. 581,416. Dated April 27, 1897. This invention relates to an apparatus which is especially designed to travel over the surface of the ground and act as a roller and at the same time to form a traveling receptacle for water, with a means by which pressure can be applied so that the water can be ejected in the form of a spray to be applied to trees or for other purposes. The roller is mounted in a suitable frame so that power may be applied to move it over the ground, and a second smaller wheel or roller is so journaled in the frame that it forms contact with the surface of the roller and is thereby revolved. The shaft of this second roller operates a crank wheel or disk from which power is derived to work a pump, the pump acting to force air into the interior of the cylinder. A discharge pipe leads through one of the journals of the cylinder which is hollow, the inner end of the pipe being located near the bottom of the cylinder so that the liquid contained therein will be forced into the pipe by the pressure of the air, and the outer end of the pipe has a hose connected with it through which the liquid may be discharged with force upon trees or plants when it is desired to spray them to destroy insects, or if plain water is used it may be used to water roads or dampen the surface wherever it is desired.

TOY.—B. E. Henriksen, San Francisco, Cal. No. 581,420. Dated April 27, 1897. The object of this invention is to provide a simple and attractive toy adapted to produce a sound which may be more or less an imitation of the natural voice of the creature in the likeness of which the toy is constructed. It comprises a hollow resonant figure having a vibratable member, a head with a flexible or hinged neck, a lever within the figure hinged at its lower end and extending upwardly into the neck having its free end adapted to bear against the same to throw the head up, a cord attached to the lever at a point above its hinge and passing outwardly through the vibratable member whereby it may be operated to cause the figure to give forth a sound.

PRELIMINARY COOLER FOR ICE MACHINES.—R. F. Schroeder, Sacramento, Cal., assignor of one-fourth to C. W. Hutton, same place. No 581,431. Dated April 27, 1897. This invention is designed to be used in conjunction with ice machines where it is important to save all the labor and time possible, and its operation is to cool the water passing through this preliminary apparatus before it is delivered into the final freezing cans so that it enters these cans at a temperature approximately close to the freezing point. It consists essentially of channels interposed between the water supply and the freezing cans through which the water flows, a pivotal trough having openings in the bottom, said trough being movable so that the openings stand above the channels or may be moved to one side thereof, a mechanism for automatically tilting the trough so that the water flows alternately over the pipes or passages and to one side of them so that the discharge of cold brine upon the channels or passages takes place while the brine is being delivered into the freezing cans, and it is diverted from these passages after the cans are filled and while the water is temporarily not flowing in the passages, the object being to prevent the water in the passages from absolutely freezing when it is not in motion.

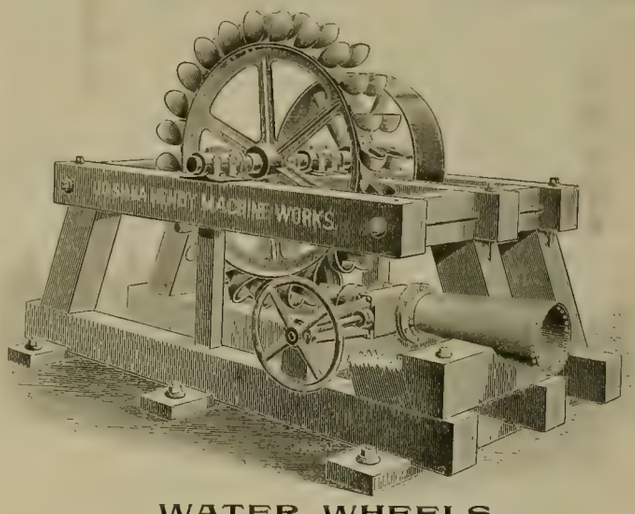
APPARATUS FOR REFINING ASPHALTUM.—Arthur F. L. Bell, Carpenteria, Cal., assignor to the Alcatraz Asphalt Co. of San Francisco, Cal. No. 581,451. Dated April 27, 1897. This invention relates to an apparatus for extracting and purifying asphaltum and kindred substances from silicious and other earthy matter by crushing, heating, agitation and the employment of solvents incorporated therewith and the reevaporation of the solvents whereby the asphalt is reduced to a merchantable product. It also relates to devices for collecting and condensing the volatilized products arising from the treatment. It consists essentially of a stationary casing or shell with an interior revoluble drum having end openings and separated from the shell to form a circumscribing space, said drum or cylinder having its inner face provided with means rigid therewith for advancing the material, means for supplying the material to the drum, means for effecting the flow of a solvent through the drum in the opposite direction to the movement of the material, and means for recovering the vaporized solvent. The material is advanced through the drum by a spirally-formed flange rotating therein while heat is applied through the double walls formed by the surrounding space or chamber. The sand, silt and other material is discharged from the drum to a drier and the vaporized solvent is recovered by means of a condenser, suitably connected with the apparatus.

GOLD SAVING DEVICE.—Joseph Mait, Oakland, Cal. No. 581,425. Dated April 27, 1897. This invention relates to an apparatus for separating gold and valuable heavy substances from lighter and worthless material. It consists essentially of an inclined longitudinally oscillating screen and oppositely inclined hopper and a regulating gate through which the material is supplied to the upper end of the screen, an extension or guide between the discharge and the screen, an air chamber supported below the screen having inlet openings in the sides and an open discharge covering the lower surface of the screen, fans with oppositely inclined blades journaled to rotate within the openings so as to force air in from opposite sides, and riffles fixed upon the screen surface having short upturned lower edges with the longest incline directed upwardly along the screen.

STOVE.—Charles M. Allen, San Francisco, Cal. No. 581,974. Dated May 4, 1897. This invention relates to improvements in stoves and is especially adapted to stoves or ranges employed for cooking purposes. It consists of a separable movable top, a means for operating it so that by sliding the movable portion backward the fuel compartment is exposed and fuel may be introduced thereinto without removing the utensils from that portion of the stove. The operation is effected by racks and pinions engaging the racks and turnable so as to move them and the movable part to which they are attached. There is also a device consisting of a flattened portion of the rollers upon which the top is carried, which flattened portion arrives beneath the rollers just as the top is closed, and thus allows it to drop a little and prevents it from being moved accidentally.

SULKY CULTIVATOR.—Neil McLean, Watsonville, Cal. No. 581,996. Dated May 4, 1897. This invention relates to improvements in that class of apparatus known as sulky plows or cultivators. It consists essentially of a wheel axle having the outer ends and the central portion in the same axial line, the bearing wheel being turnable upon the outer ends of the shaft and the seat and beam portion being connected with the central portion of the shaft, which is turnable in a journal box, while the plows or cultivators are raised or depressed by links connecting them with the intermediate crank portions of the shaft with a suitable operating lever for the purpose. This construction allows the plows or cultivator teeth to be raised or depressed without lifting any portion of the beam or the rider's weight, and makes the operation very simple and easy.

SUBMERGED CURRENT MOTOR.—John J. Smith, Auburn, Cal. No. 582,000. Dated May 4, 1897. This invention relates to an apparatus for applying the power of a current of water flowing in a ditch, sluice or other waterway. It consists essentially of a plurality of parallel shafts journaled upon a frame with their axes in the line of movement of the current in which the frame is immersed, gears upon the ends of the shafts and intermediate gears by which the various shafts are connected and propeller blades fixed upon the shafts so that the passage of the water rotates these blades in their shafts and motion is transmitted to the main driving shaft. A clutch mechanism allows any one or more of the shafts to be disengaged by the use of an interior independent shaft revoluble within the shafts which carry the propeller.



LAMP OVERFLOW PROTECTOR.—Emily A. Clingman, San Francisco, Cal. No. 581,997. Dated May 4, 1897. This invention is designed to prevent the overflow and soiling of lamps while they are being filled. It consists essentially of a flexible removable disk having a central opening to fit around the filling nozzle of the lamp, this disk being provided with upturned peripheral and interior flanges so that when fitted around the filling nozzle it will catch and retain any overflow and prevent its soiling the lamp or other parts.

A STEAM ORE STAMP.

One of the BONANZA MINES of the Black Hills was developed by a **TREMAIN STEAM STAMP MILL,** installed last summer at a cost of about $1600. After six months' run the superintendent wrote the following letter:

HILL CITY, S. D., Feb. 2, 1897.

Gates Iron Works, 650 Elston Ave., Chicago, Ill.—GENTLEMEN: It gives me great pleasure in informing you of our success with the Tremain Steam Stamp Mill which we have been running since last July. We have been running on hard, white quartz, some of it of a flinty character and a small portion of it slightly decomposed. We average about ten tons every 24 hours through a forty-mesh screen. If our financial standing had been a little better, so we could have put in a small engine and rock crusher, I am confident we could put through 14 to 15 tons in 24 hours. The wear and tear is considerably less than an ordinary stamp mill, it all being on the shoes and dies. The last we used of these were of the aluminum steel, which are the best wearing shoes and dies I have ever seen. The parts are all well made and durable, I having failed to see any weak point about the machinery.

We use one cord of pine wood in 24 hours, and run the mill with 70 to 80 lbs. of steam.

I have followed mining in connection with milling for thirty years and have never seen its equal for convenience, durability and cheapness. To parties wishing to purchase a quartz mill I cheerfully recommend the Tremain Steam Stamp Mill for its small cost, economy in operation and complete results of working. Very truly yours, [SIGNED] JAMES C. McDONALD,
Supt. St. Elmo M. & M. Co.

This Mill has the capacity of a 5-stamp gravity mill and costs less than half to install. Automatic feeder of approved design. Weight of entire Mill 3300 lbs. Made sectional for mule-back transportation.

GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work refractory ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Plata, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. For elegantly illustrated descriptive books, free, of mines in Colorado, send to

We beg to call attention to our "RISDON HAMMERED" Shoes and Dies, which are made of a special quality of steel, are hammered and then compressed in moulds so as to give the greatest possible density.

These Shoes will outlast any other make and will not chip or cup.

We have attached a sketch showing sizes; fill in the size of your Shoes and Dies, and order a trial set.

Our prices are as low as any, and the article we offer should commend it to all mine owners and mill men.

PELATAN-CLERICI PROCESS.

Patented in U. S. and Other Countries. Capital, £100,000.

London Head Office.....8 Drapers Gardens.

Laboratory and Ore Testing Plant, 1530 Wynkoop St., Denver, Colo.

This process has a well-demonstrated merit in treatment of low-grade Gold and Silver Ores, especially those of a complex character, talcose and clayey combinations or slimes, which class of ore, as is well known, cannot be treated by leaching or lixiviation.

Gold and silver values, both fine and coarse particles, are by the PELATAN-CLERICI PROCESS recovered direct from ore without roasting as pure amalgam, and the precious metals are saved in the form of fine bullion without any refining costs.

Below will be found a list of standard books in their various lines. If you do not find what you want in it, send for catalogue and price list of **Standard Mining Works and Scientific Publications.**

MINING AND SCIENTIFIC PRESS,
220 Market Street ..... **San Francisco, Cal.**

Assaying.—Part I—Gold and Silver Ores.
Third edition. Just Out. Rewritten and Improved by the Author C. H. Aaron. Embraces 150 12 mo pages, with illustrations, well bound in cloth, 1896. Price, postpaid $1 00

Assaying.—Parts II & III—Gold and Silver Bullion, Lead, Copper, Tin, Etc.
Latest edition. Contains 161 pages with illustrations and is strongly bound in cloth. Much of the original text is replaced by new matter. Price, postpaid $1 75

Notes on Assaying and Assay Schemes.
By P. De Peyster Ricketts, E. M., Ph. D., Professor in Assaying in the School of Mines, Columbia College, N. Y. Prepared with special reference to the wants of the student and practical assayer. Containing also Rules for the Examination of Mines, Assayer's Outfit, Treatment of Ores, etc. Fifteenth edition. 8vo, cloth $3 00

Prospector's Field Book and Guide.
By H. S. Osborn $1 50

A Practical Guide for Prospectors and Miners.
By C. W. Moore. With numerous illustrations $4 75

Roasting of Gold and Silver Ores and the Extraction of their Respective Metals Without Quicksilver.
Second edition. By Guido Kustel, M. E. Contains 12 pages embracing illustrations of furnaces supplements and working apparatus. Price, postpaid $5 00

The Lixiviation of Silver Ores with Hyposulphite Solutions.
With special reference to the Russell Process. Second edition. Completely revised. By Carl A. Stetefeldt. Price, bound in cloth $5 00

Modern Copper Smelting.
By Edward Dyer Peters, Jr. Seventh edition. Rewritten and enlarged. Profusely illustrated $5 00

Electricity in Mining.
By Sylvanus P. Thompson ..... 20 cts.

Practical Treatise on Hydraulic Mining.
By Aug. J. Bowie, Jr. On the use and construction of Ditches, Flumes, Dams, Pipes, Flow of Water on heavy grades, methods of mining shallow and deep placers, history and development of mines, records of gold washing, mechanical appliances, such as nozzles, hurly-gurlys, rockers, undercurrents, etc., also describes methods of blasting, tunnels and sluices; tailings and dump; duty of miners inch, etc. Price, postpaid $5 00

Practical Hydraulics.
A book for Civil Engineers, Miners, Millmen, Hydraulicians, Mining Engineers and Irrigators. By P. M. Randall. Contains useful tables for ready reference, in which the results of laborious calculations are all placed in a form so that one can find what he wants in a moment. For the engineer the principles, formulæ, coefficients, etc., are given, and for those not familiar with higher mathematics examples, rules and tables are prepared. Is specially applicable to the Pacific Coast. Price, postpaid $2

The Metallurgy of Silver.
By M. Eissler. Profusely illustrated $4 00

Manual of Mining.
For the use of Mining Engineers and Technical Schools. Treating of Preparatory and Exploratory Work, Methods of Mining, Hoisting Machinery, Pumping, Ventilation, Shafts, Tunnels, Blasting, Timbering, etc., etc. By Prof. Magnus C. Ihlseng, E. M., Ph. D. Second edition, with Appendix. 500 pages, 8vo., cloth $4 00

The Explorer's and Assayers' Companion.
A third edition of selected portions of the "Explorer's, Miner's and Metallurgist's Companion." By J. S. Phillips, M. E. A practical exposition of the various departments of Geology, Exploration, Mining, Engineering, Assaying and Metallurgy. Price, postpaid $6 00

Aaron's Leaching Gold and Silver Ores.
By C. H. Aaron. The most complete handbook on the subject extant. 104 pages, octavo. Illustrated by twelve lithographic engravings and four wood cuts. Fully indexed. Plainly written for practical men. In cloth, postpaid $2 00

Manual of Assaying—Gold, Silver, Copper and Lead Ores.
By Walter Lee Brown, B. Sc. One colored plate; 132 illustrations on wood. Fifth edition. 12 mo. 332 pp. Price, postpaid $2 50

The Metallurgy of Gold.
By M. Eissler. Profusely illustrated $5 00

A Text Book of Mineralogy.
Based upon the System of Mineralogy of Prof. J. D. Dana. Embracing an extended Treatise on Crystallography and Physical Mineralogy. By Edw. S. Dana, Curator of Mineralogy, Yale College. With upward of 486 woodcuts and one colored plate. Seventeenth edition. 8vo., cloth $3 50

Notes on the Treatment of Gold Ores.
By Florence O. Driscoll, Associate Member of Institute of Civil Engineers. 8vo., cloth $2 00

A Practical Manual of Minerals, Mines and Mining.
By H. S. Osborn $4 50

Cyanide Processes for Gold and Silver Ores.
By E. B. Wilson, E. M. 12mo., Cloth $1 5

Practical Metallurgy and Assaying.
By A. H. Hiorns $1 50

The Practical Metal Worker's Assistant.
By Oliver Byrne. Illustrated $5 00

Quartz Operator's Handbook.
By P. M. Randall $2 00

Assayer's Guide.
By Oscar M. Lieber $1 50

Assayer's Manual.
By Bruno Kerl. Illustrated $2 00

Metallurgy of Silver, Gold and Mercury in the United States.
Showing the latest practice pursued in American Metallurgical Establishments. With 150 engravings and folding plates, tables, etc. By Prof. Thos. Egleston, School of Mines, Columbia College. With corrections. Vol. I.—SILVER. 8vo $7 00

Metallurgy of Silver, Gold and Mercury—Continued.
Vol. II.—GOLD, MERCURY, Etc. Illustrated with 140 engravings and folding plates; 701 pages, 8vo., cloth $7 50

Manual of Determinative Mineralogy.
With an Introduction on Blow-Pipe Analysis, constituting the Determinative Part of Dana's Mineralogy. By Prof. Geo. J. Brush. Thirteenth edition, translated into the new system. 8vo. cloth. $3 50

Skeleton Mining Report.
Of great practical value to miners and mine owners in making a correspondence report of mining properties. Useful and convenient to mining engineers as a field notebook. Price, postpaid ..... 50 cts.

VULCAN ROPEWAY

—WITH—

AUTOMATIC ORE LOADER AND AUTOMATIC DUMPING DEVICE.

For Conveying Ore, Cordwood, Etc.

EMPIRE, NEVADA, April 17, 1896.

Vulcan Iron Works.—GENTLEMEN: The Ropeway furnished by your company to convey tailings from Morgan Mill to Mexican Mill, a distance of seven-eighths of a mile, is giving entire satisfaction. We transport 200 tons of tailings in ten hours; one man does the whole business, including elevating tailings from hopper in the ground, operating Vulcan self-loader, and attending to the Ropeway generally. The self dumper requires no attention whatever. The Vulcan loader I consider the best feature in the whole Ropeway, making it possible for one man to load 200 tons in ten hours.

Yours very truly, J. P. WOODBURY, Supt.

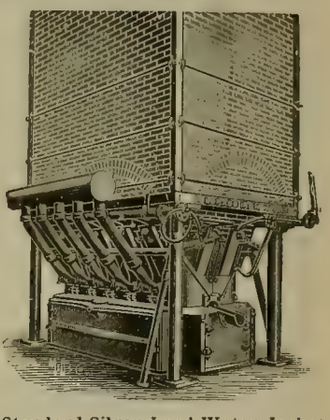
ASPEN, COLORADO, April 8, 1897.



The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles. This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly, [SIGNED], S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

PRICE, $450.00.

THE FINLAYSON PATENT WIRE ROPE TRAMWAY.

THIS TRAMWAY IS THE BEST THAT HAS EVER BEEN PLACED ON THE MARKET. IT HAS NO RIVAL. IT IS STRICTLY AUTOMATIC AND ITS CAPACITY RUNS UP TO 1000 LBS. PER BUCKET. ANY ONE CONTEMPLATING THE ERECTION OF A TRAMWAY SHOULD INVESTIGATE ITS MERITS BEFORE PURCHASING ELSEWHERE. . . . . .

Market Reports.

The Markets.

SAN FRANCISCO, May 13, 1897.

General business continues fair for the season, although it is not up to expectations owing to bad crop reports. That the yield of wheat will not be a full crop is acknowledged by all, but that it will fall below last year's is not conceded by usually well informed parties. Higher average prices for the cereal will offset the falling off in the outturn, and will make returns in money considerably larger than in last year's crop. The fruit crop will fall below estimates four weeks ago yet there is not a variety but will show an increase over last year by reason of more trees and vines coming into bearing and the general average to the older plant being larger. Prices that will be realized for the canned and dried product will be governed by the apple crop at the East, and for the green fruit by the consumptive capacity of the masses, and the latter will be controlled by their purchasing power. The continued tinkering of the tariff by Congress is having a bad effect for many lines of goods which showed an advancing tendency and are either halting or else lower. In metals and chemicals there are very few changes.

The local money market is reported fairly easy, with accommodations easily obtained by parties good to gilt edge security. Regarding collections, there are conflicting reports. While money jobbers report good collections, there are an equal number who say they are poor; but they all concur in saying there are fewer outstanding accounts, with the very large proportion considered good, while the others may require a long time to work out. The mines continue to send in increasing quantities of gold and less silver. Well-informed sources estimate the yield on this coast at fully 20 per cent more this year than was last year's. In this State the output of the mines is placed at about 15 per cent more, while some place it as high as 25 per cent greater. This increase is based on more mines being worked in about all parts of the State, while the older mines do not show any falling off. Remittances to the East are free for the season, causing stiff rates for exchange. The East reports a plethora of funds, with spasmodic speculation in railroad and industrial securities. Sterlings are weak at New York, but, notwithstanding this, gold is going to Europe. The high premiums ruling in Europe for the yellow metal make shipments profitable. The European money markets are about the same as reported last week. The market is governed largely by war news—when it looks peace speculation shows a revival and money comes out, but when it looks like continued war, then speculation is slow and money does not offer so freely.

New York Silver Prices.

NEW YORK, May 13.—Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	27 13-16	60¼
Saturday	27¾	60⅝
Monday	27 11-16	60¼
Tuesday	27 11-16	60⅜
Wednesday	27¾	60½
Thursday	27⅞	60¾

	Copper.	Lead.	Iron.	Tin.
Fri.	10 75 @11	3 25	10 00@12 50	13 25
Sat.	10 75 @11	3 30	10 00@12 50	13 30
Mon.	10 75 @11	3 30	10 00@12 50	13 30

Wed.	10 75 @11	3 32½	10 00@12 50	13 25
Thur.	10 75 @11	3 30	10 00@12 50	13 30

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	12½c Prem
New York Telegraphic Transfer	15c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.83
London Sight Bankers	$4.88½
Refined Silver, peroz., 1000 fine	60½
Mexican Dollars	49@50

SILVER.—The market fell the past week to 60¼ cents and then advanced to 60½ cents, closing barely steady at that figure to-day. The demand is slow with us, as it is at the East. The export movements from New York are light. The smaller shipments are due to the inactive demand abroad. It is the consensus of opinion that the markets will not show much improvement until the financial situation improves in India, and there is a general revival of business in that country and China.

MEXICAN DOLLARS.—The movement is still slow. New York advices quote sales at from 48 to 49 cents, with reports as low as 47½ cents.

QUICKSILVER.—The market is steady to firm at quotations. The demand shows a slight increase over the corresponding time last year. Our market is quoted at $40.50 for domestic consumption.

COPPER.—The market is lower again, and that, too, in the face of heavy sales at the East, aggregating as follows: Calumet & Hecla 10,000,000 pounds, Quincy 4,000,000 pounds, and John Stanton has also sold a considerable quantity. The price at which the C. & H. placed their copper is 11 cents, with delivery in May and June. James Lewis & Son of Liverpool write that the apparent consumption of England, France and Germany has increased so far this year at the rate of 37,824 tons per annum. On the other hand, the exports of sheets and yellow metal to India has decreased 3500 tons as compared with the same three months of last year.

TIN—The market is practically unchanged for both pig and plate.

The local market is quoted as follows:

Ingot, jobbing	——@14
Ingot, wholesale	——@13
Sheet copper	——@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

LEAD—The markets both here and at the East show more strength since the new tariff bill was introduced into the Senate.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—There is a fair jobbing demand.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER—The market is active at full quotations. The consumption is steatily increasing.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX—There is nothing new to report.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON—Advices from the East state that the markets are unsettled under strong competition. The low prices are causing quite a number of furnaces to blow out.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL—Poor crop prospects makes it quite certain that less foreign will be imported than had been estimated. The market for all kinds is steady.

ANTIMONY. — The market is steady and quiet.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7¼c for Cookson's, 6⅞@7⅛c for Hallett's and 6⅞@7c for Japanese.

NAILS.—The market is firmer.

Wire, carloads, basis per keg	...
" jobbing, " "	$2 20
Cut, carloads, " "	...
" jobbing, " "	2 10

PLATINUM.—There is a fair demand.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC. — The market is quiet at steady prices.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steadier.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

The East reports an unsettled market with the tendency to lower figures owing to heavy stocks on spot and to arrive, imported in anticipation of higher duties. The probability that the bill will not become law for sixty days yet, causes a selling by weaker holders.

SPELTER — The market is maintained steady by not forcing sales.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—There is a fair demand.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steadier.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—The market is steady.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is firm at 3c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—In our market there is nothing new to report.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light. We quote in a jobbing way at 1¾c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL. — Our market is fairly steady.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, May 13, 1897.

The market has been spasmodically active with Con. Virginia the leader. Prices shrank steadily up to Tuesday, when Con. Virginia sold on the regular morning call at $1.80; but in the informal the shares were in demand on an order from Virginia City, said to have been sent through the manipulator's instruction from this city to that place so as to give outsiders the impression that it was outside buying. These purchases advanced the shares to $2.25 by the afternoon of that day. Wednesday morning the market opened strong with sales of Con. Virginia at $2.35, but it began to ease off as soon as the smaller shorts had filled and some realizing was noticeable. The entire list moved in sympathy with Con. Virginia with the heaviest decline on the down grade in Chollar by reason of an assessment, but on the upmove the shares in the north end group of mines showed the most strength. The advance in Con. Virginia is said to have been on a reported improvement in the workings above the 1650-foot level. It is believed that before thirty days pass there will be more improvements reported in this mine. The rapid decline in Chollar was engineered by levying an assessment of 15 cents after assurances had been made that there was enough ore taken out from the Brunswick lode to pay all expenses, and, if properly managed, leave a balance. It is hardly necessary to state that C. E. Elliott is secretary of the company. The impression seems to be quite general that the mine affairs of the company are not properly handled in the interest of outside shareholders. No doubt exists but this belief is founded to some extent on the way in which money has been paid in connection with the Chollar-Norcross-Savage Shaft Co.'s combination shaft on the Comstock lode. It is stated that this shaft has been closed down for years, and that a lone watchman has performed all the duties required for the period of inaction. Regardless of that fact and of the hard times on the lode, Secretary Elliott has rendered his regular monthly statement of pay roll, $200 or $300 a month, and a water bill for the Virginia and Gold Hill Water Company of $75 per month and not a drop so far as known, of water has been used in ten years. It is hardly necessary to state that it is said secretary Elliott figures in this pay roll of $200 or $300 a month.

The Hale & Norcross Company very commendably refused to pay its proportion of these unnecessary expenses in these hard times, and as a consequence it is stated that the management of this company is to be done by those interested in the Chollar proposition, notwithstanding the H. & N. Co. agree to pay their proportion of the watchman's salary. This is said to be only one of the many ways for spending money by which assessments can be levied oftener. It is no wonder that so much difficulty is met in trying to make a deal, for outsiders, when such conditions obtain, will know that if they buy the shares on an advance it is tail they lose and heads the other fellows win. It is surprising that the honest members of the two mining share exchanges do not rise to the occasion and insist on a change in the interest of shareholders, or else refuse longer to call the shares. This action would inspire confidence, and be instrumental in bringing in a class of dealers who could buy and sell at much higher figures, thus insuring active trading and brokers making money and not losing, as they have for some time past.

The following mining companies had cash on hand May 1:

Alpha Con., $3032; Andes, $6335; Alta, $1777; Belcher, $3908; Best & Belcher, $10,479; Bullion, $2645; Con. Cal. & Va., $9861; Challenge Con, $130; Con. Imperial, $3824; Con. New York, $3; Crown Point, $11,638; Caledonia, $2168; Confidence, $5899; Exchequer, $2005; Gould & Curry, $2350; Hale & Norcross, $2156; Julia Con., $735; Mexican, $11,673; Ophir, $9837; Overman, $1992; Potosi, $16,052; Sierra Nevada, $13,262; Standard Con., $25,715; Syndicate, $858; Union Con., $2294; Utah Con., $1229.

The following mining companies had an indebtedness May 1: Cholar, $10,000, with April expenses unpaid, less $91.26 cash on hand and bullion in transit; Lady Washington, $1460; Segregated Belcher, $1800, less $524 cash on hand; Savage, $7600, less $35 cash on hand; Silver King of Arizona, $2254. The April expenses of the Savage mine are paid.

From the Comstock mines our advices are practically unchanged since last week's review. Very little information is allowed to leak. Talk about the espionage of the press in Russia and other despotic countries, it is nothing to compare with the way of manufacturing, cutting off or enlarging news, as desired, regarding work in the Comstock mines, so that the only things that can be depended on in the official letter which, unless an object is sought, are as bare of meat as a well-picked bone. It is needless to say that in these cases the inside gets the meat of the news while the outside gets the bones—number of feet run, directions, and sometimes the level or levels on which the work is done. From Con. Virginia come to hand reports of another small strike in the workings in the upraise from the 1650-foot level. It is the belief with many on the outside that quite a body of ore is in sight on that level, and that much higher prices will rule, on merit, for the shares, but from all that we can learn not

Gold and Copper Properties Wanted. We have prospective purchasers for developed and producing mines and desire to correspond direct with owners of such properties. We handle properties on legitimate commission only and prefer to deal with owner or authorized representatives.

Well Known Copper Mine

FOR SALE.

Mine well developed. Complete working plant. Situation and facilities first class. Address H. D. RANLETT, Ranlett, Amador County, Cal.

Who Sees Your Advertisement?

Is an important question. When asked for an "ad" demand proof of extensive circulation among probable purchasers.

much ore will be shown up, or, at least, not enough to send the shares up to figures which would cause the mine to sell on the basis of $1,500,000. This, on a business proposition, is a very big figure for a mine now-a-days, unless it is a large producer or a prospective producer of gold. The work on the 1000-foot and 1550-foot levels does not excite attention, yet some quite important dead work is being done to further purposes. There were extracted last week 52 tons of ore assaying over $130 to the ton.

In Ophir work is still confined to the Central tunnel and 1020-foot levels. On the former level 4 inches of ore has been found from which one ton of ore was extracted assaying $90. They followed the streak north. On the 1000-foot level the crossdrift is to the west. In Mexican they are running a southwesterly drift on the 1000-foot level. They pass through porphyry, seams of clay and narrow streaks of quartz. Elliott is secretary of this mine, as he is of Sierra Nevada. In this latter mine they are still fooling around on the Layton tunnel level. In Union the work heretofore reported is unchanged. The material does not show any essential change. In Andes they are still at work on the 175-foot level. In Utah they are crossdrifting east on the old west surface tunnel. Best & Belcher and Gould & Curry confine their work to the joint east crossdrift on the 800-foot level of the Bonner shaft. From Savage nothing new comes to head. In Hale & Norcross work is west and south from the tenth floor above the 900-foot level. No work is reported in Chollar, but in Potosi they are at work on the 175-foot level. They manage not to report much ore. Elliott is secretary of this mine, as he is of Alpha, in which mine so much reported fooling work has been done and is still being done on the 500-foot level. In Bullion the work is confined to the north drift heretofore reported. Slow progress is being made in the joint west crossdrift that is being run by Con. Imperial, Challenge and Confidence. Nothing,, so far as the public is advised, has been struck yet. In Confidence they are still working on the upper level. No ore was extracted last week. The joint west crossdrift of Yellow Jacket, Kentuck and Crown Point is being driven ahead. The work in Crown Point, Belcher, Seg. Belcher, Overman, Caledonia and Alta, so far as the official letter goes, is of the same character as heretofore reported. Some ore is being raised by Belcher, Seg. Belcher and Overman. The letters from two former fail to state from what level the ore is extracted.

From the Brunswick lode the official letters do not report any material change from any of the mines. Chollar's letter reports that 208 tons of ore were extracted, ra'sed and milled which assayed to the ton $22.94 in gold 16.81 ounces in silver. The April cleanup of the mill yielded $18,447.55 of which $9,433.63 was gold. The only change in the work since our last issue is the starting of west crossdrift No. 1 on the 300-foot level and stopping No. 2 crossdrift on the 500-foot level. The work in Occidental is on the same levels and in the same directions published last week. The joint work of Con. Virginia, Best & Belcher and Gould & Curry is unchanged.

The following resolution was passed this morning by the board of trustees of the Hale and Norcross:

WHEREAS, Information has been received by members of this board of trustees that the seal of this corporation has been forged and counterfeited by certain persons, and that said persons have collected moneys from stockholders of this corporation as assessments of its stock without authority of law; now, therefore, be it

Resolved, That the president of this company be, and he is, hereby authorized and directed to present this matter to the grand jury of the city and county for their action, to the end that said parties may be punished for their unlawful acts.

The following illustrates the changes of the week:

M.

Assessment Notices.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No. 6) of .02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 22d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.
A. F. FREY, Secretary.
Office—Room 44, Phelan building, San Francisco, California.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.
SAM W. CHEYNEY, Secretary.
Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

MARGUERITE GOLD MINING AND MILLING Company.—Location of principal place of business, San Francisco, California; location of works, Auburn, Placer County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 12th day of April, 1897, an assessment (No. 6) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 237 12th street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 21st day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.
F. METTMANN, Secretary.
Office—237 12th street, San Francisco, California. Office hours from 5 to 6 o'clock P. M. The Secretary will also receive payments from 12 to 5 P. M. at his business office, 225 Sansome street.

GOULD & CURRY SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 29th day of April, 1897, an assessment (No. 81) of 20 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 69, Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 1st day of June, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on TUESDAY, the 22d day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.
ALFRED K. DURROW, Secretary.
Office—Room 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

CHALLENGE CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Gold Hill, Nevada.

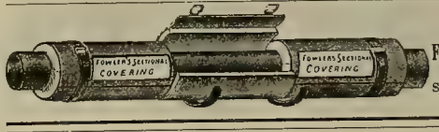
Notice is hereby given that at a meeting of the Board of Directors, held on the 13th day of May, 1897, an assessment (No. 23) of Ten cents (10c) per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, room 35, third floor, Mills building, corner Bush and Montgomery streets, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 16th day of June, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on THURSDAY, the 8th day of July, 1897, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

By order of the Board of Directors.
C. L. MCCOY, Secretary.
Office—Room 35, third floor, Mills building, San Francisco, California.

OCCIDENTAL CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California. Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 11th day of May, 1897, an assessment (No. 27) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.



Any stock upon which this assessment shall remain unpaid on the 12th day of June, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on THURSDAY, the 1st day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.
ALFRED K. DURROW, Secretary.
Office—Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

ROPP STRAIGHT LINE FURNACE

FOR ROASTING, CHLORINATING AND DESULPHURIZING ORES.

Extracts from Letters Received from Mr. Philip Argall, Manager the Metallic Extraction Co., Cyanide, Colorado:

January 2, 1897.

"The roasting is invariably good. We can do 80 tons per day to 0.13% sulphur, when everything runs smooth. Our month record which, of course, includes all delays, is 1700 tons, from 1.94% sulphur to 0.16%."

February 19, 1897.

"Our furnace is now running very nicely indeed, averaging 90 tons per day to 0.10% sulphur, and doing excellent work; in fact, it has improved right along and we are highly pleased with it.

"For 24 hours ending 7 A. M. to-day 102 tons were roasted."

The ROPP FURNACE is in successful operation at the following reduction works: The [illegible] Smelting Works, Salt Lake City, Utah (one furnace); The [illegible]c Extraction Co., Cyanide, Colo. (one furnace); The Colorado-Philadelphia Reduction Co., Colorado City, Colo. (three furnaces); The Selby Smelting & Lead Co., Selby, Cal; (one furnace); The Mount Morgan Gold Mining Co., Rockhampton, Queensland (one furnace); and Broken Hill Proprietary Co., Broken Hill, New South Wales (two furnaces).

MINE BELL SIGNALS. Adopted, Used and in Force in Accordance with State Law.

FOR THE CONVENIENCE OF OUR READERS IN THE MINING COUNTIES WE PRINT IN legal size, 12x36 inches, the Mine Bell Signals and Rules provided for in the Voorhies Act passed by the State Legislature and approved March 8, 1893. The law is entitled "An Act to Establish a Uniform System of Mine Bell Signals to Be Used in All Mines Operated in the State of California, for the Protection of Miners." We furnish these Signals and rules, printed on cloth so as to withstand dampness, for 50 cents a copy. MINING AND SCIENTIFIC PRESS, 220 Market St., San Francisco.

Southern California Mines.

The southern part of California bids fair to soon attract much more attention from the mining world than it has for many years. The phenomenally rapid growth of the citrus and other agricultural industries during the past decade and a half has done much to prevent the mineral resources of the southern counties from attracting the attention they deserve. It has been for a long time almost impossible for those who believed in the mines south of Tehachapi to turn the attention of any capital for their development from the citrus and similar industries. Probably in the end this will be all the better for the mines, for these pursuits have done much to make mining much easier and less expensive than it was a few years ago. Water has been developed, railroads and wagon roads built, men of means brought into the country, and the mines are now easily accessible, the cost of bringing in supplies no more, and in many cases less, than along the Sierras. Best of all, capital is at hand, ready to take hold.

During the past year there has been more increase in mining, proportionately, than probably in any other part of the State in San Diego and Kern counties. The output of gold and silver of San Diego for 1895 was $344,907 and in 1896 $560,618. In Kern county in 1895 it was $277,497 and in 1896 $625,516. The increase in these two counties was $575,703, or over one-third of the total increase of the State. While there has not been an increase in Riverside and San Bernardino, there has been of late a large amount of development work and mines being opened give promise of large increase this year.

A few years ago there was no part of the State less inviting to the miner, owing to the difficulties in the way of prospecting or working mines, while now all this is changed. In San Diego county, while a large part of it is desert in appearance, the mining districts have been of late years brought within easy and quick communication with the outside markets.

ROYAL ROCK MINE.

The Rand district, in Kern county, will have one railroad, and probably two, within a few weeks. This means much to any mining district. In earlier days attempts have been made to open up mines in some of these same southern counties, when the freight alone on mills and machinery was more than the total cost of purchasing and setting up would amount to now. As a consequence, there were many failures in large undertakings, such as that at Panamint and other places. These often unjustly gave bad names to mines that would now, with cheaper methods, pay well. A mine remote from cheap transportation, opened and condemned twenty years ago, is better worth investigating than any new prospects. Panamint has long been shunned because of its bad name; yet to one familiar with the manner in which money was expended in an attempt to open it there can be no reason for believing that the mines would not now pay, because they did not then under such circumstances.

In the counties of Riverside, San Bernardino, San Diego, Los Angeles and Kern there were, according to the last report of the State Mineralogist, 818 stamps in 1895, many of which were idle. While it is impossible to obtain exactly the number that have been added since, it is safe to presume that there are by this time over 1500 stamps. In many cases the mills which have been erected upon some of the larger properties are only small prospect mills, the forerunners of larger plants.

A great advantage possessed by these southern counties is the presence as residents of men of means and energy—men who have been the cause in large measure of the phenomenal growth of the country in other directions. Soon enough will have been done to prove the value and permanency of the mines and interest these people in their development.

During the past winter good work was done by prospectors in the south and the results are plainly seen in the large amount of development work now going on upon their properties.

The accompanying cuts show three typical large mining plants in the land of the cactus. One is of the Royal Rock mine in San Bernardino county, near Oro Grande, and the others the Good Hope and Santa Rosa of Perris, Riverside county.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Royal Rock Mine; Santa Rosa Mine; Good Hope Mine, 429. Tailings Sampler at the Idlewild Mine, 432. Roger's Improved Crushing Rolls, 26 In. Diameter, 14 In. Face; Cross Section Crushing Rolls, 433.

EDITORIAL.—Southern California Mines, 429. This Paper Disclaims Responsibility for Certain Remarks; The Trans-Mississippi Congress; Mine Management; The New Mining Law; Support the Miners' Association; Speculative Values of Mines; The Rapid Growth of the Mineral Water Industry, 430.

MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 434-5.

SCIENTIFIC PROGRESS.—The Deepest Well; A Large Microphonograph; To Harden Heavy Tools; A Perfect Vacuum; A Most Powerful Telescope; Electro-Capillary Light, 436.

MECHANICAL PROGRESS.—The Use of Compressed Air for Mining Purposes, 436.

ELECTRICAL PROGRESS.—High-Frequency Currents and the Human Body; Electrical Conductivity of Ether; A New Process by Which Copper Is Cast Pure; Trial of Electrical Carriages, 436.

THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 446.

MISCELLANEOUS.—Concentrates, 431. Practical Notes on Hydraulic Mining; Recent Additions to the Mineral Collection of the California State Mining Bureau; A Tailings Sampler; A Valuable Work, 432. From Mine to Mint; Improved Crushing Rolls; The Use of Infusorial Earth, 433. Coast Industrial Notes; Personal; Recently Declared Mining Dividends; Recent California Mining Incorporations; Commercial Paragraphs, 439. List of U. S. Patents for Pacific Coast Inventors; Notices of Recent Patents, 447.

THE rapid growth of the mineral water industry in this State is illustrated by the report of the Mining Bureau upon the State's output, which shows that the total value in 1895 was $701,397 and in 1896 $808,843. In 1895 only eight counties in the State reported any yield, while in 1896 returns came from no less than fifteen counties, as follows: Butte, Colusa, Contra Costa, Fresno, Humboldt, Lake, Monterey, Napa, San Benito, San Diego, Santa Barbara, Santa Clara, Solano, Sonoma and Siskiyou.

THE management of the MINING AND SCIENTIFIC PRESS takes this method of disclaiming responsibility for certain remarks in last week's paper, under the heading "Mining Share Market," respecting the affairs of the Chollar Mining Company, in so far as they may be assumed to reflect upon Mr. C. E. Elliott. In the hurry of press day things sometimes get into a newspaper which, if they had been brought to the notice of the management, would not have appeared. Of this sort was the report of the "Mining Share Market" of last week. This disclaimer is an act of free will and does not grow out of any suggestion on the part of Mr. Elliott or anybody else.

The Neighborhood Swindle.

In Montana, near the Mayflower mine at Gaylord, there was a big strike made last Spring. Since then a number of men who have located claims in the neighborhood have been selling them to unsophisticated people in Butte on representations that they adjoined the Mayflower and would become as valuable. One group near the Mayflower, upon which very little work has been done, it is alleged, has been sold and resold many times over. Then it is said that after selling the vendors have gone in and jumped these mines in some instances.

This is an extreme case of a very old game that has been worked in every district in the world, and which is yet finding many victims. In Colorado a bill was presented in the last Legislature to prevent the people who engage in this business from giving to the properties offered names similar to rich mines near which they are located.

This sort of swindle is worked more commonly in the East than here. The prospectus proposed for the unwary will give reports—not so much on the property offered, as upon other properties in the neighborhood which are well known.

Support the Miners' Association.

In the last convention of the California Miners' Association there were represented only twenty-one counties of this State, and in a number of the counties represented there were no local organizations at the time. Yet during 1896 no less that fifty-three of the fifty-six counties in the State produced minerals of one kind or another. From thirty-five of these counties the value of the mineral product of each was valued at over $100,000, and nineteen of them produced over $500,000 worth each. Nine counties produced over $1,000,000 each. The importance, directly, of the mining industry in its different branches to many of the counties is far greater than their individual outputs. These figures show the importance to all the counties of the State of joining in any movement that will tend to foster mining.

Little is asked, or probably ever will be asked, that will be the cause of any increase in taxation. Mining has required less State aid than any other large industry. Yet there is seen every day more need for concerted action by the miners to secure proper legislation, much of which will be for the good of other industries as well as theirs. The time is coming when there will be a pressing need for action to conserve and obtain the best possible use from the waters and timbers of the State. The road question is now in such a position that it is time for all such bodies as the California Miners' Association to take some active interest. There is need for better State laws as to mining and for changes in the Federal laws to meet the changing conditions. Of the need for proper representation of the mining industry in Washington there has been much said.

As long as the California Miners' Association is conducted upon the lines which have been followed in the past it should have the hearty support of the mine owners of the State. Its work has been marked by serious desire to do what can be done for the welfare of the industry. It has never been used as an advertising medium and has always commanded the respect of all.

It is to be hoped that all mine owners throughout the State will join the Miners' Associations of their respective counties and contribute the very small dues required of members. For the amount expended no public or semi-public organization in this State has ever done so much for the public good. The sphere of usefulness of the California Miners' Association is growing as the industry increases in importance. It has done much, and will do more as a body, that the individuals cannot accomplish for themselves.

The New Mining Law.

The new mining law of California as to location of mining claims upon public domain goes into effect next week. Had the miners of the State taken more interest in the proposed legislation last winter the law would probably in some respects have been differently framed. Those who had charge of it did the best that they could under the circumstances and with the short time at their disposal. No better time could have been chosen than the present for a fair test of the value of its provisions. But the value of these tests will, in a large measure, be lost if the miners, especially the Miners' Association, do not take steps in time before the assembling of the next Legislature to prepare well in advance for any remedies or changes they may deem advisable. No general law on the subject affecting so many districts should be passed hastily.

The last Legislature showed its willingness to pass any laws that the miners would agree upon for the welfare of their industry, and there will be no trouble about securing further legislation at the next session. It is peculiarly a province of the Miners' Association, through its legislative committee, to decide in good time what measures will be necessary and present them in proper shape. It would be well for the legislative committee appointed by the last Miners' Convention to prepare and present at the next meeting a report, not so much upon what has been done, but rather what should be done in the future. There are a number of subjects that they might well take up, such as the question of mechanics' lien on mines and the making of mining a public use in order to enable mine owners to obtain rights of way.

Speculative Values of Mines.

The returns from the mines of the Rand, South Africa, show a steady increase from month to month and reports of development work, and the erection of mills to crush ore opened up guarantees a continued increase in the total yield for some time to come. Yet in the London stock market the prices of shares show a continued declining tendency. In Western Australia there is even a greater proportionate increase in the yield and the reports all show that there is certainly a brilliant future for the mines. Yet the price of shares continues to fall in London, and it is almost impossible to float an Australian mine in that market. The output of Cripple Creek is increasing steadily, and proof is being given that the district will hold up its yield better than was believed. Yet the price of shares is falling.

As to Africa and West Australia, it may be explained that too much money was offered by the richest people in the world, and speculators and promoters ran the prices even of the best properties far beyond their real value. The shares will now probably go down to or even below their real value. In the meantime mining will be conducted upon more business-like lines and unhampered by too much capital.

Explaining the case of Cripple Creek, the *Mining Investor* of Colorado Springs says:

Has the production of more gold anything to do with lower prices? Has, in fact, the showing now being made at Cripple Creek anything to do with prices at all? Are fat salaries being paid? If not any of these reasons, what is the cause of the continued decline of mining stocks? In answer to the last question I would say that, more than anything else, it is the condition of the entire country that is affecting mining stocks. What is the news from the Eastern markets? What is the condition of trade in the East? There is but one answer to both: Dull! Is it, then, unreasonable for the mining market to be dull and prices to be low?

Mine Management.

California is, more than any other great mining field in the world, a "poor man's country," and will remain such unless stock gambling on a large scale in local mines comes into vogue. Most of the large mines of California have been opened by men with small capital, or none at all. Most of the mine owners to-day who are wealthy have become so through, while with little or no means, having discovered good properties, which alone, or with little outside help, they have themselves developed.

In no other mining district is such a large proportion of the mines managed by the owners themselves. As a result, California has produced more of the leading miners who have been called to other parts of the world. Yet too many men, who are new to mining, are mismanaging their own properties. In earlier days it was impossible to employ skilled miners, and the proportion of failures was far greater than it is now; yet to-day there are more mines being mismanaged in California, probably, than anywhere else in the world, simply because men of skill are not employed. The mine owners, as a rule, do not pay salaries that will tempt the best miners to enter their services as managers. It is particularly noticeable that foreign investors in mines in California pay more in the way of fees and salaries for skilled managers or experts than do the Californians. Their initial expenses and cost of management are always greater, but before they begin operations they have taken a simple, proper business precaution, often neglected by local investors.

The Trans-Mississippi Congress.

It is to be hoped that California will be well represented in the Trans-Mississippi Congress to be held this year in Salt Lake. The meetings that have been held in the past have done a great deal to unite the West upon questions of common interest, and it is only by concerted action that much can be done in the way of inducing needed Federal legislation. The influence of any single State delegation from west of the Mississippi can do little in Congress. The questions as to arid lands, forest preservation, and the management and sale of public lands are daily becoming more and more important. Unless steps are taken soon to preserve the people's interests in these things great injury may be done.

Concentrates.

THE Rossland, B. C., Mining Stock Exchange members propose to disincorporate.

THE Montreal copper property near Frisco, Utah, is reported sold to Denver people for $200,000.

JAMES DIXON of Vancouver has purchased the Badshot mine near Ferguson, B. C., for $150,000.

A PROSPECTOR in Poor Man's gulch, Calaveras county, California, last week, found a $9000 pocket.

THOMAS MAGUIRE found a $280 nugget in Heybrook gulch, Siskiyou county, California, last week.

IN the Summit district, in Kern county, California, a soap mine is reported to have been discovered.

A RICH strike has been reported in the Alameda mine, in the Rand district, Kern county, California.

A 10-STAMP mill is to be erected on the Lighthouse mine, near Middle Bar, Calaveras county, California.

NEAR Neihart, Mont., are large deposits of gypsum, and a mill has been erected for the manufacture of stucco.

JAMES A. YERINGTON has bonded a mica mine in Lincoln county, Nevada, and samples cut measure 24x24 inches.

THE parties interested in the copper mine in Mason Valley, Nevada, expect to begin the erection of a smelter next week.

AT Custer City, South Dakota, mica deposits have been bonded by a Cincinati syndicate and development work begun.

A STRIKE of copper ore, which carries gold, is reported to have been made recently in Althouse district, southern Oregon.

THERE are over 400 prospectors in the Fort Steele country, British Columbia, following the snow line up into the mountains.

SEVERAL directors of the Le Roi mine have gone to Rossland, B. C., on business connected with building the proposed smelter.

AT Nelson, B. C., last week, the Poorman mine was purchased for $100,000 by Hector McRae and J. F. Ritchie of Rossland.

A LARGE deposit of asbestos has been discovered in the Chihuahua mining district, near Oak Grove, San Diego county, California.

AN 18-inch vein of free-milling ore has been discovered almost in the heart of the city of Deadwood, South Dakota, and several claims have been located.

PITTSBURG, PA., people interested in mines at Idaho Springs, Colorado, have organized a company to drive a tunnel into Albro hill a distance of 3500 feet.

EXPERIMENTS have shown that the large bodies of low-grade gold ores at Bingham, Utah, may be worked at a profit. This will add much to the output of the district.

DURING February and March nearly 300 mining companies, capitalized at over three hundred million dollars, were incorporated and registered in British Columbia.

BRITISH COLUMBIA stocks are coming into demand in Japan. A Rossland company lately sold 5000 shares in that country and are proposing to establish an agency there.

A REPORT comes from the Rapid River district in Idaho that the Irwin ledge, 840 feet wide, with low-grade ore carrying gold and copper, has been bonded by Carr & Parker for $70,000.

NEW YORK capitalists have purchased the Peacock Farm and White Mountain copper properties in the Seven Devils district in Idaho and have incorporated a company with a capital of $2,000,000.

THE Canadian Pacific gave out that it would build the Crow's Nest Pass Railway this season, but is taking no steps in that direction, and the British Columbia papers are complaining of bad faith.

IT is reported that five new smelters will be erected at Keswick, Shasta county, Cal., as rapidly as the work can be done. About 9,000 tons of calcined ore is ready for the smelter at the new roasters.

FOR April the report of the Alaska-Treadwell is as follows: Period since last return, 31 days; bullion shipment, $38,996; ore milled, $20,405 tons; sulphurets treated, 329 tons; of bullion there came from sulphurets $10,459.

THERE has been discovered a deposit of mineral paint on the south fork of the Provo river, about twenty-eight miles from Park City, Utah. It is claimed that the product is equal to any similar deposit and is quite extensive.

THE output of gold from the Bendigo district, Victoria, Australia, from January 1 to March 28—thirteen weeks—was 44,344 ounces, against 41,325 ounces in the same part of 1896. Upon this output dividends amounting to £31,700 were paid.

A PRESS dispatch announces that the extensive San Marcial coal fields in the State of Hermosillo, Mexico, have been purchased by the Southern Pacific Railway. The coal is to be used on their western lines and on Pacific Mail steamships.

ANOTHER strike, and one much larger than that made two weeks ago, is reported in the Gwin mine, in Calaveras county, California. It was made on the 1400-foot level. This and similar reports from deep mines along the Sierras will do much to encourage bolder mining on other properties.

EXPLORATIONS which have been in progress for more than a year in the vicinity of Figeac, France, have, according to the *Echo des Mines*, resulted in the discovery of gold in decomposed diorite, in micaceous schist, and in veins of argentiferous galena, extending for a length of at least eight miles.

LAST week's shipments of ore from Rossland, B. C., amounted to 1240 tons, besides 164 tons milled. The Le Roi shipped 825 tons; War Eagle, 350; and the Iron Mask, 65 tons. The manager of the Le Roi announces that the output from that mine will be doubled in two or three weeks.

AFTER the sale of control of the Helena and Frisco mines at Gem, Idaho, to the Exploration Company in December last, the mill was shut down and since then 100 men have been employed in development work. The mill is being enlarged and will be started up about July 1st with a capacity of 800 tons daily.

IT is reported from Montana that the Bigelow-Lewisohn people are negotiating for control of the Montana Ore Purchasing Company with a view to consolidating it with the Boston & Montana and Butte & Boston Companies. This would make one of the largest copper mining companies in the world.

THE receiver of the Weldon mine at Leadville, Colorado, reported last Monday that the sales of ore by him were $95,-191.91. He had paid out in dividends $68,000, leaving on hand a little over $5,000, which was turned over to the Weldon Company. The business was closed and the receiver discharged.

THE Standard mine, on Canyon creek, in the Coeur d'Alene country, Idaho, according to the *Spokesman-Review* of Spokane, paid $53,000 profits last month, and its profits for the past year have averaged more than $50,000 monthly. It is owned by J. A. Finch and A. B. Campbell of Spokane and capitalists in Youngstown, Ohio.

THE good effect of the revival of mining on business is probably best illustrated by the fact that Spokane, Wash., which depends in large proportion on that industry, shows a much larger increase in the total of bank clearances for the first four months of 1897 over those of 1896 than San Francisco, Denver, Salt Lake, Portland, Los Angeles, Seattle or Tacoma.

THE new California mining law as to locating claims goes into effect at midnight next Tuesday. The provisions requiring that all claims be recorded with the county recorders, and that $50 worth of assessment work must be done within sixty days, are similar to provisions in the new Utah law, and the question as to whether they will hold is to be brought up in the courts.

THE American Institute of Mining Engineers will hold their annual meeting in Michigan in July, at Houghton, some time in the latter part of the month, with excursions to the Vermillion and Mesabi Iron ranges, on the north shore of Lake Superior, and to some of the copper mines near Houghton, on the south shore, the meeting and excursions to occupy about ten days.

CAPTAIN COUCH, the general manager of the Merced Gold Mining Company of Mariposa county, Cal., while in Boston recently advised his friends to hold on to their shares in the company, as, he said, the property was in a splendid condition. The shaft has reached a depth of 1000 feet, with the same results that other properties experienced—coming into good milling ore.

LAST week the Bullion-Beck mill in the Tintic district, Utah, was closed down and about 100 men thrown out of employment. The reason assigned for the closing down of the mill is that the freight rates on ores from Tintic district to Eastern points has been raised $2.50 a ton and smelter charges have advanced. Arrangements are pending to convert the plant into a stamp mill.

IN Utah the fact that the railways have advanced the cost of transportation on ore and bullion, and that the smelters have increased the treatment charges, has given rise to many alarming rumors concerning the policy of the producer, and much uneasiness prevails throughout mining and labor circles. It has been reported that the Mammoth of Tintic and the Mercur would close their mills.

THE Colorado agent of the Illinois Steel Company has been instructed to increase the shipments of manganese ore from Leadville to 150 tons daily. Shipments of this ore from Leadville commenced in February, 1896, the average shipments being 120 tons a day until the strike occurred, when the shipments were cut down to 75 tons daily, which average has been maintained until the present time.

PRESIDENT CHARLES H. FISH issues a statement which shows that the entire yield of the mines composing the present Consolidated California and Virginia Mining Company up to October 1, 1896, was: Gold, $61,780,474.86; silver, $69,856,-832.96; total, $131,637,307.82. The dividends paid were as follows: California, $81,320,000; Con. Virginia, $42,930,000; Con. California and Virginia, $3,898,800; total, $78,148,800.

THE California Debris Commission has received new applications to mine by the hydraulic process from the Industrial Gold Mining Company, in the old French mine, near Indian Diggings, El Dorado county; from James Rooks, in the Messerer mine, near Spanish Ranch, Plumas county; from the Haskel Ravine Mining Company, in Mohawk valley, Sierra county, and from Costa, Davis & Co., in their mine at Cherokee, Butte county.

THE Grant's Pass *Observer* says that it would be difficult to prescribe the limits of the copper belt of southern Oregon and northern California, the center of which is at or near Grant's Pass, though the belt has a width of about sixty-five miles northeast and southwest, and a length of not less than 300 miles, in the limits of which are many outcroppings of copper. At present there are but two properties being worked in this district, and these on small scales.

WESTERN AUSTRALIA exported in March 40,296 ounces of gold. The total for the first three months of 1897 was 113,208 ounces against 45,357 ounces for the first three months of 1896 and 87,858 ounces for the last three months of 1896. While there has been a great improvement in the output and increased confidence in their future, the prices of shares have continued to go down. This means that speculative prices will cease to hold and mining be brought down to a business basis.

IN Montana there is a law providing for the payment of a fee of 50 cents for each $1000 of capital stock on filing articles of incorporation. Last week the Seven Devils Mining Company filed papers for a capitalization of $10,000, which at the rate of 50 cents per $1000 necessitated paying a fee of $5. A day or so later a meeting was called and the capitalization was increased to $1,000,000. The fee for filing such increase of capitalization is but $5. Thus it cost these Seven Devils but $10 to file papers for a $1,000,000 company. This is a saving of $490 to the incorporators.

THE call for the International Gold Convention, to be held in Denver in July, has been received. It is stated that the objects are to secure such national legislation as may be calculated to promote the business interests and development of the resources of the mining industry in North and South America; to bring together mining men and investors; to increase reciprocal trade among them; to discuss such questions as are naturally suggested by its objects; to cultivate acquaintance, fraternal feeling and hearty co-operation among the various mining, commercial and labor bodies represented; and especially to take under advisement the importance of the creation by Congress of a department to be known as the Department of Mines and Mining, thus securing a Cabinet officer who represents an interest which affects more than one-third of the people of the United States.

THE report of the Simmer and Jack mines of the Rand, South Africa, from March 1, to December 31, 1896, shows that the total working expenses were £179,732 6s 10d, divided as follows: Mine expenses, £71,767 17s 10d; hauling and pumping expenses, £9548 0s 9d; transport of quartz, £3331 15s 11d; mill expenses, £26,300 15s 10d; cyanide expenses, £19,547 13s 2d; chlorination expenses, £8419 14s 8d; general charges, £12,976 14s 1d; development, £26,170 10s 4d; maintenance of buildings, £1669 4s 3d. The value of the gold realized was £290,269 16s 7d from 134,055 tons crushed. The cost per ton was £1 6s 10d; yield per ton, £2 3s 4d, and net profit per ton, 16s 6d.

A CONFERENCE committee of the two houses of Congress last Tuesday reached an agreement on the provisions in the Indian Appropriation bill concerning the Uncompahgre Indian reservation in Utah. As it now stands it directs the Secretary of the Interior to at once allot agricultural lands to the Indians now located upon or belonging to the Uncompahgre Indian reservation, said allotments to be upon the Uncompahgre and Uintah reservations or elsewhere; that all the lands of the Uncompahgre reservation not heretofore allotted in severalty to Uncompahgre Utes shall, on and after the first day of April, 1898, be open for location and entry under the allotment laws of the United States.

ENGLISH advices show that while the price of copper has fallen from 12 to 11 cents in the United States, and somewhat less in England, the European consumption continues to increase and absorb large arrivals, so that the stock continues to grow less, as it has since 1892. On the first of May the stock on hand was 28,743 tons, against 50,928 tons may 1, 1892 48,094 tons May 1, 1893, 43,206 tons May 1, 1894, 50,239 tons May 1, 1895, 34,246 tons May 1, 1896. Yet the imports of copper into England have gradually increased. From January 1 to May 1, 1892, the imports were 32,317 tons; in 1893, 32,422 tons; in 1894, 34,441 tons; in 1895, 34,011 tons; in 1896, 40,617 tons, and in 1897, 42,417 tons. The total visible supply on May 1 for the same years, as reported from Liverpool, was 53,668 tons in 1892, 52,055 tons in 1893, 46,805 tons in 1894, 54,638 tons in 1895, 38,459 tons in 1896, and 33,825 tons in 1897.

THE directors of the De Lamar Company of Idaho have passed the dividends for the six months ending March 31st, owing to falling off in product. The following is Manager Huntley's report for March: Number of tons crushed (wet), 4419; number of tons crushed (dry), 3977.10. Average assay value of the pulp: Gold, $15.22; silver, $2.16; total, $17.38. Average assay value of the tailings: Gold, $4.41; silver, $0.57; total, $4.98. Percentage saved, total, 71.35; number of ounces fine gold produced, 1951.037; number of ounces fine silver produced, 15,314.65; value of gold produced (at $20), $39,020.74; value of silver produced (at 65c), $9954.54; estimated surplus on sales of March bullion, $700; ore sales (estimated), $2628; miscellaneous revenue, $124.95; total, $52,428.23; deduct all expenses for the month, $38,678.23; estimated profit for March, $13,750; bullion and ore on hand and in transit, being result of general cleanup for the year, $10,085; total, $23,835.

A BILL for the regulation of joint stock companies which has been adopted by the provincial government of British Columbia provides that for the future all joint stock companies carrying on business in the province will be divided into two kinds—provincial and extra-provincial. The latter—those incorporated outside of the province—are again divided into two classes. One of these will consist of companies organized under the laws of Great Britain and Ireland; of the Dominion of Canada; the old Province of Canada, or of any of the provinces of the Dominion. Such companies can obtain a licence to carry on their business in British Columbia. The second class will comprise companies organized elsewhere, and before they can do business in the province, they must be registered under the act. The bill also contains elaborate provisions for the issue of prospectuses and for other matters, all intended to protect investors, shareholders and creditors. The bill also provides for the voluntary winding-up of companies, for the preventing of fraudulent practices, and other matters.

THE Ferreira and Robinson are the two greatest working mines in the Rand, South Africa, at present. The following are the results from the Ferreira for April: Crushed, 9964 tons; bar gold extracted, 8139 ounces; concentrates caught, 260 tons; assay value of concentrates, 7 ounces 13 dwts. fine gold per ton, equal to 1989 ounces. Cyanide works—Bullion produced from tailings, 2791 ounces. Total gold from all sources, 12,919 ounces. The following figures are from the March report of the Robinson mine: Quartz mined 15,783 tons. Development—Drives, 720 feet; raises, 233 feet; crosscuts, 589 feet; total, 1542 feet. Mill—Stamps at work, 120; net running time, 29½ days; tons crushed, 15,783; tons per diem per stamp, 4.4; gold from mill, 11,018 ounces 8 dwts. Chlorination and cyanide works—Gold won from own concentrates (by chlorination), 1057 ounces; bullion from tailings (cyanide process), 2679 ounces 7 dwts.; bullion from slimes (recovered by Rand Central O. R. Co., Limited), 1615 ounces 9 dwts.; from own ore, 16,388 ounces 4 dwts.; gold from concentrates purchased (by chlorination), 2442 ounces, 1 dwt.; total, 18,830 ounces 5 dwts.

AT a meeting of the Consolidated Gold Fields, Limited, in London to increase the capital to £2,700,000, John Hays Hammond made the following prediction as to mining costs in Africa: Now let me make a prediction, which might be called a bold one, but in the fulfilment of which I am perfectly confident, and let me tell you that costs of deep-level mining will be less—very considerably less—than the costs of mining to-day upon the outcrop companies. The people of the Transvaal, regardless of political differences—for the Boers themselves are beginning to realize their dependence upon the mining industry—the people of all South Africa, the capitalists of not only England, but of the Continent of Europe as well, must co-operate in their endeavors to obtain the best possible economic conditions for the development of the gold mines of the Witwatersrand district. Now, the expansion of the mining industry of the eastern and the western portion of the Rand, and also in the outside districts: that can only be attained by affecting a considerable but quite possible reduction in the costs of mining. To this end, as I have said, all efforts will be directed and, I believe, infallibly with ultimate success.

Practical Notes on Hydraulic Mining.*

NUMBER VII.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Overshot Wheels.—I think I am safe in stating that this class of wheel is more popular than any other class of rough-and-ready water motors. To find the horse-power, multiply .00123 by the quantity of water in cubic feet per minute used on the wheel. Then multiply the result by the head of water in feet.

To find the quantity of water required in cubic feet per minute to generate a given horse-power with a known fall, multiply the horse-power by 815 and divide by the fall, or head, of water in feet.

Example 1.—What horse-power can be obtained from an overshot wheel 12 feet in diameter, using 200 cubic feet per minute? Answer: $.00123 \times 200 \times 12 = 2.95$ H. P.

Example 2.—How many cubic feet of water per minute is required to generate 20 horse-power, using an overshot wheel 22 feet in diameter? Answer: $20 \times 815 \div 22 = 741$ cubic feet.

Strength of Materials.—All those engaged in mining should thoroughly understand this important subject, and especially that branch relating to the breaking and working strain of ropes, bolts, chains, etc.

The number of accidents and fatalities arising from ignorance on this subject should be sufficient to compel all owners of mining property to insist upon superintendents and foremen being able at all times to provide ropes, bolts, chains, etc., of proper dimensions for the work required, and in this manner more work would be accomplished, and with far less risk and expense, than is generally the case.

I will first deal with wooden beams, and as a guide to further calculations the following table compiled from various authorities will be found useful. The columns marked *S*, *N*, *C*, *E* have the following interpretation:

S—Breaking load at center of beam when supported at both ends.

N—Breaking load when placed at one end and the other end fixed.

C—Safe load in center when beam is supported at both ends.

E—Safety load at end of beam when the other end is fixed.

The following table is based on a factor of safety of 7; that is to say, the safe load shown in table is only one-seventh of the calculated breaking load, and even this high factor of safety should be increased when using beams not free from knots and shake. In addition to the factor of safety, freedom from knots and shake, it must also be remembered that seasoned timber resists crushing much better than green timber, in many cases twice as well, and the figures given in this table are for good samples of timber; therefore, the factor of safety (7) should be adhered to.

The following figures and results are obtained from experiments with small pieces of timber, and therefore considerable allowance must be made for beams that are not of a uniform texture. I have only mentioned the various kinds of American woods that are in general use. Their various breaking strength and safe loads are given in round numbers, so that in working out different problems calculations mas be made as simple as possible:

Name of Wood.	Weight in lbs. per cu. ft.	Breaking load in lbs. S.	Breaking load in lbs. N.	Safe load in lbs. C.	Safe load in lbs. E.
Ash	45	590	147.50	84.29	21.07
Beech, white	43	440	110	62.86	15.71
Beech, red	44	570	142.50	81.43	20.36
Birch, black	45	680	170	97.14	24.29
Birch, yellow	44	440	110	62.96	15.74
Cedar, white	35	250	62.50	35.71	8.99
Fir, black	42	340	85	48.57	12.14
Hickory	50	700	175	100	25.00
Hickory, bt. nut	40	480	120	68.57	17.14
Larch	35	300	75	42.96	10.71
Oak, live	54	621	155.25	88.71	22.18
Oak, red	53	562	140.50	80.28	20.17
Oak, white	49	581	145 25	83	20.75
Pine, red	40	509	127.25	72.71	18.18
Pine, pitch	41	576	144	82.28	20.57
Pine, yellow	33	395	98.70	56.43	14.71
Pine, white	34	410	102.50	58.57	14.64
Pine, Virginian	38	485	121.25	69.28	17.32
Teak	56	673	168.25	96.14	26.03

The above figures represent the number of pounds required to fracture the various kinds of wood having an area or cross section of 1 square inch by 1 foot in length. In finding the strength of beams the following proportions of strength must be observed:

VALUES OF X.

(1.) With a beam fixed at one end and loaded at the other=1.

(2.) With a beam fixed at one end and the load distributed uniformly=2.

(3.) With a beam supported at both ends and loaded at the center=4.

(4.) With a beam firmly fixed at both ends and loaded at the center=6.

(5.) With a beam supported at both ends and uniformly loaded=8.

(6.) With a beam firmly fixed at both ends and uniformly loaded=12.

In calculating the strength of beams, the whole weight of the material must be included when the beam has a uniform load, and only half the weight of material when the load is placed at the center.

*Copyrighted by the Author.

Let S=tabular number of breaking load in pounds on a beam supported at both ends and loaded at the center.

N=tabular number for breaking load in pounds on a beam loaded at one end, and the other end firmly fixed.

C=safe load in pounds on center of beam supported at both ends.

E=safe load in pounds on a beam fixed at one end and loaded at the other.

b=breadth of beam in inches.

d=depth of beam in inches.

l=length of beam in feet.

w breaking load in pounds.

R w divided by 7=safe load in pounds.

x=proportion of strength due to position of load, and method of fixing the ends of the beam.

Square Beams.—The formula for finding breaking load is as follows:

$$w = \frac{b\,d^2\,N}{l} \times x$$

Example 1. What is the breaking load on a beam of American yellow pine, 12 inches deep, 12 inches broad and 20 feet long, one end of same being firmly fixed and the load at the other end?

Answer:

$$w = \frac{\frac{b\ d^2\ N}{12 \times 12^2 \times 98.7}}{\frac{20}{1}} \times \frac{x}{1} = \frac{12 \times 144 \times 98.7}{20} \times 1 = 85027.68 \text{lbs.}$$

or 37.95 tons. And the safe load would be $\frac{37.95}{7}$ or 5.42 tons.

Example 2. With same dimensions, but beam supported at both ends and loaded in the center, the breaking load will be:

$$\frac{\frac{b\ d^2\ N}{12 \times 12^2 \times 98.7}}{\frac{20}{1}} \times 4 = 37.95 \text{ tons} \times 4 = 151.80 \text{ tons.}$$

And the safe load would be $\frac{151.80}{7}$ or 21.68 tons.

Example 3. If the beam in example 1 was uniformly loaded, the safe load would be the same, viz., 5.42 tons multiplied by x, and by referring to the different proportions of strength tabulated we find in this instance where the beam is fixed at one end and uniformly loaded, x=2. Therefore the safe load would be $5.42 \times 2 = 10.84$ tons, thus showing that a beam will safely stand double the load when uniformly loaded than it will with load in the center.

Example 4. A beam of American pitch pine, 6 inches wide and 10 inches deep by 15 inches long, supported at both ends and uniformly loaded, the breaking and safe loads will be as follows:

$$w = \frac{b\,d^2\,N}{l} \times x \qquad \text{Safe load} = \frac{w}{7}$$

$$w = \frac{\frac{b\ d^2\ N}{6 \times 10^2 \times 144}}{\frac{15}{1}} = 5760 \text{lbs.} \times \frac{x}{8} = 46080 \text{lbs. or } 20.57 \text{ tons.}$$

and the safe load would be $\frac{20.57}{7}$ or 2.94 tons.

Example 5. Take the same beam as used in example 4 and lay it flatwise, or, that is, call it 10 inches wide and 6 inches deep, then the breaking strain would be:

$$\frac{\frac{b\ d^2\ N}{10 \times 6^2 \times 144}}{\frac{15}{1}} = 3456 \times \frac{x}{8} = 27648 \text{ lbs. or } 12.34 \text{ tons,}$$

and the safe load would be $\frac{12.34}{7} = 1.76$ tons,

or a little more than one-half the strength of the same beam laid edgewise.

(To be Continued.)

Recent Additions to the Mineral Collection of the California State Mining Bureau.

Rich silver ore with ruby silver; Zacatecas, Mexico. Thos. J. Barbour.

Gold quartz very rich in free gold and tellurides of gold and silver; Melones Con. M. Co., Calaveras county, Cal. Ralston & Grayson.

Mercury, native in rich cinnabar; Mirabel mine, Lake county, Cal. C. C. Derby.

Gold quartz showing free gold; Yellow Aster mine, Randsburg, Kern county, Cal. J. M. Kelley.

Gold quartz showing free gold; Norwegian mine, Tuolumne county, Cal. From the company, per Wm. C. Murdoch.

Gold quartz with "wire gold;" Lucky Boy mine, Lane county, Oregon. Emile Qure.

Martite in very fine crystals; Thomas Mountain, Utah.

Chenevixite, orpiment crystals, olivenite, tiemanite, sphalerite, pyrite, etc.—fine crystallized specimens; Utah.

Semi-anthracite coal of good quality; Skykomish, Washington. E. Weinheim.

Native mercury in silicious rock; from near Twin Peaks, San Francisco, Cal. Behrend Joost.

Auriferous conglomerate; Robinson mine, Johannesburg, South Africa. Jas. Reid.

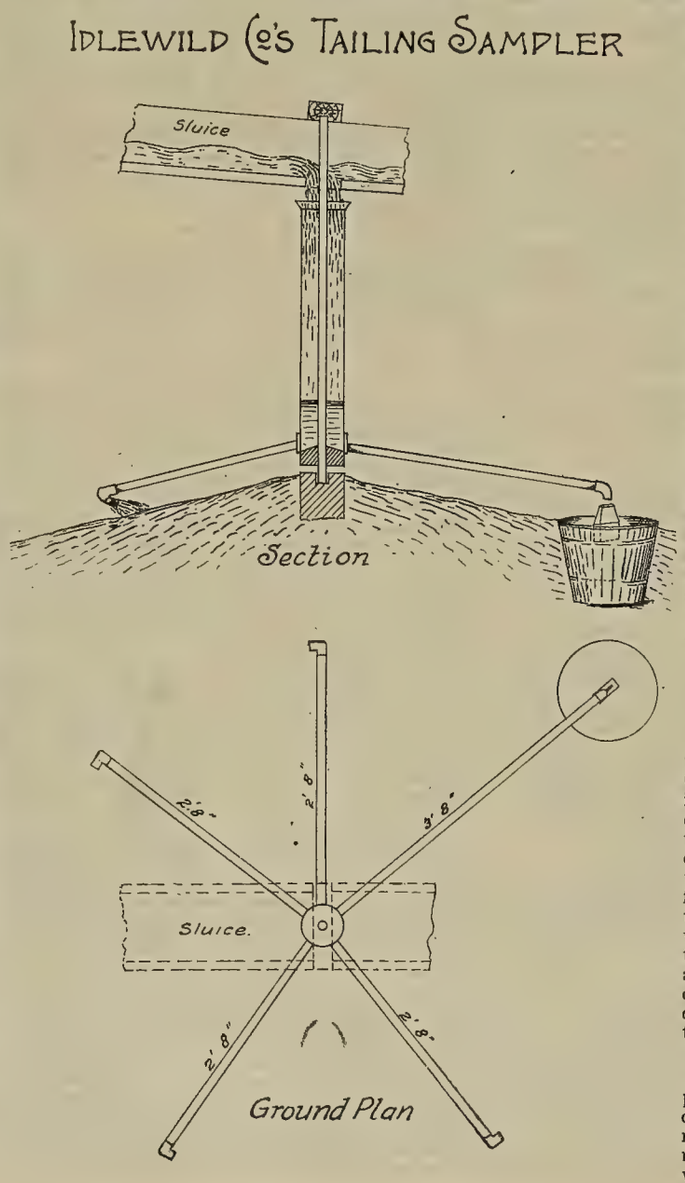
Monazite sand; Morgantown, N. C. R. H. Renebome.

Six cut and polished specimens of marble; from California and other localities. A. L. Seager.

Large and well-shaped basalt column; Healdsburg, Sonoma county, Cal.

Gold ore, sylvanite (telluride of gold)—two very rich specimens, one raw and the other roasted; Arcadia mine, Cripple Creek, Colo. Wm. Cochran.

Quicksilver ores, five specimens from as many different mines; Pine Flat, Sonoma county, Cal., and one from the Corona mine, Napa county, Cal.



Fourteen fine crystallized specimens of various minerals, mostly from Utah, including two new species—wardite and bixbyite—the latter in cubes on topaz.

And a number of other ores from various mines of the coast.

HENRY S. DURDEN, Curator.

A Tailings Sampler.

A tailings sampler in use at the Idlewild or Taylor mine, at Greenwood, El Dorado county, is shown in the accompanying cut. It consists, in general terms, of a reaction water wheel, driven by the tailings water, with one of the arms extended 1 foot beyond the rest and with the outlet turned downward, in which it passes at each revolution over a covered bucket with a raised slot, $\frac{1}{16}$x4 inches, in the center of the lid, which permits of a small amount passing into the bucket.

TAILINGS SAMPLER AT THE IDLEWILD MINE.

STATE MINERALOGIST COOPER proposes to take up the study of opportunities for the development of electrical power in the mining regions. Such work would be of value not only to mining but many other industries.

From Mine to Mint.

NUMBER II.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia

Parting and Refining Processes.—Gold and silver are not found native in a state of purity. Indeed, they seem to "hunt in couples." Our California nuggets contain, on an average, about 88 per cent gold, the balance being chiefly silver. Native silver has been found more nearly approaching purity, but even this contains enough gold to pay for parting. But by far the largest source of silver is the lead and copper ores of the West, in which it occurs accompanied by gold, in small percentage, it is true, but very important in value.

The lead ores are smelted to "base bullion," in which the gold and silver are caught. The lead smelter afterwards carries the concentrating process up to the point of dore bars, which are silver carrying gold as its chief impurity. These bars go to the refinery for parting.

The copper minerals of Montana, Arizona, etc., carry silver and gold, and the electrolytic process of refining the crude copper made from these ores is now an enormous industry. In this process the solution and current are so regulated that only pure copper passes over and is deposited on the cothode, while the original plate—the anode—is disintegrated and the impurities fall to the bottom of the tank as a mud, technically known as "slimes." This mud is a veritable drag net of nearly all the impurities known to the metallurgist, containing, besides gold and silver, notably copper, bismuth, antimony, arsenic, lead, sulphur, selenium and tellurium. After a more or less successful purification in the copper works, the resulting bullion is subjected to one of the parting and refining processes described below.

Some gold ores are associated with platinum and platiniridium. Iridosmine is rather abundant in the auriferous beach sands of northern California. Dentists' scrap again contains platinum, tin and copper. Jewelers' bars, resulting from the melting down of old jewelry, watch-cases, etc. (filled and solid), contain nearly all the metals used in the arts.

It will thus be seen that the material to be treated is of the most heterogeneous description, and not infrequently special methods have to be adopted. Thus, iridosmine is separated from gold by alloying the latter with sufficient silver to so diminish the specific gravity of the molten mass that the heavy iridosmine grains will settle to the bottom of the crucible. The silver and gold are then carefully poured off and parted by acids, as hereafter described.

Methods of Parting.—Three general methods are in use for parting gold and silver, known as the "nitric acid," the "sulphuric acid" and the "electrolytic" process, respectively. The latter is in use in a few private plants, where it gives satisfaction, but it seems to be better adapted to large smelting works, where argentiferous lead is purified, than to government refineries.

The electrolytic process is said to give satisfactory results only when the bullion to be parted has been refined in a cupel furnace until it contains not over 2 per cent of impurities (lead, copper, bismuth, etc.). None of our mints or assay offices can easily be provided with facilities for such wholesale cupelling operations, and the process has therefore been confined, as stated, to lead-smelting plants. It yields silver of exceptional purity (0.999½), and the estimated output of the few concerns using it is some 10,000,000 ounces fine silver per annum. As it is an interesting process from a scientific as well as industrial point of view, a short description may not be amiss before proceeding to deal with the methods in use at the government institutions.

Electrolytic Parting and Refining.—The silver carrying gold and a small percentage of impurities is cast from the cupel into flat plates about 18 inches long, 10 inches wide and one-half inch thick, weighing about 30 pounds each.

These plates form the anodes, and are suspended by three lugs cast on one of the long sides. They therefore hang with the greater length horizontal. Tanks of California redwood planks are very carefully made, 11 feet long by 2 feet wide and 20 inches deep (inside measure). Six partitions are placed crosswise in a tank so as to give seven separate cells or "baths." In each cell three plates or anodes are suspended, alternating with four cathodes. These latter are thin-rolled sheets of pure silver 13x20x$\frac{1}{32}$ inches thick, weighing 50 troy ounces each. The distance between anode and cathode is about 1¾ inches.

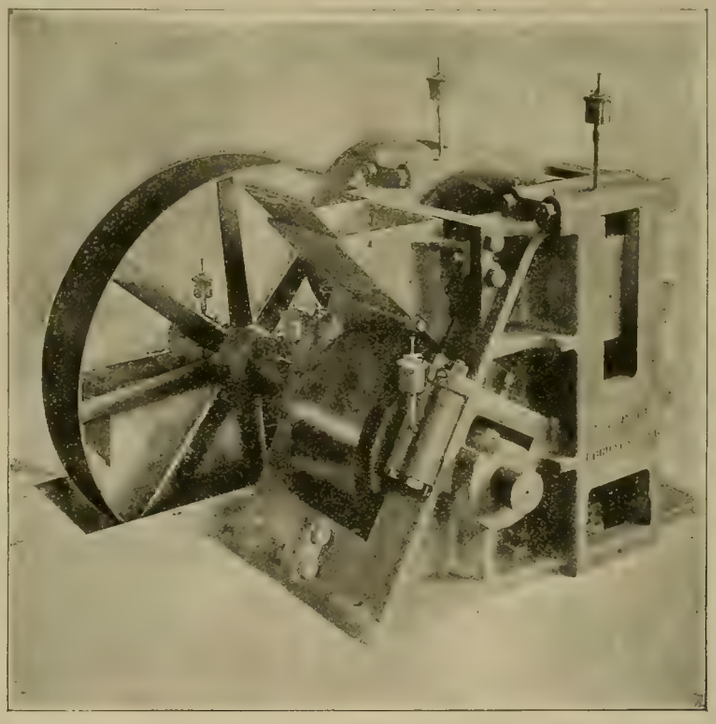
Both anodes and cathodes are suspended by conducting wires from copper rods resting on the edges of the tank. Two copper bars traverse these top edges and are connected with the respective poles of the dynamo. The cross-rods supporting the plates rest on these bars, but one end of the rod carrying an anode is insulated by a rubber band, while the opposite end of the rod carrying a cathode is insulated in like manner. The current must therefore pass from one conductor to the anodes, through the solution and the cathodes, to the return conductor. It will be seen that the current is divided between these seven cells and that we have 21 anodes connected in multiple with 28 cathodes.

A model plant consists of fourteen such tanks containing seven cells each. Ten of these tanks are constantly in circuit, four being in turn cut out for charging, discharging and possible repairs. These ten tanks are connected in series. The dynamo furnishes a current of 180 amperes, with an electromotive force of 90 volts. Such a current requires 22 horse power. The total cathode surface is 10 square feet in each tank. There is, therefore, a current density of 18 amperes per square foot of cathode surface. This is high as compared with that used in copper refining, but is purposely so in order that the silver may be deposited in coarse crystals nonadherent to the cathodes. The silver can then be easily brushed off and collected at short intervals. Thus the constant renewal of cathodes is avoided and an important saving effected in the stock of silver carried in the baths.

Each anode is inclosed in a muslin bag, which serves to catch the undissolved metals, which fall as a black slime. In this are found all the gold and bismuth, the greater part of the lead as peroxide, together with some silver and copper. Below this system of anodes, cathodes and bags in the bath is stretched on a box-like frame a piece of cloth, on which is gathered the deposited silver as it is scraped from the cathodes by wooden "brushes." These brushes straddle the cathodes without touching, and are kept moving to and fro by machinery, and they serve not only to brush off the silver as fast as it is deposited, thus preventing short circuits, but also to keep the solution uniform by gentle agitation.

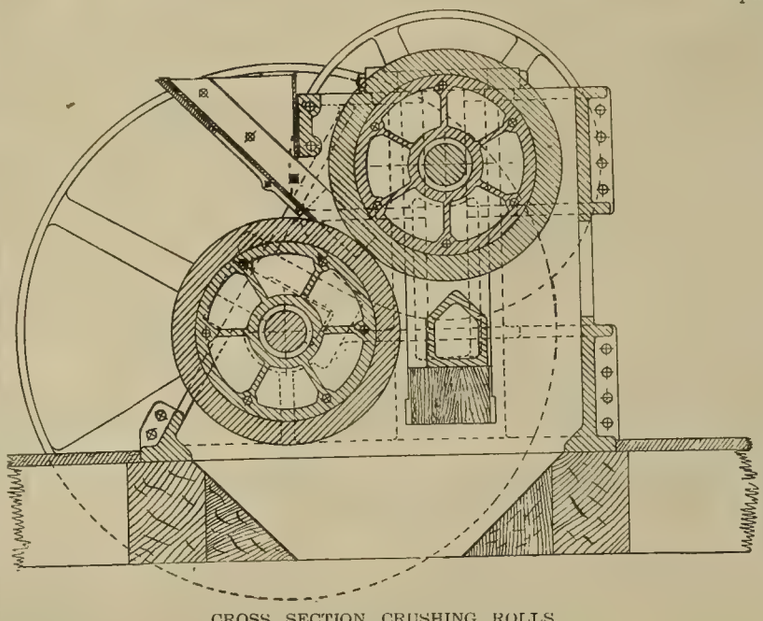
The solution is one of silver and copper nitrate, to which about one per cent of nitric acid is added. The acid tends to prevent the deposition of copper with the silver, and about one pint is added to each bath every twenty-four hours. Three-eighths of one volt will decompose silver nitrate, while copper nitrate requires 1¼ volts and lead nitrate a still higher voltage.

In a slightly acid solution, containing silver, copper and lead nitrates, the current will not deposit a trace of anything but silver until the lead and copper get to be largely in excess of the silver. It is said that pure silver will be deposited from a solution containing one and one-half times as much copper as of silver. Of course, the gradual accumulation of impurities in the bath necessitates its gradual renewal by addition of fresh solution, the silver being precipitated from the portion withdrawn by salt water.



Each tank is cleaned of deposited silver every other day and of gold slimes once a week. A full-sized anode is dissolved in about two and one-half days. The crystalline silver is washed thoroughly with hot water, dried and melted. The gold slimes are melted, granulated and parted by acid.

Such a plant as described will produce about 33,000 ounces of fine silver each twenty-four hours.



(To be Continued.)

Improved Crushing Rolls.

The engravings on this page illustrate this machine in the size 26 in. diameter by 14 in. face, arranged for belt drives. The two rolls are usually run at the same speed, most of the driving being done on the bottom roll. The main frame of the machine is made in two pieces, but may be further sectionalized if necessary. In each side of the frame is cast a heavy vertical guide. These guides are planed out true to receive the cast iron yoke piece on which the top roll is mounted. The rolls may be readily spaced for crushing to a given size by inserting two distance pieces of hard wood under the "U"-shaped yoke. The rolls are fed from a hopper placed to one side of the top roll as shown. The bottom of this hopper is made removable, giving free access to the rolls for cleaning, should the machine get choked up. The roll shells are made of either chilled cast iron, rolled steel, chrome steel, or manganese steel, as may be desired, and are fitted to the centers with machined surfaces, and are held in place by through bolts. These rolls may be driven either by belts direct, as shown in the cut, or by gearing with a countershaft.

ROGER'S IMPROVED CRUSHING ROLLS, 26 IN. DIAMETER, 14 IN. FACE.

CROSS SECTION CRUSHING ROLLS.

The principal advantages claimed by the manufacturers are: Owing to the way in which the rolls are arranged a thoroughly compact and substantial machine is possible, occupying about half the space of ordinary rolls. The customary springs by which the rolls are held together are only necessary in small machines, or where unusually hard material is to be crushed to a very fine pulp. The machine has but few parts and is easily taken apart for repairs; will pass pieces of drills, spikes or pieces of iron of moderate size without injury. Experience has shown that it takes less power than the ordinary style rolls by about 25 per cent, and for fine crushing has a much larger capacity.

The Parke & Lacy Co., 21 and 23 Fremont street, San Francisco, are sole agents for the Roger's Improved Crushing Rolls.

At a meeting of the Society of Mine Managers at Witten-am-Ruhr, the use of infusorial earth was advocated as a covering for boilers and steam pipes. It was stated at the meeting that its use effects a saving of 82 per cent in condensation water.

Mining Summary.

CALIFORNIA.

Amador.

Ledger: On the Central Eureka the operations are confined to drifting and crosscutting. Milling ore has been encountered in the south drift.

On the American mine, on Sutter Creek, Wilfred Dennis has recently completed a 10-stamp mill. He has a shaft down about 80 feet, in which at the bottom a ledge about 8 feet thick is exposed.

Butte.

Mercury: The old Red Point mine, Enterprise, is now owned by the Oregon Gold Mining Company, a San Francisco corporation, and is being prospected and opened up under the management of J. Champion. The present owners have run a tunnel which at a length of 540 feet taps the ledge 240 feet below the old works. The ledge here is about 4 feet wide.

The Golden Fissure, owned and operated by Shaw & Watson, is equipped with a 5-stamp mill, and a canvas plant is being added for saving the sulphrets.

At the Crystal Hill mine Fred Bachman is working in good rock. He has a 4-stamp mill.

Moore & McKay and Kitrick Bros. will build a 5-stamp mill this spring on their Little California mine north of the Middle Fork. A road to it is now being built.

Calaveras.

Prospect: A new company known as the Tracy Gold Mining Company was incorporated about a month ago with the intention principally of developing the Tracy mine, formerly known as the G. A. R. mine, in Angels mining district, about a mile and a half from Angels Camp. Every detail of the incorporation was completed and work commenced on the property about the first of the present month.

On the Steep Gulch mine on French Hill there has been a tunnel run in from the gulch which taps the lead at a depth of about 30 feet, at which point it shows a width of nearly 5 feet.

Rich ore has been struck in the Mitchel mine at Railroad Flat.

The final payment on the Donnallan or Gospel mine, three miles north of San Andreas, was made last week, and the mine, together with a 15-stamp water power mill, were turned over to the new owners, who are all Salt Lake people. The amount paid for the property was $22,525.

El Dorado.

Mountain Democrat: At Fairplay, Cy Mulkey has a force of men at work, drifting and ground-sluicing on Cedar creek, the work showing satisfactory results.

The Omo mine is getting out high-grade ore which shows gold freely through a 7-foot ledge.

The Philadelphia and Gold Note mine is closed down for a short time awaiting the decision of the stockholders as to who shall control.

At Diamond Springs work on the G. C. mine is progressing steadily at the tunnel, three shifs are employed and in twenty-seven days they have driven it ahead 217 feet.

Kern.

Californian: Garlock has another cyanide plant which will be in operation next week. This new plant will do custom work.

McNit, Snook and Baker in opening up a claim of theirs located on the desert about twenty miles from Garlock have struck rich rock.

Nevada.

(Special Correspondence).—This charming village of Washington, nestled among the mountains, nineteen miles northeast of Nevada City, is destined to become in the near future one of the thrifty and important mining centers of California. It lies on the southern bank of the South Yuba, whose cataract-like waters add romance to the little town, so like a Swiss alpine village. The place is reached easily, over a well-kept mountain road, with good stage service.

There is considerable prospecting now in active progress. On the Eureka a tunnel 132 feet, with over 600 feet "backs," has crosscut a 92-foot ledge that averages over $3 in free gold and carries considerable sulphurets. The footwall is slate and the hanging is serpentine.

The San Francisco, same formation, has two tunnels, the upper crosscutting a large body which has not yet been reached by the lower tunnel, which is 135 feet long. The property controls excellent water facilities. McCarthy & Condon are the owners.

Bell & French of San Francisco have bonded the Giant King, 1½ miles south of town, and have run two tunnels, the lower being 400 feet, with 300 feet backs, across a 72-foot ledge in a slate and porphyry formation.

The Gaston Ridge mine, owned mostly by New York people, six miles above Washington, is running a tunnel for the ledge, which they expect to reach within 175 feet. The tunnel is at present writing 1874 feet—so straight that one can see from its face the light of day at the mouth. Drills are operated by compressed air. Ventilation is obtained by the suction process, and the air in the tunnel is cold and pure as on the mountain top. This tunnel is expected to tap the ledge at a depth of over 1000 feet. The property was at one time a rich producer and was abandoned by C. D. Lane. The present company is incorporated under the laws of New Jersey. Dana Harmon is superintendent.

Meade & McBean have bonded two claims to the company operating the Gaston Ridge property. The tunnel has reached 700 feet. The chute, it is thought, will be reached within thirty days.

Bonnemort, Eastin & Moore have run 600 feet of tunnel, giving 300 feet backs, expecting to reach the ledge next week. The property is northeast of Washington, near Graniteville.

The Ormond, owned by Baron Von Schroeder, which was closed six years ago, is again being prospected. At the 400 level a good ore body is encountered. The south drift extends 425 feet on a 4-foot ledge, in slate walls, averaging above $8 in free gold. There are seventy tons of ore in the bin and there is ore in sight for many years' work. The property has a 20-stamp mill. Concentrators are en route and active production will soon be started.

The Yuba mine, five miles above Washington, owned by Haggin and the Hearst estate, which was abandoned four years ago at 800 feet depth, was recently bonded to Alf. Trigidgo, who expects soon to resume operations.

The German mine, near the Ormond, on the south bank of the Yuba, owned by the Shasta Mining Company, with a 10-stamp mill, is about to be rehabilitated. A visit to the mine reveals two tunnels in ore, the lower being 780 feet at a vertical depth of 265 feet from the surface. The ore, so far as opened, is from 4 to 26 feet, and mills from $5 to $13 per ton, exclusive of sulphurets. Free water the entire year, with a pressure of 212 feet, furnishes power.

The Mountain View, seven miles from Washington, on Canyon creek, is "on the contact," and has a tunnel 150 feet on a ledge of 5 feet. The ore is said to mill $7 per ton. This embodies two full claims. The Serious, in the same neighborhood, has a 200-foot tunnel on the ledge, with an upraise to the surface 120 feet, showing a ledge of from 1 to 4 feet. There are two claims in this property, 3000x 600 feet. The Arctic, adjoining these two properties, has two short prospect tunnels on a 4-foot ledge. These five properties can be operated by one plant. There is free water for power. These five claims are owned by Ole Helgensen of Washington, and, like most of the properties in this section, are awaiting capital to carry on operations.

Henry Kohler has a 200-foot tunnel on a 4-foot ledge, which is said to average $9.

The Spanish mine, three miles from Washington, is running ten stamps and four rotary mills. The formation is 100 feet wide. The country rock is slate. The cost of mining and milling this ore is 54 cents per ton, and it is taken to the mills from large surface cuts in the methods of a quarry.

Washington, Nevada Co., May 17th, '97.

Union: The Nevada City Mining Company has accepted the offer made by the London Exploration Company, of which Thomas Mein is the representative, and in all probability the latter company will take charge of the property in the course of a few weeks. The purchase price is in the neighborhood of $50,000. The Nevada City mine has a good reputation, and in years gone by yielded well. The shaft is down 800 feet and is at present filled with water.

The North Star Mining Company has commenced preparatory work for the sinking of a new 8x16 three-compartment shaft on Massachusetts Hill, through which the New York Hill, new Rocky Bar and a number of other mines in that immediate locality will be worked. This property will be known as the Central mine. It is calculated to sink a vertical shaft on the Central from 500 to 700 feet, at which depth the pay chute is expected to be encountered.

The ledge struck in the Massachusetts Hill recently is looking even better than when first encountered, and the North Star Company feel that conditions warrant them in making further explorations.

Placer.

Sentinel: The report of the Pioneer Mining Company of Boston for the eighteen months ending March 31st, shows:

RECEIPTS.

Production gold bullion	$ 77,368
18,500 shares treasury stock sold	95,500
Premium on gold coin	88
Interest account	1,065
Total receipts	$174,021

DISBURSEMENTS.

Pay roll and supplies	$104,743
Machinery, etc	13,150
Other expenses	9,280
Cash paid account new mines	10,000
Total disbursements	$137,173
Cash on hand	$ 36,848

Plumas.

National-Bulletin: In Granite Basin the Chicago company having the Robinson mine bonded will sink the shaft to a depth of 200 feet. It is now down over 100 feet.

At Grizzly Creek Dr. J. P. Welch and associates have from twenty to twenty-five men employed in putting the Joseph and other property in condition for active mining.

Dr. Saxton has six men employed in operating the Saxton hydraulic mine, which has a large and valuable bank of gravel.

San Diego.

Union: Mining men and capitalists from Los Angeles are going into the Chihuahua mining district in considerable numbers. The district is about twelve miles east of Oak Grove postoffice, fifteen miles north of Warner's ranch. New strikes are being made almost daily, and while the ore is low grade, the ledges are exceptionally large.

J. G. Shoemaker has sold to L. Schorm, for $600, the Daisy, Hardscrabble and other mining claims, situated in the Defiance district.

At Julian Mr. Tainge of the San Felipe mine is soon to return with machinery to handle the water in the mine.

A number of mining locations of claims in in the Laguna mountains have been recorded.

Shasta.

Free Press: At Copper City Sallee & McDonald have run a tunnel into the mountain over 1000 feet, and have exposed rich treasures in gold, silver and copper. For a distance of 400 feet the tunnel is in ore, and the end is not yet. How much farther this ore body extends can only be determined by pushing ahead. Like Iron mountain, it appears to be a whole mountain of ore, which, though base, is richer in gold and silver than the Iron Mountain range.

In Old Diggings district the Mammoth mine, owned by S. J. Cheney of Philadelphia, Pa., and which has been idle for several years past, is to be immediately reopened. Mr. Cheney has a contract with the Mountain Copper Company to furnish them with thirty to fifty tons of ore per day for use as flux in their smelters. The company has contracted to put in an endless ropeway from the mine to the smelter, a distance of about one mile, to convey the ore. According to the contract the work must be completed within the next sixty days. A force of about twenty miners will be employed in getting out the ore.

The Evening Star is being reopened. This property was recently sold by Frank Panter and Frank Litsch to W. M. Fitzhugh of San Francisco. The purchase price is said to have been $60,000, with $20,000 paid down. Russell L. Dunn has been placed in charge of the property. A site has been graded for the accommodation of a hoisting plant, which will be used in sinking a large shaft upon the property.

Searchlight: The rich discoveries in Harrison gulch during the past year and a half attracted prospectors to that section and the district is rapidly being extended by valuable new finds. Locations are reported over a section at least thirty miles in length by six or eight miles wide.

The new machinery for the addition to the Roberts mill is on the ground, and a force of men are at work excavating.

The crosscut being run to cut the Gold Hill ledge is now in about 350 feet, and 50 feet more will tap the ledge at a depth of 520 feet.

Fowler & Hurst have suspended work on their property temporarily. The new machinery will be put in immediately.

Steinmetzer, Huntington & Co. have bonded their properties to some Oakland parties.

The sale of the Fowler & Hurst properties in Harrison gulch to Capt. Roberts, has taken place, consideration $150,000. The mine is an extension of the Lucky Baldwin, and though hardly a year old, has already produced over $50,000, with but a 5-stamp mill in operation. The property has been developed by means of two tunnels and an upraise and thousands of dollars are now in sight. It adjoins the Lucky Baldwin on the east, and is one of the best developed properties in the gulch. Roberts now owns a complete succession of mines on the best portion of the known Harrison gulch lead. Early last year he purchased for $37,500 the Lucky Baldwin and Gold Hill mine from Fowler, Rhodes and Benton. He also bought out the interest of W. R. Conant.

At the Milkmaid mine at French gulch recently purchased by Jones, Hamilton and others of Nevada, lumber is now being hauled for the new mill and the machinery is expected to arrive shortly. Several men have been added to the force.

The Niagara mine at French gulch which is awaiting the change of the company's reorganization from the Dutch company, will start up about the first of June.

Negotiations are now under way, whereby Frank Panter and Frank Litsch will dispose of the Evening Star mine near Newtown to San Francisco parties for the lump sum of $60,000.

Morris, Norton & Weir of Buckeye, on the Top Notch, near Churchtown, have run a 180-tunnel and have two well-defined ledges.

L. L. Bettys has a force of men at work on the Trinity Consolidated mine on Dog creek, and has started up the mill.

McCourt & West have let a contract for a crosscut tunnel 75 feet in length on the Gold Standard on Treasury hill.

Siskiyou.

News: The Taylor quartz mine in Cottonwood district is being developed by a new tunnel being driven at a lower point on the ledge.

C. B. Poole is in over 400 feet on the tunnel on his mine at the head of Empire creek. He has a 21-foot ledge of low-grade ore.

The Nugget hydraulic mine, owned by Finley & Sons, is running steadily on pay gravel. They have surveyed ground for a new ditch to take water from White's gulch, a distance of four miles, which will enable them to work the year round.

Allen Davis & Co. are pushing work again in their 420-foot tunnel on the Bonanza King quartz mine. This is a prospecting tunnel, but some fine-looking ore has been taken out.

The hydraulic mines of Forks of Salmon are still running full blast; and although the season will probably be shorter than usual on account of the scarcity of water, the indications are that the yield of gold will be larger than usual.

W. P. Bennett and E. McLaughlin are opening up the old Crapo mine on Schoolhouse Flat. They will put on two giants and a large string of pipe and be ready for operation about the 20th inst.

Journal: Work is being carried on with as much speed as possible at the hydraulic mines in Oro Fino. They are all anticipating a good cleanup this season and will probably be enabled to work until about July 4th.

The Jones quartz mine in Quartz valley is turning out some rich ore at present.

Clute, Neal and Winsell are working a hydraulic mine on Hungry creek, and are doing very well.

The Steamboat mine expects to accomplish some good work this season. They will employ ten or twelve men on the mine, and with their pumps the water can be handled.

The Seattle placer mine on Thompson creek is still closed down and it is uncertain as to when it will be opened up again. It is unfortunate that this mine should be closed after the company have built their ditch and put in first-class machinery.

Journal: At the Nanetta B. mine on Thompson creek, a cleanup from a six days' run last week yielded $6,000.

The Salmon River Hydraulic Mining Coming, this side of Sawyer's Bar, is accomplishing some good work this season.

The river mining companies on the Klamath river are all hoisting pay gravel at present, and some of them are already taking out considerable gold.

Tuolumne.

Mother Lode: At the Dutch, sinking the shaft will be resumed in three weeks. From the 450 level the company intend to sink 750 or 1000 feet on the ledge. The richness of the ore in the drifts still continues. The ten additional stamps now being put in will be ready to drop in six weeks.

North of the Buchanan lies the Modoc. The company are working on a 16-inch vein of good pay rock. Considerable development work has been mapped out which the company intend to prosecute with all possible speed.

Independent: The Golden Star has just let a contract of $6000 to run a tunnel to tap the ledge.

The Soulsby mine has struck a large vein in their drift north of the shaft which is very rich.

The Belle mine, near Tuttletown, has been bonded by Superintendent Blake who has already commenced active operations.

The Draper mine has struck a new shoot of ore north of the old rich shoot which was worked in early days to a depth of 300 feet.

Union-Democrat: On the Gagnene a hoisting plant, suitable for sinking to a depth of 1200 feet, is in operation on the north shaft, and the 150 and 300 feet levels are being driven south in good milling ore. Work on the south shaft will be commenced at once, and a mill with a capacity of from 50 to 100 tons of ore per day is to be erected. A large amount of ore above the levels is now ready for milling.

On the Providence mine the shaft is down 160 feet, showing at the bottom a strong 6-foot vein of rock that is rich in free gold, with a large percentage of sulphurets. A 10-stamp mill is to be erected in the near future.

At the Confidence the new 20-stamp mill will be running in a few days. Already 450 tons of ore are in the bins awaiting reduction, while fifteen men are employed in extracting more.

At the Gerrymander ten men are employed. An old mill is on the property, but will shortly have to give way to a more modern plant. They have an 8-foot vein, carrying a big per centage of sulphurets.

The Pereira and Slonicker mine at Mormon creek is running in a 700-foot tunnel to tap the vein. The property is bonded to San Francisco parties.

The Street mine at Tuttletown still continues to show good ore.

At the Lady Washington, McGillivray and associates are arranging to place on the property a roller mill of good capacity.

At the Grizzly mine grading is being done preparatory to putting in the foundation for a new hoisting works.

The new Era, in Hunter canyon, owned by John Trewartha and Chas. Holland, is to be reopened. This is an extension of the Buchanan and was a good property in the past. The improvements consist of a hoisting works and 10-stamp mill.

The Bell mine, between Tuttletown and Robinson's Ferry, on the Mother lode, and belonging to Fred Sutton and Rowe Brothers, has been bonded to George Blake and others. Preparations are now being made for a hoisting plant, and a shaft will be sunk.

A Stock company is shortly to be formed for the purpose of operating the Silver Queen mine, at Yankee Hill, the property of G. W. Mapes.

NEVADA.

W. E. Price and B. A. Cardwell have bonded a lode claim about twenty miles north of Reno. The ledge at the surface of the ground is about 3 feet in thickness. The rock carries gold, silver and copper. It is their intention to begin development at once.

Gold Creek *News*: May 13th the water at the tower in Little Sun Flower reservoir stood at a depth of 15 feet 2 inches. This represents a storage of 194,000,000 gallons of water. The maximum flow in the ditch has reached about 1110 inches. This is emptying into the reservoir nearly 15,000,000 gallons a day. The reservoir is nearly one-fourth full. At the rate the water is now coming in it will take about forty days to store the other 600,000,000 gallons.

Pioche *Record*: In the Magnolia at De Lamar the winze from the tunnel level is down nearly 100 feet, and when the 100-foot mark is reached drifting on the ledge northward will begin. The winze is all in ore of high grade.

The new 500-horse power engine at the De Lamar mill is now running full blast.

Dayton *Times*: Work has commenced on the dredge putting the machinery in repair to hoist and screen tailings from the Carson river, to be worked in a leaching plant which has been ready for two weeks to receive these tailings. The tailings are to be hoisted and screened on a barge, then forced ashore through a large pipe into a reservoir. Here they will be allowed to remain until thoroughly dried, and then hauled by teams to the leaching plant.

It is reported that quite a rich strike has been made in the Topnotch mine, in Smith valley. The new mill is about completed and the stamps will begin dropping soon.

At Silver City the Taylor mill is running on ore from the Succor and Lager Beer mines. About twenty men are employed in both mines.

Austin *Reveille*: The Ione Gold Mining Co.'s 10-stamp mill is running steady and the returns are highly satisfactory. The mine

is improving and the ledge becomes larger as depth is attained and still holds its richness. Nine men are employed in the mine, five of whom keep the mill running.

OREGON.

Grant's Pass *Observer*: In the Waldo district Weimer Brothers have 2,100 inches of water with about 175 feet pressure. Four giants were operated last winter. Twelve men is the usual force employed during the season at the mine. They are now completing the new flumes on the old Darkas ditch, which nearly doubles the quantity of water for the time.

In the George Simmons mine a large cut for an outlet for debris had to be run to the Illinois river nearly two miles distant. This mine is operated nine to ten months every year, and employment is given to from eight to a twelve men.

On Galice creek the Alexander-Bent placer mine is the largest hydraulic mine in this district. It comprises 510 acres of patented land and extends along an ancient river channel over three and one half miles in length, far above the present bed of Galice creek. The water supply is taken out of the west fork of Galice creek, and is conveyed seven miles to the mine, giving a pressure of from 335 to 500 feet.

Rogue River *Courier*: Supt. Weston has struck what he has been tunneling after for the last two years on the Summit gold mine ledge, at the head of Althouse. At a depth of 435 feet he opened a rich ledge of quartz on the 23rd of last month and the miners are into it now 8 feet but there is no sign of getting through. This means a chlorination plant in the Althouse country.

The new 2-stamp mill for the Ajax mine at Mt. Reuben is on the ground and will be crushing ore at that point soon.

Dowell & Belding's 5-stamp mill started up last week on Green's creek.

Jacksonville *Democratic Times*: A new 5-stamp mill will soon be in operation at the Jewett mine near Grant's Pass.

Swinden, Still & Co., on Oscar creek, cleaned up their season's work last week, with satisfactory results.

Belding & Dowell, on Green's creek, have a new 4-stamp mill in operation.

The cleanup of the Rocky Gulch Mining Company in Galice creek district was a satisfactory one. The company has plenty of water yet.

BRITISH COLUMBIA.

(Special Correspondence).—Copper finds are the order of the day. Rich strikes of copper are reported at Cowichan lake and Douglas lake. The properties were located by farmers, who have left their plows to hunt for gold, and are being tested and sold in Vancouver.

This week a rich find was made on Lynn creek, South Vancouver, barely outside the city limits proper. The surface rock assays gold, silver and copper.

Bottles of metal water are being exhibited in Vancouver just now, accompanied by certificates stating that the water assays 20 pounds of copper to every 200 gallons of water. The water is said to come from a ledge in the Blackwater Camp, Lillooet district, so named owing to the color of the stream flowing through it. The water seeps through the ledge and trickles down the mountain.

A deposit of copper ore running 11 per cent in that metal has been discovered three miles from Union, B. C., on Vancouver island. It resembles the Michigan copper. The ledge is 5 feet wide and very accessible.

The Fire Mountain Company have run a tunnel in their property on Tepella mountain, near Harrison lake, Westminster district, 100 feet, and assayed 600 pounds of rock off the surface of the two closely joined fissure veins, running 5 feet wide. The company at once ordered a mill and will crush on the 15th of June or before that date. The lake below this claim is staked around its complete border. Many of these properties are commencing to ship.

Vancouver, May 16, '97.

Spokane *Chronicle*: All the bins and chutes at the Columbia and Kootenay are full of ore and the foreman has received orders to get ready to ship ore. He says that without any inconvenience he can ship over sixty tons per day.

At the Iron Mask the output has recently been about eighty tons a week. All of this has been hauled down to the Columbia & Western Railroad in wagons and then transported to the Trail smelter.

From the Cliff mine shipments of ore will begin on the 20th of this month in earnest.

Smith & Whiteman have bonded the Big Four No. 2 group, on the middle fork of Murphy creek, for $25,000. They are acting for an English syndicate, which has already acquired numerous interests in the Trail creek camp. The Big Four No. 2 group consists of six claims, covering about 300 acres.

Spokesman-Review: At Greenwood, a tunnel to be run 250 feet has been started on the Sunset claim. The property is held on a bond by Montreal and Vancouver parties, who also have a bond on the Silver Crown claim.

E. A. Bielenberg is developing the Anaconda group, in Deadwood camp.

John Douglas has put a force of men on the Silver King, in Shylark camp. This vein has an immense capping of pyrrhotite, as well as a small vein of high-grade silver-gold ore.

Leslie Hill, manager for the Prospecting Syndicate of British Columbia, is calling for tenders to sink a 50-foot shaft on the Crown Point camp.

At Fairview camp about fifty men are at work, half of whom are employed at the Joe Dandy property, the balance at the Smuggler and Tin Horn claims.

In the Slocan, the Lexington, Polly and Sunnyside mines have been sold to E. J. and A. W. McCune for $20,000. The properties will be incorporated at once under the name of the Lexington Mining Company; capital, $1,000,000. The control of the Bonanza, I. X. L., Excelsior and Slocan Belle claims have also been purchased by the McCunes.

On the west fork of Kettle river galena ore carrying about forty per cent lead and a few ounces of silver was recently found by prospectors, and a number of locations have already been made.

At New Denver on the Galena Farm the ledge at the 200-foot level is of unknown extent, and a level is about to be started both ways on it. Water power is soon to replace the present steam hoisting and pumping plant, and the 150-ton concentrator and air compressor plant will soon be placed in position.

Rossland *Miner*: There is a great improvement in the Josie deep shaft. Ever since the 100-foot level was passed there has been ore in what was supposed to be the hanging wall. This has varied in width from a foot to 3 feet and has been of good grade. The foot wall has been well defined all the way down and all the ledge matter heavily mineralized. When the 200-foot level was reached a round of holes was put into what was supposed to be the hanging wall, and the drill revealed 4 feet of solid, high-grade copper ore.

UTAH.

Salt Lake *Tribune*: At Park City Kearns & Weber have recently put thirty men to work jigging the ore on the Silver King second-class dump, and as soon as the new crusher and concentrating plant are put in working order, which work is being rapidly pushed, the force will be increased.

The Butters experimental plant, in the Dooly block, is nearing completion. The effort will be to find a process best adapted to the treatment of ores of every variety, and that this may be accomplished no expense is being spared in the equipment of the plant, which is one of the largest of the kind that has been undertaken in this country. The experiments will be confined to the ores of no particular locality, although much attention will be given to arsenical ores that have been a source of so much trouble to the miner since the Mercur district came into prominence.

Mercur *Mercury*: At the Gold Dust a good deal of cinnabar has been found, some of it carrying as high as $40 per ton. At the top of the hill on the west side of the claims two tunnels have been run into the vein, which comes nearly to the surface.

During the past ten days in the Daisy the vein on the incline has been gradually widening out from 4 feet. It was not known how thick it was on the lower level until this week, when a crosscut was made through the ore to strike the foot wall. It was then learned that the ore body was 16 feet 4 inches thick.

Work is being prosecuted in both the upper and lower drifts of the Wonder shaft, and twelve men are employed, working three shifts.

A contract has been let by Walker Brothers for sinking another 100 feet on their claims near the mouth of Ophir canyon.

Bingham *Bulletin*: In the Dalton & Lark a large body of ore has been encountered in the drift off the 640-foot level. Developments have proved it to be 15 feet wide, of which 6 feet is high grade and the balance milling.

Work is rapidly progressing on the site for the Highland Boy mill, which is now nearly ready for the foundation. About thirty-five men are employed.

The new company to operate the Winnamuck property having taken formal possession, it is understood that operations are soon to begin on an extensive scale, including ore production for market, which has been entirely suspended for many months.

Park *Patriot*: The work of cutting the station in the 1300-foot level of the Daly-West has begun.

Two shifts are working on the Deer Valley Consolidated. The prospects grow better as work progresses. An immense amount of work has been done on this property.

Tintic *Miner*: Shipments for the week are reported as follows: From the Bullion-Beck mine, 15 carloads ore; Bullion-Beck mill, 5 carloads concentrates; Eureka Hill mine, 9 carloads ore; Eureka Hill mill, 5 carloads concentrates; Centennial-Eureka, 2 carloads ore; Mammoth mill, 10 carloads concentrates; Sioux mine, 3 carloads ore; South Swansea, 5 carloads ore; North Star, 3 carloads ore; Dragon iron mine, 1 carload ore daily.

Indications in the great Bullion-Beck tunnel are reported to be growing more favorable daily. The territory crossed by this tunnel site is among the most promising mineral sections of the district.

G. H. Murray commenced this week on the development of the South Wheeler lode, which is a large fraction joining the Wheeler ground, in which a good strike of ore was reported a short time ago.

The Ferguson Brothers have commenced work on the Gray Eagle, west of Eureka.

C. E. Hudson and Paul Rodenhouse are preparing to commence work on the Silver Cloud. They will timber the 192-foot shaft and immediately commence drifting to the vein.

IDAHO.

Spokesman-Review: At Loomis the Palmer mountain tunnel is in 300 feet.

The Red Jacket and Little Falls quartz claims have recently been bonded to Frank Raborg of Spokane, with a 10 per cent cash payment.

The contractors on the crosscut at the 80-foot level on the Mammoth claim, one of the properties of the Whisky Hill Mining and Tunnel Company, have completed their work, and the ledge shows a width of 40 feet, all in ore, and have not yet secured either wall.

The managers of the Detroit-Windsor Mining Company have secured bids on 400 feet of tunnel and 20 feet of shaft work.

The Wyandotte Company are improving their cyanide process plant on the Similkameen river. The company have advertised for bids for 400 feet of tunnel work on one of their claims.

Near Kendrick the recent discovery of copper ore on Little Bear creek continues to be the all-absorbing topic.

The Cyprus Mining Company have a force of men at work on their property, which has a ledge of well-defined mineralized ore measuring 15 feet between walls. A force of men will be put to work driving a 400-foot tunnel, which is expected to strike the ledge, which crops out on the brow of a hill some distance above.

MONTANA.

Mining World: Efforts to reorganize the Hope Company at Basin have come to naught, and last week the pumps on the lower levels were taken to the surface. It will only be a few days now until the levels are flooded with water and the mine will once more be idle. Owing to the many complications, legal as well as others, there is little hope for the mine and mill again being operated for some time to come.

The Easton mine and mill at Virginia City have again resumed operations under the superintendency of Mr. Pankey. A force of thirty men is employed, which will be increased as soon as room can be made.

At Neihart there are six mines and several prospects at work, employing nearly 200 miners, and shipping about 12,500 tons of ore annually. This ore consists principally of sulphur compounds of silver and lead. In the vicinity of Neihart there are located 300 mining claims, of which government patents have been procured for about 200.

Butte *Miner*: The Parrot Copper Mining Company has resumed operations at the Moscow mine.

The Butte & Boston Consolidated Mining Company is making improvements on the surface and underground, one of the largest gallows frames in the district having just been erected at the Blue Jay.

The Boston & Montana Consolidated Copper and Mining Company has the Atlantic shaft down nearly to the 800-foot level and an air compressor was recently added to the plant. At the Leonard shaft over 600 tons of ore are hoisted daily. At the West Colusa good progress is made in enlarging and sinking the shaft.

The Montana Ore Purchasing Company has commenced sinking on the Nippur mine, the water having been pumped out. The shaft on the Nippur is now down 300 feet, and an additional 250 feet will be sunk before crosscutting will be done.

WYOMING.

During last season the owners of the Rambler copper mine at Battle Lake, in the course of development work, done with primitive means and crude machinery, took out over 100 tons of ore and shipped it to the smelter. The average of the entire output now, in copper, is about 45 per cent. The tunnel is 300 feet in length, and the shaft is down 150 feet from the surface. The width of the vein is about 4 feet, and the formation is pure quartzite.

The Garfield mine, near Atlantic City, in Fremont county, has some 500 feet of shafts sunk and 1,000 feet of tunnels run. The output of the mine thus far has been over $400,000 in gold.

COLORADO.

Republican: The success of three tunnels in finding ore and proving their utility as drainage and transportation enterprises has increased the importance of these propositions in Cripple Creek, and it is not surprising that tunnel companies are coming more into favor. The Squaw mountain, the Cripple Creek, and Gold Hill, and Chicago and Cripple Creek are now steady shippers of good ore, and the two last named having come into ore since the beginning of the year, have done much to advance the tunnel into favor. There is not a hill in the district that has not one or more tunnels driving toward its mineral core, and a dozen of them are equipped with steam plants for efficient and rapid work.

Two workings planned to run under the entire district at great depth are now in the hands of Eastern capitalists and may be started under full headway, equipped with machinery plants, at any time. They are the Watson and the American, both running from the Cripple Creek slope, and now being kept alive by hand work. The first named of these will prospect Guyot hill, and in a short distance will reach the heart of the gold belt, and is looked upon as one of the big workings that will some time be a necessity to the camp.

The Johnston lease on the Republic of the Mary McKinnie Company is turning out large quantities of rich ore. The breast of the drift on No. 2 vein now shows 8 feet of ore.

Production from the Anchoria-Leland for the past week ran 250 tons of ore, much of it of high grade coming from the Maloney crosscut vein, and also from the new chute reached by an upraise from the first level from the new shaft.

At Idaho Springs the Sun and Moon mine continues to attract attention because of its rich strikes of free gold in the ores coming from the shaft at 370 feet. In starting a level at this depth the streak which had heretofore carried mostly lead values began changing to a copper ore and now there is about 10 inches of smelting ore showing both lead and copper with free gold throughout the entire width.

The Alkire properties at Dumont have been opened out by a tunnel now being driven to reach several lodes lying far into the mountains. The distance now gained is 565 feet, and because of a parallel lode coming in it will be followed instead of continuing the crosscutting.

P. R. Stanhope is opening up the Silent Friend mine with a number of drifts, some of which are into the mountain nearly 1,000 feet.

The Boston Company operating the Eagle mine on Albro hill has made an important strike of mineral in the shaft at a depth of 350 feet and this is being drifted on with marked results. Three feet of pay ore is showing and for a distance of 300 feet it has remained continuous in the levels.

At Creede at present the mine owners estimate that about 400 men are being employed.

Over 300 cars, loaded with ore, left Creede camp in March, and this amount was exceeded in April by 200 car loads. The tonnage for April borders on 8,400 tons.

The Commodore mine is by far the heaviest shipper at present. This mine is now employing about 200 miners, and the shipments average 150 tons per day.

A strike was recently made within the corporate limits of the town of Creede by A. Kleasner in the Jo Jo claim, which has every indication of being the Commodore extension, in which a very wide vein of a low grade ore has been uncovered.

For the month ending April 30th, ore shipments from the Black Hawk depot numbered 298 cars, aggregating 4,798 tons, which represented the output of smelting ores only of the county for that month. As compared with the corresponding month of last year, this last month's shipments show an increase of eighty-six cars, or 1,376 tons of ore, and shows the same proportionate increase as in the preceding month of this year.

At Aspen the Deep shaft, which has been shut down since the summer of 1892, will start up within a few days. This comes from a reliable source, and the machinery and shaft are now being repaired.

At Telluride the Columbia-Menona mines and 30-stamp mill will be running full capacity in the next few days. Driving east and west drifts on the vein from the intersection of a crosscut tunnel, which cut it 850 feet below the surface and 450 feet below the upper workings, is being prosecuted and valuable gold, silver and lead ore is being taken out.

The Tom Boy mine and mill are running regularly and turning out from 150 to 175 tons daily, although the mine is susceptible of a much larger output. The Tom Boy vein is expected to be cut any hour by the mill tunnel crosscut, which has been in course for two years past. It is in 1,900 feet, the distance estimated by surveyors that it would be necessary to drive to reach it.

Several additional men were put to work today in the Nellie mine, Bear creek, which is being developed under lease and bond by the North American Exploration Company, principally composed of European capitalists.

The completion of the sale of the Caledonia in England only awaits a few routine details. The bond has been taken up, the money paid and the deed passed from W. S. Stratton. A new compressor plant recently installed is being utilized in crosscutting.

Production from the Victor for April has run close to the usual amount, and the earnings have been between $30,000 and $35,000. The mine has been running with a reduction of one-third in the force, but the tonnage reached 1,500 tons, besides 1000 tons broken on the stulls.

The Golden Cycle Company is taking position as one of the heaviest shippers in the district, the output for the past month having reached 1,500 tons of $40 average grade. A new level, the fifth, is now being opened at 376 feet and finds the ore in larger body.

The Gold Crater Company is shipping about 300 tons of mill ore a week. Prospecting the territory goes on steadily. It is said on good authority that W. S. Stratton is closing a deal with the Chicago & Cripple Creek Tunnel Company, by which that working will be crowded under Globe with all possible speed, to prospect the Gold Crater and Plymouth Rock groups.

ARIZONA.

Phœnix *Republican*: At Oro Blanco, in the Tres Amigos mine, the owners have uncovered the richest gold ore that has ever been found in the district. The ledge proper is about 4 feet wide, all good grade gold ore, but 6 inches of it is extremely rich.

On the Oro Blanco mining claim a parallel ledge was recently discovered which all these years has passed unnoticed, and yet it carries not only coarse free gold largely, but horn silver also; but the reason was because the metals were in a decomposed porphyry, as unlikely looking as the adjoining country rocks.

The Sooner mine, an 800-foot claim adjoining the Sorrel Top, and from which excellent ore has been worked in an arrastra, has been bonded to F. G. Wulzer & Co.

AUSTRALIA.

The following table of exports of gold shows the steady increase in yield of West Australia:

	1897.		1896.		1895.	
	Ozs.	£	Ozs.	£	Ozs.	£
Jan.....	40,386	153,469	16,350	62,130	18,617	71,009
Feb....	32,526	123,593	17,922	68,104	15,509	58,935
March..	40,296	153,126	11,085	42,122	10,619	74,554
April..	.....	.....	16,773	63,736	19,128	72,687
May ...	.....	.....	22,266	84,611	19,208	72,991
June...	.....	.....	27,933	106,148	16,129	61,299

August.	.....	.....	20,517	112,164	23,669	79,940
Sept....	.....	.....	35,301	134,135	18,245	69,940
Oct....	.....	.....	27,331	100,156	27,726	105,357
Nov....	.....	.....	30,874	117,322	15,508	58,930
Dec....	.....	.....	29,653	112,681	17,890	67,092
Total.	113,208	430,198	281,263	1,061,800	231,513	879,748

The Queensland gold returns for April are as follows:

	Tons Crushed.	*Yield in Ozs.*
Charters Towers.....	28,500	28,900
Mount Morgan.....	8,300	13,000
Gympie.....	5,100	8,700
Croydon.....	3,400	4,700
Other fields.....	7,400	6,900
Alluvial.....	.....	2,000
Total output.....	52,000	64,200

The calls paid in the Charters Towers district amounted to £5,000; dividends, £28,900. The calls at Gympie were £6,500; dividends, £18,000. Croydon calls, £1,500; dividends, £14,600. Mount Morgan, no calls; dividends, £25,000.

Scientific Progress.

The Deepest Well.

The deepest well in the world will soon be completed near Pittsburg, Pa. It is now more than one mile deep, and when finished it may reach down two miles into the earth. It is being bored in the interest of science. The object in penetrating so deeply is to determine just what the interior of the human footstool is like. From a commercial point of view the well was a success long ago. At comparatively few feet below the surface, both gas and oil were struck in paying quantities, but the company owning the plant determined to dedicate it to science and invited Prof. William Hallock of Columbia College to carry on a series of temperature investigations as the hole is carried deeper and deeper into the earth. The results of these investigations are very interesting, and it is the opinion of several well-known scientists that the ultimate result of the boring will prove to be of widespread economic as well as of scientific value. Most significant of all the facts so far ascertained is that the well grows steadily hotter as its depth increases.

The temperature of the Pittsburg well, at a depth of 5000 feet, was found to be 120.9 degrees Fahrenheit. At the bottom the temperature is 128 degrees Fahrenheit. The well in its present stage is 5502 feet deep. This gradual rise is found to exist all over the world, although it is more marked in some places than in others. In a deep well near Wheeling, W. Va., the temperature is 51 degrees at the top and 110 degrees at the depth of 4500 feet. In the Sperenberg salt well, near Berlin, the temperature is about 47 degrees at the top and 118 degrees at a depth of 4170 feet. In the Schaladabach salt well, near Liepsic, the surface temperature is about 51 degrees, while at 5740 feet it runs up to 135.5 degrees. External conditions seem in no way to affect the temperatures of the wells.

A LARGE Dussand microphonograph, now being constructed for the Paris exhibition of 1900, is expected to make the voice heard by 10,000 people. This form of apparatus is especially designed for the deaf, and for the study of the feeble sounds given out by the organs of the body in health and disease. It magnifies the voice much as a lens magnifies objects to the eye. The register is a modified phonograph, with a diaphragm vibrated by small electro-magnets receiving currents through a microphone; the repeater is somewhat similar, with a microphone attached to the membrane, the current for this being obtained from one to sixty battery cells and thence passing to a telephone. The intensity depends upon the amount of current passing. The instrument is being used in the education of deaf mutes, and has had a marked effect in stimulating the nerves and apparatus of hearing.

FOR hardening heavy lathe and planer tools for hard work, where the steel has been selected at random and is found a little too low in hardening properties for the purpose, take one pail of soft water, one-quarter pound cyanide of potassium, one pound salt, one dessert spoonful oil of vitriol. Draw the temper slightly. This is Hunt's tempering recipe.—Crescent Anvil.

PROF. ELMER GATES of Washington claims to have produced an absolutely perfect vacuum by filling a very infusible test tube with a glass melting at much lower temperature. Then by inverting the test tube and partially withdrawing the molten glass by suction, a space was left which, when the glass had solidified, was claimed to be perfectly vacuous.

SIR HENRY THOMPSON has presented the Royal Observatory at Greenwich with a telescope said to be the most powerful instrument at present existing for the prosecution of astronomical research by means of photography. The photographic refractor has an object glass 26 inches in diameter. The photographs it will take will be on twice the scale of 2 mm. to one minute of arc, and its short focal length gives it great light-gathering power. The instrument now mounted at Greenwich has been in course of construction by Sir Howard Grubb of Dublin during the last three years.

Electro-Capillary Light.

In a contribution to *Wiedemann's Annalen*, No. 12, Herr O. Schutt of Jena describes a new electric discharge phenomenon, which he terms electro-capillary light. When the discharge of an induction coil is sent through a narrow capillary tube of about 0.05 millimeter in diameter, provided with aluminum or copper electrodes and filled with air under ordinary pressures, an intense luminosity of the thread of air is obtained—a luminosity which is intrinsically far superior to that of the arc, and would form an exceedingly powerful source of light, if it could be made continuous. The narrow capillaries deteriorated rapidly, roughening inside, and were blown into a series of spherical enlargements. Wider tubes gave less light, but were much more permanent. At the same time the bright lines in the continuous spectrum in the original light became more prominent. At pressures above one atmosphere the phenomena were nearly the same, but the sparks passed with greater difficulty. At low pressures the light became less intense, the continuous spectrum faded, and the bright lines shone out more distinctly. The kind of glass is immaterial. It is stated that the tubes may be made twenty centimeters long and make splendid line sources.

Mechanical Progress.

The Use of Compressed Air for Mining Purposes.

NUMBER II.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

I have spoken only of the energy *stored* in the air after it is compressed. There is, however, a perfectly mechanical translation of energy from the prime mover to the air motor, that we call the energy of full pressure and is that part of the work performed in an air compressor or given out in a motor, which takes place at constant temperature, or, in other words, is the work performed by the piston to discharge the air from the cylinder. I might call it an air piston rod, which reaches from the compressor to the motor, and conveys the energy of one to the other absolutely mechanically, and in the case of isothermal compression would act just the same as if a column of water reached from the compressor piston to the motor piston. It is nothing but a flexible piston rod, acting during the period of full pressure only, and stops when the compressor stops, unless the air receiver be infinite in its capacity. It is this air piston rod only, which direct acting pumps and ordinary motors and rock drills use, thus availing themselves of a mere mechanical phase incident to the operation of a compressor and abandoning entirely the real work which is stored in the compressed air itself and which is practically three times the value of the other. It would be just as sensible to judge the economy of a steam engine by its full pressure work only, as to do so in an air engine.

I have been thus explicit on this somewhat puzzling point because I wish it well understood that the least possible power expended in compression gives the highest resultant efficiency and is the first condition precedent to an economical air plant. You are all no doubt familiar with the way to produce this, viz., highest form of prime motor, compound compression where proper, minimum frictions in all moving parts, slow piston speeds, least clearances, large valve areas and cooling surfaces, so that heat of compression shall be as nearly constant and at initial temperature as possible, or in other words isothermal. It is always, you perceive, a case of temperatures.

Now in using the air after compression, or in other words, to utilize as much of its intrinsic energy as possible, we become involved in a case of temperatures again, and it is precisely the reverse in all ways and considerations of the phenomena of compression. If it be true that difference of temperature between the admission and exhaust of the air in a compressor is the head to be overcome by the prime mover in reaching a certain receiver pressure, it is evident this difference should be made as small as possible, and reversing the case for air motors, it is evident it should be made as large as possible. Everything would tend toward the accomplishment of this fact readily were it not for the presence of moisture in the air, which, while it offers no difficulty to compression, which is a heat developing phenomena, freezes at once during expansion, which is a cold producing phenomena. This freezing has nothing to do theoretically with the perfect operation of the air in its expansion, but practically it fills up the valve ports with ice, congeals the lubricants, and the motor stops. These temperatures ranges often as low as −150 degrees.

Inasmuch as it matters not between what degrees of temperature we do our expansion, so long as we maintain the same difference, it must occur to the engineer at once that if in expanding from atmospheric temperature downward he meets with the mechanical obstruction of ice, he must slide his range of temperatures up the scale until the final exhaust temperature shall be such that ice will not form. Inasmuch as this cannot be done without supplying extraneous heat, either before or during expansion, the idea of reheating is at once suggested, and upon it hinges the whole subject of the economical use of compressed air.

In determining the amount of heat to be applied to the air before use, it will be found that no great temperatures are required, averaging generally about 150 degrees Fahr., to exhaust at 32 degrees Fahr., and gives complete expansion to the atmosphere.

Inasmuch as every degree we add to the temperature of the air before use increases its head, provided we exhaust always at the same temperature, and inasmuch as lubricants will not be destroyed at 400 degrees Fahr., or even more, it comes as a natural conclusion that while we are reheating we should go to the practical limit, and especially as it is found by experience that the additional fuel required is of little consequence.

The increase of power obtained by this increase of volume (for that is the way the increased temperature manifests itself) ranges from 0 to 60%, at an expenditure of fuel which, after reduction to terms of the prime mover power, means an addition of from zero to 10% of that power, depending upon the head and price of water, or price of fuel. A gain of 50% at an expenditure of 10% may in some cases be made to cover all losses of compression and transmission, and deliver to the motor the full amount of power expended upon the air at the compressor, or even more.

It need not be demonstrated here that the use of fuel to expand air is from five to seven times more economical than it can be used in any other manner to generate power.

Having thus shown you the proper and natural conditions under which to compress and to use air after it is compressed, and having also called your attention to the requirements of a modern air compressor, the motor is the last thing and the most important thing to be considered. It appears to me that inventors and builders of compressed air machinery are devoting too much time to the compressor and none at all to the special air motor. Compressors can be made having an efficiency approximating 90%, while the average motor using the air from such a compressor would not give 40%.

(To be Continued.)

Electrical Progress.

High-Frequency Currents and the Human Body.

M. d'Arsonval recently sent a communication to the Societe Internationale des Electriciens concerning the therapeutic and physiological effects of high frequency currents. He showed the powerful inductive effects which can be obtained with these currents. A striking experiment consists of placing three lamps in tension and allowing the current to pass through the body. These currents cause no sensations, and a man placed in a circuit does not feel that he is traversed by the currents which brilliantly illuminate the lamps. The principal results of this electrification are an augmentation of the oxidations in the organism and an increase in the production of heat. A subject who, under ordinary conditions, eliminates 17 to 21 liters of carbonic acid per hour throws off 37 liters after having been submitted to this action. High-frequency currents do not act solely upon the surface of the body, but also profoundly upon the interior. All of these results have been obtained upon a number of subjects by MM. Apostoli and Charrin. M. d'Arsonval cited, in closing, the action exercised upon microbes and bacteria by these currents. The microbes and bacilli are modified, and the toxines are killed and transformed to vaccine. MM. d'Arsonval and Charrin hope by this method to arrive at a direct treatment for the interior of the bodies of patients suffering from zymotic disease, and experiments to this end have begun.

Electrical Conductivity of Ether.

John Trowbridge, in the *American Journal of Science*, discusses the "Electrical Conductivity of Ether." By the method employed the author thinks he obtains an estimate of the energy required to produce the Rontgen rays and also a measure of resistance of sparks in air and different media. He closes thus: "It shows conclusively that the discharge in a Crookes tube at the instant when the Rontgen rays are being emitted most intensely is an oscillatory discharge. In popular language it can be maintained that a discharge of lightning a mile long under certain conditions encounters no more resistance during its oscillations than one of a foot in length. In other words, Ohm's law does not hold for electric sparks in air or gases. Disruptive discharges in gases and in air appear to be of the nature of voltaic arcs. Each oscillation can be considered as forming an arc. It is well known that a minute spark precedes the formation of the voltaic arc in air. The medium is first broken down and then the arc follows. I believe that this process occurs also in a vacuum and that absolute contact is not necessary to start the arc. My experiments lead me to conclude that under very high electrical stress the ether breaks down and becomes a good conductor."

UNDER a new process by which copper is cast pure, it is stated that this metal acquires an additional tensile strength of 33⅓ per cent, and possesses a conductivity of 95 per cent when compared with the best rolled copper. It is stated also that the discovery is anticipated to occasion distinct changes in the construction of dynamos, motors, and other electrical plant, inasmuch as the new metal is believed to carry the same current with only one-third of weight ordinarily used. The change which is represented as being effected in the molecular structure of the metal may be accounted for by the theory that the shape of the crystals has been altered so that their lines are parallel, and that the molecules are consequently brought closer together, and into more intimate contact with each other.

THE Belgian Government has decided upon a trial of electric carriages on the ordinary State railways, starting with the nine-mile run between Brussels and

Tervueren. The Belgians are adopting the accumulator system, notwithstanding the known difficulties attending its use. The speed is to be 31 miles, reduced to 18½ miles an hour on the steepest gradients. The accumulators weigh 12 tons, the electric motors and appliances 10 tons, and the cars, which are 52½ feet long, on two bogies, and carrying eighty passengers, weigh 20 tons. The accumulators may be charged to run for 72 miles. The motors are to be compound wound, the pressure of current being 500 volts. At 15 amperes the motors will run at 116 revolutions per minute, the field magnet only being excited by the shunt winding. When connected in parallel they will make 231 revolutions, the total current being 150 amperes.

E. E. BURLINGAME'S ASSAY OFFICE AND Chemical Laboratory. Established in Colorado, 1866. Samples by mail or express will receive prompt and careful attention. Gold and silver bullion refined, melted and assayed or purchased. Address 1736 and 1738 Lawrence Street, Denver, Colo.

TRANSVERSE SECTION HYDRAULIC GRAVEL ELEVATOR.

JOSHUA HENDY MACHINE WORKS,
Principal Office: NO. 42 FREMONT STREET. - - Works: Corners Bay, Kearny and Francisco Streets, SAN FRANCISCO, CAL.
SPECIAL DEPARTMENT OF
Hydraulic Mining Machinery,
Comprising Hydraulic Gravel Elevators, Double-Jointed Ball-Bearing and Single-Jointed Giants, Sheet-Iron and Steel Water Pipe and Fittings, Water Gates, Etc.

NOTICE.—All other forms of Hydraulic Gravel Elevators are simply poor imitations in construction and infringements of the patents held by us.
The Double-Jointed Ball-Bearing Giants recently perfected and patented by our MR. JOHN H. HENDY are incontestably superior to any other form of Giants yet introduced.
We are prepared to furnish plans and estimates of cost of any proposed Hydraulic Mining Plants upon any specifications submitted to us, and tender the services of our Hydraulic Mining Engineer to erect and place same in successful operation under guarantee.

HYDRAULIC GRAVEL ELEVATOR (in position.)

ESTABLISHED 1849.
I. S. VAN WINKLE & CO.,
IMPORTERS AND DEALERS IN
Iron, Steel, Coal, Blacksmiths', Miners' and Mill Supplies,
413-415 MARKET ST., SAN FRANCISCO, CAL.

Daniel Best Crude Oil Engine,
Kinkead Quartz Mill,
Smith Striking Stamp Mill.

Springer Ore Concentrator,
Truax Ore Cars,
Rock Breakers, Hoists, Etc.

Why the Springer Concentrator is the Best:

It will do more and cleaner work than any rubber belt machine.
It weighs only one-half as much as some of the six-foot concentrators.
Is the most simple in its construction of any machine in the market, and only one-third as many pieces in it as in some of the others. Was invented by an old miner of forty years' experience handling every known concentrator on the market.
Should any piece need repairing, it can be removed without disturbing any other part of the machine.
Can be set up by any inexperienced miner.
Its distributor is perfection itself, distributing the pulp evenly over the entire surface of the belt.
Grade of shaking frame can be changed while the machine is running at full speed.
It is the strongest, lightest running and most inexpensive to keep in repair of any
Will save more of the fine slimes than any other machine.
Is cheaper than any other six-foot machine, costing only $350.00 f. o. b. cars or boat, San Francisco.
Will handle the pulp from five stamps better than any other Concentrator.
Has adjustable eccentrics, and any length of stroke can be had, thereby giving different speeds per minute.
The belt is very durable, being made of No. 3 Canvas, woven especially for the Springer concentrator.
This machine requires so little attention that one man will easily attend to a dozen of them.
It has a solid rubber flange, which no other canvas belt has.
Wear and tear upon this machine is not one-third as much as upon some of the other concentrators.

UNION IRON WORKS,

"Union" Gas Engines,

Which use either Manufactured or Natural Gas, Ordinary Stove Gasoline (Naphtha or Benzine), Distillate or Kerosene.

STATIONARY ENGINES for All Kinds of Work, Built in Sizes from 3 to 200 h. p.
"UNION" COMBINED HOISTS in Sizes from 2 to 40 h. p.
"UNION" COMBINED COMPRESSORS—20, 30, 40 h. p.
HOISTS and COMPRESSORS Can Be Built in Larger Sizes to Order.
"UNION" MARINE ENGINES, 4 to 200 h. p., of Single, Double and Four-Cylinder Types.
TEN YEARS' EXPERIENCE Building Gas and Oil Engines.
"UNION" ENGINES Are In Use All Over the United States.
"UNION" ENGINES Are Simple, Durable and Economical.

Office: 314 HOWARD ST., SAN FRANCISCO, CAL.

Coast Industrial Notes.

—J. A. Vaughan of Otay, San Diego county, Cal., has put out 5000 tobacco plants in one acre near that town.

—The Pasadena & Pacific road, between Pasadena and Los Angeles, it is expected, will be completed and in operation by July 1st.

—At St. Helena, California, $2,500 of stock in the proposed creamary has been subscribed, and the total required, $4,000, will soon be obtained.

—In Ventura county the California Asphaltum Company gave employment to forty men last week, with the expectation of increasing the force soon.

—The school bond election at Chino, California, last week, resulted in favor of the issuance of $20,000 bonds for the improvement of the school buildings of the Chino district.

—The rails of the Valley road were laid to the site of the depot at Hanford last Tuesday. Big preparations have beem made for the celebration of the arrival of the first passenger train to-day.

—Petitions are being circulated in San Jose asking Mayor Koch to call a mass meeting of citizens for next Tuesday evening at Hale's Hall for the purpose of considering the improvement of Alviso channel.

—The estimated shipments of fruit from San Diego since January 1st are 264 carloads, over three-fourths as much as was shipped in 1896. Six hundred carloads of lemons and oranges will be shipped from that city during 1897.

—The biggest pipe contract ever signed in Santa Barbara has just been concluded by the Alcatraz Asphalt Company. The contract calls for forty miles of piping, and involves an expenditure of $60,000. The Alcatraz Asphalt Company will use the pipe to convey asphalt from its mines at Sisquoc to the coast.

—The Chino sugar factory people expect to handle over 10,000 acres of beets from the middle of July to the middle of November. That means something like $650,000 worth of beets. Chino alone will grow 7000 acres of beets this year. The factory will be prepared to use 2000 tons of beets every twenty-four hours.

Personal.

W. C. RALSTON left last Monday for New York and will be gone about a month.

SHERWOOD HOPKINS has been appointed superintendent of the Gold Hill mine at Grass Valley.

HENRY BRATNOBER has gone to Telluride, Colo., to look into the progress of work on the Tomboy.

CAPTAIN THOMAS MEIN is about to sail to Alaska to look after the properties of the Exploration Co. of London.

OSCAR B. LEWIS of this city will probably be appointed superintendent of construction of the new San Francisco postoffice building.

VICTOR M. CLEMENT, who recently examined the Mercur mine in Utah and the De Lamar in Nevada, is in London, as is also Capt. J. B. De Lamar.

MANAGER F. W. BRADLEY of the Bunker Hill & Sullivan mine at Wardner, Idaho, who has been for some time in California, has returned to his properties.

HAMILTON SMITH, as at present arranged, will come out to this coast this summer and go up to look at the Alaska-Treadwell and other properties controlled by the Exploration Co. in Alaska.

GOV. BUDD has appointed John R. Price, engineer of the Board of Public Works, and W. L. Ashe of San Francisco as members of the Bureau of Highways to succeed J. L. Maude and R. C. Irvine, and Marsden Manson to succeed himself.

Recently Declared Mining Dividends.

Cariboo Mining & Smelting Co., Camp McKinney, B. C., $16,000; payable May 14. The total to date is $157,410.

Mercur, Utah, $25,000; payable May 20—a total of $700,000.

Silver King, Utah, $37,500; payable May 11.

Reco, Sandon, British Columbia, $50,000; payable May 20. The total to date is $187,500.

Recent California Mining Incorporations.

Winona Mining Company, San Francisco; E. G. Heinz, G. W. Tomb, J. T. McCormick, J. L. H. Manning, W. L. White; capital stock $100,000; stock subscribed $25.

Commercial Paragraphs.

THE Pacific Sheet Metal Works of this city has established a branch at Los Angeles, under the name of the Los Angeles Metal Works. Cans for fruit, meat, lard, honey, oil, etc., also family fruit cans and galvanized goods of all descriptions will be manufactured at rates that will compete with similar Eastern goods. This will give employment to a large number of men and keep in local circles money that would otherwise go abroad. The works adjoin the Southern California Packing Company and will be under the management of L. S. Porter.

Scientific Books

Our catalogue S is sent free for the asking. It lists books pertaining to all the sciences. A copy should be had for ready reference by those desiring electrical, medical, engineering, scientific, mining and technical books, which we sell to everybody at wholesale prices.

PELATAN-CLERICI PROCESS.

Patented in U. S. and Other Countries. Capital, £100,000.

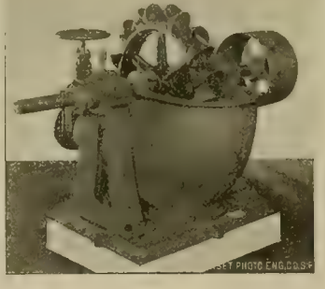
London Head Office.....8 Drapers Gardens.

Laboratory and Ore Testing Plant, 1530 Wynkoop St., Denver, Colo.

This process has a well-demonstrated merit in treatment of low-grade Gold and Silver Ores, especially those of a complex character, talcose and clayey combinations or slimes, which class of ore, as is well known, cannot be treated by leaching or lixiviation.

Gold and silver values, both fine and coarse particles, are by the PELATAN-CLERICI PROCESS recovered direct from ore without roasting as pure amalgam, and the precious metals are saved in the form of fine bullion without any refining costs.

F. CLERICI, Manager for U. S.



HORACE F. BROWN, CONSULTING ENGINEER.

Special attention given to preparing plans for the Chlorination and Bromine Processes of Treating Gold Ores.

PATENTEE { **Brown's Complete Automatic Mill Process.** **Brown's System of Mechanically Stirred Roasting, Cooling and Conveying Furnaces, Etc.**

A Great Mining Triumph.

Capt. J. R. DeLamar, of New York City, is one of the largest owners and workers of Gold Mines in the world. After the most careful investigation he purchased in August, 1895, two Griffin Mills, and his report is so remarkable as to demand the careful attention of every one interested in Gold Mining.

We give it in his own words.

NEW YORK, Jan. 6, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—The two Griffin Mills have been in operation now for 100 days on the hardest rock, with the exception of corundum, that I have ever met during my mining life. They have taken the rock direct from the breaker and they average about 20 tons to each machine, 40 mesh fine, without elevating or bolting. We simply put a ¼ mesh screen around the Griffin Mill, and the stuff comes out 40 mesh fine or over, which makes it an excellent pulp for leaching by cyanide or chlorination; therefore we have concluded to order **10 more Griffin Mills.** We have tried high-speed rolls and dry stamps, and after looking into the Huntington Dry Pulverizer, the Narod Pulverizer, the Stedman Pulverizer, the Frisbie Lucop, the Cook, and various other dry pulverizers, unhesitatingly recommend your Griffin Mill to any one.

Yours truly, (Signed) J. R. DELAMAR.

HOW 10 GRIFFIN MILLS WORK.

DELAMAR'S NEVADA GOLD MINING CO.,
SALT LAKE CITY, UTAH, Nov. 24, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—In answer to your inquiry as to what the "Griffin Mill" is doing at our DeLamar Mill, DeLamar, Nevada, we beg to state that we often run 110 tons per day with 10 of your mills in operation, and on one occasion these 10 mills produced 408 tons in one day. I have no hesitancy in stating that they will regularly produce at least 30 tons per day each on our ore, which is extremely and unusually hard.

Yours very truly, H. A. COHEN, *General Manager.*

These strong letters coming from such representative men are conclusive evidence that we are right in claiming that the "Griffin Mill" will produce a larger amount of finer pulp at less cost than any other stamp or pulverizer made.

Let us send you a free copy of our illustrated pamphlet, which will tell you all about the Mill and bring to you other evidence of its great achievements.

BRADLEY PULVERIZER CO., 92 State St., Boston, Mass.

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.
This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly,
[SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

Market Reports.

The Markets.

SAN FRANCISCO, May 20, 1897.

Business in nearly all branches is reported by jobbers to be steadily enlarging, with an increasing call from farming and mining districts. Manufacturers report enough orders in hand to run them for some time to come, but the margin of profit has been greatly reduced by close competition. There is a continued good inquiry for structural and railway materials and also for mining machinery.

In the money market there is nothing new to report. The call for crop moving purposes is light. This is said to be due to the fact that requirements are met almost entirely by interior banks. With increasing quotations of fruits going east New York exchange ought to sell lower. Sterling bills are weak, but notwithstanding this gold is still being sent to Europe. New York reports a low rate of interest—1¼@1½ per cent per year on call loans.

New York Silver Prices.

NEW YORK, May 20.—Following are the closing prices for the week:

	London.	N. Y.
Friday	28 1-16	61⅛
Saturday	28 1-16	61⅛
Monday	28⅛	61⅛
Tuesday	27¾	60⅝
Wednesday	27⅝	60¼
Thursday	27½	60

	Copper.	Lead.	Iron.	Tin.
Fri.	11 00 @—	3 30	10 00@12 00	13 35
Sat.	11 00 @—	3 25	10 00@12 00	13 35
Mon.	11 00 @11 12½	3 30	10 00@12 00	13 30
Tue.	11 00 @11 25	3 27½	10 00@12 00	13 30
Wed.	11 00 @11 25	3 30	10 00@12 00	13 30
Thur.	11 00 @11 25	3 30	10 00@12 00	13 30

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87¼
London Merchants	$4.85
London Sight Bankers	$4.88½
Refined Silver, per oz., 1000 fine	60¾
Mexican Dollars	49@50

SILVER.—The market strengthened on reports that China had negotiated a large loan chiefly for railroad building, but weakened off on receipt of news that there was trouble owing to jealousy between the favored nations—one or two not having interest in the loan.

Pixley & Abell report shipment of silver from London to India, China and the Straits to May 1 as follows, compared with the corresponding period of 1896:

Year.	India.	China.	Straits.	Total.
1897	£1,884,850	£ 44,512	£ 57,092	£1,986,455
1896	1,575,298	427,450	282,882	2,285,630

MEXICAN DOLLARS.—Our market continues to be reported nominally unchanged, with a light demand ruling. The East quotes the dollars in quantities below 48 cents.

QUICKSILVER.—There is an increasing demand. Exports by sea the past week aggregate 120 flasks to Central America and 300 flasks to Mexico. This is the largest single week shipment for over a year.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—With confirmed advices of an armistice between Greece and Turkey which will lead to peace, the markets at home and abroad have improved, closing the week quite strong.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN—The consumption of plate and pig is a full average, but about all wants were met by canners the fore part of the year. The market is steady.

We quote as follows in a jobbing way:

Pig, per lb	14c@ —
Plate, I C coke, heavy, per box	$4 00@ 4 15
" " " light, "	3 90@ —

LEAD—There is a continued free consumption. The market is fairly firm.

Our market is quoted in jobbing lots as follows:

Pig	4 00 @	4 25
Bar	@	4 50
Sheet	5 62½@	6 12½
Pipe	4 87½@	5 37½

SHOT.—There is a fair jobbing demand.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER—There is a free movement for mining purposes. A vessel sailed the past week for Mexican ports which took out nearly 52,000 pounds.

The market is quoted as follows for Hercules: No. 1, from 11½c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX—There is nothing new to report.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—The East continues to report weak and unsettled markets, with cutting still the order. Our market is quoted nominally unchanged, but it is reported that concessions are obtainable.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—The market is unchanged. There is a fair demand for the season. The agitation for a higher tariff is having some effect.

We quote as follows:

SPOT FROM YARD—PER TON.

Wellington	$8 00@— —
Greta	6 00@ 6 50
Nanaimo	6 50@ 7 00

ANTIMONY. — The market is steady and quiet.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7½c for Cookson's, 6⅞@7¾c for Hallett's and 6⅞@7c for Japanese.

NAILS.—The market is steady.

Wire, carloads, basis per keg	....
" jobbing, " "	$2 20
Cut, carloads, " "	....
" jobbing, " "	2 10

PLATINUM.—There is a fair demand.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC. — The market is quiet at steady prices.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steadier.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

In our market there are no features of special interest to report. The East reports unsettled markets in nearly every line, while English advices state their markets are steady to firm.

SPELTER — The market is maintained steady by not forcing sales.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—There is a fair demand.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steadier.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—The market is steady.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is firm at 3c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—In our market there is nothing new to report.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL. — Our market is fairly steady.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, May 20, 1897.

The market has been spasmodically active, with strength only shown in Chollar, and Potosi a sympathizer. Con. Virginia, which had been the leader, hung around $1.85 to $1.90, with the other north end shares barely steady. The Gold Hill shares were generally weak and unsettled. Yesterday Con. Virginia, under inside manipulation, set back to $1.60, closing the day at that figure bid, but Chollar sold up to 76 cents, with that figure bid at the close. Potosi was also stronger. The decline in Con. Virginia, which the street had been watching, created a feeling of demoralization, and caused many to throw shares out along the line, which were taken in by strong parties. With the advance in Chollar a slightly better feeling prevailed, though more or less mistrust prevails with the trading public. The points on the street are to the effect that Chollar is to have a small up—some placing the figure at over $1.50 a share largely on a short interest. Whether these reports are correct the writer has no way of verifying. The present showing in the works on the Brunswick lode justify better figures on merit without taking anything else into consideration.

The mining share market opened strong this morning for Chollar and Potosi, but the rest of the list was weak. After regular call, Chollar continued to show strength, when Con. Virginia began to advance, causing all to sell at better figures. At the 2:30 session Con. Virginia was easier, but Chollar was firmer. The advance in the latter is due to reports of an improvement on the 500-foot level Brunswick lode.

From the Comstock mines official letters report that in Utah they are still working east, with the material showing clay seams and narrow streaks of quartz. In Sierra Nevada the west crossdrift, Layton tunnel level, is in about 420 feet. The material is hard porphyry. In Union they have resumed work in the north lateral drift on the 900-foot level. The face at last advices was in porphyry. The south drift on the 1000-foot level of Mexican shows clay seams and narrow streaks of quartz, giving low assays. In Ophir a south drift has been started 41 feet above the Central tunnel level. This drift is following a narrow streak of ore from which two tons have been extracted, giving an assay value of $45.95. At last official advices they were easing timber on the 1000-foot level. In Con. Virginia fairly active exploiting is being done on the 1000-foot, 1550-foot and 1650-foot levels. The center of attraction is the work in the incline upraise from the 1650-foot level. At last official advices the opening still showed good grade ore of an average width of 4 feet. In a south drift they run into a foot of ore going about $40 to the ton, which is said to be the downward continuation of the ore found above. The total number of tons extracted was eighty-two, giving an assay value of over $58 to the ton. In Best & Belcher and Gould & Curry there is no change in work; neither is there in Savage. The official letter from Hale & Norcross reported that work was largely confined to needed repairs in the mines. In Andes, on the 175-foot level, the crossdrift passed through a quartz formation 11 feet in width, but was, at last advices, in soft porphyry. In Potosi they are still upraising from the tunnel level. Last letter received stated the top was in quartz going from $20 to $30 to the ton. They saved about forty tons, assaying over $34 to the ton. In Bullion they are still driving ahead the north drift. The total distance run is about 335 feet. They are driving ahead in the Alpha west crossdrift on the 500-fcot level. From the Gold Hill group of mines the news is practically unchanged in Con. Imperial, Confidence, Yellow Jacket, Kentuck, Crown Point, Belcher, Seg. Belcher, Overman and Caledonia. Belcher is extracting more ore, but Seg. Belcher and Overman are extracting about the same as heretofore reported. From Alta our advices do not differ essentially from that published last week.

From the Brunswick lode our advices state that Chollar continues to extract and sent to mill over thirty tons of ore a day. Last week the average battery assay was $19.65 gold and 16.57 ounces fine of silver to the ton. Active exploiting work is being done on the following levels: 200-foot, 300-foot, 400-foot and 500-foot. On the 600-foot level they are driving ahead on a south drift. In Occidental they are chiefly engaged on the 550-foot level in exploiting work. On the 650-foot level they are cleaning out a south drift so as to meet the winze going down from the 550-foot level. The joint work of Gould & Curry, Best & Belcher and Con. Virginia is confined to opening up of the 300-foot level and sinking shaft No. 2. On the 300-foot level they are running an east crossdrift. They have also resumed work in the south drift.

The following illustrates the changes of the week:

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

PUMPING APPARATUS.—John Winter, Tulare, Cal. No. 582,568. Dated May 11, 1897. This invention relates to a pumping mechanism. It consists essentially of a storage tank having a discharge pipe and a valve controlling said discharge, a vertically disposed stem, of a wheel contiguous to said tank having radially projecting spokes, connecting braces, buckets with arms fulcrumed between their ends to the outer extremities of the spokes, inclined cams on the connecting braces adapted to contact with the lower end of the valve stem and automatic upon the valve upon the alignment of a preceding bucket with the discharge bucket, and a fixed stop for acting against the free ends of the bucket arms, causing the bucket to tilt and discharge the contents. In connection with this device is a pump operated directly from the rotating wheel shaft and adapted to pump water up into the storage tank.

VENTILATED HAT. — James E. Goodman, Santa Rosa, Cal. No. 581,857. Dated May 4, 1897. This invention relates to hats provided with ventilating devices. The object is to provide a simple means for ventilating and controlling the ventilating devices. It consists of a crown which is circumferentially severed, the upper section held apart and supported above the lower section by fixed standards at intervals so that a circumscribing or annular opening is made in the crown of the hat above the brim, a flap secured around the upper section of the crown falling over the circumscribing opening, having its lower edge free, with means for moving the lower edge to and from the lower section of the hat crown in order to close and open the passage, the means consisting of hangers and expansible and contractible rim wire with an attachment by which it can be easily operated.

Rainfall and Temperature.

The following data for the week ending 5 A. M., May 19, 1897, are from official sources, and are furnished by the U. S. Weather Bureau for the MINING AND SCIENTIFIC PRESS:

SITUATIONS WANTED.

PRACTICAL ENGINEER AND GOOD DRAUGHTSMAN seeks re-engagement as foreman or manager of power plant. Thoroughly conversant with steam, hydraulic and electric power. Fair (foreign) commercial experience and used to control of men. Excellent references. Address M. E., Mining and Scientific Press Office.

WANTED.—BY A PRACTICAL MINER, position as superintendent or foreman of quartz mine. Understands timbering, assaying, surveying, and how to make a mine pay if there is any pay in it. Address J, this office

Assessment Notices.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 2) of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office: Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897 will be delinquent and advertised for sale at public auction, and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

GOULD & CURRY SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 29th day of April, 1897, an assessment (No. 81) of 20 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 69, Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 1st day of June, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on TUESDAY, the 22d day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office—Room 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

CHALLENGE CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Gold Hill, Nevada.

Notice is hereby given that at a meeting of the Board of Directors, held on the 13th day of May, 1897, an assessment (No. 23) of Ten cents (10c) per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, room 35, third floor, Mills building, corner Bush and Montgomery streets, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 16th day of June, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on THURSDAY, the 8th day of July, 1897, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

By order of the Board of Directors.

C. L. McCOY, Secretary.

Office—Room 35, third floor, Mills building, San Francisco, California.

OCCIDENTAL CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California. Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 11th day of May, 1897, an assessment (No. 27) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 12th day of June, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on THURSDAY, the 1st day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office—Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from the Industrial Gold Mining Co., in the Old French Mine near Indian Diggins, El Dorado Co., to deposit tailings in Cedar Creek; from James Rooks, in the Messerer Mine near Spanish Ranch, Plumas Co., to deposit tailings in Spanish Creek; from the Haskel Ravine Mining Co., in its mine in Mohawk Valley, Sierra Co., to deposit tailings on a flat; and from Costa, Davis & Co., in their mine at Cherokee, Butte Co., to deposit tailings in an old pit; gives notice that a meeting will be held at room 69, Flood Building, San Francisco, Cal., on May 24, 1897, at 1:30 P. M.

DEWEY & CO'S Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American reports, with full copies of U. S. patents since 1872. All worthy inventions patented through Dewey & Co's Patent Agency will have the benefit of a description in the *Mining and Scientific Press*. We transact every branch of patent business, and obtain patents in all countries which grant protection to inventors. The large majority of U. S. and foreign patents issued to inventors on the Pacific Coast have been obtained through our agency. We can give the best and *most reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior.

Advice and Circulars free.

Cheap Power!

SAVE MONEY BY USING

—THE—

"DANIEL BEST" Crude Oil Engine.

This Engine can be operated on either Crude Oil, Distillate, Gasoline, or Kerosene. **It is the cheapest power on earth** and is not tied to any one kind of Oil, but can use any kind that will make gas and is not handicapped by being compelled to use a certain Oil. Do not forget this when in need of an Engine.

We guarantee our Engines to work perfectly on California Crude Oil, or Distillate, or any other kind of gaseous Oil; we however prefer CALIFORNIA CRUDE OIL, from Coalinga, Fresno county, for the reason that gas from Crude Oil will produce more power from the number of feet of gas used than from any other Oil, and it is also a natural lubricant as well, the valves being always lubricated sufficiently to prevent them from sticking, thus assuring greater durability of the working parts than it otherwise would be in using dry gas. And another advantage we claim is, that danger from explosions is reduced to a minimum, there being no accumulation of gas, but is used by the Engine as fast as it is generated and hence is absolutely safe. The following is a test that we made with one of our Five-Horse Power Crude Oil Engines, running ten hours on the different gas oils:

California Crude Oil, 40 grav.,	2½	gals. at	5c.,	$.37½
Distillate	40	"	8c.,	.60
Domestic Coal Oil	40	"	12½c.	.93¾
Gasoline	14	"	15c.,	1.31½
City Gas	1000	feet,		2.00

We manufacture all sizes from two-horse power up, and will guarantee that our Engines will run cheaper and are more simple in construction, have fewer parts and hence are more durable than any other Gas Engines on the market. Seeing is believing—don't take our word for it, but come and investigate for yourselves. You can always see one in operation at our works. We will be pleased to see you and will at all times take pleasure in showing them up. Our Engines are specially adapted for running well and mining machinery—in fact, for any kind of power desired. We are the pioneers and first inventors of Crude Oil and Distillate Engines. **We always lead and never follow.** Send for Catalogue and Price List of the only genuine Crude Oil and Distillate Engine made.

523 Mission St., San Francisco, Cal.

THE BROWNELL "PATENT LIP" FLANGE FRUE VANNER BELTS.

It has taken years of ceaseless testing and experimenting to produce the superior belt which we now offer, with elastic flanges and pliable body reinforced with specially woven duck. Every belt is manufactured by experienced workmen, and carefully tested on machines especially built for that purpose; consequently we are to-day manufacturing the best belts that mechanical ingenuity, combined with honesty of construction, can possibly produce.

RAWHIDE GOLD MINING COMPANY,
JAMESTOWN, TUOLUMNE CO., CAL., Feb. 21, 1897.

J. S. BROWNELL, ESQ.—DEAR SIR: Replying to your query of Feb. 15th, will say that I have used your Patent Lip flange belt more than one year, and judging from their appearance after more than one year of hard service, I do not hesitate to say that they are the best belt I have ever used and I take great pleasure in testifying to the fact. Yours truly, W. A. NEVILLS, President.

AMADOR CITY, CAL., Feb. 18, 1897.

MR. J. S. BROWNELL—DEAR SIR: I take pleasure in saying that I have used your Patent Lipped flange belt for several years while connected with this company, and I consider them the best that we have used. The quality of rubber in the flange seems to be the best, and we are not bothered with the flange cracking and thereby destroying the life of the belt. At present we are using 14 concentrators, and have in use several kinds of belts. We consider your Patent Lipped flange the best. Yours very truly, THE CONS. SOUTH SPRING HILL G. M. CO.
By JOHN R. TREGLOAN, Superintendent.

JAS. S. BROWNELL, Western Agent FRUE VANNING MACHINE CO.

(Successor to Adams & Carter.) 132 MARKET STREET, ROOM 15, SAN FRANCISCO.

RISDON IRON WORKS,

Office and Works: Cor. Beale and Howard Sts., San Francisco.

READ WHAT MINERS THINK OF THE BRYAN PATENT ROLLER QUARTZ MILL AND JOHNSTON CONCENTRATOR.

OFFICE OF THE CANDELARIA CONSOLIDATED MEXICAN MINING CO.,
SAN DIMAS, DURANGO, MEXICO, October 25, 1888.

RISDON IRON WORKS, San Francisco—Gentlemen: Our company has been operating three of the 4-foot Bryan Roller Quartz Mills, one of which has been running steadily for three years, one for two and one for one year. Our quartz is very hard; we crush through a No. 60 mesh screen. Our mills run 55 revolutions per minute, and each crush through 60-mesh screens 12 tons in 24 hours; through 50-mesh, 15 tons; and through 40 mesh, 18 tons. This proportion has been continuous.

One set of dies will crush from 1500 to 1600 tons.
One set of tires will crush 1500 tons.
One ring plate will crush from 2200 to 2300 tons.

The mills require very little attention. At our mill an ordinary "peon," earning one dollar per day, has complete charge.

In regard to slimeing, in comparison with stamps, by reason of the discharge surface and the continuous agitation by the scrapers, a MUCH less amount of slime is created. A three years' experience teaches me that, in every respect, the mills are a complete success, and of material benefit to the mining world. They can be set up and running in forty-eight hours and can be dismounted in the same time and removed to wherever desired. Ours were packed on our mule trail over as difficult a road as any in Mexico. As a gold amalgamator it is unequaled by any mill now in existence. Yours truly,
D. M. BURNS, Superintendent.

BULLION-BECK AND CHAMPION MINING COMPANY,
EUREKA, UTAH, August 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: Referring to contract made by you with the Bullion-Beck and Champion Mining Company, by which you were to furnish one 5-foot Bryan Roller Quartz Mill on four months' trial, in competition with the Huntington Mill, would say that we have made the test, and the Bryan Mill has proven so greatly superior on all points claimed, viz., capacity and economy, that we have ordered a second Bryan Mill from you and have concluded to discontinue the use of the Huntington Mill.

Yours truly, JOHN BECK, Pres.
SIMON BAMBERGER, Director. [Copy.] W. J. BEATIE, Sec't'y.

BULLION-BECK AND CHAMPION MINING COMPANY,
EUREKA, UTAH, Aug. 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: In February last, in connection with the five-foot Bryan Roller Mill which we took from you to test in competition with the Huntington Mill, we also took a six-foot Johnston Concentrator to be tested with ten Frues, one end shake with four belts and one side shake Woodbury. We have been working these machines since the mill was completed, at such times when we had sufficient water.

The terms on which the test was made was that the machine doing the most satisfactory work should be accepted and the others taken out. This did not apply to the Frue, as they were purchased with the plant. In compliance with this agreement, we now inform you that the Johnston Concentrator has proved so superior over the other machines that we now order from you four more of the Johnston Concentrators. Yours truly, JOHN BECK, Pres.
SIMON BAMBERGER, Director. W. J. BEATIE, Sec't'y.

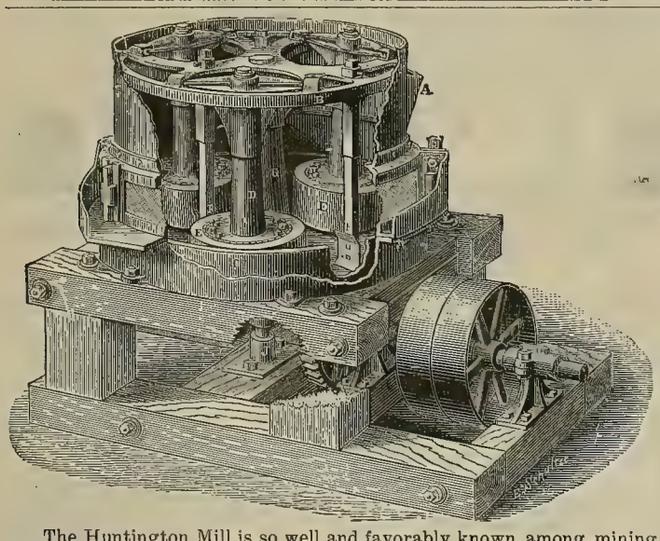
GREAT SALT LAKE AND HOT SPRINGS RAILWAY,
S. BAMBERGER, President and Manager.
SALT LAKE CITY, UTAH, October 10, 1895.

B. R. TAWNDRAW, ESQ., care Guyer Hot Springs, Ketchum, Idaho—Dear Sir: In reply to yours of the twenty-eighth of September, we have been using at the Bullion-Beck Concentrating Works, Frue Vanner, Woodbury and Johnston machines, side by side for the last four months; and after a thorough trial of all of them, we concluded that the Johnston Vanner was doing the most accurate work and was the best; hence, we bought four more Johnston machines and shall continue to use them in preference to any other.

You will find it the easiest regulated machine and very much easier set up than either of the other machines. We bought our machines from the Risdon Iron Works, of San Francisco, where Mr. Johnston, the patentee, personally superintends the manufacturing of them.

Hoping you will make a success, I remain, Yours truly,
[Copy.] [Signed] SIMON BAMBERGER.

THE GOLD VALLEY MINING COMPANY OF SAN FRANCISCO,
C. C. McIVER, President; D. CUSHMAN, Secretary.
MISSION SAN JOSE, CAL., Oct. 17th, 1895.



RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: We take great pleasure in having to inform you that, after a careful investigation extending over a six weeks' steady run alongside of six other concentrators, the Johnston which you put in for us was the only machine from which you could not find a loss in the tailings. It has done all you claim for it and has proved more than satisfactory. We intend replacing all our other concentrators with Johnston's, as we are convinced they will pay for themselves many times over in a year. CHAS. C. McIVER, President.

Fulton Engineering and Shipbuilding Works.

Improved Mining and Milling Machinery

OFFICE AND BRANCH WORKS:

213 FIRST STREET, - - - - - - - - - SAN FRANCISCO, CAL.

The Huntington Mill is so well and favorably known among mining men throughout the world that any description of it would seem superfluous. They are in use in the United States, Canada, Mexico, Central and South America, Australia, China, Japan and South Africa—in fact, wherever mines exist, and have given the best satisfaction of all quartz-crushing mills. The construction of this Mill has lately been much improved and we claim it to be the cheapest, most efficient, simplest and most durable Mill upon the market. Catalogue upon application.

Paper taken from the Library

A Duty on Onyx.

An effort is being made in Washington by representatives of the onyx industry in California to have a duty put upon the importation of that article from foreign countries, most of which comes from Mexico. It is claimed that the markets of the United States are closed to the owners of deposits in this State by the Mexican product worked by very cheap labor, and but for that the demand could easily be supplied from here. There is an increasing demand for onyx for fine buildings, and this will be supplied from Mexico unless something is done by Congress to enable the people of this State to compete. Were there any question as to the quality of onyx found here a reasonable objection might be made to placing a duty on the Mexican product, but in fact finer qualities of onyx and of many varieties are to be found in this State. With a small duty—enough to cover the difference between the price of labor in California and Mexico—the onyx from this State would immediately find a large market in the Eastern States. Otherwise the owners of the deposits must wait for a local demand, which, of course, will hardly ever be commensurate with the supply.

The amount of onyx produced in California in 1896 was only 3000 cubic feet, valued at $24,000. The only onyx deposits in the United States, of extent and value, are those of this State. At the Chicago Exposition a display of samples of onyx was made that were then regarded by the judges as of the finest quality, yet no market has been opened for it nor can one be until better prices can be obtained in the East.

A large proportion of the onyx produced last year came from the quarries in San Luis Obispo county, where there are extensive deposits two layers thick. Most of that produced has been remarkable for its beauty. In Sonoma county, near Healdsburg, is a deposit of green aragonite that has in the past been quarried for ornamental purposes. The scene of this quarry is illustrated on this page. In Yolo and Mendocino counties onyx has been quarried for ornamental purposes, and there are many outcrops in other parts of the State that, owing to their remoteness from cheap transportation, have not been developed.

In Mono county is the so-called travertine, or banded onyx, like the famous Egyptian marble. These deposits are of great extent and the product is of such beauty that it commands high prices. It is as fine as any that comes from the regions of the Nile. Lately some Eastern capitalists have been investigating these deposits with a view to purchasing them and shipping the product to the East. What they will determine is likely to depend upon whether a duty is put upon the article or not. The entrance hall of the new Claus Spreckels building is to be finished with the travertine. The use of wood for ornaments in fine buildings and houses is going out and the demand for these finer stones is increasing.

CALIFORNIA ONYX, NEAR HEALDSBURG.

Mineral Paint.

The production of different mineral paints in California in 1895 was 850 tons, valued at $8425. In 1896 it fell off to 395 tons, valued at $5540. In the latter year only one mineral paint mine was worked—that near Healdsburg, in Sonoma county, whose works are illustrated on this page. This product is the so-called Indian metallic red paint. The ore body, consisting of hematite and silicate of iron, is 60 feet in width and the mill has a capacity of grinding eight tons a day. After a superficial sorting the ore is crushed and passes to an iron drying drum, heated by a wood fire, which revolves at a slight inclination; thence to the self-feeders of an ordinary 10 stamp mill; thence the dry pulp passes through a coarse bolting cloth and the residue is thrown away. That which passes through the bolting cloth is ground between three sets of French burr-stones, and between each set is passed through the finest bolting cloth. Finally, it is passed between iron rollers, one running faster than the other, to give a sliding motion, and packed in paper-lined barrels. For a darker color, the ore is mixed in the batteries with a black, carbonaceous shale.

MINERAL PAINT WORKS NEAR HEALDSBURG, CAL.

There has been mined some mineral paint in Tehama county, in Calaveras and in Nevada. In fact, the State is full of paint mines, but none can be made to pay except this one in Sonoma on account of freight.

Most of the mineral paint used in California is brought from the East around the Horn, and as it comes as ballast the freight is trifling. Until local rates of freight are much lower than at present, and the local demand will enable the working of it in large quantities, there is not apt to be much increase in the output.

However, the deposits of mineral paint, like the deposits of chrome ore, of onyx and other of the more valuable building stones, cinnabar, and other minerals, will all in time add to the wealth of the State, when its population has increased and costs of production and transportation have been reduced.

Reviving Abandoned Mines.

A report comes from Grass Valley, California, that the old Cariboo ledge in the Allison Ranch mine has been uncovered and rich ore found. While probably not enough has been developed to entirely satisfy the owners that the mine will turn out as rich as it was many years ago, no doubt they would quickly refuse the prices lately offered for it by foreign investors if they were again placed before them. There have been a great many mistakes made by foreigners in this State of late—not so much in taking hold of poor properties and losing money, but in refusing to buy good mines at the prices asked—mines which have turned out worth much more than the prices placed on them.

Most of the big paying properties in this State today are old mines which were abandoned for many years. The California miners have learned that with the reduced cost of working these mines in which old ore bodies are known to exist, but are covered with water, are the safest investment and are putting money into them. The Englishman cannot so easily be led into putting money into what has been a failure and has not yet learned that the cause of the failures has been in most cases higher wages, heavier freights, greater cost for supplies and smaller percentage of gold saved in the days gone by. Some of the leading mines of the State—the Utica, Kennedy, Gwin, Dead Horse, and many of the big mines in Nevada county—have all been abandoned for a time, not from want of ore but because of cost of working.

MINING AND SCIENTIFIC PRESS.

ESTABLISHED 1860.

Oldest Mining Journal on the American Continent.

Office, No. 220 Market Street, Northeast Corner Front, San Francisco.
☞ *Take the Elevator, No. 12 Front Street.*

ANNUAL SUBSCRIPTION:

United States, Mexico and Canada.....$3 00
All Other Countries in the Postal Union.....4 00

Entered at the S. F. Postoffice as second-class mail matter.

Our latest forms go to press on Thursday evening.

J. F. HALLORAN.....General Manager

TO THE PUBLIC.

No one is authorized to solicit business for this paper unless in possession of proper credentials and regularly numbered and stamped blank subscription receipts.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Mineral Paint Works Near Healdsburg, Cal.; California Onyx, Near Healdsburg, 449. Plan of Iron or Steel Capped Riffle Bar, 453.
EDITORIAL.—A Duty on Onyx; Mineral Paint; Reviving Abandoned Mines, 449. The New Move of the Anti-Debris Association; The Mining Bureau and Motive Power, 450.
MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 454-5.
SCIENTIFIC PROGRESS.—Revolutionizing Plant Growth With Ether; Liquid Air and Agent of Research; Attacking the Problems of Inorganic Chemistry, 456.
MECHANICAL PROGRESS.—The Use of Compressed Air for Mining Purposes, 456.
ELECTRICAL PROGRESS.—Electric Light From the Heavens; Electricity on the Manhattan Railway; The Largest Telegraph Office in the World, 457.
THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 466.
MISCELLANEOUS.—Concentrates, 451. Practical Notes on Hydraulic Mining; The Hand Auger and Hand Drill in Prospecting Work, 452. From Mine to Mint; Iron-Capped Riffles; Australasian Gold Yield, 453. Coast Industrial Notes; Personal; Recently Declared Mining Dividends; Recent California Mining Incorporations; Commercial Paragraphs; Obituary; Book Notices, 495 List of U. S. Patents for Pacific Coast Inventors; Notices of Recent Patents, 462.

The Mining Bureau and Motive Power.

The State Mineralogist has announced his intention to gather and publish data as to the available water power in the State for generating electricity and similar purposes. This is timely. At present there are in this State two transmission plants, each longer than any other in the world outside of California—that at Bakersfield being thirty-five miles long and the Fresno line thirty-two miles. The Folsom plant, to transmit power twenty-two miles from Folsom dam to the city of Sacramento, was the first great success in transmission of large power a long distance.

Another large undertaking is that of the Blue Lakes Company, to supply the mines of Amador and Calaveras with power. A number of other such plants are being considered for supplying the mines of Mariposa and other districts. It is claimed that, until power is brought from the Kern river to the mines in the Rand district, in Kern county, a distance of thirty-five miles, the question of cheap milling and mining for that district will not be solved. There is talk of similar plants on the Colorado river and in other parts of the arid districts in southern California.

Whether these undertakings will be carried out or not depends entirely upon whether the showing that shall be made in the mines will warrant their being worked extensively.

The Southern Pacific people have been for some time examining into the question of running their trains over the mountains in northern California and southern Oregon, and over the Sierras between Sacramento and Reno, by electric power generated with water from the torrential streams along the two roads. It is not likely that anything will be done until more is heard from the experiments on Eastern railroads looking toward supplanting the locomotives by electricity with the third rail system.

There is probably no other part of the world so well supplied with torrential mountain streams, available for the generation of electric power, as is California. More than that, the climatic and other conditions are favorable to inexpensive installation and economic working the year round. Then, when the time comes for the State to do much manufaacturing, it will have another advantage over most of the rest of the country in respect to climate. Rigors of winter and heat of summer will not prevent obtaining good work from laborers, as well as machinery, the year round.

Probably, as to mining, in no direction will the use of electricity play so important a part as in prospecting and developing new mines. It is proposed now to carry electric power into Amador, Calaveras, Tuolumne and Mariposa counties in the near future and sell to the individual mine owners. This will result in the exploiting of many mines now idle and upon which the owners cannot or do not wish to go to the heavy expense that would be entailed in setting up independent power plants. Aside from giving an impetus to mining, the installation of large power plants in the foothills will lead to the building of railroads and in time factories. Probably in no other direction could work be done by the State Mining Bureau at the present time that would be of more value, not only to the mining industry but to the State at large, than in making a thorough examination into the possibilities of developing this resource of wealth.

The New Move of the Anti-Debris Association.

In his remarks before the executive committee of the California Miners' Association, last Tuesday evening, Tirey L. Ford brought out quite clearly some facts that are specially interesting at this time. He recalled the fact that the valley people at all times disclaimed any desire or intention to interfere, by injunction or otherwise, with any kind or character of mining other than hydraulic mining. During the years of fiercest conflict between valley and mountain this disclaimer was repeated with much frequency and seeming earnestness. This declared attitude of the valley people was finally accepted in good faith by the miners of the mountains, though there were not wanting a few who doubted the sincerity of the valley declaration. It was argued by these doubting few that the evident purpose of the valley people was to attack one branch of mining at a time, and, by creating a sense of security as to all other branches, make the particular branch attacked more easy of successful assault. These skeptics further predicted that when one branch of mining had been thus successfully assailed, other branches of mining would, in their turn, become the object of attack, and that this process would continue until the entire mining industry had been so crippled that its further prosecution would become altogether too hazardous to warrant the further investment of capital therein. This view, however, was not shared by the great body of miners in the mountains, the feeling there being that the valley people were sincere and desired no more than the suppression or, at least, a proper regulation and control of the hydraulic branch of the mining industry.

Upon this basis an armistice was declared, and in January, 1892, the mountain and valley men met in Pioneer Hall in this city and mapped out a mutually satisfactory plan for the settlement of the differences that had so long kept the two sections apart. Pursuant to this plan, Congress was persuaded to pass an act for the regulation and control of hydraulic mining, such regulation and control to be in the hands of a commission composed of U. S. Army engineers. This involved some concessions upon both sides, but it was believed that mutual advantage would result. It placed hydraulic mining where the valley farmer would feel safe as to its proper regulation and control, thus accomplishing all he had ever sought to accomplish, and without expense to the valley people. On the other hand, the miner, though feeling that the act of Congress (known as the Caminetti act) was rather severe, not to say burdensome, in its restrictions and regulations, still felt that the matter was, at least, in the hands of an impartial tribunal and that his rights were definitely and finally settled and prescribed.

An era of good feeling thereupon set in, the terms of peace being fairly and substantially respected in both mountain and valley. The miners set to work to secure such State and national legislation as would more fully carry out the terms of the Caminetti act, including the needed appropriations to be expended by the U. S. engineers under the provisions of that act. The farmers also sought legislative aid, in the procurement of which they had the hearty co-operation of the miners. This was notably the case in the recent session of our State Legislature when the representatives from the mountains and from the valleys worked hand in hand and in perfect harmony. In fact, without the active aid of the mining representatives the appropriation of $300,000 for river improvement and rectification would have wholly failed.

It is, therefore, the occasion of some surprise, and of still more regret, that the Anti-Debris Association should now seek to attack another branch of the mining industry, and thus give rise to some suspicion as to their former good faith in disclaiming any hostility to any branch of mining save hydraulic mining alone. The great problem that had long confronted the two sections above referred to seemed in a fair way of an early and honorable solution, and the increasing harmony and good will between farmer and miner was effectually hastening that desirable result. But, just as matters were in this happy condition, just as the miners and farmers were about to make a joint appeal to Congress for the necessary means to carry out their concerted plan of action, there came the unwelcome news that the Anti-Debris Association had departed from its declared purpose of restricting its operations to hydraulic mining. This news should be as unwelcome in the valley as in the mountains, for it is clear that without united action no lasting or substantial benefits can follow. Once let the terms of peace be broken and war again declared, and we may bid a long farewell to all further hope for Congressional aid, without which any proper or permanent solution of the grave problems now engaging the earnest attention of both farmers and miners will be indefinitely, if not hopelessly, delayed.

The above is written in no unfriendly spirit toward the farmer, but rather in a spirit of friendship to both farmer and miner, and with a hope that the valley people may see that any slight or temporary gain that might result from the methods newly employed by their Anti-Debris Association would be wholly lost and swallowed up by the strife and disaster that would be sure to follow. Let the Caminetti act be the arbiter of our differences and the California Debris Commission the tribunal before whom all grievances shall be laid; let every energy be bent to securing national aid for the improvement and protection of our rivers under the direction of Federal engineers, and we may rest assured that the results to be thus obtained will be all that either farmer or miner could desire, and more than either could accomplish without the aid of the other.

It seems the purpose of the Anti-Debris Association, as indicated by some of their procedures, to attempt to have all sluicing of gravel brought under application of the Caminetti act. The Caminetti act in Section 8 states: "That for the purpose of this act 'hydraulic mining' and 'mining by the hydraulic process' are hereby declared to have the meaning and application to said terms in said State." This act was approved March 1, 1893. The Legislature of California adopted as sections of the code, which were approved March 24, 1893, the following:

SEC. 1424. The business of hydraulic mining may be carried on within the State of California wherever and whenever the same can be carried on without material injury to the navigable streams or the lands adjacent thereto.

SEC. 1425. Hydraulic mining, within the meaning of this title, is mining by means of the application of water under pressure through a nozzle against a natural bank.

The California Debris Commission has taken this definition as accepted by the act of Congress of March 1, 1893—the Caminetti act. The Anti-Debris Association claims that the above quoted sections of the code having been passed later than the Caminetti act, can have no bearing upon it. That "hydraulic mining" and "mining by the hydraulic process" in "the meaning and application given to said terms in said State (California)" refers only to the washing of gravel by the "application of water under pressure, through a nozzle, against a natural bank," can be proven. Take Bowie's "Practical Treatise on Hydraulic Mining." On page 84 the definition is given as follows: "Hydraulic mining is that method of gold mining in which the ground is excavated by means of water discharged against it under pressure (hydraulicked)."

For all other classes of mining gravel with water, such as "sluicing," "booming," other terms are and have always been used.

Concentrates.

A 20-TON cyanide plant is to be erected at Pony, Montana.

OREGON'S gold output for '96 aggregated a little over $2,000,000.

IN Riverside, Cal., twelve mining location notices were filed in one day last week.

THE establishment of a mining stock exchange in Portland, Or., is being talked of.

THE Junction mine, Nevada county, Cal., has been bonded to San Francisco men for $12,000.

A RICH strike is reported in the 1400-foot level of the Dead Horse mine, in Tuolumne county.

NEW YORK people have bonded the Franklin mine, near Washington, Nevada county, Cal.

RICH ore was struck last week in the North Star mine, Nevada Co., Cal., on the 700-foot level.

AT the Cadmus mine, at Nevada City, Cal., instead of firing the blasts by hand this is done by electricity.

SQUAWS near Bodie, Cal., earn considerable money by pounding rock up in a mortar and horning out the gold.

THE Rossland, B. C., Mining Stock Exchange's members have decided to disincorporate and close its doors.

A COMPANY with a capital of £2,000,000 is being formed in London to acquire the Jumbo mine in British Columbia.

A LINE of stages has been put on the road between Baker City, Or., and the Seven Devils copper district in Idaho.

THE Canadian Government at Ottawa has been urged to put an export duty on lead ores, but will probably not do so.

THE 10-stamp mill at the Cleveland mine, Sierra City, Cal., was destroyed by fire last week. The owners will rebuild.

THE State Commissioner of Mines of Colorado has begun to prepare a report on the mines and prospects of Cripple Creek.

THE tailings of several old mines at Cherry Creek, White Pine county, Nevada, have been purchased by Salt Lake City people for 25 cents per ton.

AN amendment to the Mineral act passed by the Legislature of British Columbia provides that the cost of surveying a claim up to $100 may be counted as assessment work.

THE Canadian Pacific Exploration Company has been formed in London, with a capital of £500,000, to operate in British Columbia.

AT the Iron Mountain mine, in Shasta, last Saturday, five miners were buried by a cave, one being killed and the others more or less injured.

IT is estimated that there are 200 teams hauling machinery and supplies from the railroad depot to Sonora, Tuolumne county, for the mines.

AN English syndicate is negotiating for the purchase of the Reco mine at Sandon, B. C., for which it is reported they have offered $2,500,000.

TELEPHONE LINES are being constructed and will connect Spokane with Rossland, Trail and other points in British Columbia in a few days.

SILVANITE, in the Yakh district, Montana, where was only a log cabin a year ago, now has a population of 300, owing to the discovery of gold mines.

THE gold exported from British Guiana from January 1 to April 12, 1897, was valued at $432,915, against $417,054 for the corresponding period of 1896.

A COMPANY has been bought out in London with a capital of £80,000 to take ore and work a copper property near Ario, State of Michoacan, Mexico.

THE Mountain Copper Company at Keswick has ordered 2,000,000 feet of lumber from Sisson, Cal., and will erect forty-five new cottages for the workmen.

THE Todos Santos gold mine in the San Jose de Gracia district, Sinaloa, Mexico, has been purchased by the Anglo-Mexican Mining Company, Limited, for $82,000.

PROSPECTORS are preparing to go on the Cuyamaca grant in San Diego county, Cal., the owners having made offers to any who may discover mineral in paying quantities.

A FACTORY for making fire brick has been started at Great Falls, Montana, where a good quality of clay is found. Montana consumes about 10,000,000 fire brick per year.

ON Coffee creek, Trinity county, Cal., the Graves Brothers with a 10-inch stream in one week lately washed out 249 ounces of coarse gold, the largest piece being worth $250.

B. A. CARDWELL has begun the construction of a wagon road from Truckee, California, to the Meadow Lake mines, and expects to have it completed by the middle of June.

THE volcano of Popocatepti is bonded to an American syndicate, the object being to exploit for sulphur, bring ice and wood to the City of Mexico and carry tourists up to the crater.

OF the many proposed smelters for British Columbia work has only been begun on one—that at Victoria. All the details as to location and plans have been accepted and some contracts let.

AT a joint meeting of the Chamber and the Association of Mines on the Rand, South Africa, April 28, it was resolved to reduce native wages 30 per cent. This will bring the average down to about $7 a month.

A LARGE bed of auriferous gravel has been opened up near Offenbanya, in Transylvania. These alluvial deposits appear to have been known to the Romans, as adits driven by hammer and wedge have been found.

THE question as to location of a smelter for Trail creek ores depends largely on the place where coke may be obtained cheapest. The price at Northport, Washington, is $10 per ton, at Rossland $14, and at Trail $12.

A MOTION last Wednesday in the U. S. Senate to reduce the rate on boracic acid from four to three cents per pound in the forthcoming tariff bill was defeated by a vote of 34 to 20, being the first test vote on the measure.

THE Duquesne G. & S. M. & M. Co., has bought "the old Mexican mines," two miles from Escondido, San Diego county, Cal., paying, it is said, $100,000 therefor. Considerable development work will be done by Supt. Little.

AT a meeting of the members of the Spokane, Wash., Mining Stock Exchange a motion to disincorporate was lost by a vote of 8 to 13; but those in favor claim that a majority of all the members are in favor of the movement.

A CASE involving conflicting interests between the miners and farmers of the Carson valley, Nevada, was decided by Judge Hawley this week, giving judgment to the mining and milling company for 6000 inches of water, except in July, August and September, when the ranchers should have what they needed for irrigation, and for domestic use the year round—a conclusion satisfactory to both sides.

A COMPANY has been formed in Alaska to mine garnets near Wrangel. These garnets are noted for their size, being as much as 1¾ inches in diameter. Several thousand tons are annually used in this country for abrasive purposes.

THE exports of copper from this country lately have been large and outstrip the production. As a consequence prices are higher, reaching 11 cents a pound for Lake Superior copper, against 10¼c at the corresponding period of last year.

THE Mercur mine at Mercur, Utah, was closed down last Saturday in order to allow putting in the new machinery with which the output will be increased to 300 tons daily. Efforts of foreign capitalists to secure control have been resumed.

A DEAL is being negotiated in Colorado between a syndicate of English investors in Cripple Creek and Victor mines and the Colorado Midland and Midland Terminal, which will give them central shipping facilities from the camps to the East.

A PRESS DISPATCH from Deadwood, South Dakota, states that the Pierre syndicate has purchased thirty-five claims and several fractions adjacent to Lead City, and that it is their intention to erect a 200-stamp mill on Belle Fourche river.

S. R. PORTER, the superintendent, reports that at the Baliol mine, at Sutter Creek, Amador county, Cal., in April, the 40-stamp mill crushed 5885 tons of ore, at a cost of 60 cents per ton for mining and milling. It was delivered in the mill at 33 cents a ton.

AT the Black Oak mine, in Tuolumne county, the cyanide plant lately put in is found to be saving over 90 per cent of the assay value of the tailings, and the manager is about to take up the treatment of the hydrated ores and concentrates, and treat them.

THE Senate Committee on Public Lands has decided to report favorably Senator Perkins' bill for the examination and classification of the mineral lands within the railroad grants in California. It is thought this measure will pass before the tariff bill does.

THE gold output of Tasmania for the three months ending in March amounted to 13,822 ounces, being a decrease of 730 ounces as compared with the corresponding period of last year. That of Queensland for the same period was 167,500 ounces, an increase of 19,800.

UNDER the new mining law of British Columbia companies that have been operating under miners' licenses which have cost $5 per annum must by June 30 take out new licenses, which will cost $50 where the nominal capital does not exceed $50,000 and $100 where it does.

IN the early days of the Vulture mine, in Arizona, only the highest grade ore was milled. The present office building and storeroom was built of ore valued at about $50 a ton. The old assay office building was torn down several years ago and the walls milled, yielding about $2000.

JAMES BRAYELL, an old Comstock miner, has interested an English syndicate in his plan of exploration in British Columbia, and last Sunday left San Francisco with 150 men—experienced miners. They will be divided into prospecting parties, covering the unprospected country of the North.

THE shipments of ore from Rossland, B. C., mines for the week ending May 22 amounted to 1248 tons, made up as follows: Le Roi, 855; War Eagle, 250; Iron Mask, 143. The O. K. milled 141 tons. This makes the total of the shipments from Rossland since January 1, 22,258, and of ore milled 2261 tons.

IT is suggested by the Eureka, Utah, *Democrat* that now that the smelters have increased their charges, the railroads raised their rates for shipping ore, the price of powder increased 40 per cent., and there is imminent danger of the mills and low grade mines closing, the thing to do is to build a smelter in Tintic.

THE gold yield of Victoria, Australia, for March amounted to 83,440 ounces. The following are the returns for the three months ending March 31st: Ararat, 5530 ounces; Ballarat, 40,649 ounces; Beechworth, 25,780 ounces; Castlemaine, 11,700 ounces; Gippsland, 24,600 ounces; Mayborough, 14,622 ounces; Bendigo, 43,013 ounces. The quarter's dividends amounted to £98,500.

TAKING a list of forty-three of the principal mines of Cripple Creek, Colorado, the Colorado Springs *Mining Investor* shows that the stocks sold at the rate of $18,884,758 for the whole December 31, 1895, and May 17, 1897, the same stocks sold at a rate of $5,760,021 for the whole. In the meantime, the output of the Cripple Creek mines has increased from about $750,000 a month to over $1,000,000 per month.

THE American Flat Development Company of Virginia City, Nevada, is asking the owners of claims in American Flat to enter into a contract by which the company agrees to cut the tunnel 8000 feet in length, 8 feet wide and 7 feet high, provided the mine owners will deed over undivided two-thirds interests in their claims. It is understood that the tunnel company will then work the mines and turn over one-third of the net proceeds to the mine owners.

THE Broken Hill Proprietary mine of Australia reports on April 30 that 28,733 tons of ore were treated for the four weeks ending April 29, and the output from the refinery was 461,462 ounces silver, 1841 tons lead, 51 tons antimonial lead (estimated), the copper matte containing 26 tons copper (estimated) and 27,298 ounces silver (estimated). Owing to a portion of the plant being required for other purposes, the cleanup of gold will not be made until next month.

THERE were in operation last year in Alaska 549 stamps, as follows: Alaska Commercial Company, 40; Alaska-Mexican Gold Mining Company, 120; Alaska-Treadwell Gold Mining Company, 240; Alaska-Willoughby Gold Mining Company, 10; Bald Eagle Mining Company, 4; Berner's Bay Mining Company, 40; Ebner Gold Mining Company, 10; Green mine, Norton sound, 10; Julian Gold Mining Company, 10; Juneau Gold Mining Company, 30; Nowell Gold Mining Company, 35. This number will be increased about 40 per cent this year.

THE following data as to the cost of asphalt from the island of Trinidad placed in New York, as reported by Consul Price, will be of interest to the California asphalt mine owners: Crude asphalt is sold on the island of Trinidad for $4 per ton; digging, overlooking and cleaning and carting, 90 cents; loading lighters and ships, 30 cents; lighterage from shore to ship, 50 cents; contractor's profits, mercantile commission and all other expenses and losses, $1.10; export duty, $1.20; freight and insurance to New York, $2.25; total cost per ton, $10.25.

WITH the advance of cost of transportation, smelting charges and price of powder, there has been a great shrinking in the bullion market in Utah. In the Tintic district over 100 miners have been laid off by various mine owners. It is claimed by some that the smelter trust, on which work was commenced about six months ago, has been finally arranged, and that the proof had been afforded by the recent advance in smelting charges, which had gone all down the line. It is suggested by a prominent shipper that the only way in which to meet the advance was co-operation among the producers and the erection of a co-operative smelter.

IN the Gold Dust mine at Mercur, Utah, recently the shaft in the lower workings passed through nine feet of pay ore and stopped at a stratum of lime, supposed to be the footwall. Last week it was thought best to sink the shaft deeper in order to connect with other workings, and then it was discovered that the lime stratum was only a few inches thick, and under it was found twenty-two feet more of the best ore ever found in the property. Another lime stratum has now been encountered, but whether it is the footwall or the covering of another large ore body is not yet known.

ARTICLES OF INCORPORATION were filed with the Secretary of State in New Jersey last week for the New Mexico Railway and Coal Company, with a capital stock of $4,000,000. This at Santa Fe, New Mexico, is taken to mean that work will soon be commenced on the El Paso-White Oaks road, at least as far as the coal deposits in Salado canyon, 165 miles north of El Paso. It is estimated that it will require $1,800,000 to build and equip the road and about half a million will go into improvements at the coal mines, for which the Lowrey syndicate has paid Eddy Bros. $200,000. These mines show 6-foot wide coal veins, and their product can be delivered to the railways and smelters in Mexico and along the border, in competition with the Colorado, northern New Mexico and Thurber, Texas, coals. The building of this new line will open to the railways centering at El Paso a virgin country, rich in gold, copper, silver, timber, salt and many varieties of high-grade marble.

THE DeBeers Consolidated diamond mines' report for the year ending June 30, 1896, says that during the twelve months the diamonds produced realized £3,165,382. The total expenditure amounted to £1,452,528, including amount written off machinery and plant account, etc., and payment of £60,225 interest on the company's debentures and obligations, £206,754, leaving a profit of £1,712,854. Manager Gardner F. Williams reported that the total production of blue ground from the two mines was 2,698,109 loads, as against 2,525,717 loads for the previous year. The amount washed and crushed was 2,597,026, as against 2,854,817 loads. The increase of blue has been 101,083 loads, and the increase of lumps has been 121,254 loads, which now stands at 874,041 loads. The average yield of blue ground from both mines has been 0.91 carat, and the average cost of winning and washing has been $1.68 per load, as against 0.85 carat and $1.56, respectively, for the previous year.

PURSUANT to call there was a special meeting of the executive committee of the California State Miners' Association, at the Union League Club Rooms, San Francisco, on the evening of the 25th instant. Representation at the International Gold Miners' Convention at Denver, Colorado, July 7, 8 and 9, and mineral exhibition thereat were discussed. It was decided that there was not sufficient time to prepare a proper exhibit. The matter of representation was left to President Neff and Secretary Sonntag, who constitute a committee to appoint five delegates to the convention if deemed advisable. Regarding the Trans-Mississippi Congress, which meets at Salt Lake City, Utah, July 14, the president of the association was authorized to appoint two delegates thereto. A communication was read from the Sacramento, Cal., Chamber of Commerce regarding the recent complications in Nevada county, which have been fully reported in these columns. The communication was conservative and evinced a desire to be just. Its reading elicited considerable discussion, which took a wide range, the point being clearly made that the question, "What is hydraulic mining?" will necessitate new and satisfactory definition. The language of the Caminetti bill, enacted by Congress March 1, 1893, has recently been given new interpretation by the Federal Debris Commission at the instance of the Anti-Debris Association. Water operated under pressure, through a nozzle, against a natural bank, has been usually considered the normal element of hydraulic mining. If any form of mining in which water is incidentally used shall be considered "hydraulic mining," it will open up endless complications. The president of the association appointed Messrs. T. L. Ford and C. M. Cross a committee of two to further elucidate this matter. President Neff, with Messrs. T. L. Ford and A. J. Carrigan, also constitute another committee to meet the Sacramento officials as requested and endeavor to adjust the present difference, with due regard to mutual interests.

THE assayer of the United States at Helena, Montana, reports the mineral product of Montana for 1896, placing the output of gold, silver and copper at $50,732,019.13. The yield of gold was 211,915 ounces, valued at $4,380,671, and of silver, 15,730,022 ounces, valued at $10,324,877. A comparison shows that, while the production of gold increased 2549.375 fine ounces, or $53,680.68, during 1896 over that of the preceding year, the silver output decreased from 17,701,658.11 fine ounces in 1895 to 15,720,022.44 fine ounces in 1896, or nearly 2,000,000 ounces. During the year the largest gold producing property in the State closed down temporarily and only a few new gold producing properties were started up. From placer mines there was obtained 32,271 ounces of gold, valued at $667,099. The silver mining industry of Montana is decreasing in importance. The mines which have produced silver exclusively in the past have closed down, with the exception of properties at Neihart and Elkhorn. However, the production of silver is still large, due to the greater extraction of copper ore during 1896 than in the previous year. In 1895, 49.80 per cent of the entire silver output in the State was a by-product from the copper ores. The silver from this source increased to 10,614,000.62 ounces of fine silver in the total production of 15,720,022.44. The output of copper was 232,096,483 pounds, of a value of $25,356,540.77. This shows the increase over the production of the previous year to have been 31,002,491 pounds, or more than $4,250,000. Practically all of this is produced by the mines in Butte, in Silver Bow county. Recent discoveries promise a new field in the northwestern part of the State. Of lead there was a production of 22,521,340 pounds, valued at $670,009.87. By reason of large expenditures made by some of the most prominent smelting companies operating in the State, it is believed that the treatment charges will eventually be lowered and result in the opening of many properties yielding gold, silver, copper and lead, that are now idle. At present these improvements are in the direction of cheaper power.

The Hand Auger and Hand Drill in Prospecting Work.*

By CHARLES CATLETT, Staunton, Va.

Much has been done of late years to facilitate preliminary stratigraphical investigations, and for examination at considerable depths and in a certain character of material the diamond drill, in its general forms, certainly stands pre-eminent among the tools for such work. But there are large classes of deposits—indeed, I may say the larger proportion in which ordinary prospecting is done—which lie near the surface and are interbedded with soft and fine material. The method usually employed for prospecting these is by means of small shafts. These are sunk with considerable slowness and at considerable expense, depending largely upon the character of the material encountered, and are greatly interfered with by water. In this region the smallest are 3 by 4 feet, but they are usually considerably larger.

Having had occasion during the past year to do a large amount of prospecting work, I have found the use a hand auger and drill of immense value in this respect, and in my practice it has largely superseded, and always preceded, the other forms of investigation. I believe that the information desired was thus acquired at one-fifth what it would have cost by any other method. I am, therefore, satisfied that a brief account of the work of this device will not be without interest to the members of the Institute.

Mr. Darton of the U. S. Geological Survey has referred to the excellent results obtained in his work by the use of a small auger, and a similar instrument has no doubt been used for prospecting purposes; yet it seems to be to no one's interest to manufacture them—at least I could not learn of none on the market. I was, therefore, compelled to make them with such additions and modifications as experience showed to be necessary. The result may be summed up in the following description of a set of tools:

1. An auger bit of steel or Swede iron, with a steel point, twisted into a spiral, with an ultimate diameter of 2 inches and an ultimate thickness of blade of not less than ¼ inch. The point is found more effective when split. The length of the auger was gradually increased until about 13 inches was reached as the apparent maximum which could be used effectively. The 13-inch auger contains four turns. This was welded to the end of 18 inches of 1-inch wrought iron pipe, on which screws were cut for connection.

2. One foot of 1¾-inch octagonal steel, with a 2-inch cutting face, which is likewise welded on to 18 inches of pipe, cut for connections.

3. Ten feet of 1¼-inch iron rod, threaded at either end for connection with 1-inch pipe. When connected with one of the drill bits this becomes a jumper for starting holes through hard material. It is also used when desired to give additional weight to the drill in going through rock below the surface.

4. Sections of 1-inch pipe and connections.

5. An iron handle, with a total length of 2 feet, arranged with a central eye for sliding up and down the pipe and with a set screw for fastening it at any point.

6. A sand pump, consisting of 1 or 2 feet of 1-inch pipe, with a simple leather valve and a cord for raising and lowering it.

7. Two pairs of pipe tongs or two monkey wrenches, with attachments for turning them into pipe tongs.

8. Sundries—Twenty-five feet of tape, oil can, flat file, cheap spring balance, water bucket, etc.

The auger is used by two men, who, standing on opposite sides, turn it by means of the handle. The handle is also useful in giving a good purchase for starting the auger from the bottom of the hole, in opposition to the air pressure, which is considerable. Enough water is continually used to just soften the material. Usually the auger brings up a small portion which is dry and unaffected. Every few minutes, as the auger becomes full, it is lifted out, scraped off and replaced. The handle is moved up and tightened by means of the set screw as the auger goes down. At every slight change of the material the depth and character of the material are recorded.

When hard material is encountered the auger bit is screwed off and the drill bit screwed on, thus forming a churn drill, which may be used for passing through the hard material, the auger being replaced when softer material is reached. The churn drill is used by lifting it and letting it fall, turning it slightly each time. Its weight makes it cut quite rapidly. When the drill is used the muck is either worked stiff enough to admit of its being withdrawn with the auger, or it is extracted by means of the sand pump or a hickory swab. In either case the material is washed and a sample is obtained of the stratum through which the drill is cutting. After washing all the material from one stratum the washed material is mixed and a sample is put into a bottle and labled. In passing through "wash ore" (*i. e.*, iron ore consisting of small particles mixed in clay or other material that can be separated by washing) the material is brought up by the auger, put into a vessel with a perforated bottom (an empty tomato can, having holes punched in the bottom and provided with a wire handle, does very well), weighed by means of the spring balance, washed and weighed again, and thus an approximate idea is obtained of the proportion of ore in the material, while a sample is secured for analysis.

As the mere recollection of the contents of the several holes cannot be safely depended upon, it is very important that an accurate record be kept. To secure this is one of the difficulties encountered with ordinary foremen, though they are generally found to recognize accurately very slight changes of material. My foremen were provided with small vest pocket notebooks, and were soon trained to write down everything and to trust nothing to memory.

The holes were located as far as possible with reference to some natural object or to some other hole so located, and the distance therefrom was in all cases measured, not guessed at, the compass direction being recorded. Every hole was marked with a substantial peg bearing its number and location.

In designating the holes upon the record care was taken to avoid all causes of confusion. Separate properties, or great natural divisions on large properties, were designated by letters, minor divisions by numbers. For instance, we would have as the first number at a certain location on a property "Location H, Drill Hole 8000." The first number in the next natural division to the southward on the same property was designated "Location I, Drill Hole 9000," and so on. By allowing 100 holes for the minor divisions of each locality, it was made possible to return and put in additional holes without confusion or conflict. With such a record it was possible to plat the location of the holes in plan and elevation, and give a visible representation of the "lay" of the strata intersected.

Of course, the best work with such tools is done on soft material, but it is entirely practicable to go through hard material (a few feet of quartzite or flint and many feet of ore being often encountered in a single hole), and the ability of this simple contrivance to go through interbedded layers of hard and soft substances makes it very efficient.

The cost per foot increases considerably with depths exceeding 50 feet, but at the greatest depth I attained (some 80 feet) I did not reach either its capacity or the limit of its economical use as compared with other methods.

Up to 25 feet two men can operate it; from 25 feet to 35 feet three men are necessary; from that to 50 feet a rough frame, 15 to 20 feet high (costing something over $1), for the third man to stand on, is required. The frame can be moved from point to point. Above 50 feet it is generally necessary to take off one or two of the top joints each time the auger or drill is lifted.

The following record of some holes and the time employed will be of interest. Labor was paid 90 cents per day of ten hours. A foreman at $1.25 could watch three or four holes. The only current repairs consisted in sharpening drills, and their amount, of course, depended upon the material:

I.	*Feet.*
Sand and gravel	2
Yellow clay	2
Yellow clay and little ore	4
Solid ore	5
White clay and ore	3
Total	16

Two men 10 hours.

II.	*Feet.*
Loose slide	3
Blue clay	7
Shale ore	3
Wash ore (⅔ ore)	9
Shale ore	3
Wash ore (⅔ ore)	15
Total	40

Two men 11 hours; 3 men 4 hours.

III.	*Feet.*
Light yellow clay	12
Black flint	½
Light yellow clay	2½
White sand	1
Solid sandstone	2
Total	18

Two men 5 hours.

IV.	*Feet.*
Sand and gravel	1
Pink clay	18
White clay	10
Total	29

Two men 5 hours.

V.	*Feet.*
Light yellow clay	14
Solid ore	3
Yellow clay	1
Sol d ore	5½
Yellow clay	1
White clay	1½
Total	26

Two men 6 hours.

VI.	*Feet.*
Sand and sandstone (drift)	12
Dark yellow clay and ore (¼ ore)	3
Light yellow clay with little ore	7
Dark yellow clay and ore (½ ore)	9
Dark yellow clay with white flint	3
Light yellow clay with small quantities of ore	8
Dark brown clay with little ore	8
Very black clay with small quantities of ore	3
Dark yellow clay with ore (¼ ore)	2
Dark brown clay with small quantities of ore	5
Yellow lifeless clay	3
Total	63

Two men 5 hours; 3 men 25 hours.

The ore in most of the holes was brown hematite. In some of them it was manganese ore. It varied very greatly in hardness.

The above records represent, on the whole, the most favorable conditions, the hard material being, as a rule, less than one-fourth of the entire depth; but it is interesting to note how the drill carries through the hard material and how the auger takes up the work on the other side.

In addition to the economy of operation, which means either a saving of money for the same amount of information, or the expenditure of the same amount of money and the acquisition of more information, there are other marked advantages in the use of such tools. The land is not injured for other purposes. Badly located holes (and there are always such) do not remain as conspicuous blots on the property. The holes can be located at points where it would be exceeding inconvenient to put shafts. They can stand an amount of water which would add very greatly to the cost of shaft work.

The following describes the way in which I have used the holes in particular instances:

The iron ore deposits of the Potsdam, as they are found in Virginia, are well known to many of the members of the Institute. It is sufficient to say here that the beds of ore, of more or less regularity, are interstratified with clays and decomposed shales, and are characterized by numerous folds, bends, secondary concretions and drift material formed from the breaking down of the beds. The workings of the old ironmakers dot the horizon of these beds for several hundred miles.

In the examination of one of the old workings, consisting of a narrow open cut, which is about 1000 feet long, and must have been formerly some 20 feet deep, the natural supposition was that the old operators had commenced on the outcrop of the bed and had worked down as far as they could conveniently do so. But the important question was, Had they got through the beds, and was the remainder of the ore to be found in the direction of the dip, or was there still ore in the bottom of the cut? Holes put down at intervals along the bottom revealed no ore, while a line of holes, 50 feet apart, put down on the side of the cut in the direction of the dip, encountered, almost without exception, the beds of ore, and gave very positive information as to their average thickness, dip and composition.

From my experience of the past year with these drills I am sure their more extended use would be of immense benefit to the mining industry. As one of your members has pointed out, a good thing that is not patentable is rarely brought to the public attention, because it is to no one's interest to advertise it; but perhaps modifications might be invented increasing the convenience and efficiency of these already very effective tools, which would justify some one in making a specialty of them and bringing them to the attention of prospectors. Even without the protection of patents, I believe, the manufacturer of an outfit of the character I have described, if properly advertised, would meet an existing and increasing demand and benefit the manufacturer as well as the user of the tools.

* Trans. Am. Inst. M. E., Feb., '97.

Practical Notes on Hydraulic Mining.*

NUMBER VIII.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Round Beams.—In order to find the strength of a circular beam it is necessary to first work out the breaking load of a square beam of which each side is equal to the diameter of the circular beam, and multiply this load by .589, so the formula for the breaking load will read: $W=\frac{bd^2N}{l}\times X\times 0.589$.

Example 1.—Having a round beam of American cedar, 40 feet long between supports and uniformly loaded, with a diameter of 10 inches, the breaking load would be: $W=\frac{\frac{b}{10}\times\frac{d^2}{10^2}\times\frac{N}{62.5}}{\frac{40}{l}}\times\frac{x}{8}\times 0.589=7362$ lbs., or 3.29 tons, and the safe load would be $\frac{7362}{7}=1052$ lbs.

Oval Beams.—In this case first find the load for a rectangular or square beam, with sides equal to the two diameters of the oval beam, and multiply the result by 0.6.

Example.—Having an oval beam of American white pine, firmly fixed at both ends and loaded in the center, having 15 feet between supports, the smallest diameter 10 inches, the largest diameter 12 inches, and placed so that it would be 10 inches wide and 12 inches deep, the breaking strain or load would be:

$$\frac{bd^2N}{l}\times x\times 0.6.$$

Here, on referring to the multiplier given in proportion of strength, we find x=6, and therefore

$$W=\frac{\frac{b}{10}\times\frac{d^2}{12^2}\times\frac{N}{102\,5}}{\frac{15}{l}}\times\frac{x}{6}\times 0.6=35424 \text{ lbs., or } 15.8 \text{ tons,}$$

and the safe load would be $\frac{15.8}{7}=2.26$ tons.

Triangular Beams.—To find the breaking or safe load for this class of beams, first find the strength of

* Copyrighted by the Author.

a square beam with equal sides, and divide the result by 3.

According to experiments made by Barlow and others, it was found that triangular beams were ½ stronger where the base of the triangle was up, and it was found necessary to provide in the support a triangular notch in which to place the sharp edge of the beam.

Strength of Chains.—The strength of chains varies, owing to the nature of the iron from which they are made and their mechanical construction. The strength also varies as the square of the diameter of the iron from which the links are made. Experiments show that a single-link chain from good iron carefully welded, made from 1 inch diameter round bars, has a safe working strain of six tons. Great care must be exercised in using chains on loads that would cause disaster in case of breaking, and each link should be carefully examined, always bearing in mind that the strength of the chain is only equal to the strength of the weakest link. Many serious accidents have been caused by not paying proper attention to this fact.

There are many formulæ for determining the safe load for and breaking strength of chains, all of which are only approximate and depend upon careful examination prior to attaching the load. For crane chains the breaking load can be found by multiplying the square of the circumference of the link in inches by 32.4, and for the safe load divide the result by 6.

Example: What is the breaking load of a chain made with links from a round bar of iron ¾ of an inch in diameter? Answer: $75^2 \times 32.4 = 18.225$ tons, and safe load $= \frac{18.225}{6} = 3.04$ tons, nearly.

Another simple and approximate result is to divide the square of the diameter of the iron from which the links are made by 9, and the result is the safe working strain or load.

Example: A chain made from round iron ½ inch in diameter, the safe load would be 4 (the number of eighths of an inch in ½ inch) squared, or 16 divided by 9=1.8 tons, the safe load.

The same result, nearly, is obtained by squaring the diameter of the link iron in inches and multiplying by 7.111. Taking the above example the answer would be: $.5^2$ or $.25 \times 7.111 = 1.77$ tons.

To find the diameter of the iron in eighths of an inch that the links should be made from, to safely support a given load, proceed as follows: Multiply the weight to be hoisted or hauled in tons by 9 and extract the square root of the product, and the answer will be the number of eighths of an inch there should be in the diameter of the links.

Example: What sized iron should the links of a chain be made from to safely support a load of two tons? Answer: $\sqrt{2 \times 9} = \sqrt{18} = 4.24$ eighths of an inch, or a little over ½ inch in diameter.

Some readers will no doubt recall instances to their minds where they have lifted much heavier loads with such chains as shown in the examples given. Although this is often done without any bad results, nevertheless these rules should be followed whenever possible, and especially when chains are used for long pulls and subject to heavy strains, as it is much better to err on the safe side.

While dealing with the strength of chains, it may be of interest and information to readers to have the following table which I have in my pocket-book and often find of great value in making calculations as to strength of iron, bolts, bars, rivets, etc.:

Tensile Strength and Shearing Strain of Iron and Steel.—

	Tensile Strength per Sectional In.	*Shearing Strength per Sectional In.*
Cast Iron	7	9
Wrought Iron rolled bars	25	20
Best Lowmoor rivets	29	23
Cast Steel, best quality for tools	52	39
Double Shear Steel	40	30
Cast Steel Boiler Plates	48	36
Puddled Steel Boiler Plates	42	31½
Bessemer Steel Boiler Plates	32	24
Steel Bars	45	31½
Cast Steel Rivets	49	37
Wrought Iron Plates, lengthway	22½	18
Wrought Iron Plates, crosswise	20½	16½

It is as well to explain, for the benefit of some readers, that tensile strength of any material is the weight attached to the end of a bar that will tear it asunder, and the shearing strength is the weight or pressure that will cut the material through.

In calculating the strength of screw bolts, of course a proper allowance must be made for the thread, and an approximate allowance is to deduct $\frac{1}{10}$ from the diameter of small bolts, and from ⅛ to ¼ for large bolts. For instance, a bolt ½ an inch in diameter, deduct ⅛ of an inch for thread and calculate the strength of said bolt as if it were a ⅜-bolt, instead of a ½-inch, and with a bolt 2 inches in diameter, deduct ¼ and call it ¾, when calculating its working or safe load.

In order to fully explain the use of the above table of tensile strengths and shearing strains, I give an example as follows:

What is the tensile strength of a bar of iron 2 inches in diameter?

Here 2 inches in diameter has an area or cross-section = to 3.141 sectional inches, and $3.141 \times 25 = 78\frac{1}{2}$ tons, and the safe load would be $\frac{78.52}{7} = 11.22$ tons.

From Mine to Mint.

NUMBER III.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia.

Acid-Parting Processes.—Acid-parting processes depend upon the solubility of silver, copper, etc., in an acid which will not attack the gold. Strong sulphuric (oil of vitriol) is such an acid, and nitric acid is another, but their mode of action and the apparatus required are quite different. The use of each will be described in detail.

The Nitric Acid Process.—This is the oldest and until a comparatively recent date the only method in use for parting gold and silver. The first notice we have of its use on a large scale was in the fifteenth century, and proved a very profitable one, by some Germans at Venice, who employed it in extracting gold from Spanish silver, keeping their art a secret. They acquired with their wealth the title of "gold makers" by their mysterious operations.

Parting by nitric acid is conducted on a large scale in much the same manner as an assay of gold bullion is made in the laboratory. It consists of the following operations:

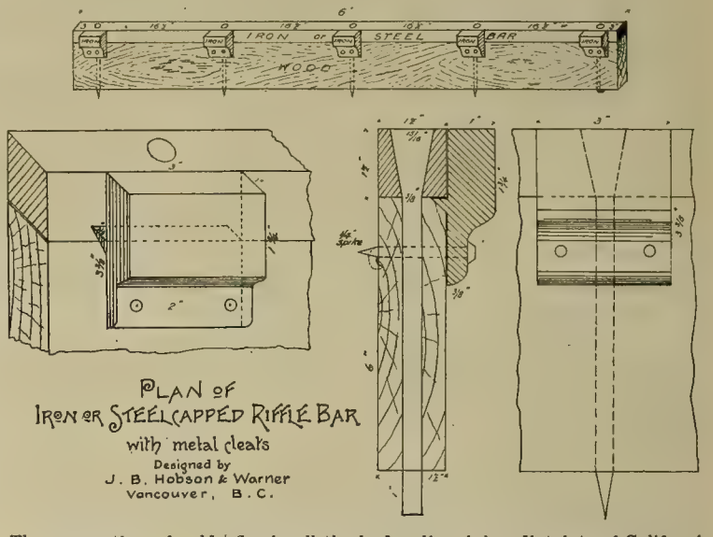
(1) Assorting and proportioning the bullion; (2) granulation of the same; (3) solution of the silver in acid; (4) treatment of the gold residue; (5) precipitation of the silver as chloride; (6) reduction of the chloride by zinc; (7) washing, drying and melting the parted metals.

It is of course desirable that the bullion should be approximately free from base metals other than copper. Tin, antimony and arsenic are especially objectionable, the two former not being soluble in nitric acid. They give insoluble oxides, which remain behind with the gold and must be removed in the crucible by suitable oxidizing fluxes. Copper, on the other hand, acts as a substitute for silver in the parting process, being, as it is, readily soluble in nitric acie. When silver deposits are scarce, therefore, such as have considerable quantities of copper, whether of gold or silver, are not undesirable, although the copper requires more acid for solution than the silver which it replaces.

It was originally thought that the proper proportion for parting was three parts silver to one of gold, hence the name "quartation" given to the process. Experience has shown, however, that a lesser proportion of silver is quite as effective, and that the copper may be considered as silver for parting purposes. The proportion of gold to silver (and copper) used at the Philadelphia mint is 1 to 2½.

The necessary calculations having been made, the deposits are assorted into melts of about 4000 ounces each, preferably by mingling gold and silver deposits. If the latter are not on hand in sufficient quantity, fine silver is substituted. The "melt" is now brought to fusion in a large crucible, thoroughly mixed, and then by means of a dipping cup is poured into cold water from a height of some 3 feet. The cup is given a peculiar swirling, wavy motion, by which means the thin stream of molten metal is broken up when it strikes the water into leafy granules and hollow spheres, not unlike golden popcorn in appearance—this to expose as much surface as possible to the action of the acid. These granulations are dissolved in porcelain vessels of about thirty-three gallons capacity. Twelve such vessels are placed in a large water bath in what is called the "parting house." Provision is made for heating the water, surrounding the jars, and a connection from the top of the house to a chimney serves to carry off the acid fumes.

Each jar receives a charge of 190 pounds of granulations and 175 pounds of strong nitric acid. When the first strong action has subsided, steam is admitted to the water surrounding the jars. The metal and acid will about half fill the jar. At intervals of twenty minutes the contents are thoroughly stirred with a wooden paddle, the doors on the side of the house being raised for the purpose. The charge is kept boiling gently during six hours, by which time most of the silver will have been dissolved, leaving the gold as a granular sediment. The steam is turned off from the bath, and hot water added to the jars to dilute the strong silver solution. After subsidence of the gold, the clear solution, containing silver, copper, lead, etc., is siphoned off and transferred to the precipitation tank. The jars are again filled with hot water, the contents well stirred, and again allowed to settle. The clear liquid is added to the first, and fifty pounds of fresh, strong acid added to each jar. The boiling is renewed for five or six hours, when washing of the gold by decantation is several times repeated. The gold sediment is now transferred to a lead-lined tub, mounted upon a truck. The tub has placed in it a perforated false bottom, which is carefully covered with cotton cloth, the whole constituting a large colander or movable filter. Water is now passed through the gold until most of the silver has been removed, the wash waters being transferred, as before, to the large tank for precipitation.



From this filter the gold is transferred to cast iron pots, in which it receives a boiling in strong sulphuric acid, to which a small quantity of niter is added. This treatment extracts an additional portion of silver and materially increases the fineness of the gold. The strongly acid liquor is ladled off into vessels partly filled with water. From this solution the silver and a little gold are periodically recovered as "residues." The gold is thrown from the iron pots into water, washed a number of times by decantation, and then thoroughly sweetened on a portable tub filter, such as has been described. It is now dried and melted. If a sample bar, upon trial, proves to be tough, the melt is now ladled into molds, giving bars of some 300 to 400 ounces each. If the trial bar is brittle, the molten mass is fluxed with niter through an "eye" of bone ash. The niter oxidizes lead, antimony, arsenic, sulphur, etc., the products being absorbed by the bone ash cover.

About 6000 ounces constitute such a melt, and we have some fifteen bars of a fineness of 0.998 or 0.999, and worth, say, $8000 each.

(To be Continued.)

Iron-Capped Riffles.

The abundance of cheap timber for blocks and riffles in all the hydraulic mining districts of California has prevented the general adoption of more lasting paving for sluices, where stone is not used. Yet a number of devices for iron-capped riffles have been invented, and iron or steel rails have been in many cases substituted. The great advantage of these over stone and block paving is in the ease with which with them sluices may be cleaned up. The greatest disadvantage in the use of wooden riffles is that they wear away quickly. Where hydraulic mining is conducted in districts where wood is expensive, iron or iron-capped riffles must in time replace those of wood.

PLAN OF IRON OR STEEL CAPPED RIFFLE BAR with metal cleats
Designed by J. B. Hobson & Warner Vancouver, B. C.

The accompanying cut illustrates a style of iron-cap riffle designed by J. B. Hobson and Mr. Warner. Mr. Hobson had long experience in this State and is now in charge of large gravel properties in the Cariboo district, B. C.

Australasian Gold Yield.

The following has been received from Consul-General Maratta, Melbourne:

On the 31st of last December the gross output from Australasian gold fields amounted, according to the published statistics, to 99,592,305 ounces, as follows:

	Ounces.
Victoria	61,034,884
New Zealand	13,312,837
New South Wales	11,710,510
Queensland	11,172,073
Western Australia	967,626
Tasmania	886,822
South Australia	507,553
Total	99,592,305

This enormous mass of gold represents the work of the miners from the discoveries in 1851 till the close of 1896—say, forty-five and a half years. It will be noted that the total falls short of 100,000,000 ounces by 407,695 ounces. As this amount is very much less than the average yearly yield, it follows that the shortage will be made up very early this year. Moreover, figures show that the yield is increasing:

	Ounces.
1894	2,343,716
1895	2,359,244
1896	2,375,948

Mining Summary.

CALIFORNIA.

Amador.

Ledger: The shaft at the Oneida is now down about 950 feet. The rock is not breaking as well as they would like, but still it is better than it has been.

The north drift in the Anita is now in over 400 feet and the work in it is still progressing toward the Shober ore chimney. Ledge matter has been encountered the entire distance.

The excavation for the 40-stamp mill at the Argonaut has been completed and the work of putting in the foundation was commenced last week.

Mining operations at the Jackson Gate mine, which has been prospected for the past two years by one of D. Gutmann's companies, has been suspended and the machinery taken off the property.

Record: At the Guiliani mine, on Sutter creek, M. D. Nixon has lately obtained possession and is running a tunnel from the creek bank to tap the ledge in depth. The tunnel has been extended 110 feet. The ledge is from 4 to 6 feet wide.

Owing to the death of W. B. Carr, one of the principal owners in the Gover mine, all work has been suspended with the exception of keeping the pumps going.

Republican: The Kennedy Mining Company contemplate many improvements during the present year. Greater facilities and improved machinery will be among the new features.

The 10-stamp mill recently erected at the American by W. Dennis will begin operations soon.

C. M. Meeks is making arrangements to do prospecting on the old Meeks tract south of the Zeila mine.

Calaveras.

(Special Correspondence).—The May Day Company have bonded the Gold Bug mine, which, with the four locations of the May Day group, gives them five full claims. At present they are driving a crosscut tunnel from the base of the mountain to the south of the mines. The tunnel will be about 2000 feet long and will tap the mines 600 to 700 feet deep. As the mountain is seamed with quartz ledges, they expect to develop a large number of veins in addition to the ledges that they have opened from the surface. Naylor Williams has secured the O'Henio & Frasier mine, which shows very rich ore. The Buckhorn group, Beatrice and Mayflower have been secured by a Chicago company, who will develop it. The Falcon is bonded to a Portland company. The ore in the Falcon is rich in visible gold and tellurium. The Old Calaveras is being reopened by J. W. Henderson. The Collier mines have been developed by Z. A. Willard and Eastern capitalists interested by him. The mines are in charge of his son, J. Willard. The Central Hill hydraulic mine is running full handed and taking out its usual amount. It is rumored that the old Oro Plata mine will be reopened. It is a big property if properly developed and operated. The hills are full of prospects that only want money to make them mines.

Murphys, Cal., May 24, '97.

Amador *Ledger*: The facts as to the strike in the Gwin mine are that very rich gold-bearing rock has been discovered running through the ledge in a wide seam in the north drift at the 1300 level. The seam is immensely rich and will go several thousands per ton, while the balance of the ledge is good milling ore. The ore is too rich to go into a mill, and, as the company is not prepared to handle it, Superintendent Thomas and David McClure, chief owners of the concern, who are on the ground, decided to lag up the drift for the present and proceed to arrange to handle the gold, which doubtless extends throughout the depth of their ledge. They are crushing 120 tons of ore per day with their 40 stamps.

Nevada.

(Special Correspondence).—The committee of the Sacramento Chamber of Commerce, after a careful examination of the methods of gravel mining at You Bet, has made its report. Meanwhile the Red Dog mill, which was enjoined from operating, is still idle, in obedience to the courts. However, the time during which this property is open to work on account of water supply is rapidly passing by. Six weeks more at the utmost closes the season. Men are out of employment in the meantime, water goes to waste, gold remains in the hillside instead of being put into circulation, and hungry mouths are dependent upon work in the mine.

Without any intention of passing upon the opinion of others, the writer, who made a second trip to the properties in question, and who is quite familiar with the different methods of gravel mining, and with the law governing the case, would say that the whole affair in dispute resolves itself into this: Are the parties at You Bet disobeying the law by their methods of mining? They are not hydraulicking; they are merely ground sluicing. The answer is self-evident. Engineers and members of public works will see practically as other capable men view the situation.

The people of You Bet were not violating the law; yet it becomes possible for an individual, who must make some record and plausible excuse for drawing his stipend, to bring an injunction and stop the earning of wages by deserving people in their honest pursuit.

It is a very mild stricture to say that this affair is not only a gross injustice, but is the outgrowth of a shortsighted policy, a seeming gratification of spleen, a mercenary motive, that benefits an individual to the injury of a whole community, and the jeopardizing of large and widespreading business interests.

Nevada City, May 24, '97.

(Special Correspondence). — About seven miles above Washington is situated Maybert, scattered in its mining properties on both sides of the Yuba river. With its record of products in gold from the several mines in the neighborhood, none of which have been worked to any great depth, and with the great advantages for operating the properties through tunnels, capital will soon find its way hither to unearth the mineral wealth of this section.

The formation changes radically in the short distance from Washington. In and about Maybert it is a syenitic granite, and some maintain it is a contact.

At the Governor Morton, owned by Bonney & Ritchie, the ledge averages 3 feet. The tunnel is in 220 feet, and ore is stoped to facilitate operations because of limited means. A small rotary mill grinds out ore that nets $10, and no sulphurets are saved.

The Blue Jay, owned by Bonney & Baugh, is 300 feet above the river and has a 5-stamp mill. It is in syenitic granite and is within 100 yards east of the contact. By running a 1200-foot tunnel 1000 feet in depth could be attained. The ore averages $14 in free gold. Water to any amount desired is available.

In this vicinity is the old Lindsay, which has been abandoned for twenty years. The prospect for reopening this by a tunnel that would give about 1200 feet backs is good. Some twenty-five years ago $150,000 was refused for this mine. Death of the principal owner caused it to be closed. San Francisco and Nevada City capital is about assured to make a deep mining test of the property.

With the available electric power that is rapidly becoming the popular feature in this county, and the undoubted mineral resources of Nevada county, this great mining district is still in its infancy so far as gold mining is concerned. Prospects are being steadily developed and they are offered on reasonable terms.

Maybert, May 24, '97.

Telegraph: Among the mines that have been closed for years and are now being further developed are the Gold Hill, Massachusetts Hill, Granite Hill, Homeward Bound—lately acquired by purchase by the Omaha Consolidated Gold Mining Company, the Allison Ranch and Bullion mines.

The Gold Hill Company is steadily sinking its shaft and driving drifts north and south on the 400-foot level.

The Massachusetts Hill Company has decided to sink another vertical shaft, to further facilitate the workings of their property.

The Granite Hill Company is steadily developing its mines.

The Omaha Consolidated Gold Mining Company has commenced the sinking of a new incline shaft. The initial development will consist of sinking the shaft to cut No. 8, No. 10 and No. 11 drifts of the Lone Jack south.

The Allison Ranch Company is pumping and retimbering its mine to the bottom levels.

The Bullion Consolidated Gold Mining Company have sunk their shaft to a depth of 840 feet, and have encountered the ledge and are now running drifts north and south.

Herald: At the Milliken mine the shaft is down over 600 feet, and Superintendent Durbin expects to make a station and begin drifting when he gets about 30 feet deeper.

Plumas.

Independent: The work of pumping out the Thistle mine is progressing slowly, the water in the shaft having been lowered at this date 14 feet.

National-Bulletin: At North Fork on the Scott drift mine a small force of men are employed and good results being obtained.

Below this is the San Jose location, owned by Hugh Kelley, who is driving a tunnel to open up the channel.

On Angus Cameron's mine several men are employed.

A force of men are driving a new tunnel into the Glazier to tap the channel at a greater depth than was done by the first tunnel.

Austin and Cadle who have the Pliocene drift mine leased from Bransford, Austin and Higbie, are takink out good pay.

San Diego.

Union: L. N. Bailey is about to resume operations on the Kentuck mine at Julian. This mine, long ago, was one of the principal producers of the comp.

Moore and Standish have bonded a two-thirds interest in the Bay Horse and Irma mines in Mesquite district for $5,000.

Sierra.

Enterprise: At the Golden Star drift mine Wm. Hanley is working a number of miners.

The Docile quartz mine has been bonded and a shaft will be sunk on the lode.

Shasta.

Searchlight: The Top Not mine has been bonded for $9000 to the men who recently did development work on the Delta. Ex-United States Marshal Frank has charge of the property. A contract has been let to deepen the shaft 75 feet. A 10-stamp mill will be erected during the summer.

M. D. Butler and son have resumed work on the Delta mine, but are about to close a deal with San Francisco capitalists for a bond on the property.

J. Bischelt has struck rich ore on the west extension of the Gold Standard, and F. K. Fritz is developing his claim on the east extension of the same ledge, and with good prospects.

On the Paymaster mine, owned by McCourt & West, a tunnel has been run 250 feet, and some rich auriferous gravel encountered in the bed of the old channel, which is 80 feet above the present channel. Nuggets weighing from $60 to $70 have been found during the past few months.

Siskiyou.

News: Sipe Brothers have begun work at their quartz mine in New York gulch.

Preparations are being made for the erection of a new stamp mill on Indian creek by the Miller & Parker Company.

The hydraulic mines of Wright & Fletcher, S. R. Gardner and Eastlick Brothers at Oro Fino, will probably run until July 1st.

Active operations have begun at the Last Chance mine, near Callahans, under S. J. Fore. The elevator will be lowered so that they can get down to bedrock.

The water supply of the hydraulic mines about Hooperville is falling. The Bay City mine, owned by Moore, Hamilton & Co., and Geo. Baker's mine are still running pipes. Parker and Castello are cleaning up bedrock.

Several hundred acres of placer ground was located in Happy Camp district this week by men who have the means and enterprise to develop the property.

The new tunnel at the Commodore mine has tapped the ledge at a distance of 274 feet from the surface, and the rock shows prospects above expectations. The ledge is 2½ feet in width.

Journal: The Klamath River Flume and Mining Company, who expect to develop a large property near Happy Camp, have had several surveying parties out lately locating the best route for a ditch.

The Nanetta B. mine, on Thompson creek, is said to be paying from $500 to $1,000 a day, which makes it about the best paying mine in the county.

The small placer mines in the vicinity of Hawkinsville have been compelled to close down, owing to a scarcity of water. Some seasons they are enabled to run up till the first of June.

Day & Son, who are the principal investors in the Klamath Flume and Mining Co., will start two carloads of machinery from Portland next week for use at the mine.

The big pump at Shasta river has been kept running night and day of late, and furnishes an abundance of water for the Hunter & Simmons mine below Hawkinsville. The water pumped at night, is run into a reservoir and then piped to the mine during the day.

Finley D. Fraser has sold to the Golden Eagle Quartz Mining Co. of West Virginia three quartz ledges on Indian creek, known as the Robert S. Green, Black Crow and May Apple ledges, adjoining the old Golden Eagle.

L. F. Coburn has leased the Erno & Morrison mill in Quartz valley, and also one of Erno's mines.

The Golden Eagle ledge on Indian creek, from which the London Q. M. Co. crushed some rich quartz about the beginning of the sixties, is to be reopened.

The shaft at the Blue Gravel mine on Greenhorn has been sunk to bedrock, at a depth of 108 feet, and the gravel is expected to pay well.

Reporter: At the Gold Run mine at Hungry Hill, owned by Dannenbrink Brothers, a 4-foot ledge of high-grade ore has been encountered in the new 1200-foot tunnel. The 400-foot raise to the tunnel above has been completed, which furnishes plenty of pure air for the miners. It is estimated that there is enough ore in sight to keep a 10-stamp mill going day and night for seven years. Fourteen men are employed at the mine.

A new tunnel is being driven to tap the ledge of the Taylor mine in Cottonwood district.

Work is going rapidly ahead in the tunnel of the Bonanza King mine owned by A. Davis & Company.

Trinity.

An Oakland company has purchased the Rumfeldt mine near Carrville. This property consists of about 100 acres of good auriferous gravel.

The new pump at the Altoona mine, at Cinnabar, has been placed in position and started up. It is hoped that in two weeks the water will be lowered below the upper levels. When the mine is pumped dry about eighty more men will be given employment in and about the mine.

Tuolumne.

Union-Democrat: At the Rawhide the main shaft has reached the 1100 level. It will be continued to the 1200, when crosscutting and drifting will be commenced. Later on the shaft will be run down still another hundred feet. Work is also being pushed on the north drift of the 800, but the ore which keeps the 40-stamps dropping comes from the stopes between the 1000 and 900 the 900 and 800. It has not yet been decided whether a cyanide or concentrating plant will be put up, but probably the former will be adopted.

At the Black Oak the main shaft has reached the 800-foot mark, with a big body of fine ore in sight. Drifting still continues north and south on the 700 level, and the main portion of rock reduced still comes from those points. The shipment of 200 tons per month to Selby's keeps up regularly. The work of putting on the additional ten stamps to the mill and the erection of the cyanide plant is being hurried along as fast as possible.

At the App the main shaft is down to the 900 level, with a strong 25-foot vein of quartz in the bottom. The mill is being fed from ore taken from the stopes of the 800 level.

The New Era, owned by Holland and Trewartha, will be put in working order this summer, and started up with entirely new machinery.

Independent: The Omega mine which was recently sold to a Scotch syndicate will soon commence operations.

The 80-stamp mill to be erected on the Pino Blanco has been ordered and work on it will be immediately commenced.

NEVADA.

Silver State: At Golconda a number of quarrymen and masons have arrived at the Adelaide copper mine. Buildings will soon be erected to accommodate the workingmen, who are arriving daily. The townsite has been laid out south of the Golconda hot springs hotel, and the plant is to be located east of the townsite. The water supply has already been provided for in Robinson's basin, where two large dams have been built.

At Jersey, Humboldt county, a once prosperous mining camp not very distant from Kennedy, J. W. Abel and sons are working on the old Jersey mines and other claims and are taking out some very rich lead ore which is being shipped to the smelting works of Selby & Co., San Francisco.

Ford, Douglass and others have a lease on the old dumps and are working them over with a jig with a capacity of ten tons a day and are making good wages. They have enough to keep them busy for at least four years.

At Kennedy J. A. Blossom has several men working on the Gold Note and other claims, which look encouraging.

At Spring valley J. B. Foltz and Sons have their hydraulic works in operation and have plenty of water with which to work.

At Bloody canyon John Taylor is working on his antimony mine in which a 3-foot vein of antimony was recently struck. He is getting ready to make a shipment of ore.

OREGON.

Medford *Mail*: The old Bybee quartz mine on Rogue river, below Galice creek, is now the property of Turner & Sanders who will resume work this summer.

Work still continues at Baylor & Iliff's pumping plant on Rogue river. This plant has been working now for some five months and it has been demonstrated that it is a paying enterprise.

Dowell & Belding's 5-stamp mill started up last week on Green's creek.

A. W. Fox and others have taken charge of the Strong & Phillips copper ledge in Waldo district, and will sink a shaft 100 feet and then run a drift of the same length.

Rogue River *Courier*: The 5-stamp mill at the Jewett mine will be in operation in a few days. Some 100 tons of ore are ready for grinding.

Layton is running two placer mines with abundant water, one on Williams creek and the other on Ferris gulch.

Pollock & Co. are in over 100 feet on a ledge at the head of Jumn-off-Joe which widens as they advance. Hitherto an arrastra has done the crushing but sulphurets lately appear and so a stamp mill with concentrator are being considered.

Baker City *Democrat*: The shaft at the Virginia Consolidated is now at a depth of nearly 600 feet. Crosscutting will be commenced soon.

The Flagstaff mine, five stamps, is running ten hours daily. The water in the shaft is increasing and it is expected there will soon be a sufficient supply to run all the stamps of the mill for twenty-four hours.

At the Gold Ridge mine the machinery for hoisting works will be put up at once to admit of deep sinking operations. A vertical shaft has been started and will be run to a depth of 500 feet before crosscutting.

The big ditch which has been in course of construction for several months for the Flick Bar Placer Mining Company has been completed.

T. A. Walley and L. E. Riter, owners of the Sixteen-to-One group of mines in the Pleasant Valley district, are preparing to extensively develop them.

WASHINGTON.

Spokesman-Review: At Chewelah a large body of ore has been struck on the Copper King mine the ore showing native copper.

At Eureka camp on the Colville reservation a tunnel 118 feet long on the Lone Pine crosscuts several veins of from 2 to 4 feet, but at 102 feet they struck a ledge 16 feet wide and 80 feet below its cropping on the surface. This ledge is as fully free miiling at that depth as at the apex of the vein.

Seattle *Times*: At Snohomish the Naiad Queen and Belcher claims are to be worked.

A number of miners have gone to work on the P. and I. mine near Monte Cristo under contract with the company to do 100 feet of tunnel.

The May Creek Mining and Milling Company put eight men to work this week on their property.

At Silverton the main ledge has been struck in the St. Louis on Deer creek. A four-drill compressor was placed on the property and a crosscut started, and at a distance of 240 feet an 18-inch vein of well defined ore was exposed.

Bessie and Rhodes of the Double Eagle, with a force of seven men, are building camps near their free milling propositions on Cole creek. The placing of a stamp mill on their property is now in contemplation.

BRITISH COLUMBIA.

The annual report of the president of the Iron Mask gives the following financial statement for the year ending May 1, 1897:

Total amount of ore shipped (tons)	1,749 65
Cash realized on same	$55,946.97
RECEIPTS.	
Managers' per cent	$ 3,286.90
Sales of ore	55,946.97
Money advanced by War Eagle Co	13,000.00
Total	$73,133.87
DISBURSEMENTS.	
Operating exponses	$66,529.78
Cash in treasurer's hands	6,604.09
Total	$73,133.87

The exports of Slocan ore via the outport of Revelstoke for the month of April were:

	Tons.	*Value.*
D. N. White	300	$24,048
Idaho	134	15,199
Enterprise	40	6,573
Monitor	20	2,510
Mountain Chief	20	1,481
Hustler	19	2,733
Totals	533	$52,544

President Clarke, of the Old War Eagle Company, in his annual report, submitted a financial statement of the company's affairs

from the beginning of operations, December 3, 1894, up to May 1, 1897, as follows:

Total amount of ore shipped, pounds	41,514,425
Total amount of ore shipped, tons	20,757 21
Total amount of cash received on above	$501,150 78

RECEIPTS.

Sales of ore	$501,150 78
Virginia Company, supplies	10 66
Rossland lots $2,050, less improvements $1,474.75	575 25
War Eagle sale	700,000 00
Total	$1,201,736 69

DISBURSEMENTS.

Operating expenses	$ 252,046 11
Dividend per cent., sales ore, etc	217,320 00
Dividend War Eagle sale	603,760 00
Iron Mask loan	13,000 00
Iron Mask supplies	10 66
Cash in treasurer's hands	$8,459 62
Unpaid dividends	6,231 00 14,690 62
Total	$1,201,736 69

The following table shows the product of the Kootenay mines for the week ending May 15. The total value will doubtless reach $3,000,000 for the first five months of 1897:

BULLION AND MATTE.

	Pounds.	Value.
Trail smelter	244,657	.....

ORE.	Approximate Tons.	Value.
Noble Five mines, Slocan	98	.....
Slocan Star, Sandon	135	.....
Slocan Boy mine	17	.....
Little Phil mine, Ainsworth	19	.....
Black Diamond, Ainsworth	18	.....
Total for week	409	$ 94,947
Total so far for May	980	231,982
Total for April	3,764	433,234
Total for March	5,822	677,681
Total for February	5,201	562 853
Total for January	4,543	675,506
Total via Revelstoke May 12	2,296	223,382
Total so far for 1897	22,586	2,794,638

Spokesman-Review: The manager of the Jumbo reports that about 1000 feet of tunnels, drifts and shafts had been opened. Work is now being done on the lower tunnel. They are in about 350 feet, and expect to cut into the ore body in about 100 feet more.

At Kaslo George Nelson, acting as agent for eastern capitalists, has bonded the Morning Star, in the Jackson Basin group of mines, from Jackson Bros. The consideration is $25,000, upon which $2000 was paid in cash, the balance to be paid in six and nine months.

C. L. Webb and his associates of Seattle have made the final payment on the Montezuma mine, located on the south fork of Kaslo river. The amount, $15,000, was not due until August ,19th. The mine will shortly be equipped with a concentrator and tramway.

The Reco is one of the winter mines of the Slocan at present, as it is necessary to take the ore out on rawhides. Up to the present time it has paid $150,000 in dividends, the last being May dividend of $50,000. In the winter season they employ from 85 to 100 men. The ore body is now about 20 inches of high grade, running about 700 ounces to the ton.

In the Ainsworth camp there are about 200 miners employed. The Canadian Pacific M. & M. Company have twenty men at work under M. A. Hallman. They are running the mill all the time.

Eight men are at work on the Ajax, one of the Laurier Gold and Silver Mining Company's properties.

Rossland *Miner:* The Josie has resumed shipments. The mine can easily supply a carload of ore a day for an indefinite period.

The Kootenay and Columbia will also resume shipments this week.

The Cliff is ready to resume shipments. Several hundred tons of ore are on the dumps of the upper tunnel, and the mine is being put in shape to produce regularly.

It is expected the aggregate shipments this week will be much the largest in the history of the camp.

The Black Bear now has one of the largest ore bodies ever opened in the camp. The Black Bear lies between the White Bear and the Le Roi and belongs to the Le Roi Company. The ore body is 12 feet wide. The ore now being taken out looks like the standard Le Roi ore and carries 4 or 5 per cent of copper.

Spokane *Chronicle:* At Rossland some rich copper ore has been found in the Jo Jo, west of the Commander. The lead is supposed to be the same as that which runs through the Commander.

Work has been resumed in the face of the St. Elmo tunnel, and the showing there is the finest ever seen on the property. The tunnel is now in nearly 500 feet.

At Ymir the Black Hawk mine has been bonded for $75,000 upon a 5 per cent cash payment. It is the intention of the new company to put a force of men to work at once.

The New Victor Mining Company have commenced development work and have erected the necessary buildings.

ALASKA.

Miner: The five-compartment shaft which is being built by the Treadwell Company is rapidly approaching the surface. It has now reached a point within 50 feet of the top.

At Sheep Creek, in the Nowell mine, in addition to the fifteen extra stamps, five more concentrators will be installed, and the present output of the mill will be more than doubled.

The Silver Queen tunnel No. 1 is in about 600 feet. It will be driven a distance of 280 feet farther.

No. 2 drift in the Glacier is 400 feet long; No. 3 drift is 483 feet long and in ore its entire length, and has 4 feet of ore on the face. This is 280 feet from the surface. No. 4 crosscut is in a distance of 370 feet, and 156 feet of it in ore.

UTAH.

Salt Lake *Tribune:* The directors of the Golden Bar Mining Company have decided to continue development work on their property at West Dip, and to go to whatever depth may be necessary to reach the ore bodies.

The management of the Brickyard have decided that before beginning the construction of the mill to conduct a series of experiments at the Golden Gate's experimental plant. The ore bodies in the Brickyard are among the best that has been uncovered at Mercur.

At Park City J. J. Daly states that there is no probability of the Daly-West shipping any ore in the near future, unless the action of the railroads in increasing the rates on ore and the action of the smelters in increasing treating charges is reconsidered. The work of sinking the shaft to the 1300-feet level has been completed, and the men engaged in the work, about twenty in number, will be laid off.

The hoisting works which were intended to be erected at shaft No. 2 of the Creole, will be erected on the Typo group, just above the Creole.

The Sioux-Ajax tunnel has now reached the 2400 foot station and with the new air compressor will advance at the rate of over 65 feet a week.

In the Daly-West in an upraise from the 900-foot level a body of ore has been encountered that is rather richer than the general run of mineral in the mine. It will assay 100 ounces in silver and 30 per cent lead. The pay streak is 3 feet in thickness.

The tunnel on the Dutch Canyon property is in about 600 feet. There are abundant indications of copper on the surface of the ground and they are now beginning to appear in the tunnel.

Tintic *Miner:* The shipments for the week were as follows: From the Bullion-Beck mine, fifteen carloads of ore; Bullion-Beck mill, three carloads of concentrates: Centennial-Eureka, three carloads of ore; Eureka Hill mill, five carloads of concentrates; Uncle Sam, four carloads of ore; Humbug, two carloads of ore; Mammoth mill, seven carloads of concentrates; Carisa, two carloads of ore; Sioux mill, two carloads of ore; Swansea, one carload of ore; South Swansea, five carloads of ore; North Star, three carloads of ore; Dragon Iron mine, one carload of ore daily.

The drift on the 100-foot level of the Triumph has run into ore, showing good assays.

B. M. Cornish has let a 100-foot contract for tunneling on the Empire Cons. group at Mt. Nebo.

The report to the effect that the Mammoth mine and mill will be shut down is a mistake, and that no such action is contemplated.

A new strike of ore has been made on the 650 level of the Swansea. The new strike shows greatly increased gold values.

Mercur *Mercury:* At La Cigale last week in grading for the mill on the Boston the heavy lime capping of what was supposed to be the footwall country was removed and it was found that underlying it was an immense body of ore at least 100 feet in width, all of which appears to be good milling ore.

Mercur *Miner:* Twelve or fourteen men are at work on the Wachusetts, and a contract has been let for doing a large amount of shaft and tunnel work.

Bingham *Bulletin:* About the 1st of June the Frisco will begin putting in machinery, consisting of a 40 H. P. engine, hoists, pumps, etc The main shaft of the mine is now 100 feet deep, and four drifts have been run from it. They are all showing first-class ore.

Another contract for 200 feet of the development work has been let on the Mohawk.

Eight carloads of lumber for the Highland Boy mill have been delivered and four more are at the depot.

The Heaston Brothers will soon start their water power jigs, probably on Montezuma and Julia Dean ore.

From five to seven carloads of ore are going out daily.

Work will be resumed in a few days on the Lone Tree adjoining the Frisco.

Silver City *Star:* A very fine showing of ore is reported in the Bull Domingo, encountered on the 200-foot level. The ore is rich in lead and silver and the vein varies from 4 inches to 2 feet in thickness.

A 2-foot body of ore was recently encountered in a crosscut from the 200-foot level of the Fissure mine.

A strike of ore was made on the 650-foot level of the Swansea last week in a drift being run to tap the ore directly beneath the stope on the 550-foot level.

Salt Lake *Tribune:* There are now 90,000 pounds of gilsonite on the road for the Culmer Bros. between here and the Pariett mines. They have let a contract to haul 1300 tons of lime-rock asphaltum from their Clear Creek mines to the railroad.

Five cars of stone are being daily shipped from the Kyune stone quarries, and it is claimed that the shipments will be kept up nearly all summer.

The coal mines at Castle Gate are at present only working about half time, and many of the miners are leaving the camp for other fields.

IDAHO.

Spokesman-Review: Within the territory drained by the two branches of the Cœur d'Alene river there are between 50 and 100 claims whose owners expect will be producing ore in paying quantities before the snows of another winter begin to fall.

At Wardner there will be little new work outside of that done by the Bunker Hill and Sullivan Mining and Milling Company. Most of the property in that neighborhood has passed into the possession of that company, and instead of a dozen mines that place will have one, monstrous in size, rapidly increasing its force and product.

At Wood river there are forty men at work on the Minnie Moore mine for Park City parties. It was at first understood that their operations were to be confined to the dump, but the water is to be cleared from the mine and the property worked.

Captain Day, of the Jessie mine, at Bellevue, proposes to build a mill that will reduce 75 to 100 tons of ore per day.

A. H. Boreman has taken a bond and lease of the Bullion and Mayflower, and has put about fifty men to work. These properties have each produced about $3,000,000, and it is believed they will again become dividend-payers under good management.

Mr. Boreman is working seventy-five men on the Jay Gould, which he purchased from "Deacon" White, the New York broker.

C. E. Towne reports that work will soon be started up on the Elmore mine, at Rocky Bar, by W. A. Clark, of Boston, the owner. The plan is to sink 300 feet and thoroughly explore the property.

MONTANA.

Butte *Miner:* The Hesperus Leasing Company will commence crosscutting on the Hesperus shaft, sunk by the Parrot Company, some time this week.

Manager Maginnis of the Montana Ore Purchasing Company states that the usual output from the Rarus and the Glengarry is keeping up, the latter mine supplying any curtailment in the output of the Rarus, caused by the injunction against working certain portions of the mine claimed by the Boston and Montana and Butte and Boston.

The deal for the transfer of the Mayflower group of mines, near Norris, has been consummated between A. G. Macdonald of Norris, the former owner, and Frank B. Turner and J. J. Broughall, of Butte, by which the latter acquire full title to the group of twelve claims. Development work will begin on the property at once.

WYOMING.

A strike of gold-bearing ore has been made ten miles east of Saratoga, in the foothills along Cedar creek, by prospectors. The lead can be traced for half a mile along the surface and shows from 6 inches to 4 feet in width.

COLORADO.

Republican: At Telluride all the principal mines are either being worked to their full capacity, or being put in condition for a large and constant production.

The Columbia-Menona mines and mills were started up full blast the first of this week and they will employ 125 to 150 men the rest of the year. The 30-stamp mill disposes of about 100 tons of ore a day.

It is believed that the Japan mines and concentrating plant will be started up within the next week or two, which will give employment to about 100 men.

The Tom Boy vein has not yet been cut by the mill tunnel crosscut, although it is in a distance of 1,900 feet, the length of the tunnel calculated, according to surveys, that would intersect it, but it may be that the vein has dipped more than figured on.

Development work is being prosecuted on the Grand View, lying on the mountain south of the Gold King mill, under the superintendency of C. A. Hallett.

At Cripple Creek some of the mill men of the camp are objecting to the agitation of the fact that the mines of the camp are being restricted in the production of mill ore for fear that mill building will be overdone and are looking forward to a time when the capacity in this line will exceed the supply of ore.

Tutt & Penrose are holding down the water in their leasing shaft on the Abe Lincoln in Poverty gulch and appear to be able to work on the ore reserves in spite of the properties which have shut down.

After working nine months and producing $78,000 gross value of ore, the Foley Leasing Company has been forced to turn back the Lillie on Legal Tender spur of Bull hill with $11,000 indebtedness for the owners to lift.

Barker, Andrews & Hall have let a contract for sinking a 100-foot shaft on the north end of the Elreno property on Gold hill on the new vein recently opened by lessees.

The Newell tunnel in Grouse mountain is making an average of 10 feet a day at present and is now 150 feet on its way.

The upraise on the Lelia vein from the Chicago-Cripple Creek tunnel, being run by John Nolen to develop a leased portion, is now in 12 feet of ore that gives average assays its full width.

The Bluebird Company has uncovered the best body of ore yet found in the mine in the fourth level from the old shaft.

McCourt & Burns will equip their 100-foot leasing shaft on the north end of the Burns of the Acacia Company with a new steam plant and push the shaft down an additional 100 feet. The vein is showing low values in body.

The ore has been located by the crosscut at 150 feet from the Sutphen shaft on the west end of the Yellowbird, and the grade found is equal to that in the level above.

The McKinley Gold Exploration Company of London has raised a treasury fund of $40,000 to be expended in developing its R. A. M. and Pessimist, and in patenting a number of properties on outlying hills.

At Victor McCourt and McCourt have disposed of the nine locations at McCourt camp on the Florence & Cripple Creek railroad to Kansas City parties who propose putting on a combination amalgamating and cyanide mill to handle the immense body of gold-bearing quartize that covers that section. Several attempts have been made in the past to handle the rock to a profit with stamp mills, but to no success.

In Gilpin county at Pine creek the Portland, in Elk park, has been leased and bonded to Burdis and Vickers of Colorado Springs for eighteen months for $25,000. The new parties will put up machinery and commence sinking.

Mike Cornwell is driving his St. Louis tunnel, at the mouth of Elk creek, and is now in over 200 feet, the drift at present showing a 20-inch streak of lead and yellow copper, which is being sacked.

Scott, Converse and Britton have resumed work on their Magnet tunnel, on Michigan hill, which at a distance in of 100 feet shows up encouragingly.

Prospectors are arriving daily in the Black canyon section, and work has been resumed on several properties during the past week.

Pennsylvania parties are interested in the Buckeye tunnel, which is in over 600 feet, and after some necessary work of retimbering the mouth of the tunnel active work will be started in this property.

In Boulder county the camps of Sunshine and Magnolia are in the tellurium and more men are at work in both places than at any time since the first discoveries were made.

ARIZONA.

Republican: At the Commonwealth Mining Company's property at Pearce the customary shipments of ore continue. The construction of the 60-ton mill is being pushed.

In the Dragoons the Black Diamond group of mines has been bonded to the Copper Queen Co. Prof. Ricketts, who is connected with the Copper Queen Co., will superintend the further development of the Black Diamond.

The Golden Rule mine, six miles south of Cochise station, has been sold to J. W. Bibbins of Philadelphia for $50,000, half in cash and balance in stock.

Russellville copper mine, west of Dragoon station, is being prospected by steam drill.

The Grand Reave mine in Arivaipa canyon, owned by Raum & Cunningham, has been bonded to a New York syndicate and work will be pushed on a large scale.

The Saginaw Mining Company is developing the Saginaw mines, nine miles south of Tucson, in a systematic manner, with a view to doing deep work. The ledge on the 50-foot level is 10 feet wide and between good walls. When ground is opened to supply sufficient ore they will erect a 300-ton concentrating plant and pump water from the river, three miles distant.

Three hundred men are now on the payroll of the Excelsior Mining Company. This number will probably be increased when the company has their plant in working order.

There is great excitement over a rich strike on the lower levels of the Tres Amigos gold mines at Oro Blanco. There is a 2-foot streak of high-grade ore.

At the Vulture mine the new owners took possession April 8. At present there are thirty-five men at work, seven miners keeping the 10-stamp mill busy. The great beds of tailings stretch for a mile through a wide ravine. It is estimated that there are 300,000 tons. A 100-ton cyanide plant is now being freighted from Fool's Gulch and a few months will see it in active operation here.

NEW MEXICO.

Silver City *Enterprise:* "At Hanover A. B. Laird has purchased the Cinque Senoras mine, Hanover gulch, and started work. A body of copper ore is opened.

At Santa Rita J. B. Gilchrist has thirty men working upon the Guadaloupe, Oxide and Chino mines. On the Gladaloupe the new Gilchrist shaft is down about 70 feet and shows a 3-foot vein of ore which runs 24 per cent copper.

At Mogollon the main adit level on the Confidence is in 1524 feet. The ore body in the breast of the tunnel is over 4 feet in width and is of much higher average grade than the ore milled during the past year. This new ore body in the breast of the main level is directly under a big outcrop of ore of the same grade which shows in an open cut upon the surface.

The Apache camp, in the Little Hatchet mountains, in the southern portion of Grant county, was in the early eighties a big producer of lead and copper ores, but the mines have been for some time dormant. About two months ago Weems & Anderson took a lease upon the Copper King mine. With a very small amount of development work they uncovered a large body of ore. With twelve men they are making regular shipments ranging from 160 to 200 tons per month.

J. D. Weems, one of the owners of the lease on the Copper King, has purchased from Gleason & Anderson one-third interest in the Gopher mine. Work was started last week and the mine has already become a producer. The ore body is from 6 to 16 feet in thickness.

At Pinos Altos the Treasure Mining Company have decreased the force of men at work in the mine until the new machinery being put up in the mill is in place, as the mine produces ore too rapidly for the storage capacity of the mill.

MEXICO.

(Special Correspondence).—The Compania Minera de Penoles at Mapimi, State of Durango, Mexico, have two large mines, smelting works, twenty miles of narrow-gauge railroad, electric light plant, telephone line, and have just finished the first rack railroad ever built in Mexico. Their headquarters are at Mapimi, where they have 400 acres of land enclosed by an adobe wall 12 feet high, inside of which is all of their plant. Outside of this is the Ferro-Carril Mapimi, which goes twenty-four kilometers, or fifteen miles to Estacion, Mapimi, on the Mexican Central Railroad. A branch runs from the smelter four miles to the pumping station at the foot of the hill, where is the shaft of the mine. The smelter's daily product is 550 bars of bullion, each weighing 85 pounds, mostly lead, containing a little silver and gold. The bars are shipped on the company's railroad to the Mexican Central to Tampico, thence to Hamburg.

The gauge of the railroad is thirty inches. It has cost a little over half a million dollars. There are four engines and forty-five cars. Nearly all the labor is native Mexican. The principal diet is tortillas, beans and coffee. One shaft is now sunk 1700 feet; another about 600 feet. From the former the production is about 150 tons of ore daily. Nearly 2000 people are in the employment of the company. Peons receive $1 a day at the mine and 75 cents at the smelter. Underground work is let to contractors, who make from $1.50 to $3 a day.

For nearly 300 years this mine has been worked by native Mexicans in a primitive manner. All the timber used here is brought from Texas and Florida and fitted in the shops of the smelting works.

Mapimi, Mexico, May 1, '97.

Scientific Progress.

Revolutionizing Plant Growth with Ether.

Consul Kirk, of Copenhagen, sends the following translation from Dannebrog of February 12, 1897, of an account of an interesting discovery in the physiology of plants.

Mr. Johannsen, lecturer at the Agricultural High School, delivered a lecture two evenings ago on the results so far obtained by the etherizing method, which consists in developing plants earlier than is normal to them by exposing them to the influence of ether fumes.

By exposing sleeping plants to the influence of ether and chloroform, the result is obtained that each plant, after the treatment with ether, begins to shoot; they have thus probably been awakened from their previous condition of sleep or inactivity. This sleep is due to a regular stoppage of activity, which causes the growth to cease.

Mr. Johannsen's first experiment was made with willow plants and next with bulbs and hyacinths. In the fall of 1894, he experimented with lilacs. As a result of these experiments, it was proved that the etherizing of the bulbs had no effect before the formation of the roots; the condition produced by the ether passed before the formation of the roots had advanced sufficiently to cause budding. Mr. Johannsen has also made some experiments with La Reine; the growth was considerable and the development of the bulb was in every respect satisfactory. The experiment was commenced on November 20 and on December 19 a part of the tulips were salable. The problem was solved as regards La Reine. It would, however, be of greater interest to produce lilies of the valley. The experiment in this direction in 1895 was promising, but the results this year were very poor.

Interesting and important are the experiments with ligneous plants. Lilacs grow splendidly when placed in an air-tight compartment and exposed forty-eight hours to the effect of 500 or 600 cubic centimeters of ether, and then placed in a hothouse. Just before Christmas, the plants had developed splendidly. The etherizing of the plants will cost 1 to 1½ cents each. The main point is to get the plants to shoot at any time before Christmas, even in September and October. Mr. Johannsen has had blooming lilacs on the 10th of September, but the plants did not develop regularly. It has, on the whole, been proved that the ether is not beneficial if applied before the middle of November.

The ether causes a derangement in the independence which should characterize each of the different stages of the plant. The development is not harmonious, owing to the too strong or too weak action of the ether. Mr. Johannsen will now try to gradually bring the plants to stand the action of the ether by giving them larger and larger doses. Experiments were made with certain seeds; for instance, the lupine grass and barley, and it was at once demonstrated that increasing doses of ether had a powerful effect. It is not so much the repetition of the ether which is the important point in the treatment, but its increasing application. The small and light doses of ether have a harmonizing and equalizing influence on the growth of germinating plants.

It can be said that some progress has undoubtedly been made, but no one can tell to what astonishing results this discovery may lead. Tulips, lilacs, etc., can be developed much earlier and have a pretty color and great durability, as the ether frees the plant of decomposable matter.

To etherize the plants, they are placed in an air-tight receptacle and exposed from twenty-four to ninety-six hours (generally forty-eight hours) to the influence of the ether. Cylindrical glasses are used for small plants, and for large plants an oil-painted box, the interior of which is lined with tin foil, 4 feet high and long and 2½ feet broad. On the lid a small hole is made, which is closed with a cork and the ether is conducted through this hole. As ether is very inflammable, great care must be taken not to bring candles or matches near it. The ether is dissolved at from 15° to 20° C.

Liquid Air an Agent of Research.

In beginning a course of lectures on "Liquid Air as an Agent of Research," at the Royal Institution in London last month, Professor Dewar said it was a mistake to suppose that the establishment of the various eryogenic laboratories that now existed in Europe was due to a desire merely to attain very low temperatures. Rather the desire was to investigate the conditions of gases of all temperatures and thus carry on the work of Faraday, Regnault, and Dr. Andrews of Belfast. The laws of Boyle and Charles, connecting together the volume, pressure and temperature of a gas, broke down as the liquid state was reached and indeed before, and for them Van der Waals, working on the careful measurements made by Andrews, proposed a new formula which connected the gaseous and liquid states. From this it was possible to calculate the critical temperature of a gas, above which no amount of pressure could liquefy it, and the work of Cailletet and others consisted in the experimental verification of the results thus obtained. Van der Waals also predicted that there would be found one isothermal line which would express the pressure, temperature and volume relations of all gases, and Amagat's work had confirmed this prediction. Referring to the difficulty of getting to very low temperatures, the lecturer said that if we had liquid hydrogen to-morrow we should still be a long way from the zero of absolute temperature and should have no conceivable way of reaching it. No liquefied gas could be utilized to produce a fall of temperature more than one-third to one-half its absolute critical range. Hence the lowest temperature that could be obtained by means of liquid hydrogen would still leave us some 20 degrees above the absolute zero. In the course of the experiments which occupied the rest of the lecture, Professor Dewar illustrated the application of extreme cold to the purpose of analysis by showing how with its aid certain constituents, such as ethylene and marsh-gas, could be separated out in a liquid form from a mixture of coal-gas. He also showed the extreme contraction produced by cold in gaseous and other bodies by cooling one end of a tube of ethylene, the other end being immersed in mercury. When the ethylene became liquid the mercury had risen in the tube substantially as high as in the barometer, proving the vapor pressure to be practically as small as in the Torricellian vacuum.

In his attempts to photograph flying bullets by the light of the spark, Prof. C. V. Boys has found that the double flash produced lasted somewhat less than the 100,000th of a second, giving only blurred pictures. He, therefore, shortened the spark. Instead of wire terminals, he used two very thick, broad bands of copper, not more than 2 inches long, which reached round opposite edges of the photographic plate in such a manner that a spark resulted when electric junction was effected by the passage of the bullet. The spark was thus shortened to about 1-13,000,000 of a second! In this time a bullet from an ordinary magazine rifle could not travel more than 1-500 of an inch, and good and sharp pictures were obtained.

For some time past there has been a tendency on the part of an increasing number of chemists to attack the problems of inorganic chemistry, profiting by the light which the study of organic chemistry has thrown upon the carbon and nitrogen atoms. This is an encouraging tendency from the standpoint of theoretical chemistry, for while the devotion of by far the largest proportion of chemists, for several decades down to the present time, to organic chemistry has widened vastly our knowledge of organic compounds and the carbon atom, yet the study of all other atoms is even more necessary for the theory of chemistry. Relatively very few inorganic compounds have been studied and some of our most familiar reactions are illy understood. So far from the inorganic field having been long ago worked out and exhausted, it is here that the chemistry of the future will find its most prolific harvest. Yet the field is far harder to till and less productive of immediate results.—Science.

Mechanical Progress.

The Use of Compressed Air for Mining Purposes.

NUMBER III.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

To those who care to put thought on the subject of compressed air, I would suggest the subject of special motors and reheaters as a field offering both honor and remuneration. The advocates of compressed air would gain several points if they would pattern after the methods of electrical engineers, who have claimed from the very beginning that nothing was too good in the shape of material or machinery for the development of electrical power. The very finest and most efficient prime motors are always insisted upon, even down to insignificant plants, and the splendid construction of generators and installation of machinery and appurtenances, scracely without regard to cost, has enabled them to place their product upon a high engineering plane. Their methods and their ideas for the advancement of their interests have been correct and they are justly entitled to a commensurate reward.

How all this contrasts with the miserable class of compressed air machinery which until the last twelve months has been installed throughout the country! The very cheapest of slide valve engines, or some jumping, flapping belt for prime movers, poorly designed, poorly made compressors, with insufficient valve areas and cooling devices, generous clearances, enormous piston speeds, all and everything done to make a machine as cheap and undesirable as possible. For motors, anything that would reciprocate. The valve motions causing the pistons to meter out nicely the air in solid chunks at full pressure, the real work being done at the end of the exhaust pipe, and I might add that the louder the noise of escape the more work was supposed to be done in the cylinder, whereas in reality the air was simply making a louder protest at its misuse.

All this must change, and is changing, and an awakening is at hand. It is the duty of every pneumatic engineer to insist upon high class installations, not only for his personal success but for the advancement of compressed air: that most willing, useful and satisfactory power medium ever given to the service of mankind.

The requirements of the ordinary mine in this State, as far as power is concerned, may be enumerated as follows: Power for hoisting, for both surface and underground pumps, for rock drills, for milling and for lighting, for forge blasts and the mine whistle, which must be provided for some way, as it serves to mark the shift changes and give the fire or accident alarm.

I will take up each of these heads, briefly, speak of the prevailing practice here, and how it can be improved, and in any comparisons I may make between the efficiency of compressed air and any other power, I shall assume that the horse power in each kind of power costs the same ready to deliver to the various motors.

Before speaking of the various motors to develop the required power, we shall assume that our mine is properly equipped with air conduits and reheating apparatus. Too much stress cannot be laid upon the fact that generous air conduits on the surface and underground, properly provided with bends or elbows of large radius and properly insulated where they convey hot air, contribute greatly to the economical operation of an air plant.

While the actual loss to the compressed air in its potential, by the drop in pressure, caused by friction in small pipes, is not more than one-third of what the public believes it to be, still the annoyance in not getting initial pressure where small working cylinders are used, is great, and again the increased velocity in small pipes down a shaft deprives the compressed air of a gain instead of a loss of power as it goes downward, which it would have in proper sized conduits.

Illustrating the first point, it is generally assumed for instance, if a compressed air pipe receives air at 100 lbs., and delivers it at 80 lbs., that the loss is 20%, so it is in pressure, but relative pressures do not measure such a loss, for while the pressure has decreased, the volume has correspondingly increased, and the real loss is merely a frictional one of 8.4% instead of twenty.

Illustrating the second point, there is a very material gain to be had from the weight of air in average shafts, provided the pipes are of proper size. Air at 90 lbs. gauge on the surface would be 92 lbs. at 500 feet, 94 lbs. at 1000, 96 at 1500, and 98 at 2000 feet,—a gain sufficient to offset all frictions and ordinary leakage, a proportion which cannot be matched in electric-transmissions down a shaft.

Most of the air plants in our mines are inefficiently piped, and no attention whatever is paid to long bends, and the pipes in general appear to be specially installed to exhibit every class and variety of pipe fitting the market affords and with many duplicates. I have counted five 1-inch elbows in the space of 3 feet, to connect up a pump to the main air pipe, when the price of 1-inch hose and couplings would have been less and the hose would have delivered to the pump nearly the line pressure. The pressure loss in each of the 1-inch elbows would be (.005 V, 2), five thousandths of the square of the velocity of the air through the pipe. The pump had a 6-inch cylinder and the piston moved 50 feet per minute, the ratio of the cylinder area to the pipe being 1 to 36 the air in the pipe must move 1800 feet per minute, or 30 feet per second. This squared and multiplied by five one-thousandths makes a loss of 4½ lbs. for each elbow, or 22 lbs. for the five, certainly not a sensible or desirable result, yet one sees it everywhere in the mines. The passion miners have for 1-inch pipe is marvellous. One may frequently see strings of it 500 feet long, conveying air. It has cheapness and ease of installment to recommend it, but the wood pile and the owner suffer. A proper plant should have no 1-inch air pipe underground over 10 feet long, and no short elbows.

At some convenient place, where the total length of air conduits from the surface motors shall be a minimum, a good reheater should be established and connected to all these motors. There is ample scope to improve upon the reheater now upon the market. They may be classed as coil, tube and shell reheaters. The former, a simple or nest of coils within a furnace, the tube reheater consisting of a nest of pipes screwed into a cast iron head, and all surrounded by a furnace, the shell reheater made much like an ordinary domestic sheet iron heater, except that it will sustain pressure, the fire being within it.

Any of these will do fairly well, especially if well insulated on the outside to prevent surface radiation. They should be provided, in large plants, with pyrometer and proper dampers, to prevent over-heating. We build also a compound reheater, which contains two independent heating compartments for different pressures, the utility of which will be seen latter on.

A very small amount of fuel will be used in one of these reheaters,—just about half a cord of pine wood a day, to reheat 100 H. P. of cold air so that it will yield 140 H. P. When it is re-

membered that one-half a cord of pine wood will yield at the maximum 8 H. P. for 24 hours, when burned under a steam boiler, its capacity to produce 40 H. P. is little short of incredible. Besides doing this, it renders still further service by permitting us to use the compressed air in an expansion engine.

Some engineers use a steam boiler for a reheater, especially if it is already installed at the mine. A slow fire is maintained on the grates and about 80 to 90 lbs. steam pressure maintained, the compressed air bubbles up through the hot water, and mingles with the steam. Fully 90% of the mixture is air. This system has earnest advocates who claim that the latent heat of the condensing steam being released in the cylinder just where it is then needed, and the condensed water acting as a lubricant, make this system preferable. It is certain that the heat can be carried farther this way, but we lean to the classes of dry reheaters mentioned first, because they are simpler, will give higher temperatures, and require less fuel.

A temperature of 450° Fahr. can easily be maintained in the dry reheater, and with well insulated pipes this will insure 400° Fahr. to all motors contained within the ordinary hoisting works, with mill adjoining.

There should be installed at the end of the compressed air transmission pipe ample reservoir capacity. This is, next to reheating, the most important feature in a compressed air plant for mining work, and it is in the proper arrangement of this particular feature that we make a great gain in economy over electrical power for intermittent work.

The two sets of machines which take the most power around a mine are the rock drills and the hoists. These use large powers for short periods, and frequently the average power covering 24 hours is in the case of the hoist from one-third to one-fourth the maximum, and with rock drills about one-half where more than three machines are in use. It is evident, therefore, that if sufficient storage capacity be provided the average power will only be demanded from the transmission main, while in an electrical plant the maximum power must be continually delivered by the transmission, for it may be required at any moment. This makes it an expensive proposition to use electricity for intermittent work.

True storage batteries would accomplish the desired end, but who dares face their first cost and cost of maintenance.

(To be Continued.)

Electrical Progress.

Electric Light From the Heavens.

William A. Eddy, in his kite flying experiments at Bayonne, N. J., has lately made two interesting discoveries in relation to atmospheric electricity. As to the first, Mr. Eddy noticed that the fringe of a linen towel which hung beside the table at which he was working had been lifted up and stuck fast to the edge of the table. It has been the general belief of scientists that atmospheric electricity is not magnetic, but, acting upon the suggestion contained in the linen towel, Mr. Eddy has proved that it is at least capable of magnetizing soft iron. A small bar of iron was wrapped with four different kinds of wire, a layer of paraffine paper being placed around each layer. When connected with the electric current the iron was able to attract a bunch of heavy keys. By making use of this magnetic property it may be possible to produce continuous mechanical motion with an electric current drawn from the air, something that has not yet been done.

The second discovery was the production of electric light with a current drawn from the atmosphere. Mr. Eddy has in a second story room of his Bayonne home a most unique electric lighting plant. It is very simple in appearance, consisting only of a table containing half a dozen Leyden jars, one wire connecting with the kite apparatus, another with the ground, an electric switch, and an ordinary Edison incandescent lamp.

When the experimenter wishes to set his lighting plant in operation he sends up his tandem of kites to a height which varies according to weather conditions from 100 to 400 feet. Suspended from the kite string is the electric collector, which is simply a small wooden frame covered with tinfoil. From this collector a light wire is festooned down the kite string and enters the window There the current is controlled by an ordinary switch, across which it passes through the Leyden jars, thence through the electric lamp and off to the earth along a grounding wire.

For his first crude experiments Mr. Eddy has used an Edison incandescent lamp, with the carbon filament broken, to leave a space across which the current sparks. The wire leading from the electric collector is connected with one of the platinum wires leading into the lamp, and the grounding wire is connected with the other, thus completing the circuit. In this manner Mr. Eddy has been able to produce a faint but very clear and practically continuous light. Owing to his imperfect apparatus he has not yet been able to get one strong enough for the taking of X-ray photographs. "My next step," said Mr. Eddy, in speaking of his new achievement, "will be to construct a larger globe in which to place my wire, so that I can produce a larger spark. I believe that by using the ragged edges of metal I can obtain a 'brush,' and that by placing this in a vacuum tube I can produce a steady glow light. Equally important, too, it will be a cold light, the thing that experimenters have been working for in a number of different ways. Of course, the amount of atmospheric electricity that can be brought to earth is limited only by the size of the collector."

A DISPATCH from New York announces that the Manhattan Railway Company has finally decided to adopt electricity, and the system to be used is what is known as the "third rail." The success of the experiment on the New York and New England railway, which President Clark of the New Haven road predicted would result in revolutionizing travel on every railroad in the country, determined the system to be introduced on the elevated roads in that city, and at an early date the various electric companies will be invited to submit bids for equipping the entire system with the third rail. It is estimated that the change will require an outlay of $7,000,000. The saving that will accrue to the Manhattan Company from the change to the third-rail system of electricity is variously estimated from $750,000 to $1,000,000 a year. An illustrated account of the New York & New England electrical railway equipment will appear in the issue of June 5th.

THE largest telegraph office in the world is in the General Postoffice building, London. There are over 3000 operators, 1000 of whom are women. The batteries are supplied by 30,000 cells.

FOR SALE CHEAP.

First-Class Air Compressor (Steam Driven) and Drill, New.
Also, 3-Ton Capacity Pulverizer.

A. L. FISH, 59-61 FIRST STREET, S. F.

FOR SALE.

The four Boilers now in use at the Crown Mills, together with Fronts, Valves, Grate-Bars, etc., are offered for Sale.

Delivery can be made on or about the 1st of May. For further particulars, inquire of

STOCKTON MILLING CO.,
STOCKTON..... .....CALIFORNIA.

FOR SALE AT A BARGAIN.

GOLD QUARTZ MINE fully equipped with all required machinery and water power and reservoirs, situated on 80 acres of mining property in El Dorado Co. Principals only apply to Thos. R. Church, 1016 Franklin St., or A. M. Ebbets, 109 Sacramento St., S. F.

FOR SALE AT A BARGAIN.

One new GOLD KING AMALGAMATOR — never used. Apply to Marshutz & Cantrell, N. W. corner Main and Howard streets, San Francisco, California.

British Columbia.

W. J. R. COWELL, B.A., F.G.S., Mining Engineer, Reports on mines, designs and superintends the erection of mining and milling machinery; makes analyses of ores, metals, soils, etc.; arranges for mill tests, and selects suitable processes for the treatment of ores. Correspondence invited. Address W. J. R. COWELL, Victoria, B. C.

British Columbia.

E. S. TOPPING, TRAIL, B. C.,

Has prospects for sale in Trail Creek and the whole of the Columbia basin. Will buy legitimate stock and mines for investors. Will examine mines. Has lots for sale in Trail and Deer Park.

TABLE OF DECIMAL EQUIVALENTS
Of Inches, Halves, Thirds, and Sixths of an Inch.

Plain Rules on Gearing.

The word "diameter" when applied to gears is always understood to mean the pitch diameter.

The diametral pitch of a gear is the number of teeth in each inch of its pitch diameter.

The circular pitch is the distance from the center of one tooth to the corresponding point in the next, or from the side of one tooth to the side of the next, measured on the pitch circle or on the pitch line of the teeth.

To obtain the distance between the centers of two gears, add the number of teeth together and divide by 2 then divide by the pitch.

The width of tooth for face of a gear is a good proportion when it is ⅓ times the circular pitch.

GEARS
Our Specialty

Job, or cutting and making of every description; spur gears under 8 inch pitch and 8 inches face up to 40 inches diameter; bevel gears up to 30 inches diameter; screw gears; small jobs a welcome as can be done. Quality, speed and low prices our watchwords. Any material you like, whether steel wood or fibre.

Facilities Complete
Prices Reasonable
Service Prompt

Why use cast gears, when you can have them cut by us under at the same price.

P. T. Taylor & Co.,

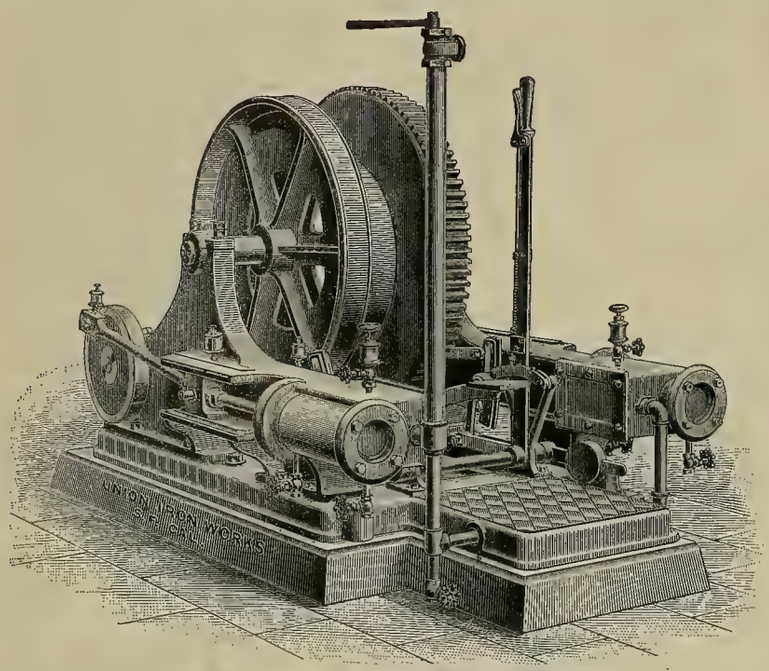
P. T. Taylor & Co.,
San Francisco Gear Works.



UNION IRON WORKS,

★ ★ 222 Market Street, San Francisco, Cal. ★ ★

MAKE THIS SMALL

DOUBLE CYLINDER SINGLE DRUM HOIST

HOIST FOR PROSPECTING.

For Prospecting Purposes or Underground Work,

USING COMPRESSED AIR.

The entire hoist is self-contained, being mounted on an iron sole plate or bed which carries all the operating levers and provides a footboard for the operator. The engines are provided with reversible link motion and the drum with a broad strap brake, insuring safe and rapid work.

The general lines upon which this hoist is designed are neat, strong and substantial and all the operating parts are conveniently arranged.

The size herewith illustrated is the 4 in. x 10 in., rated at 15 horse power. The larger sizes, 8 in. x 12 in. and upwards are provided with post brakes.

Electrical Engineering Co.,

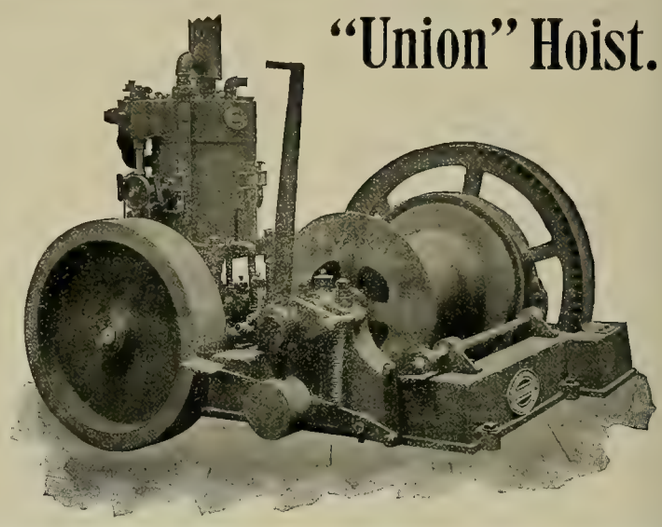
34-36 MAIN STREET,

SAN FRANCISCO, CAL.

Manufacturers of All Kinds of

Electric Machinery

For Mines, Mills and Hoists.



Girard Water Wheel Co.,

34-36 MAIN STREET,

SAN FRANCISCO, CAL.

These wheels are durable, highly efficient, and are the only wheels which have perfect regulation, which feature makes them especially suitable for the operation of electric machinery.

"Union" Hoist.

The above cut represents our 10 h. p. Double Cylinder Engine of latest type, and Hoist combined on strong iron base. This hoist is designed to raise one ton 125 feet per minute from an inclined shaft, or 1500 pounds at the same speed vertical lift. The drum will hold over 600 feet of ⅝-inch cable. The outfit weighs 3500 pounds.

THE UNION GAS ENGINE CO.

—BUILD THE—

"Union" Gas Engines,

Which use either Manufactured or Natural Gas, Ordinary Stove Gasoline (Naphtha or Benzine), Distillate or Kerosene.

STATIONARY ENGINES for All Kinds of Work, Built in Sizes from 3 to 200 h. p.
"UNION" COMBINED HOISTS in Sizes from 2 to 40 h. p.
"UNION" COMBINED COMPRESSORS—20, 30, 40 h. p.
HOISTS and COMPRESSORS Can Be Built in Larger Sizes to Order.
"UNION" MARINE ENGINES, 4 to 200 h. p., of Single, Double and Four-Cylinder Types.
TEN YEARS' EXPERIENCE Building Gas and Oil Engines.
"UNION" ENGINES Are In Use All Over the United States.
"UNION" ENGINES Are Simple, Durable and Economical.

Office: 314 HOWARD ST., SAN FRANCISCO, CAL.

Coast Industrial Notes.

—The new ice plant at Redding, California, with a daily capacity of 6½ tons, has been started up.

—A survey will begin in a few days for a proposed railroad from Nevada City, Cal., to Marysville.

—There is a proposition on foot to light the town of Quincy, Plumas county, California, with electricity.

—The S. P. Co. by land and the O. R. & N. Co. by sea are again cutting rates between S. F. and Portland, Or.

—It is expected that the Hawaiian reciprocity clause will be restored in the Dingley tariff bill by the Senate.

—Surveyors are working on the line of the proposed twenty-six miles of railway between Randsburg and Kramer, Cal.

—Labor Commissioner Fitzgerald closes today the free employment department of the State Labor Bureau, the appropriation being exhausted.

—The trustees of the Mechanics' Institute have invited the co-operation of Manufacturers' and Producers' Association to make the coming exhibition a pure food fair.

—The Standard Oil Co. has effected an arrangement with the Union Oil Co. of Ventura, Cal., securing immunity from competition for five years, with the probable result of higher prices.

—The preliminary survey of the Bedlington & Nelson Railway, in British Columbia, has been begun. The survey is being made for the company incorporated by the last Provincial Legislature.

—The recent governmental ruling that passengers could not be carried on vessels using gasoline for motive power has been set aside and gasoline boats can continue to carry passengers under license.

—The Sierra Railway Company have thirteen miles of track from Oakdale, Cal., twenty miles are graded, and by June 15th the company will be able to receive and discharge freight at Smith's, twenty-one miles from Oakdale.

—The San Gabriel Electric Company is formed to acquire and sell power for application to mechanical and other devices. M. Weed, C. Allen, J. D. Wiley, J. A. Elliott, S. J. Chase, Los Angeles; capital stock, $500,000; subscribed, $25,000.

—Electricians report to the Sacramento, Cal., trustees that that city can have municipal electric lights for $7.84 per arc light per month, the cost of the entire plant to be $63,658.14. The Capital City is also figuring on a sewer plan to cost $120,000.

—The low value of a horse in California is in sharp contrast with the price of one in Alaska, the equine freight for a part of the way there being 4 cents a pound. Dogs, of which there are a multitude in California, are worth from $20 to $50 each in Alaska.

—The value of the pearls found in the waters about Lower California last year was $300,000. From this peninsula 5000 tons of pearl shells were shipped, valued at $1,250,000. Many black pearls are found in those waters, and these have a greater value than the white. The pearls are exported direct to London and Paris.

—Last Saturday the Folsom and Sacramento Highway Commission met. C. A. Luhrs was elected president, C. T. Hughes secretary, J. L. Maude engineer. The macadamized roadway will be 20 feet wide, extending from Sacramento to Folsom, twenty-two miles, and will cost about $90,000.

—Word comes from Tehachapi that two parties of surveyors are at work in the Tehachapi mountains surveying a line of railroad through Tejon Pass, and considerable speculation is being indulged in in consequence as to the identity of the railroad company that is doing the work. There is indication that the survey is being made by the Santa Fe road, for recent events in the affairs of that company would seem to show that it intends to reach out for California traffic more than it has in the past.

—Secretary of War Alger has made a response to the Senate resolution calling for a statement as to what has been or is about to be done with reference to making contracts for the improvement of San Pedro harbor, California. The Secretary submits the whole subject to Congress for further instructions as to its purpose—whether to create simply a harbor of refuge or one for refuge and commerce—and states that the breakwater alone would absorb the whole appropriation of $2,950,000. The cost of all the work contemplated he estimates will require over $5,000,000.

—The San Francisco and San Joaquin Valley Railroad has been completed to Hanford, and trains were run to that place last Saturday. Chief Engineer Storey, at that time, said in an interview: "The Valley road will push on to Bakersfield. It is reasonable to suppose that some transcontinental line will build to Bakersfield and give us connection through to the East. We can then handle transcontinental freight. In the meantime, we undertake to perform only what we set out to perform—that is, to grant relief in the matter of local rates, which bear the heaviest on the farmers."

Obituary.

On the 15th inst. a prospector found the dead body of Ed Schieffin in his cabin, 22 miles from Canyonville, Or. His faithful dog guarded the body. The verdict of the coroner's jury was death from natural causes. Deceased was noted as the discoverer of Tombstone district, Arizona. He was a born prospector, a true comrade, and this brief chronicle of his death will be read with regret by many.

Personal.

George W. Grayson is at Baker City, Oregon, visiting the Virtue mine, which he owns.

Charles B. Boothe of Los Angeles returned from the East this week via San Francisco.

J. F. Herrick was last week appointed manager of the Iron Mask mine at Rossland, B. C.

Prince Louis of Savoy sailed from Southampton last Saturday with the companions who are to attempt the ascent of Mount St. Elias in Alaska. The mountain is 18,000 feet high. The party includes four Alpine guides.

J. J. Crawford, ex-State Mineralogist of California has resumed the practice of his profession of mining and hydraulic engineering, and makes his headquarters at the Mining Bureau. After August 1 he will be in the new Claus Spreckels building, where he has engaged offices on the tenth floor.

At the annual convention of the Western Federation of Miners, held in Salt Lake, the following officers were elected: President, E. Boyce, Wallace, Idaho; vice-president, J. F. McDonell, Virginia City, Nev.; executive board—E. Boyce; W. Walsh, A. Sholin, Butte, Mont.; R. S. Lyons, Free Coinage, Colo.; A. Morton, Land Conlac, Mont.; J. J. Frier, Lead City, South Dakota.

The Miners' Association of southern Oregon has enlarged its executive committee from eight to fifteen. The members now are William H. Hampton, H. A. Shorey, L. L. Jewell, Frank M. South, J. W. Robinson, George Lyman, J. D. Cook, George W. Lance Jr., H. A. Corless, L. Savage, W. F. Hull, A. M. Brown, F. Niday, John Bolt, P. H. Harth, N. P. Dodge, J. L. Calvert.

Recent California Mining Incorporations.

Sunset Mining and Milling Company, San Francisco; E. and F. Happersberger, J. T. Ish, E. Meyer, C. F. Humphrey, F. F. Cooper; capital stock, $5,000; all subscribed.

Manitou Mining Company, Vallecito, Cal.; A. Lundberg, W. Moyle, Vallecito; F. J. Solinsky, J. B. Luddy, San Andreas; E. Hebard, Soulsbyville; capital stock, $100,000; subscribed, $25.

Oro Minto G. M. Co., S. F.; A. R. Smith, N. King, C. R. Alberger, San Francisco; F. J. Baker, G. L. Dillman, Sausalito; capital stock, $250,000; subscribed, $25.

Garibaldi M. & D. Co., S. F.; C. H. and T. F. Fish, H. G. Blasdell, W. E. F. Deal, J. Stadfeld, Jr.; capital stock, $1,000,000; $5000 subscribed.

Radical G. M. Co., S. F.; W. C. Wright, W. H. Foster, S. N. Parson, D. and W. C. Mackintosh; capital stock, $1,000,000; subscribed, $2500.

Big Oak Flat G. M. Co., S. F.; F. L. Fisher, G. S. McPhee, B. C. Rucker, D. Corcoran, S. Berwin; capital stock, $100,000; subscribed, $25.

Granite State M. & D. Co., Washington, Cal.; J. A. Gleason, C. Thornton, W. H. Mead, H. J. Wright, J. J. Jones; capital stock, $1,000,000; subscribed, $50,000.

Books Received.

Pacific Coast Gold Mining Directory." Mines, mine owners, etc., of the Coast, by counties and towns in California, with routes of travel, distance, rates of fare, etc., published by A. R. Dunbar & Co., 421 Market street, San Francisco; price $5.

"*The Mechanical Arts Simplified,*" with an appendix containing an electrical department, a treatise on ice making, and a collection of miscellaneous practical examples; illustrated, 480 pages. A book of reference for architectural iron workers, blacksmiths, boiler makers, contractors; civil, mechanical, mining, marine engineers; firemen, master mechanics, machine shop proprietors, machinery salesmen, machinists, pattern makers, railway superintendents, etc. In silk cloth, gold stamp, $2.50. Sent postpaid on receipt of price by the publishers, Laird & Lee, 263 Wabash avenue, Chicago, Ill.

"*The Gold Quartz Veins of Nevada City and Grass Valley Districts, California,*" by Waldemar Lindgren. This work is one of the most valuable contributions ever made to the economic geology of this State. Some time ago extracts from the description of the geologic atlas, published in a folio by the United States Geological Survey, and written by Mr. Lindgren, were published in the Mining and Scientific Press. This work, a volume of 250 pages, with many valuable and beautiful illustrations and maps, deals particularly with the economic side of the geology of the district and the hydrography. So long as the United States Geological Survey continues to turn out such good work it should have better support from Congress. Copies may be obtained, as long as the edition lasts, by addressing Director United States Geological Survey, Washington, D. C.

Recently Declared Mining Dividends.

Hope Mining Company, Glendale, Montana, $10,000; payable May 1; a total to date of $682,250.

Mercury, Utah, $25,000; payable May 20.

Homestake Mining Company, Deadwood, South Dakota, $31,250; payable May 25.

The Victor mine at Cripple Creek, Colorado, which passed its monthly dividend for April, will hereafter pay dividends quarterly.

New Idria Quicksilver Mining Co., California, $10,000; payable June 10.

Etna Consolidated Quicksilver Mining Co., California, $10,000; payable June 10.

Commercial Paragraphs.

Williamson & Cheney of Boulder, Colo., have put in a Hendrie & Bolthoff double friction hoist at their property in the Eldora district.

C. M. Walker of Denver, Colo., has patented the Walker '97 Rock Drill, which will be manufactured in Denver. A distinctive feature of the machine is said to be in the saving of power.

Geo. E. Truax of the Truax Manufacturing Co. of Denver, Colo., is the inventor and patentee of a mine windlass, by action of which an ore bucket is automatically landed without pulling it from over the shaft.

The Gold Medal mine of Idaho Springs, Colo., has just started up a new 8x10 geared hoist, which was made by the Vulcan Iron Works Co. of Denver, which has also shipped a plant of machinery to the Falu mine at Idaho Springs.

A gear index chart published by P. T. Taylor & Co.'s Gear Cutting Shop, 523-525 Mission St., will be found useful and convenient for all machinists. It is printed on heavy check board 14x22 and will be sent free upon application.

The Ingersoll-Sergeant Drill Co., Havemeyer building, New York City, have issued catalogue 72, "Water Pumped by Compressed Air," which describes the Pohle air lift system, its operation and technical working, and the advantages of pumping water by compressed air. It also illustrates methods of well piping, gives results of the air lift system at various places, including the operation of steam piston pumps by compressed air. The catalogue is illustrated with halftones, sectional views, etc. Parke & Lacy Co., 21 and 23 Fremont street, San Francisco, are the local agents.

Fraser & Chalmers, Chicago, have built a 2-stamp mortar with screen openings on all four sides, no copper plates inside of the mortar and no chuck blocks, the object being to get the pulp out of the mortar as rapidly as possible, and to accomplish this purpose the top of the die is kept well up to the screen opening and the stamps are run at 100 drops a minute, having a weight of 950 pounds each. In order to bring the ore in contact with copper plates and amalgamate the ore as much as possible without excessively long tables, the sluices and lips of the mortar on all four sides are lined with copper plates, electroplated. To facilitate the cleaning of copper plates in the side sluices of the mortar the distance between the battery posts is made 4 feet 6 inches. The posts themselves are the regulation width, 12 inches.

Patented in U. S. and Other Countries. Capital, £100,000.

London Head Office.....8 Drapers Gardens.

Laboratory and Ore Testing Plant, 1530 Wynkoop St., Denver, Colo.

This process has a well-demonstrated merit in treatment of low-grade Gold and Silver Ores, especially those of a complex character, talcose and clayey combinations or slimes, which class of ore, as is well known, cannot be treated by leaching or lixiviation.

Gold and silver values, both fine and coarse particles, are by the Pelatan-Clerici Process recovered direct from ore without roasting as pure amalgam, and the precious metals are saved in the form of fine bullion without any refining costs.

F. CLERICI, Manager for U. S.

HORACE F. BROWN, CONSULTING ENGINEER.

Special attention given to preparing plans for the Chlorination and Bromine Processes of Treating Gold Ores.

A STEAM ORE STAMP.

One of the BONANZA MINES of the Black Hills was developed by a **TREMAIN STEAM STAMP MILL**, installed last summer at a cost of about $1600. After six months' run the superintendent wrote the following letter:

HILL CITY, S. D., Feb. 2, 1897.

Gates Iron Works, 650 Elston Ave., Chicago, Ill.—GENTLEMEN: It gives me great pleasure in informing you of our success with the Tremain Steam Stamp Mill which we have been running since last July. We have been running on hard, white quartz, some of it of a flinty character and a small portion of it slightly decomposed. We average about ten tons every 24 hours through a forty-mesh screen. If our financial standing had been a little better, so we could have put in a small engine and rock crusher, I am confident we could put through 14 to 15 tons in 24 hours. The wear and tear is considerably less than an ordinary stamp mill, it all being on the shoes and dies. The last we used of these were of the aluminum steel, which are the best wearing shoes and dies I have ever seen. The parts are all well made and durable, I having failed to see any weak point about the machinery.

We use one cord of pine wood in 24 hours, and run the mill with 70 to 80 lbs. of steam.

I have followed mining in connection with milling for thirty years and have never seen its equal for convenience, durability and cheapness. To parties wishing to purchase a quartz mill I cheerfully recommend the Tremain Steam Stamp Mill for its small cost, economy in operation and complete results of working. Very truly yours, [SIGNED] JAMES C McDONALD,
Supt. St. Elmo M. & M. Co.

This Mill has the capacity of a 5-stamp gravity mill and costs less than half to install. Automatic feeder of approved design. Weight of entire Mill 3300 lbs. Made sectional for mule-back transportation.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

SECURING OBJECTS FROM SUBAQUEOUS BOTTOMS.—Wm. McGregor, B. C. No. 582,828. Dated May 18, 1897. This invention relates to means for securing materials and objects from bottoms under water. It consists of a vessel adapted to be lowered into the water, a valve in said vessel and a frangible cap or cover forming a closure for the lower end of the vessel and temporarily excluding the vessel therefrom and, when broken, permitting the water under its pressure to rush into the vessel and carry objects and materials from the bottom with it into the vessel. The object is to secure materials and substances lying at a depth below the surface, such as samples of a subaqueous bottom, or prospecting for precious metals or stones or other objects which may be dropped or lost therein accidentally, and is especially useful in recovering diamonds which may be dropped from the crown-heads of diamond drills, or metallic pieces or objects broken from boring tools or dropped into the hole where drilling or similar work is being done.

GATE.—Levi Lundquist, Middletown, Cal. No. 582,826. Dated May 18, 1897. This invention relates to the class of gates which are adapted to be opened and closed by the approaching or receding traveler without his alighting from his conveyance, and its object is to provide means for opening and closing the gate, and at the same time operating the lock or latch thereof. It consists of an overhead track; rollers by which the gate is suspended so as to travel on the track; a catch lug fixed in the upper part of the gate with a gravity latch bar hanging from the overhead track adapted to engage the catch lug; a swinging lifter carried by the gate and adapted to operate under the latch bar to lift it from its engagement and free the gate; ropes or lines connected with the lifter for both freeing and sliding the gate open and also for closing it, these being connected to posts on opposite sides of the roadway at a sufficient distance from the gate to be operated by the approaching or receding traveler.

APPARATUS
—FOR—
Regulating Pressures
—IN—
PIPE LINES

By the use of this device, the fluctuations of pressure resulting from shock or water ram may be entirely overcome, and where water is used for operating water wheels in connection with hoists or electric-generators, it will be found indispensable, as by its use uniform speeds can be far more easily maintained, and all danger of injury to pipe line will be obviated.

Patent Allowed.

DEWEY & CO'S Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American reports, with full copies of U. S. patents since 1872. All worthy inventions patented through Dewey & Co's Patent Agency will have the benefit of a description in the *Mining and Scientific Press*. We transact every branch of patent business, and obtain patents in all countries which grant protection to inventors. The large majority of U. S. and foreign patents issued to inventors on the Pacific Coast have been obtained through our agency. We can give the best and *most reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior.
Advice and Circulars free.

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.

This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly, [SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

PRICE, $450.00.

Market Reports.

The Markets.

SAN FRANCISCO, May 27, 1897.

Grocery and provision houses report an increasing demand for goods, as do hardware, paints, oils, etc., but dry goods, clothing, etc., firms state that trade is dull owing to it being between seasons with them. The uncertainty regarding tariff continues an unfavorable factor in all lines of trade. In well informed circles the belief prevails that in everything that will be affected by higher tariff, there have been enough imported and on the way to meet the demand all this year without taking into consideration the fact that domestic factories are turning out and will turn out considerable goods. This condition makes dealers conservative and is causing a weakening in values in quite a number of lines.

The local money market is practically unchanged. The inquiry for funds is light in the absence of any speculative movements and no requirements, as yet, for crop moving purposes. The gold mines continue to turn out increasing quantities of the yellow metal which has its effect on the money market by causing funds to accumulate. New York exchange rules high in the absence of much of a movement of produce East and free importation of goods. New York reports a plethora of funds with the rate of interest on call loans 1½ per cent. a year. The shipments of gold are light, but it is stated they will increase later on. Speculation at the East is tame. London advices continue to note easy money markets with a good demand still ruling from Japan, Austria-Hungary and Russia for gold. This keeps the premium strong.

New York Silver Prices.

NEW YORK, May 27.—Following are the closing prices for the week:

	London.	N. Y.
Friday	27½	60
Saturday	27⅜	60¼
Monday	27⅜	60⅜
Tuesday	27 9–16	59⅞
Wednesday	27 9–16	60
Thursday	27 9–16	60

	Copper.	Lead.	Iron.	Tin.
Fri.	11 00 @11 25	3 25	10 00@12 00	13 35
Sat.	11 00 @11 25	3 27½	10 00@12 00	13 40
Mon.	11 00 @11 25	3 27½	10 00@12 00	13 50
Tue.	11 00 @11 25	3 27½	10 00@12 00	13 55
Wed.	11 00 @11 25	3 27½	10 00@12 00	13 55
Thur.	11 00 @11 25	3 27½	10 00@12 00	13 55

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87¼
London Merchants	$4.85
London Sight Bankers	$4.88½
Refined Silver, per oz., 1000 fine	.60
Mexican Dollars	.49@50

SILVER.—The market strengthened slightly, then eased off but towards the close it was a fraction higher, but barely steady. The foreign demand is slack, which is making itself felt. Both China and the Straits take limited quantities, while Japan confines itself to gold to conform to the currency reform. The steamer that left for Hongkong the past week took out $135,000 in bullion.

MEXICAN DOLLARS.—The market is extremely dull. The last steamer for Hongkong took out only 11,800. The wants of the China trade are met mostly by exchange, which is cheaper than remitting dollars.

QUICKSILVER.—There is nothing new to report in our market. The demand is about the same as rules at this season of the year. Our market is quoted at $40.50 for domestic consumption.

COPPER.—The market is barely steady. The local demand is light. The East reports some difficulty in getting full figures; the basis of transactions from first hands is 11 cents. Stocks in this country are said to be large, but abroad they are light, with a continued free consumption, yet selling offers from this side are against an advance.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—Pig is firm, but plates are irregular. The demand for both is light.

We quote as follows in a jobbing way:

Pig, per lb	14c@ —
Plate, I C coke, heavy, per box	$4 00@ 4 15
" " " light, "	3 90@ —

LEAD.—The market is quiet but steady. The East reports a fair demand.

Our market is quoted in jobbing lots as follows:

Pig	4 00 @ 4 25
Bar	— @ 4 50
Sheet	5 62½@ 6 12½
Pipe	4 87½@ 5 37½

SHOT.—There is a fair jobbing demand.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—Factories are kept busy to supply the demand, which is increasing from mining camps.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17½c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX—The feeling is stronger in anticipation of higher tariff.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—There is nothing new to report either here or at the East. Last week's review covers this week's advices.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—There is nothing new to report. Increasing employment of electricity cuts into the consumption. For household purposes the demand is light.

We quote as follows:

SPOT FROM YARD—PER TON.

Wellington	$8 00@— —
Greta	6 00@ 6 50
Nanaimo	6 50@ 7 00
Cuman	5 50@ 6 00
Seattle	5 50@ 6 00
Coos Bay	—@ 4 75
Cannel	8 00@— —
Egg, hard	12 00@13 00
Wallsend	6 50@— —

TO ARRIVE—CARGO LOTS.

Australian	5 50
Liverpool Steam	6 25
Scotch Splint	
Cardiff	6 25
Lehigh Lump	9 00
Cumberland	13 00
Egg, hard	10 00
West Hartley	6 50

COKE.—The market is quoted as follows:

Gas Companies'	— — — —
English, to load	9 50 @ — —
" spot, in bulk	10 00 @ — —
" in sacks	11 00 @ 12 00
Cumberland	— — @ — —

ANTIMONY. — The market is dull and easy.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7½c for Cookson's, 6⅞@7⅛c for Hallett's and 6⅞@7c for Japanese.

NAILS.—The market is steady.

Wire, carloads, basis per keg	
" jobbing, " "	$2 20
Cut, carloads, " "	
" jobbing, " "	2 10

PLATINUM.—Very little doing.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC. — The market is quiet at steady prices.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is dull.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

Our market is practically unchanged. The slow progress made in tariff legislation has an unfavorable effect, but now that the bill is before the Senate speedy action is looked for. Stocks in this country are large, imported in anticipation of higher duties.

SPELTER.—The market is quiet at unchanged quotations.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—The demand is light.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is easy.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—There is a good shipping demand.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is steady at 3c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—The movement is light.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL. — Our market is fairly steady.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, May 27, 1897.

The market fluctuated downwards from Thursday, May 19th, to yesterday, when a slightly steadier tone was noticeable in Chollar. Throughout the week attention has been attracted to the work in Chollar on the Brunswick lode, where it is claimed an important strike has been made on the 500-foot level. It is stated that the find is entirely new and has no connection with the ore found on the upper levels. While not saying it, yet if this is the case then it must be the apex of another vein which ought to be struck on the 600-foot level. Outside of this little find, the work on the 500-foot level has not resulted so far as favorable as had been expected by the many. The strength in Chollar brought in some strong outside buyers, who took the shares at around 85 cents. They bought on bull points from the mine. Potosi sympathized with Chollar. With the better informed class of operators there is a bear feeling, but so far as can be learned they do not risk much on the bear side except on spurts. These persons have been correct for a long time past. They think that while the market may go some higher, the developments in the mines and general condition of business and finance on this coast and at the East, do not warrant a bull movement. It looks now that after the Chollar and Potosi flurry has subsided, attention will center on the work either in Confidence-Challenge-Con. Imperial west crossdrift or else in that of Yellow Jacket-Kentuck and Crown Point. Late advices state that work in both is being pushed steadily ahead. From the first-named joint west crossdrift official and semi-official advices state that it is quite possible the west or red lode straightened, and if so they will have to run some distance yet. Had they read an article in the MINING AND SCIENTIFIC PRESS, published in 1895, on the west lode they would have seen that it dips slightly to the west, whereas the old Comstock lode dips to the east. They either do not know their business or else they are trying to mystify the public for some kind of object not as yet apparent.

From the Comstock mines there is nothing allowed to leak which is calculated to excite the credulity of outside operators. This is done, as stated by one of the philanthropic insiders, so as not to cause operators to rush in and load up with shares of mines in which developments do not warrant prices paid. In Utah work is continued on the east crossdrift started from the north drift. No change is reported. Work is continued in the west crossdrift from the Layton tunnel level in Sierra Nevada. At last advices it was in hard porphyry. In Union active work is continued on the 900-foot level. A west crossdrift has been started at a point 900 feet north from east crossdrift No. 3. In Mexican they are still working to the west on the 1000-foot level. In Ophir they have started another west crossdrift on the 1000-foot level. This time it is from the main north drift, 125 feet from the shaft station. The work in this mine continues to be confined to the 1000-foot and Central tunnel levels. No change is reported in material encountered. In Andes they are running a north drift from the east crossdrift on the 175-foot level. In Con. Virginia active preparatory and also exploiting work is continued on the 1000-foot, 1650-foot and 1750-foot levels. There is nothing new to report in any of the work. There were extracted and sent to mill the past week 71 tons of ore, assaying over $62 to the ton. This does not pay expenses. Unless more ore is taken out an assessment will have to be levied before long. Best & Belcher and Gould & Curry work is still jointly to the east from the Bonner shaft. In Savage they are exploiting on the 500-foot and 750-foot levels. Nothing of interest is reported. There is nothing new from Hale & Norcross, and nothing expected while lawsuits are the order. Work reported is confined to the 900-foot level. Repairing in Potosi took up some time, but work has been resumed again. The delays eat up money and bring out assessments. No change is reported in the work in Bullion, Alpha or Con. Imperial, Confidence or Crown Point. They are still raising ore in Belcher, but from what level or levels the letters are still silent. There is nothing new reported from Overman, Caledonia or Alta. The former raises a few tons of ore each week.

The center of attraction on the Brunswick lode continues to be Chollar, as noted in the fore part of our review. In this mine, on the 500-foot level, they struck a small seam of ore which was followed until the shorts filled and some bulls bought, when the ore got away from them to the east. It may be found, if there are enough shorts to justify it. Ore continues to be extracted, raised and sent to the mill from the 400-foot, 300-foot and 200-foot levels. Last week 256 tons were raised, assaying $19.12 gold and 18.12 ounces silver. In Occidental there is active exploiting and preparatory work on the 550-foot level. No change is reported in the joint work of Gould & Curry, Best & Belcher and Con. Virginia. In Savage they have resumed work in sinking the shaft.

The following illustrates the changes of the week:

Every Inventor Wants a Good Patent

Or none at all. To secure the best patents Inventors have only to address DEWEY & Co., Pioneer Patent Agents, No. 220 Market St., San Francisco.

There are many good reasons why Pacific Coast Inventors should patronize this Home Agency.

It is the ablest, largest, best, most convenient, economical and speedy for all Pacific Coast patrons.

It is the oldest on this side of the American continent, most experienced, and in every way reliable.

Conducted from 1863 by its present owners (A. T. Dewey, W. B. Ewer and Geo. H. Strong), this agency has the best knowledge of patents already issued and of the state of the arts in all lines of inventions most common on this coast.

Patents secured in the United States, Canada, Mexico, all British colonies and provinces, England and other civilized countries throughout the globe.

Caveats filed, assignments duly prepared, examinations made, and a general Patent Agency business conducted.

Established and successfully and popularly conducted for nearly thirty years, our patrons number many thousands, to whom we refer with confidence, as men of influence and reliability. Old and new inventors are cordially offered the complimentary use of our library and free advice, etc. No other agency can afford Pacific States inventors half the advantages possessed by this old, well-tried and experienced firm.

SITUATIONS WANTED.

PRACTICAL ENGINEER AND GOOD DRAUGHTSMAN seeks re-engagement as foreman or manager of power plant. Thoroughly conversant with steam, hydraulic and electric power. Fair (foreign) commercial experience and used to control of men. Excellent references. Address M. E., Mining and Scientific Press Office.

POSITION WANTED

By Mining Superintendent.

Twelve years practical experience. Address T M. P., this office.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from Hoey & Lewis, in the Parsons Gravel and Timber Claim in Brownsville Mining District, El Dorado Co., to deposit tailings in Little South Fork of Cosumnes River; from Daniel McLaughlin in the Morristown Mine at Morristown, Sierra Co., to deposit tailings in the Morristown Ravine; from Henry Northrop and Robert C. Nicholson, in the Etta Placer Mine near Sierra City, Sierra Co., to deposit tailings in North Fork of Yuba River; and from J. P. West, in the Mountain View Mine near Coutolenc, Butte Co., to deposit tailings in Little Butte Creek, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on June 14, 1897, at 1:30 P. M.

Assessment Notices.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9), of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 31st day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of May, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on WEDNESDAY, the 23rd day of June, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 18th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No. 6) of .02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 22d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

POSTPONEMENT.

The date of delinquency of the above assessment has been postponed to June 7th, 1897, and the day of sale to SATURDAY, June 27th, 1897, by order of the Board of Directors. A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

GOULD & CURRY SILVER MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, Virginia, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 29th day of April, 1897, an assessment (No. 81) of 20 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the secretary, at the office of the company, room 69, Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 1st day of June, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on TUESDAY, the 22d day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office—Room 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

CHALLENGE CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Gold Hill, Nevada.

Notice is hereby given that at a meeting of the Board of Directors, held on the 13th day of May, 1897, an assessment (No. 23) of Ten cents (10c) per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, room 35, third floor, Mills building, corner Bush and Montgomery streets, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 16th day of June, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on THURSDAY, the 8th day of July, 1897, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

By order of the Board of Directors.

C. L. McCOY, Secretary.

Office—Room 35, third floor, Mills building, San Francisco, California.

OCCIDENTAL CONSOLIDATED MINING COMPANY. Location of principal place of business, San Francisco, California. Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 11th day of May, 1897, an assessment (No. 27) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 12th day of June, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on THURSDAY, the 1st day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

In the Superior Court of the City and County of San Francisco, State of California, Department No 8. John V. Kimball, plaintiff, vs. Mabel L. Kimball, defendant. Action brought in the Superior Court, City and County of San Francisco, State of California, and the complaint filed in said City and County of San Francisco, in the office of the clerk of said Superior Court. The people of the State of California send greeting to Mabel L. Kimball, defendant. You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court, City and County of San Francisco, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this county; or, if served elsewhere, within thirty days. The said action is brought to dissolve the bands of matrimony now existing between yourself and plaintiff, on the ground of habitual intemperance on your part for more than one year past. All of which will more fully appear in the complaint on file herein to which you are hereby referred. And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the said plaintiff will apply to the said Court for the relief prayed for in the complaint. Given under my hand and seal of said Superior Court at the City and County of San Francisco, State of California, this 9th day of April, in the year of our Lord, one thousand eight hundred and ninety-seven. GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work rebellious ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Pluta, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. California Asphaltum Products.

The fact that the owners of the asphaltum deposits of this State within easy reach of sea transportation are devoting their attention now much more to Eastern and foreign markets than to the local demand is a matter of considerable consequence to that industry. Widespread as is the use of asphaltum for paving and other purposes the world over, it was not until 1854 that it was first tried. That was in the city of Paris. In very few large cities of this country or of Europe is more than a small proportion of the streets paved with asphalt. A notable exception is Washington. No other article has been found that will satisfy nearly so well the principal requisites. It is elastic, smooth and less noise is made upon it by traffic.

The article as used on the streets here is an asphaltic sandstone, while that which comes from the island of Trinidad is an asphaltic limestone. Asphaltum is a mineral pitch, more or less pure, which may be mixed with sand or other material for street paving. It is for this reason that the people at Santa Barbara who obtain, at but a trifling cost for purifying, asphaltum over 90 per cent pure, are enabled to ship it East, where it is mixed with four parts sand to one of asphaltum for street paving.

Heretofore the output has been controlled by the local demand, which has not been large enough to maintain prices. Of asphaltum the output, according to the returns of the Mining Bureau, was, in 1894, 11,698 tons, valued at $238,800; in 1895, 25,525 tons, valued at $170,500, and in 1896, 20,914 tons, valued at $362,590. Of asphaltic sandstone or bituminous rock the returns were for 1894, 31,214 tons, $115,193; 1895, 38,921 tons, $121,586, and 1896, 49,456 tons, $122,500. The total value of the output of asphaltum and bituminous rock in 1896 was therefore valued at $485,090.

For some four years now shipments have been made to the East from about Santa Barbara, and the amount is increasing each year. Some of it is being tried on the streets of Paris to compare with the European article, which is an asphaltic limestone which becomes harder and slippery. So, too, the city of Glasgow, Scotland, probably the best governed city in the world, has lately obtained a supply for the purpose of comparing it with products from other sources.

In New York a great deal of money is being expended on asphalt, and there is hardly a city in the United States which will not within the next few years repave a large proportion of its streets with asphalt, for no other satisfactory material can give the two requisites—smoothness and noiselessness as well. The bicycle is compelling the use of smooth pavement more than ever before.

From Santa Barbara a rate of $4 per ton on asphaltum to the East has been obtained. This article, 90 per cent pure, to be mixed with four parts of sand at the place of consumption, has a great advantage over the Trinidad article, which is only 33 per cent pure as imported.

The Trinidad article, which is the only product against which California will have to compete, is claimed to be in many respects inferior to ours. For instance, in mixing the Trinidad article they use petroleum residues having a paraffine base, out of which the naphtha and lighter oils have not all been taken. As simply a mixture is made, these in time evaporate and the paving cracks. With the California asphalt they are mixed with a flux which is a solvent. California oils have an asphalt base. Then the Trinidad article is not so satisfactory around hydraulic works.

In time considerable use will be found for the California asphaltum for lining ditches and reservoirs. In ditches the percolation would be entirely stopped and the friction greatly decreased. As a lining for reservoirs it has one great advantage over Portland cement in that it will not crack with trifling subsidences of the earth. A reservoir of a capacity of 1,500,000 gallons of water, being constructed for the city of Santa Barbara, is lined with asphaltum.

The principal deposits worked of late in California have been in Kern county, at Asphalto, and in Santa Barbara county. Yet good qualities of asphalt, found in large quantities, have been worked in other counties.

The imports of asphaltum into the United States in 1895 was about 80,000 tons, most of which came from the asphalt lake in the island of Trinidad and about 3400 tons from the State of Bermudez, in Venezuela. Besides what was mined in California, there was very little asphalt produced in the United States. Glance pitch, or gilsonite, of Utah controls the black varnish market. The asphaltic rock for paving of Utah, owing to cost of transportation, will not probably compete with the California product for some years to come, and then only in the interior of the country, away from seaboard. Besides these sources, there are deposits in the Indian Territory upon which considerable money has been expended without success. Then there are deposits in Kentucky which have not proved of great value.

BITUMINOUS ROCK QUARRY OF THE CITY STREET IMPROVEMENT COMPANY.

The great value of the asphalt deposits of California lies in the fact that there can be no competition in this country except from foreign articles, and against these there seem to be advantages that promise local control of the field. The demand for asphalt all over this country is growing, and the consumption should within a few years increase many fold. Many other materials have been given trial for smooth pavements, but none have stood the test so well as asphalt, which promises to hold favor for many years to come.

Chinese Gold Mines.

The prospectus of a large company being brought out in London to develop by itself and sub-companies mineral resources in north China—eastern Mongolia—states that a concession has been obtained extending over 30,000 square miles of territory owned by Prince T'san. It is stated that for centuries past the Chinese have been engaged in washing gold from the gravel along the rivers having their rise in north China, and at present 100,000 natives find employment in this industry. With the building of the great Siberian railway, with its branches into north China, a rich field promises to be opened.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Bituminous Rock Quarry of the City Street Improvement Company, 469. Switchboard; View of Boiler Room; Train, One Motor Car and One Passenger Coach; 850 Kilowatt Dynamo Direct Connected to 1200 H. P. Engine; Truck of Motor Car with Two G. E. 3000 Motors, 477.

EDITORIAL.—California Asphaltum Products; Chinese Gold Mines, 469. A Duty on Onyx; Statisticians and the Gold Yield; A Warning to Locators Under the New Law; The Future of Copper Mining; Eastern Mining Investors, 470.

MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 474–5–6.

SCIENTIFIC PROGRESS.—The Synchronograph, 476. An Aztec Manuscript Found in Iowa, 477.

ELECTRICAL PROGRESS.—Electricity Displacing the Locomotive, 477–8.

MECHANICAL PROGRESS.—The Limitations of Government in Water-Power Plants; The Use of Compressed Air for Mining Purposes, 478.

THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 490–1.

MISCELLANEOUS.—Concentrates, 471. Practical Notes on Hydraulic Mining; Gold in Black Sand; From Mine to Mint, 472. Permanence in Depth of California Gold Mines; Cheap Milling and Mining, 473. Coast Industrial Notes; Personal; Recent California Mining Incorporations; Commercial Paragraphs; Recently Declared Mining Dividends, 480. List of U. S. Patents for Pacific Coast Inventors; Notices of Recent Patents, 483.

Statisticians and the Gold Yield.

Statistics are very satisfactory when only one statistician works on any particular line, but when two or more go at it the faith of the public in the value of statistics is apt to be weakened. *Mineral Industries* came out the other day with a statement that the product of gold in the United States in 1896 amounted to no less than $58,660,637. In January, a few days after the close of last year, John J. Valentine, President of Wells, Fargo & Co., gave as an estimate of the value of the gold yield $53,015,242. Last Tuesday, some six months later, Mr. Preston, the Director of the Mint of the United States, announced that the gold yield amounted to $53,600,000.

One thing that is particularly worthy of note about Mr. Preston's figures, is that he credits California with an output of 721,600 ounces, or about $14,500,000, a slight decrease from the figures of 1895. Yet about a month ago Mr. Yale, the statistician of the United States Mint at San Francisco, from the best available returns announced that the gold yield of California in 1896 was $17,181,562, an *increase* over that of 1895 of $1,847,245.

Mr. Preston's figures make the gold product of the United States for 1896 greater than that of the previous year by about $6,250,000, while the *Mineral Industries* makes out an increase of about $11,000,000.

Comparing the United States Mint statistics with those of Wells, Fargo & Co. for Oregon for a number of years back, it will be seen that they were for 1891—Mint, $1,994,622; Wells, Fargo & Co., $1,004,000. 1892—Mint, $1,491,781; Wells, Fargo & Co., $1,020,886. 1893—Mint, $1,645,300; Wells, Fargo & Co., $1,151,977. 1894—Mint, $2,113,356; Wells, Fargo & Co., $1,603,218.

The great differences between all these figures do not show that any of the people quoted have been careless or were unskilled in their work. The great trouble in gathering statistics, especially in the West, is the lack of sources of intelligent information. The mine owners are not compelled by law to make returns of products, and a very large proportion refuse to do so. Returns are now being required by law in Utah and Nevada under laws levying a tax on the yield of mines. Yet this in itself may tend to make some conceal the true facts.

However uncertain all the statistics are, and however much the statisticians differ, one fact is brought out clearly, and that is that mining is the most prosperous industry in the country.

The Future of Copper Mining.

The production of copper last year was considerably larger than ever before and there has been a continued increase during the first months of 1897. At the same time the stock in Europe has been steadily decreasing and is now about half of what it was a year or more ago—or about a month's supply. This has not been due to any decrease in the amount shipped to Great Britain and the Continent, but to the rapidly increasing demand for it. In the meantime the supply from Chili and other foreign countries does not promise to increase. An official in one of the large copper mining companies is quoted by the Boston *Financial News* as saying:

If business in this country should start up I do not know what Europe would do for copper. The European supply of copper has been decreasing constantly for over a year notwithstanding the large exports of the metal from this country, showing an enormous consumption of copper over there. Domestic consumption of copper is about 50 per cent of the normal amount, and this has been the case since the panic in 1893. It seems ridiculous that this large country cannot absorb one-half of the copper produced here, while Europe is using more than half our product and large amounts imported from Chili besides. I suppose the condition of things will change some time, but it seems a long wait.

It is hardly possible that the increase in the output of copper will in the near future keep pace with the increased demand; yet the price of copper has not risen very much, although it is considerably higher now than it was a year ago. It seems probably that influences are brought to bear to keep the prices down by those manipulating the copper markets of the world. In the meantime there is more eagerness than ever shown on the part of European and Eastern investors to obtain control of copper properties that are already opened or of those that promise well.

A considerable rise in the price of copper will of course cause the opening up of many properties which now cannot be worked at a profit. There will no doubt be found new fields for copper mining, and a number of those now being exploited will soon be made to produce. In Arizona there is more activity in new mines than ever before; the Seven Devils District of Idaho is being taken hold of by capitalists; mines in Northwestern Montana are being exploited, and there is considerable activity in different parts of Nevada. Yet it is hardly to be expected that from all these sources will the output be increased in the near future as fast as the demand.

Outside of the Michigan mines there are no copper properties of consequence being worked that do not produce precious metals as well as copper; and without these precious metals, at present prices, few, if any, of them would pay. The question of transportation is of course of much importance in copper mining, and the opening up of mines that are now known to be valuable, but unworked, will depend largely upon the building of railroads.

A Warning to Locators Under the New Law.

The new California law as to locations went into effect last week, and will govern all locations hereafter made. As it provides that "all locations * * hereafter made which do not conform to the requirements of this act * * * shall be void," it is incumbent on locators to use special care to conform strictly with the law as it now stands. It should be clearly borne in mind that the new law does not in any manner supersede the existing Federal law, but is merely supplementary thereto, and all the provisions of the United States law are just as binding as ever. Sec. 2324 of the United States Revised Statutes reads in part as follows:

SEC. 2324. The miners of each mining district may make regulations not in conflict with the laws of the United States, or with the laws of the State or Territory in which the district is situated, governing the location, manner of recording, amount of work necessary to hold possession of a mining claim, subject to the following requirements: The location must be distinctly marked on the ground, so that its boundaries can be readily traced. *All records* of mining claims hereafter made *shall contain* the name or names of the locators, the date of the location *and such a description of the claim or claims located by reference to some natural object or permanent monument as will identify the claim.*

Section 2 of the new mining law in prescribing the contents of the preliminary notices, which must be recorded, omits the provisions of the Federal law above quoted in italics. It would appear that whenever this point is raised in contest in either the departments or the United States courts it will be held that notices filed for record and which do not contain these points are not such notices as the Federal law requires, and are invalid.

Eastern Mining Investors.

It is particularly noticeable of the average Boston investor in mining property that he looks only for those that are developed and paying profits. He goes into the business just as he would make investments in railroad stocks or government bonds for the dividends or interest returns. Prospects or partially developed properties, no matter how well they promise nor how cheaply they may be purchased, have little attraction for him. The Californian prefers to take such properties and develop them. Of all the money that has been put into mines by local people but a trifling percentage has gone into paying mines. The Californian is a good miner and directly does more than anyone else to develop the industry.

But after all the Boston or other Eastern people who only want good-paying properties indirectly do much good, and such inclination should be encouraged. Of late there has been an unusual amount of inquiry from conservative business men not only of Boston but other Eastern centers for opportunities for safe investments in mines. This shows the great change of sentiment that has come about in a few years in regard to that industry. On this subject the conservative Boston *Post* in an editorial lately says:

There was a time, not so far distant either, when mining, whether of gold, silver, copper or iron, was hardly considered a legitimate field of investment, and when mining men, particularly the promoters of large enterprises, were in the eyes of investors too often classified with the green-goods men and the gold-brick manufacturer. * * * Now, however, that there have been so many failures in the industrials the investor is compelled perforce to seek some new field for the legitimate employment of his capital.

But where can he find such a field in these days of low interest bearing bonds? In the past twenty-five years there has been no class of securities in which New England capital has been placed which furnished safer and sounder investments and have returned a larger and more continuous rate of interest on the capital invested than mining stocks, particularly the shares of the great Lake Superior and Montana copper mines. Through the experience of the recent years of depression, when the passing and cessation of dividends have become so common, the investor has at last awoke to this fact and discovered that there is such a thing as legitimate mining, and that legitimate mining offers to-day most exceptional attractions to capital.

There is no doubt that the coming summer will see a great interest taken, not alone in mining speculation, but in legitimate mining—a branch of industry which has gradually come to be regarded as among the safest investments the country has got now. Some of the best banking houses in the East, particularly here and in New York, are all the time on the lookout for good gold or copper properties, and some of the best people are going into them. A general revival of the mining industry will mean more for Boston than any other Eastern financial center.

A Duty on Onyx.

The United States Senate last Tuesday agreed to an advance in the duty on onyx from 50 cents to $1.50 per cubic foot. As pointed out in the MINING AND SCIENTIFIC PRESS a few weeks ago, all that is necessary to enable the owners of the California onyx deposits to work them is some such duty as is proposed, and it is to be hoped that it will finally pass. Without it there can be no market for the American onyx deposits in this country, for it would be impossible to compete with the cheap labor of Mexico, where most of the onyx that comes to the Eastern States is quarried. The proposed duty would enable the California and other Pacific coast producers to compete in the Eastern States with the article now brought in from the southern republic. Were there any question as to the quality of the onyx found in California a good argument might lie against this duty, but there is not. It was generally acknowledged that the finest onyx displayed at the World's Fair in Chicago was from this State.

Concentrates.

ON the Congress mine in Arizona it is proposed to sink to the 3,000-foot level.

THE London *Statist* states that the interest there in American mining is increasing.

THE owners of the Crystal mine at Marysvale, Utah, propose to erect a mill shortly.

A GOLD ledge has been discovered near Elko, Nev., and many claims have been located.

THE Calumet & Hecla shipped 9,375,812 pounds of copper between January 1st and May 15th.

IN the Olympics in Washington a ledge of onyx, said to be of good quality, has been discovered.

AT the Gwin mine in Calaveras county sixty stamps are to be added to the mill, making 100 in all.

EDWARD SMITH will erect a 5-stamp mill on his mine on the Rogue river, near Grant's Pass, Oregon.

THERE are over 300,000,000 gallons of water in the new reservoirs at the Gold Creek mines in Nevada.

THERE are 150 freight teams on the road hauling freight from Elko to the Gold Creek mines in Nevada.

THE Noble mine, on Wisconsin creek, Montana, has been bonded to Reins and others of Butte for $100,000.

FOSTER and Fore propose to erect a 10-stamp mill on the American mine near Fort Jones, Siskiyou Co., Cal.

TWO sluice robbers were shot last week in Siskiyou county, Cal., on the Gilmore & Baur mine, near the Oregon line.

ALONG the trail into the Yukon country is strewn a large amount of supplies found to be useless or too weighty to carry on.

THE Anglo-Mexican reports the total output for the month of April $32,610 bullion, $1050 concentrates; 1671 tons; 26 days' run.

AN antimony mine at Kingston, Idaho, which has been idle for some years, is to be reopened, and a smelter is being built.

A STRIKE in the Argentum-Juniata at Aspen, Colorado, last week, caused the stock to advance from 11 to 55 cents per share.

ROBBERS broke open the safe at the Providence mine at Nevada City, Cal., last Tuesday night, and stole $2,500 worth of amalgam.

THE company owning the Niagara mine in Shasta county, Cal., has been reorganized, and a large amount of exploration is to be done.

A NUMBER of new companies are being formed in London to work British Columbia mines, more probably than for any other district.

NEAR Tacoma, Wash., on Lynch and Mashell creeks, copper and gold prospects have attracted the attention of a number of prospectors.

SINCE the closing of the Rossland, B. C., mining stock exchange it has been proposed to start another as a branch of the Board of Trade.

WITHIN the past ten days the price of best copper in London has been rising, and sales are now being made of late at 11¼ cents per pound.

A MOVEMENT is on foot in Butte, Montana, to start a mining stock exchange. One was organized a few years ago, but it met with little success.

THE management of the Gold Dust mine at Mercur, Utah, have decided to begin the construction of a mill with a capacity of 100 tons daily.

AT the Mercur mine, in Utah, the new machinery has been put in place and the output increased to 300 tons a day. It has paid in dividends $675,000.

AT Colorado Springs the cook at the Antlers hotel is taking rich gravel out of a shaft in his back yard, and some of his neighbors are also sinking.

A CABLE from London announces that the Government is preparing to transport 30,000 troops to South Africa, besides 8000 horses and 25,000 mules.

AT New Denver, B. C., properties are being staked at the rate of forty or fifty a day, and miners' licenses are issued at the rate of 150 and 200 a week.

THE London Gold Tunnel Company propose to penetrate Mule Mountain in Shasta county, Cal., with a tunnel which will give a depth of over 2000 feet.

THE old mining town of Aurora, Nev., now has so few inhabitants that the postoffice there has been closed. Mail for Aurora will go to Fletchers, Esmeralda county.

THE prospective increase in the duty on lead ore by the Dingley bill has caused an American company to decide to establish a smelting plant at Monelova, Mexico.

THE Prescott Placer Dredging Company has been organized at Tacoma, Wash., to use the Bowers dredger in the streams on this coast in which there is gold in the sands and gravels.

A MINING CONVENTION is to be held at Rat Portage, Ontario, Canada, June 23 and 24. An exhibit of ores has been prepared from every portion of the gold fields of northwestern Ontario.

H. BRATNOBER and John B. Farrish have been making an examination of the Butterfly and Terrible mines, near Telluride, Colorado, on behalf of the Exploration Company of London.

VICTOR AUSTIN has bonded to New York people his quartz mine in Willow Valley district, Nevada county, Cal., for $10,000. It is proposed to sink an additional 500 feet, making 900 in all.

THE conference report upon the sundry civil bill, which suspends the reservation of forests under President Cleveland's order of February 22 last until March 4, 1898, has passed the Senate.

THE importance of a small difference in cost to the working of mines is shown by the closing of big properties in Utah on account of the raise in transportation and smelter rates and price of powder.

THE town of Ymir, on Salmon river, B. C., three months ago consisted of a water tank, hotel and store, but through the discovery of mines in the neighborhood has since increased its population to 600.

A PATENT has been obtained for the Bates mine in Gilpin county, Colorado, and this settles a mining suit of 30 years' standing which has gone the rounds of the courts since application was made.

As a result of the decision of the United States Supreme Court in the Colorado tunnel case, it is stated that a number of tunnel enterprises which had ceased operations will resume work at Cripple Creek.

STOCK in the Mollie Gibson mine of Aspen, Col., which once sold as high as $12 and a few weeks ago was down to 12 cents, last week went up to 56 cents upon the report of the discovery of rich ore in the mine.

THE Boundary Creek district in British Columbia will soon be tapped by a branch of the Corbin system or railways, and there is a race between Corbin and Heinze to get into the Kettle Creek district first.

THE American Loan and Trust Company of New York have floated bonds for the construction of a smelter in the Seven Devils copper district in Idaho. The machinery for its construction is already on the way.

L. S. ROSE and others, who under the name of La Suerte Mining Company held the bond on W. W. Kirkham's quartz claim near Nevada City, Cal., have made their final payment of $12,500 and taken their mine.

MINING companies in British Columbia are alarmed at the announcement that the Ontario legislature has passed an act that mine shares cannot be sold in Ontario without a license, for which a large fee is charged.

SINCE the new law as to mining locations went into effect in Utah, there has been a great falling off in the number of notices filed. Last week in the Tintic district not one was offered at the district recorder's office.

THE first sale of consequence in the new Stateline district on the boundary between Utah and Nevada took place last week, Knight Brothers & Company purchasing a two-thirds interest in the Creole mines for $24,000.

A DISCOVERY of oil has been made by the Southern California Railroad Company near its line at Richfield, San Bernardino county, Cal. Seventy-five barrels are being obtained daily and six drills are to be put at work.

IT is reported that the Whitewater mine in the Slocan district, B. C., has been purchased by the Puget Sound Reduction Company of Everett for $500,000. The Whitewater has been a regular dividend payer for the past two years.

DURING January, February and March of 1897 the total influx into the colony of West Australia was 20,838, compared with 14,862 in the first three months of 1896. The departures for the same periods were respectively 6164 and 9154.

IT IS announced in British Columbia that the Cassiar railway concession has been acquired on behalf of the Transvaal Gold Fields (Limited) of London. This includes the right to 70 lots of 10,000 acres of land with all minerals contained.

THE gold value of New South Wales, Australia, for the quarter ending March 31st, was 63,633 ounces, a decrease of 10,000 over last year. The Queensland returns are 167,488 ounces against 147,664 for the corresponding period of 1896.

THE Alaska-Mexican Mining Company of Alaska reports the clean-up for April, 1897, to be: Bullion shipment, $33,153; ore milled, 13,206 tons; sulphurets treated, 437 tons; of bullion there came from sulphurets, $14, 666; gross expenses for period, $22,638.

A LAW of Utah requires the owners of mines before June 10 of each year to make sworn statements of the product of their mines upon which a tax is collected. There has been renewed opposition to the law enacted lately, and it is proposed to make a fight against it.

THE Miners' Association was reorganized at Quincy, Plumas county, last week, to succeed the old association, and the following officers elected: President, Sam W. Cheyney; vice-president, M. S. Light; secretary, William Watson; treasurer, B. C. Lorich.

THERE was a rush to file locations of mining claims before the new law went into effect in nearly every mining district in the State in order to take advantage of the easier provision of the old law. On Monday, May 24th, at San Bernardino, there were fourteen locations filed.

THE Mammoth mill has followed the Bullion-Beck at Tintic, Utah, in closing down, owing to the increased transportation and smelter charges and rise in price of powder. It is expected that others will follow soon, and it is even claimed that work on the Sioux Ajax tunnel will be stopped.

THE California Debris Commission has received new applications for permits to mine by the hydraulic process from Hoey & Lewis for the Parson claim, El Dorado county; from the Morristown mine, Sierra county; the Etta placer mine, Sierra City, and the Mountain View mine, near Coutolenc.

THIS has turned out a poor season for water for the hydraulic miners on the Pacific coast. Never before for many years had so much money been spent upon equipping plants for working, and while the season was short the great number of new mines and the improved methods of working have doubtless increased the output.

THE enormous profit of the sale of dynamite in the Transvaal, S. A., has attracted attention to the facilities afforded by California in that regard. The local powder companies are considering the invasion of that profitable field. It is thought that an energetic business policy could secure the sale in that and other mining fields of 500 tons per month.

AT Cripple Creek, Col., the production of ore has been so great of late that the mills cannot handle it and the railroads have given notice to mine operators that they must restrict their shipments. This refers mainly to the lower grades. There are some additions being made to the milling capacity of the district, but it is claimed that the opening of new mines is more than keeping pace with this.

THE Elkton Consolidated Company of Cripple Creek, in its annual report to April 30, shows the following figures: Gross production, $609,711.31; returns on ore, $520,890.25; net profits, $346,867.53. The mine and office expenses amounted to 28 per cent of the gross production. The total dividends paid by the company amount to $266,960.57. The cash reserve amounts to $208,316.50 in the bank and in United States bonds.

IT is claimed that the addition to the tonnage of Leadville involved in the unwatering of the down town district will be about 1000 tons per day. The present shipment from the Leadville mines is about 1200 tons daily, so that when the drowned district is entirely unwatered the daily product of Leadville should be at least 2200 tons. When the strike was started last year the shipments were about 1800 tons daily.

THE Witwatersrand, South African, Chamber of Mines, in an analysis of the gold production of 36 leading mines, in March, shows that the mills, with 2440 stamps, crushed 312,673 tons, in 28¼ days, or an average of 4.49 tons per stamp per day of 24 hours. The yield of gold on the plates was 116,240 ounces, or £1 6s 10d per ton. From the concentrates and tailings there was obtained 68,888 ounces, making a total value from all of £645,480, or an average of a little over $10 per ton.

IN Western Australia the output of gold continues to increase, and the mines promise a great future for that industry in the colony. Yet it will be impossible for some time to float any of these mines in the London market on account of the great amount of overcapitalization of the past two years. The output for the first three months of 1897 was 113,208 ounces. Last year the total output of the colony was 281,265 ounces.

THERE are, according to the *Mining Investor*, of Colorado Springs, mines at Cripple Creek which are making a profit, but which under more able management would be earning double the amount, and others, operated at a loss, which could be made to pay if properly handled. This is a story as old as mining. There are few mine owners of little experience who do not believe themselves capable of managing their own properties. Until it becomes the custom to employ trained managers and pay good salaries this condition of affairs will last.

THE African mines in the Rand, in spite of all the troubles with the native labor and governmental restrictions, are rapidly increasing their output. The yield for April is returned as 235,699 ounces. This shows an increase over the previous month of 3020 ounces, although April was one day shorter. The increase over April of 1896 was 58,992 ounces. The total for the first four months of this year was 888,593 ounces. If this rate is only maintained until the end of the year, the total will exceed that of last year by 385,000 ounces, or about $7,750,000.

SPEAKING of the troubles caused by the railroads and smelters in raising prices in Utah the Tintic *Miner* says that an impression is gaining ground that the railroads and smelters, seeing the suicidal effect of their action, will reconsider the recent advances. The proposition of a special session of the Legislature for the enactment of an anti-pooling and anti-trust law is also receiving much attention. The question of building a smelter is also coming in for its share of attention, but is not generally regarded as feasible, owing to the fact that even if a smelter was built adjacent to the district it would be as much at the mercy of the railroads as are the mines at present. In the meantime a state of unrest and uncertainty exists, and business in all parts of Tintic has suffered severely.

ACCORDING to the *Mineral Industry* the total value of the mineral and metal production of the United States in 1896 was $751,732,782, an increase over 1895 of $18,791,264. In gold the total production was $58,660,637, or $11,830,437 more than 1895. The production of silver was 56,222,322 fine ounces, or 9,891,807 ounces more than the previous year. The pig iron production was 8,623,127 long tons, a decrease of 821,801 tons. Coal production amounted to 187,373,477 tons, being 1,922,167 tons less than in 1895. The production of copper was the largest ever reported, being 467,822,973 pounds, or 81,359 pounds increase. The production of lead was 174,792 tons; of spelter, 77,637 tons; of quicksilver, 133,480 flasks; of alum, 77,700 tons; of cement, 8,487,265 barrels, and of salt, 13,354,573 barrels. The production of gold, silver, copper and pig iron is greater than that of any other country in the world, and that of coal is exceeded only by Great Britain.

THE annual report of the Anchoria-Leland mine of Cripple Creek, Colorado, shows that there were produced 3832 tons of smelting ore, having a gross value of $300,439.56, the average value per ton being $78.40. There were 1207 tons of mill ore of a gross value of $23,981.67, or an average per ton of $19.87. Lessees produced 504 tons, of a gross value of $29,392.14; average per ton, $58.31. The total shows 5543 tons, with a gross value of $353,813.31. It is stated that, with low treatment charges, they could mine all the ore in the vein, both high and low grade together, and, after a slight sorting out of the high grade, send the rest to the mill. In this way the mining and sorting expenses would be greatly reduced. As it is now, they are compelled to work only the richer bodies, which are often narrow. It is estimated that there are from 10,000 to 15,000 tons of ore, averaging from $10 to $20 per ton, now in the five dumps that were made from ore and waste hoisted from the Chance and Maloney veins.

A WASHINGTON dispatch states that Mr. Preston, the Director of the Mint, has about completed his figures of the gold and silver production in the United States during the year 1896. He finds the production of gold to have been about $53,000,000, an increase of over $6,250,000 as compared with 1895. The production of silver is given as 57,700,000 fine ounces, an increase of 1,900,000 ounces over 1895. The principal gold-producing States, with their product last year in ounces as compared with Mr. Preston's figures for 1895, are given as follows: California 721,600 ozs., decrease 571; Colorado 708,006, increase 64,372; Montana 189,066, decrease 9339; Arizona 125,980, increase 30,908; Idaho 104,265, increase 18,177; Utah 97,006, increase 31,487; Alaska 97,445, increase 19,305. The production of silver is given in ounces as follows: Colorado first with 22,573,000, decrease 825,500; Montana 14,432,000, decrease 3,137,100; Utah 8,100,000, increase 632,000; Idaho 4,550,000, increase 1,439,400; Arizona 1,705,000, increase 718,100.

J. J. VALENTINE, President of Wells-Fargo & Co., has issued his annual estimate of the product of gold and silver in the Northwest for 1896. According to this, the output in Oregon was: Gold, $1,950,204; silver, $121,784, against for 1895, gold, $1,649,785; silver, $102,645. The yield was, therefore, considerably greater than ever before. This is in large measure due to the quartz mines of the Baker City district and the increased activity in gravel and quartz mining in Southern Oregon. In Washington the figures for 1896 are: Gold, $353,350; silver, $170,500; against, for 1895: Gold, $349,817; silver, $202,650; a total decrease of $28,617. In Idaho the returns are: Gold, $2,652,500; silver, $5,572,682, for 1896; and, gold, $2,521,000; silver, $4,905,898, for 1895; an increase in gold of $666,784 and in silver of $131,500, or a total of $798,284. The Montana yield is given as: Gold, $4,625,000; silver, $32,645,500; which is very nearly the same as the figures for 1895. The United States Assayer returns the Montana yield as: Gold, $4,380,671, and silver, $20,324,877.

Practical Notes on Hydraulic Mining.*

NUMBER IX.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

Strength of Hemp, Manilla, Iron and Steel Rope.—This subject is a most important one, and every superintendent and mine foreman should be thoroughly conversant with the mode of calculating the breaking strain, and, more particularly, the safe load that ropes of different material will stand, as the lives of the men employed, especially in deep mines, are dependent entirely upon the safety of the ropes used in hoisting, etc.; in fact, men working in mines have a right to demand that the employers have a thorough knowledge of this subject.

A simple test for the purity of manilla or sisal ropes is as follows: Take some of the loose fiber and roll it into balls and burn them completely to ashes, and, if the rope is pure manilla, the ash will be a dull grayish black. If the rope be made from sisal, the ash will be a whitish gray, and if the rope is made from a combination of manilla and sisal, the ash will be of a mixed color.

For calculating the breaking strain of round ropes of different materials, the following table is one of several: Where B = breaking strain in tons, and C = circumference of rope in inches.

B = $C^2 \times 0.277$ for hemp rope.
B = $C^2 \times 0.2$ ordinary fiber rope.
B = $C^2 \times 1.5$ iron wire rope ordinary.
B = $C^2 \times 2.5$ steel wire rope.
B = $C^2 \times 2.09$ flexible galvanized wire rope.
B = $C^2 \times 2$ 60 extra flexible galvanized wire rope.
B = $C^2 \times 4.18$ plough steel rope.

The working or safe load should be taken as about $\frac{1}{6}$ or $\frac{1}{7}$ of the breaking load B, or $\frac{B}{6}$.

The weight of ropes can also be approximately calculated from the circumference, as follows: Where W=weight of each 100 feet in pounds, and C=circumference of rope in inches, as follows:

$W = C^2 \times 4.16$ for each 100 feet of hemp or fiber rope.

$W = C^2 \times 14.54$ for each 100 feet of iron or steel rope.

A splice weakens a rope about one-eighth, and it is well to remember that a three-strand rope is about one-fifth stronger than a four-strand one of the same dimensions.

The Bursting and Working Strain of Iron and Steel Pipes, Plates, Etc.—Under this head I will deal only with wrought-iron and steel pipes as are generally used in connection with mining work, and in arriving at the safe working strain or pressure it must be understood that the following rules depend upon good workmanship, correct diameters and distance apart in riveting, etc. In making wrought-iron pipe care must be taken to have the plates rolled lengthwise, as it generally affects the strength of the longitudinal seams—that is to say, the plates should be rolled across the grain and not with it.

The simplest method of calculating the pressure that wrought-iron and steel pipes will stand is as follows: $P = \frac{T \times t}{R} \div c \times f$.

Where P=safe working pressure.

T=tensile strength of plates, taking iron at 48,000 lbs. to the square inch and steel at 75,000 lbs.

t=thickness of plates in inches or decimals of an inch.

R=radius of pipe in inches.

f=proportional strength of plates, as follows: When double-riveted=0.7 and single-riveted=.5.

c=a coefficient or factor of safety usually taken at 3.

p=pressure in pounds per square inch due to head of water.

Example: What is the safe working pressure for a 36-inch pipe, double riveted along the longitudinal seams, and made from wrought iron plates rolled across the grain, and $\frac{1}{8}$ of an inch thick? Answer:

$$P = \frac{\overset{T}{48000} \times \overset{t}{.125}}{\underset{R}{18}} \div \underset{c}{3} \times \underset{f}{0.7} = 77.7 \text{ pounds to square inch,}$$

or 179 feet pressure head.

By means of the same formula, the thickness of plate is easily found, that will safely stand any given pressure; for instance: $t = \frac{P \times R \times c}{T \times f}$

Example: Having a pressure of 179 feet, or 77.7 pounds to the square inch, what thickness must the wrought iron plates be for making a pipe 36 inches in diameter? Answer:

$$t = \frac{\overset{P}{77.7} \times \overset{\text{radius}}{18} \times \overset{c}{3}}{\underset{T}{48000} \times \underset{f}{0.7}} = .125 \text{ in.}$$

With reference to the difference between the strength of drilled and punched holes, it has been determined by experiment that the loss of strength in the metal between the rivet holes when drilled is practically nothing, or, to give the summarized result, the loss when drilled lengthwise was but 1.13 per cent, and when drilled crosswise the loss was only 0.9 per cent, while, on the other hand, experiments made by Mr. Kirkaldy on punched plates showed the mean loss to be 13 per cent with the grain and 17.26 across the grain. Although the result of experiments has conclusively proved that the strength of plates is greater with drilled holes than with punched holes, the extra cost occasioned by drilling would not make up for the extra strength obtained, except in particular cases; and with regard to wrought iron and steel pipes for mining purposes, the effect of drilling or punching need not be taken into consideration, but at the same time I thought it would be interesting to some readers to learn the difference in strength between the two methods.

Methods of Treating Alluvial Deposits in Large Quantities, Where Sufficient Fall is not Available, Sluices, Grades, etc.—Under this heading, I will first deal with what is known as the "Hydraulic Elevator," which is the simplest and most economical machine connected with mining alluvial deposits, where, by lack of grade, it is impossible to run bedrock sluices, or when it is impossible to secure a good dump at the end of sluices to keep them running in a proper manner. The elevator also enables large areas of ground to be profitably mined in districts where the debris law is operative, by means of lifting the material into restraining dams, etc.

In this country, with such water facilities, there are thousands of acres that can be profitably worked by means of an elevator; but, owing to the heavy cost, weight and poor efficiency of the elevators used in California, it appears to be regarded by miners that, to work an elevator, it is necessary to have excessive heads and small lifts, or, in other words, one must have a large quantity of water, or it is of no use trying to mine with an elevator.

Now, this is practically correct, when the clumsy and costly machines that have been the custom for years past are considered. It is far from correct when considering the hydraulic elevator now in the market and manufactured in San Francisco, for which patents have been granted to the writer.

I do not in any way wish my readers to think my remarks here are for the purpose of advertising these elevators, for my personal benefit, and, to be frank with all, I may state that in making arrangements for the manufacture of these machines I agreed upon a price to be charged that only carries an ordinary manufacturing profit, and the amount of royalty received on each machine is but $75, my aim being to assist brother miners and with that end in view did not insist on such exorbitant royalties as has been the custom in connection with other elevators. I feel a little diffident about pushing forward the many claims in regard to cost, weight, efficiency, etc., and would much rather any one interested would write for particulars from the manufacturers in San Francisco—the Risdon Iron Works.

What I wish to impress upon readers is that if they have a piece of ground that is too low for ordinary mining and have only a few inches of water under pressure, do not think it is impossible to work it by means of an elevator. I had charge of a large hydraulic claim in New Zealand, where with less than 400 inches of water under a working head of 225 feet I lifted sand and gravel to a height of 52 feet, and each twenty-four hours handled from 2000 to 2400 tons, and for one year elevated at the rate of an acre each month to a depth varying from 30 to 35 feet banks. Of the quantity of water used, only 250 inches was taken by the elevator and the remainder by the giant for piping. The elevator was connected upon the surface, and instead of going to great expense, as is usual in this country, to sink shafts to bedrock before placing the elevator, we let the elevator do its own sinking, and in less than a week the machine had excavated its own shaft to bedrock, a depth of 43 feet through some bad running ground, which is much better than sinking by hand, timbering through running sand, let alone the expense of pumping, etc.

Gold in Black Sand.

TO THE EDITOR:—In your issue of December 26th last, in an article by the writer on the Snake river placers, reference was made to the alleged values contained in the black sands, aside from their free-gold contents. Since then a closer investigation proves those values to have been much overestimated.

From the tailings of some of the machines being worked on gravel, averaging from 50 cents to $1 per cubic yard, samples were taken and carefully panned with quicksilver to separate the fine gold still remaining in them. The gold thus recovered indicated a loss in the tailings of from 5% to 10% of the amount saved by the machines, showing a reasonably close saving when the fine and flaky nature of the gold is taken into consideration. There is every reason to believe that a more careful and skillful operation of the various styles of machines in use would still further reduce this loss.

The residual black sand was principally made up of hematite and magnetite, in which were numerous rubies and other beautiful though minute crystals.

The magnetite was first separated by the use of a small magnet, and on being assayed showed but a trace of gold. The hematite, in which the gold was supposed to be encased, was then assayed and gave returns of $4 per ton of hematite. When the fact is taken into account that the hematite does not usually exceed 5% of the original gravel, it will be seen that the margin of profit above the cost of concentration and treatment by any practical known process is small.

Probably the greater part, if not all, of the gold found by assay in the hematite will be seen to be in a free though in an invisibly fine state, which a closer saving by the machine process would greatly lessen.

There are a considerable number of miners operating in a small way along the river on the higher bars at present. When the water goes down again, which generally takes place about August 1st, a much greater number will find employment along the river banks on the low bars now from six to ten feet beneath the water.

There is considerable interest being manifested by professional men in the problem of working the placers on a large scale, one mining engineer having spent the whole winter in diligent investigation, principally with a view of working them by the cyanide process, but with what result we were unable to learn.

W. H. WASHBURN.

Huntington, Oregon, May 11, '97.

From Mine to Mint.

NUMBER III.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia.

Recovery of the Silver.—The silver solutions, together with the wash waters from the gold treatment described, are transferred to a large precipitation tank having a capacity of some 2000 gallons. This is never filled to its full capacity, since abundant room must be left for stirring and rousing the contents. Salt water is now run into the silver solution until a test shows that enough has been added to convert all silver present into chloride. An excess is avoided, since silver chloride is slightly soluble in salt water. The contents of the large tub are now drawn off through a filter. This is a wooden tank 6½ feet long, 3 wide and 1½ in depth, lead lined and provided with a perforated false bottom. The bottom and sides of this tank are carefully covered with cotton cloths as a filtering medium. The curd-like silver chloride is run into this filter through a large wooden stopcock. The liquid which drains off is returned to the filter until it runs clear, after which it is passed through several traps to the sewer. Fresh water is passed through the chloride until all soluble matters are removed, when it is allowed to drain. The filter tank is mounted on low wheels for convenience of removing the chloride to the reducing vat. This is again a lead-lined rectangular tank. The silver chloride is transferred to this tank by means of a copper scoop shovel. Hot water is run on, and granulated zinc added in sufficient quantity to reduce the chloride to metallic silver. The addition of sulphuric acid hastens the action and serves to dissolve the slight surplus of zinc which it is necessary to use to insure complete conversion into metallic silver. The reduced silver is now taken out with a copper scoop having a shovel handle and put into a filter colander, such as we described previously when speaking of gold treatment. In this colander the silver is washed with hot water until entirely sweet. It is now ready for compression into solid cakes by hydraulic pressure. These cakes are dried in a current of hot air, when they are ready for melting. This is usually done without fluxes, and the resulting bars have a fineness of 0.998 to 0.999.

The Sulphuric Acid Process.—Thoroughly satisfactory as is the nitric acid process, so far as its effectiveness is concerned and the high grade of gold and silver which it yields, yet the comparatively high price of nitric acid and the necessity of using either platinum or porcelain vessels led to its being superseded in modern plants by the sulphuric acid parting process. Diluted sulphuric acid has no action on silver, but the strong acid, when heated, is decomposed by that metal, giving off sulphurous acid and forming silver oxide, which passes into solution in the excess of acid as silver sulphate. If gold is present in moderate percentage, say not to exceed one-third of the whole, strong sulphuric acid will extract the silver and leave the gold as a granular brown sediment. Should the bullion contain anything like one-half gold, the latter metal will protect the silver against acid attack, and the result will be failure. It is, therefore, the business of the refiner to adjust for the melting pot gold deposits with those of silver carrying small quantities of gold, or, failing such, to add fine silver so as to have from two to three parts of silver for each part of gold. Such an admixture is melted in a large crucible, thoroughly mixed, and then, with a "dipping cup," is poured into cold water, as described in speaking of the nitric acid process.

But the proper adjustment of silver to the gold is

not the only point requiring care. Most bullion coming to the refinery contains varying quantities of copper, and this metal works very badly in strong sulphuric acid, although we found that metal the least objectionable one in the nitric acid treatment. While decomposing the acid with formation of copper sulphate, the latter, unlike the silver sulphate, is insoluble in oil of vitriol, hence, if present in any considerable quantity, copper soon acts as a protector to the bullion and the chemical action either ceases or becomes tediously slow. Besides apportioning the silver to gold, it is necessary, therefore, to so combine deposits that the granulations do not contain more than 6 to 8 per cent of copper.

Dissolving the Silver.—The success of this beautiful process really depends upon the happy observation that while weak sulphuric acid rapidly dissolves iron, yet, if the acid be strong enough, it has no appreciable action—just the reverse of its relations to silver. Cast iron vessels may, therefore, be employed. A cast iron kettle will last for years, during which time hundreds of tons of silver may be dissolved in it by boiling oil of vitriol. Large iron kettles are used, weighing half a ton, mounted over a furnace. Into this a charge of 300 to 400 pounds of the granulated bullion is placed, and covered with three or four time its weight of acid—66 B. Heat is applied, when a lively evolution of sulphurous acid sets in, which, if too violent, must be checked by the addition of a little cold acid and slackening of the fire. This boiling is continued for several hours, during which time the escaping and consumed acids are gradually replaced. When the solution is complete the fire is withdrawn and the contents of the kettle allowed to quietly settle. A little cold acid is added to aid the precipitation of any suspended gold. Hoods over the kettles carry off the fumes to condensing and suppression apparatus.

The strongly acid solution, while still hot, is siphoned off into the "reducing houses." These are long, rectangular vats lined with lead, and provided with sloping covers like the roof of a house. These covers are hinged to what would be the ridge pole, and are counterbalanced so as to be easily raised. Slabs or ingots of metallic copper are placed on the bottom and sides of these vats, which are then partly filled with cold water. The hot silver solution is then run in. A live commotion ensues, as will readily be imagined when one recalls the heat evolved by the mingling of cold oil of vitriol with water. In this case the acid is nearly at its boiling point, which is greatly above that of water, and the resulting crackling and spluttering must be seen to be appreciated. The result is a weak solution of silver sulphate, rendered milky by the separation of fine crystals of that salt, the solubility of which is very slight in pure water. The copper immediately begins to precipitate the silver as a beautiful crystalline moss, easily detachable from the plates when the operation is complete. This requires about twenty-four hours. Meanwhile the copper has taken the place of silver, and we have now a strong solution of copper sulphate (blue vitriol). This blue solution is drawn off for crystallization, and the spongy silver carefully transferred to leaching tubs for thorough sweetening with fresh water. The silver, now in the form of minute, flaky crystals, is compacted into cakes by means of hydraulic pressure and these cakes dried in a current of warm air, after which a simple fusion in a black-lead crucible without fluxes gives a bullion 0.998 or 0.999 fine. If silenium or tellurium is present in the bullion, it will pass into solution with the silver and be deposited with it by the copper plates. In this case the spongy silver will be dark colored and the melt will be brittle. It must then be fluxed with niter.

The sulphate of copper is a staple article of commerce, and is carefully prepared for the market. When sold, the proceeds should materially reduce the expense of parting the bullion. But, unfortunately, while the materials for its production, the acid and copper, are purchased out of the fund arising from the collateral charges from the depositor, yet the product, blue vitriol, is by present ruling treated as "waste product," the proceeds from which when sold must be turned into the general treasury instead of the refinery fund.

We left the gold as a sediment in the large iron dissolving kettle. A small quantity of fresh acid is added and the gold then removed to a smaller vessel by an iron ladle, perforated with holes. It is transferred to another iron pot, in which it receives a number of repeated boilings with fresh strong acid. There are not less than five such boilings. The finishing acids are siphoned off and used upon fresh charges of bullion. The gold is now transferred to a tub, in which it is washed first with cold water and then with hot. These washings find their way to the silver precipitating tanks. It is now transferred to a lead-lined vat mounted upon a truck. This vat has a perforated false bottom, which is carefully covered with cloth, the whole constituting a large movable filter. Water is now passed through the gold in this filter until it is entirely sweet. If the gold is in coarse particles it may be dried and melted without danger of its being mechanically carried off while placing it in the crucible, but if very fine it is compacted into cakes while wet by hydraulic pressure. These cakes are dried, as were those of silver, in a current of warm air, and melted in a graphite crucible. A trial sample is taken to see if the metal is tough. The presence of even small quantities of lead will render the gold brittle, in which case it is fluxed with niter through an "eye" in a cover of bone ash. When tough, it is ladled into iron molds. About 6000 ounces constitute such a bar melt. The bars are worth about $8000 each.

(To be Continued.)

Permanence in Depth of California Gold Mines.

Waldemar Lindgren, in his book on the quartz veins of Nevada City and Grass Valley, published by the U. S. Geological Survey, has the following to say as to their permanence in depth:

It is certain that the experience with many of the smaller bodies of ore is that they give out or pinch at varying depth. Others, again, have continued to the greatest depth at which the exploitation of the mines has been carried on. Similar relations prevail in regard to the large ore shoots. While some have been found to cease in depth—the Sierra Buttes mine, in Sierra county, being a well-authenticated example—others continue to the deepest levels as strong as or stronger than in the upper part of the mine, the Kennedy mine, in Amador county, being an example of the latter class.

The frequent local irregularities of most shoots make it very difficult to affirm, without extensive explorations, that the end of any certain ore body has been reached. Owing to the habit of immediately distributing all of the profit as dividends, reserve funds for exploratory work are seldom available, and a local impoverishment in a level has often been sufficient to close a good mine. Experience with the large shoots is still sufficient for safe generalization.

The ore shoot of the North Star extends for a distance of about 2500 feet in depth, measured along the plane of the vein. When approaching the sedimentary area to the west, it was cut off or divided into stringers. Still, the explorations are scarcely extensive enough to affirm that its end has been reached; its continuation may be found, or a parallel shoot may be found in depth. In the case of the large Empire shoot a complication has arisen, due to a split of the main vein, reducing the tenure of the ore by dividing it on three veins. The Eureka-Idaho shoot has held its own remarkably well and uniformly over a distance of over 5000 feet, though the richest part of it was probably found in the Eureka and the western part of the Idaho ground.

High-grade ore is now mined in the Maryland mine on the same shoot at a vertical depth of 1500 feet, and a small ore shoot was found near the bottom of the Idaho shaft at a depth of 2200 feet. As gold-quartz veins of fair grade occur near the summit of Banner hill, at an elevation of 3800 above the sea, or 3500 feet above the bottom of the Idaho shaft, we have in this district within short distance a vertical interval of 3500 feet within which there is no evidence of any gradual change in the character or quality of the ore. Again, in the vicinity of Washington, Nevada county, excellent quartz is mined 600 feet below the river level, in the Eagle Bird mine, and on the ridges north of the river 2000 feet above the river level. In this distance there are no distinct differences in the quality of the ore.

Many smaller veins carry only one ore shoot, but in the larger fissures there are generally several of them. There is a strong probability that in such veins thorough exploration laterally or in depth will develop new bodies of ore if the one on which exploitation has been carried on is found to pinch out. The question will naturally arise as to whether, with increased depth and cost of mining, it will be a good venture to carry on the necessary dead work. This will have to be decided by the record of the mine and the character of the fissure.

It is generally conceded now that the fissures are, comparatively speaking, surface phenomena, and that below a certain depth, where plasticity and flow of rocks under pressure come into play, open spaces can not exist. This limit Prof. Heim, for instance, places at 16,000 feet, while Prof. Van Hise, basing his consideration on the strength of rocks, arrives at 33,000 feet as the maximum limit for hard rocks in which fissures can exist. Even the lowest of these estimates far exceeds the depth of practicable mining. But it is not likely that all fissures continue until that limit. On a small scale the discontinuance of fissures may be observed in extensive sheeted outcrops. It is also an incontestable fact that many small veins close up in depth, while others continue unchanged. In considering the probable permanency of a given vein, its general character must be taken into consideration. Continuous well-defined outcrops and large bodies of quartz are in general good indications of the maintenance in depth, as is also any evidence of strong faulting and movement. Some quite extensive veins, though, have relatively short outcrops. Thus, the Eureka-Idaho practically shows croppings only for a distance of 2000 feet, but within that distance they are very prominent. Those of the North Star are less than 2000 feet long. From the developments to the east along the Omaha system it is pretty certain that the vein does not continue far across in that direction. A fissure which can be definitely proved to extend only a short distance will in all probability be found to be correspondingly limited in depth. In regard to probable permanency of the vein in depth, the Ural and Merrifield, along which extensive faulting has taken place, stand first in the districts.

In scrutinizing the scant statistics of the production, in tons and value, of the Grass Valley district, it can not be denied that they show on the whole a distinct increase. There is also a distinct decrease in the average value of the ore. It is not safe, however, to draw too far-reaching conclusions from these data, because there are many factors involved: The cost of treatment and mining has decreased greatly by reason of the modern methods introduced, and more low-grade ores are now milled than formerly; nor are there any rich surface ores left to swell the grade.

Leaving the difficult question of deep mining out of consideration, there are, however, in both districts a large number of veins which have been only slightly developed, but which with improved methods may be converted into paying mines. The development of these will probably maintain the production of the district for many years in the future, even if no new ore bodies are discovered in the old mines.

It can be confidently stated that there is no gradual diminution of the tenor of the ore in the pay shoots below the zone of surface decomposition. Within the same shoot there may be many and great variations of the tenor, but there is certainly no gradual decrease of it from the surface down. This important fact has been previously stated by those conversant with the veins, such as Prof. Silliman and Mr. J. A. Phillips. The statements to the contrary, for instance, by Mr. Laur or Mr. Reyer are due to imperfect acquaintance with the facts and generalization from insufficient premises.

Cheap Milling and Mining.

At the request of the editor S. R. Porter, superintendent of the Baliol Gold Mining Company, at Sutter Creek, Amador county, California, has sent the following interesting and valuable data as to the low cost at which mining and milling may be done under careful management and favorable conditions:

To the Editor:—I have your favor of the 21st inst., making inquiries for publication in the Mining and Scientific Press of the cost of mining and milling ore by me as superintendent for the company. Knowing that data of actual runs and expenditures are of great interest to those who are engaged in the mining industry, to them I most cheerfully submit the following:

The ore was excavated from an open cut 75x125 feet, from which it was dumped into a chute and trammed 700 feet to another chute, where it was again trammed 800 feet to ore bin at mill, thus requiring the ore to be handled twice and trammed a distance of 1500 feet.

No timbers have been used thus far in the cut.

The mill which I operate is forty stamps, of 1000 pounds each, with a 4-inch drop, making 102 drops per minute, with a 9-inch die. Forty-mesh perforated tin screens are used in batteries to plates. The mill was closed down sixty hours during the month of April.

The following is a copy of my report as transmitted to the president of the company for the month of April, 1897:

THE COST OF MINING FOR APRIL.

534 days labor mining	$1,145 50
25 days blacksmith, sharpening	60 00
1275 lbs. powder	102 00
5 boxes caps	2 50
2200 ft. fuse	11 22
30 days lighting, miners' candles	7 50
310¼ days labor tramming ore	647 12
30 days lighting, trammers' candles	7 50
5 gallons coal oil for lamps	55
Oil for cars	2 83
Total cost of mining and delivering 5885 tons of ore	$1,986 72

MILL REPORT.

I had in ore bin on May 1st 300 tons of ore, which was the same amount brought forward the previous month. This will give me the full 5885 tons as mined also worked in the mill.

THE COST OF MILLING FOR APRIL.

118½ days labor on batteries and plates	$ 382 00
61½ " " " concentrators	168 00
44 " " " rock crushers	101 25
94 " " " ore bin	188 00
Mill repairs	161 27
Mill expense	60 12
Mill lighting	28 06
Power water supply for April	480 00
Total cost of running mill for April	$1,546 70

Cost of mining and delivering 5885 tons of ore.....$1,968 72@.33$\frac{4407}{5885}$ ₱ ton.
Cost of milling, do..... 1,546 70@.26$\frac{1860}{5885}$ "

Cost of mining and milling.$3,533 42@.60$\frac{242}{5885}$ ₱ ton.

Yours respectfully,
S. R. Porter, Superintendent.

It will be observed that forty stamps crushed 5885 tons of rock in twenty-seven and a half days, or an average of 5.35 tons per stamp each twenty-four hours.

Mining Summary.

CALIFORNIA.

Amador.

Dispatch: The concrete foundation for the new 40-stamp mill at the Argonaut mine is being laid, and the framework of the mill will soon be under way.

The Zeila is expected to resume operations with a full complement of men about the first of June.

Work at the Kennedy goes on in the usual matter-of-fact way. Work of putting the new hoist over the north shaft is progressing favorably.

Republican: The work of sinking at the Pocabontas mine is going forward well. The flow of water has been disposed of by means of a bulk head. The Potosia ledge is expected to be tapped by means of a crosscut at the 350-foot level. A payment of $4,500 on the purchase price of this mine was recently made.

The Iron Mass mine, near Volcano, under the superintendency of A. B. McLaughlin, has recently added a 20 H. P. engine, which will furnish power for the hoist soon to be erected.

Butte.

Register: At Merrimac the Bloomer Hill quartz mine has closed down for the present. The Little Hope quartz mine gives employment to a number of men. On the Branhan mine, near Merrimac, an 8-stamp mill is being erected. The drift on the ledge shows good ore.

The mine in which Ekman, Spangler, Haynes and Faul are interested, shows good ore and work is being driven ahead on the ledge.

Calaveras.

Dispatch: At the Gwin the rich streak in the ledge still continues in the 1300-foot level north from the shaft. This strike was made in new ground, and was never thought of under the old regime. A new shaft has been decided upon, and it will be located south of the old works.

Chronicle: At the Eclipse gravel mine an upraise is now to be made from the tunnel into the channel.

Mountain Echo: Work is to be resumed on the Charter Oak mine in Washington Flat mining district. The shaft is to be sunk 100 feet, when the vein will be crosscut.

Citizen: C. L. Meyer of New York and R. C. Mueler of France are investing in mines near Sonora and at Angels. They have secured a bond on 800 acres in the vicinity of Angels from C. Tryon.

D. Fricot is making arrangements to develop the Fricot group of mines, situated on San Antone ridge. A tunnel nearly a half mile long will be driven from O'Neils creek to tap the entire group.

El Dorado.

Republican: The Veerkamp Bros. are opening up the Grey Eagle mine and are sinking a new shaft on the ledge, which prospects well.

The work on the Marquart & Hancock gravel mine is progressing well. They have several hundred feet of tunnels, with 1350 carloads of gravel on their pay dump.

Mountain Democrat: Another rich strike has been made in the Never Sweat mine, near Diamond Springs, about $6000 having been taken out.

Inyo.

Los Angeles *Times*: Panamint mining camp, now attracting the attention of so many prospectors and others, is about seventy-five miles from Randsburg. The nearest and best road is by way of Garden station and Borax lake, going north between the Argus and Slate range of mountains until nearly opposite Postoffice springs, then crossing over Slate range on a fairly good grade road, thence down across Panamint valley.

The next water station on the road is at the borax works on Borax lake, where water is piped from the Argus range a long distance. Here a charge of 25 cents is made for watering a team, with an additional charge for hauling water away. Here a great deal of money has been expended in erecting expensive buildings, putting in costly machinery, houses for the men, vats and tanks to manufacture borax.

The next water station is Postoffice springs near the new town of Ballarat, and the distance thirty miles with Slate range to cross to reach it.

Ballarat is the new town built in the open valley, near the new mines, and will doubtless be the distributing point for supplies entering the camp for all the region embraced in the Panamint country. It now contains about a dozen houses and as many tents, with several new houses in course of erection. It also has several stores, two saloons and one feed yard.

Mono.

Chronicle-Union: Everything is running smoothly at the Dunderberg mine, and the full force of the mill, 30 stamps, will soon be running. The mine is looking well. About twenty men are now at work.

Nevada.

Telegraph: The South Idaho a short time ago was closed down for want of funds. Now money has been received to pay off most of the indebtedness from A. B. Benedict now in New York. It is the intention of Mr. Benedict to operate more than one mine, as he has a strong company behind him, composed of New York and Philadelphia capitalists. Everything is now satisfactory and the South Idaho will soon be working again. The South Idaho is the mine owned by E. C. Webster. The other called by that name is the South Idaho Consolidated and is owned by Joe O'Keefe and others.

Placer.

Herald: The new mining machinery for the Gold Blossom mine in the Ophir district, owned by C. F. Reed, is being put in. An air compressor and new machinery throughout will be put in operation, and it is quite probable that a large force of men will be put on this summer.

Sentinel: County Surveyor C. E. Uren has in preparation drawings of a restraining dam across Squire's canyon, near Dutch Flat, to be used by Nicholls Bros. on a permit to hydraulic. The logs of the dam will be 213 feet long across the canyon, and at the highest point it will be 60 feet, giving a capacity of 400,000 cubic yards. The principal mine to be benefited is the Abeel claim, owned by the Nicholls Bros., Dutch Flat, though other claims will probably be given permission to dump.

Plumas.

National Bulletin: Messrs. Marsteller, Baker and Kelley of Susanville have purchased of T. D. Bennett a gravel mine in the upper end of Mohawk valley near the Jackson mine. The new owners propose to open up the property as soon as possible.

At the Thistle shaft efforts to pump the water out of this mine continue, but the progress is slow. The great body of water has been lowered in the shaft only 15 feet since the work of pumping began this spring. At the beginning the water in the shaft was 56 feet deep.

J. F. Cummings and San Francisco men have purchased of Goodwin and Thompson the Bushman gravel mine north of Quincy. The new owners will soon begin development of the mine. It will be necessary to run 500 feet of tunnel to bottom the channel.

San Diego.

Ramona *Sentinel*: At Julian in the Washington mine the workmen have uncovered a ledge 2 feet wide of solid ore, running high in free gold.

Shasta.

Free Press: On the Shasta King group on Squaw creek the ore vein is well defined and is from 16 to 45 feet in width. The ledge has been traced for 4,000 feet. The ore is base and can only be reduced by the smelting process. It carries good values in gold and silver, with a small percentage of copper, zinc, and other minerals.

Upon the north of the Shasta King group is the property of J. R. Lowdon and Walter Friday. The ore in this property carries the largest percentage of copper of any of those along the lode. The Mammoth group lies still north of the Lowdon and Friday properties, and is the apparent end of the lode.

Mr. Hill, formerly superintendent of the Mountain Copper Company, but who now has a hand in the Windy Camp mines, has a force of men employed in developing that property, with a view to placing it upon the market.

A new corporation, the London Tunnel Company, has been organized under the laws of the State of Colorado, with a non-assessable capital stock of $1,000,000. The company owns the Burton and London mines, on Mule mountain, in the Centerville mining district, and in addition has recently purchased contiguous claims owned by Markwick and others, and altogether making something like 100 acres of ground. Active operations in the development of the property will commence immediately. A tunnel, already commenced, will be pushed for 1,000 feet, which will give a depth of 1500 feet from the surface.

Frank Brightman, superintendent of the Gladstone mine, says that 80 feet from the intermediate Gladstone tunnel he has discovered what will eventually prove a large body of ore. The ledge is 4 feet wide, and thirty tons run through the mill produced about $660 in bullion.

Searchlight: Thirty men are employed on the Milkmaid, purchased by Senator Jones et al last winter of John Souter. Good ore is being taken out at the present time, and the mill in course of construction will have plenty to do when it is completed.

At the Sunny Hill mine the tunnel is now in over 700 feet. Several small veins have been encountered so far. The objective point is still some 600 feet head.

On the Windy group of the Ballakalalla mines, which Alex. Hill is preparing to develop, the ore body is large and work has been done on the same ledge for a distance of 4000 feet. A tunnel has been run in the ore since the bond was acquired that shows a depth of over 500 feet; and although this tunnel has crosscut solid ore for a distance of 120 feet, the opposite wall has not as yet been reached.

The work so far done on the Princess hydraulic mine, owned by Bear & Simonds, disclosed a valuable placer property. The water obtained from Brandy and Boulder creeks has been somewhat disappointing. The ditch is fifteen miles in length, and, being new, a large percentage is lost in seepage, as well as by evaporation.

E. Holden, who discovered some valuable gold, silver and copper properties near Pitt river, on the headwaters of Stillwater, has a small force of men at work developing the find for the Black Diamond Consolidated Mining Company.

Sierra.

Mountain Messenger: At the Northern Belle mine the mill is running steadily day and night.

The upper tunnel in the Prospect mine in Slug Canyon has been driven in to a point under the old works, and an upraise will be started in a few days.

Men are kept steadily at work on eight hour shifts, sinking the shaft at the York quartz mine.

Preparatory work is now being done by I. Copeland on the Independence mine, Wolf Creek, where machinery will soon be placed in position for the purpose of pumping the water from the shaft. The shaft has been full of water for some fifteen years.

The Sierra Buttes mine has temporarily closed down.

Siskiyou.

Journal: Members and employes of the Klamath Flume and Mining Co. have gone down the Klamath river to commence work on their hydraulic mining properties. They have fourteen claims, comprising about 1500 acres of gravel, some of which is known to be rich, and the ditch and flume, which they intend constructing, will deliver 3,000 inches of water on the Happy Camp divide, 680 feet above the Klamath river.

The Chinamen at Buckeye Bar will have their wing dam completed by the 1st of July, when they will commence hoisting.

Humphreys & Quigley, who have been running a tunnel at their Commodore mine for the past six months, have struck the ledge at a depth of 230 feet. The ledge is 2 feet wide, and the ore from all appearances is rich.

The hydraulic mines at Oro Fino will run another month, and the final cleanup will no doubt show that this has been a prosperous season.

The Eastlick Bros., the Wright & Fletcher, and the Gardiner mines have also been working on rich ground.

Smith & Hunter, having reached bed rock in the Greenhorn blue gravel mine, with their shaft, are now fixing up the pumping and hoisting machinery to carry on work in hoisting gravel and keeping the claim drained of water.

The Klamath River Flume and Mining Co. received three carloads of machinery from the north last week, and expect three more carloads in a few days. It is stated that a large supply of water is to be obtained, sufficient to run twenty or more giants in sluicing.

Reporter: On the Klamath Dr. Dean is working quite a crew of men at his mine, which is paying well. The owner intends to build a reservoir so as to run all summer.

The Minnetta B. continues to do well under Mr. Stanley's management. The owners are satisfied with the property and contemplate making a great many improvements soon. They have already made three good clean-ups.

News: A 5-foot ledge carrying a 30-inch pay streak has been opened up on the American mine in Deadwood district. The mine is owned by J. R. Foster and S. J. Fore. A force of men are working in the mine, and ore from the ledge is being crushed in an arrastra.

Trinity.

Journal: James Bowie and James A. Johnson have sold to Bradford, Duvergey and Hall brothers the Johnston Farm gravel mine and water rights on Indian creek. The property consists of 700 acres of land, a large part of which is rich gravel. The consideration of the sale was $25,000. The purchasers are all officials of the La Grange Hydraulic Mining Company.

The Altoona Q. M. Co. has placed its new pump in position at Cinnabar and started it. The company expects in two weeks' time to be able to lower the water below the upper levels. As soon as the mine is pumped dry a large force of men will be employed in addition to those already at work.

Tuolumne.

Union-Democrat: At the Rawhide the main shaft has passed the 1100 and is now being driven toward the 1200, at which point sinking will be stopped and levels run. Stoping still continues on both levels between the 1000 and 800. The vein holds uniformly its width of 30 feet.

At the Providence the main drift is now in 300 feet, showing a well-defined 6-foot ledge of good quartz in the face. In the bottom of the shaft, 110 feet from the surface, high-grade rock is being taken.

In the Black Oak the main shaft has passed the 800-foot mark, with a fine body of rich quartz in sight, although the greater portion of ore reduced comes from the north and south drifts on the 700 level.

The north extension of the Providence has been sold to Miller, Muller & Blodgitt, and a contract has been let to drive the 60 foot tunnel 100 feet further. There is also a shaft 40 feet deep on the property.

A force of six miners were put to work on the Consuelo mine last week. In 1865 the Consuelo was one of the best producers in the State.

Independent: A rich strike is reported in the Green mine at Confidence. This mine in former days was a good dividend producer.

Operations on the Mascot mine on Mormon creek will shortly be commenced by the erection of a 5-stamp mill.

The Jumper people are sinking a new shaft north of the present one.

The Tarantula mine has its gallows frame in place and the whim ready for operation.

The Consuelo mine, on the north fork of the Tuolumne river, has been sold to New York capitalists.

The Santa Ysabel mill is getting its machinery in place, the tramway from the shaft to the mill being about completed.

The Rappahannock is drifting to the north from the main shaft and is putting in a station at the 600-foot level, on completion of which sinking will be recommenced.

The Omega people have begun active operations. They have laid a tramway into the tunnel and will have a force of men employed steadily from this time.

The whole of the country west of the mother lode in the Rawhide district is taken up, and prospecting and sinking go on in all directions.

The Miles claim, a new discovery to the north of the Isabella and Gem, has a 4 or 5-foot vein which shows up well in free gold.

NEVADA.

Dayton *Times*: The Peck concentrating plant in the Douglass mill is completed and ready to start up, with the exception of placing the water wheel, which has not yet arrived. The railroad, the electric lighting plant and all other machinery is in readiness for the start.

Col. Sutherland, who visited the Ely mines at Como a couple of weeks ago in the interest of a Scotch syndicate, has made a very good report of his investigations. The Mayflower mine was sampled very thoroughly for 3000 feet.

Austin *Reveille*: The Gold Park mill will start up in a few days. There is an abundance of ore in sight ready to be taken out. The ledge from which ore is now being extracted is 20 inches thick and will mill high in gold, with a small amount in silver and lead.

Yerrington *Rustler*: The Boston, Nevada, Copper Mining Company is incorporated by New England people. The company will build a 40-ton smelter. In all probability 20 men will be employed in the smelter, and 30 in the mine. It is expected to have the plant completed by July 1st, when the mining and smelting of copper ores in Mason Valley will begin.

Elko *Free Press*: The Dexter Company is enlarging an old shaft on the Coptis ground, which is 100 feet deep, to a 2½ compartment shaft. They intend to sink it 200 feet.

Salt Lake *Tribune:* The miners of Eagle Valley district in Lincoln county have laid off a townsite and called it Deerlodge. There is much prospecting going on since the snow went off. Mining and mill men come over every few days from Stateline.

Johnson and Campbell are developing good ore in the Comstock group.

Vanina and Delmue are down 100 feet on the Charley Ross; one crosscut shows 25 feet of pay ore. James Knight is opening up the Quartzburg claim.

Troutman, Clark & Pickett are sinking in the ore body on the Indiana. Bennett and Delmue have taken out some high grade silver ore from the Interocean.

Moody, Lytle and Hammond's shaft on the Idlewild is down 75 feet, and they are crosscutting the vein, with prospects of having a large ore body.

Walker Lake *Bulletin*: The dump of the Mary tunnel is crowded with ore, and hauling will commence in a few days. The mill will start by June 1st.

The Valcalda Bros. are working ore from their mines.

Reese River *Reveille*: Rich ore has been struck in the Dexter mine; a double compartment shaft is to be sunk at once, and a new hoisting works to be erected.

Other properties in the camp are looking well, and most of the new finds are principally gold.

OREGON.

Baker City *Democrat*: At the Flagstaff mine they are running a crosscut to tap the ledge inside of 30 feet.

Monitor-Miner: The Coast Range Mining Company is preparing for extensive placer mining operations on the Stidham bar on Rogue river.

Observer: The new 5-stamp mill at the old Jewett mine near Grants Pass is completed and will start up soon.

The copper deposits of southern Oregon are attracting quite considerable attention this spring and some good companies are looking this way for investment.

Rich diggings have been reported as being struck on Silver creek that pay $15 per man. This creek was famous in the early days and at one time furnished employment to several hundred men.

G. W. Trefren of Ashland and D. V. Snowgoose propose to put in a pumping and elevating plant to work a gravel deposit below Grants Pass.

Baker City *Epigram*: The Virtue mine, eight miles out, employs about 100 men, and yields upwards of $20,000 per month, with a 20-stamp mill, the ore being free milling, as is all the ore in that immediate district.

The Flagstaff mine has just started a new 10-stamp mill.

WASHINGTON.

Spokesman-Review: At Davenport the Deer Trail No. 2 has sixteen working tunnels and ore in every one of them. The aggregate length of these tunnels is approximately 4500 feet. The manager of the mine reports that he is taking out ore from one body whose area is 200 feet by 400 feet and whose pay streak is 4½ feet thick.

In a few days the first carload of ore from the Mountain Queen mine, owned by the Grand View Consolidated Mining Company, will be shipped.

In Okanogan county the Palmer mountain tunnel is 300 feet under ground. Work has been temporarily suspended on the tunnel until they can get their compressed air plant in place.

The Triune is shipping concentrates, but it is a free milling mine. They are saving 80 per cent of the value on the plates, and the ore is being mined and milled at a total cost of $2.75 per ton.

The Hercules Mining Company is working two shifts on their tunnel on Douglas mountain, and expects to tap the ledge soon.

The Wyandotte company is also at work with a good force of men at both mine and mill.

ALASKA.

Mining Record: A rich lode, carrying gold, silver and copper, has been discovered and located on Cat island, south of Mary island. The claim makes the best showing of any in that section.

Gravina island is literally covered with mining claims. Many claims have been bonded for sums ranging from $20,000 to $45,000.

The Alaska-Juneau Company has commenced work at the mines in Silver Bow basin and stamps are dropping on ore. Extensive development work will begin in a few days if the weather will permit.

BRITISH COLUMBIA.

(Special Correspondence).—Col. Forsyth of Chicago is now developing his claims at the head of Frederic's Arm, in Phillip's Arm district, and is erecting a concentrator. The ledges in this country are very wide, and

some of the properties run rich to the ton. There are over 300 claims in the district. The country is very accessible, and there is wood and water everywhere. Harrison Lake section, within a few miles of Westminster, reached by ferry, is also the scene of great mining activity. In a short time there will be several shippers in this section. The Money Spinner mine is owned by the Fire Mountain Company, who own the two joining claims. A mill site has been chosen and a mill ordered for crushing the free milling rock.

Spokesman-Review: The new management of the Iron Mask at Trail have taken charge. They are working thirty men on the property and are shipping a carload of ore a day. A double shift is at work running a tunnel on the west lead, and the face of the tunnel is now in mineralized rock.

The No. 1, a Rossland claim west of the War Eagle, will soon be in the hands of developers. Larson, Greenough and Geldness have completed the purchase of the one-half interest of George Sohnemann and now own the entire property.

More than 200 mineral locations have been made about Christina lake in the past two weeks and a large amount of development work is being done. Three good strikes were made last week, one by Mr. Montgomery on Sutherland creek, one by the Lattah brothers and one on the Standard on McCrea creek.

The Ontario, adjoining the Mannamead on the North Fork of the Salmon, has been sold by the owners, Adie, Craig, Campbell and Berwick, for $15,000 cash, to parties in Victoria.

Spokane *Chronicle*: At Sandon the Payne has about 4 feet of clean ore in the breast of the fourth level. Shipments of ore will be resumed between the 5th and 10th of June.

A force of men has been at work on the Eureka, adjoining the Slocan Star.

Three drills are now employed in the development of the Slocan Star. They are now in about 650 feet on the fifth tunnel, and expect to strike the ledge in 300 feet more.

At Ainsworth Alex McLeod reports another strike on the Silver Glance on Woodbury creek. The tunnel on the property is now in 100 feet. The ledge is 4 feet wide and the pay streak about 1 foot wide.

A. A. McKinnon and F. L. Fitch have bonded the Kate L, near Ainsworth, to a syndicate represented by Knight of Spokane for $6000, 10 per cent of which was paid down.

At the Currie, on the Galena farm, a compressor is being placed in position.

The Kaslo sampler is handling two or three cars of ore a day. The Ruth is a steady shipper, and the Sunset and Whitewater are sending down ore now.

The Center Star management is pushing the work on its big property with a large force of men. A crosscut is being run through the big ore chute near the west end of the big tunnel. This crosscut has been run 50 feet to the north of the tunnel, and 20 feet to the south of it, or 75 feet altogether, and neither foot nor hanging wall has yet been found. This makes the ore body 75 feet wide up to date.

Preparations have been made for the rapid development of the Mamie claim at the north fork of Lemon creek, the property of the Lemon Creek Gold Mining Company of Slocan City.

Spokesman-Review: The Payne Extension Mining Company is being incorporated to work the group of claims called the St. Paul, Minneapolis, Toronto and Auditorium. This group is the northeast extension of the Payne group and has the same lead.

In the Ainsworth camp 400 miners are employed, the Black Diamond employing about sixty-five.

The fifth tunnel on the Slocan Star is in about 650 feet, and it is thought 950 feet will strike the ledge. Three drills are now used.

The Primrose Mining Company has let a contract for 100 feet on its property on Toad mountain.

The Delhousie has been rebonded for $35,000.

The Maritime Exploration Company has paid $8000 for the Iron Cap.

The Kootenay & Columbia is now a shipper and development work is well along. A tunnel is being driven in the Iron Colt, and they ought to be at the ore bodies in ninety days, when they will have a depth of 300 feet.

The output of the Kootenay mines up to May 22 for this year amounted to nearly $3,000,000 in value. The following are the returns:

ORE EXPORTED.

	Tons.
From Slocan via Kaslo	10,717½
From Slocan via Nakusp	2,642½
From Rossland via Northport	6,479¼
From Rossland via Nelson	52
Total	19,909¼
Through Nelson Custom-house	$1,178,781 95
Through Revelstoke (Nakusp)	292,110 65
Total value	$1,470,892 60
Average value per ton	$73,879

PRODUCE OF SMELTERS.

	Tons.
Nelson (Hall Mines) Matte	582
Trail Smelter Matte	2803¼
Total	3385¼
Total value	$1,504,336 78
Total value of ore and matte exported	2,975,229 38

UTAH.

Salt Lake *Tribune*: At Park City, in the Constellation the drift from the 300-foot level of the old shaft will be rapidly pushed, so as to cut the gold ledge at a depth of about 500 feet below the present 30-foot hole.

Manager Dern of the Mercur says that the mill, with its increased tankage, is now handling very nearly 300 tons of ore a day, and that the mine shows more ore than at any time since its development was commenced.

The owners of the Gold Dust have decided to erect a mill of 200 tons capacity, and will put in crushing machinery that will enable the company to double that at any time the management may deem it expedient.

The management of the Brickyard have decided to make a series of test or experimental runs through the plant that Capt. J. R. De Lamar has erected at the Golden Gate, and the erection of a mill will shortly be commenced.

A report comes from Sunshine that a ledge of galena carrying 50 per cent lead and 18 ozs. of silver has been struck on the north side of the Overland ground.

At Frisco the superintendent of the Cactus Mining Company has received orders to discontinue work temporarily and wait for more remunerative prices for its ores.

Sinking in the main shaft of the Horn Silver mine was resumed a few weeks ago, and the bottom is now almost 1300 feet from the surface. Another 200 feet will probably be sunk before any station is cut and drifting started.

Hall & Higgins have bonded the Dick Bland claim for twelve months from R. S. Lipscomb and John Murray. Three cars of ore have been shipped from this property, which was taken out in sinking a 125-foot incline.

Mercur *Mercury*: One hundred tons a day is the record of the Geyser mill now. Everything is working well in the treatment of the ores, and average values of $5 per ton are obtained therefrom, while the dump shows analysis of from 70 to 82 cents to the ton. The capacity of the mill will be increased.

Two drifts are still being run on the two separate veins in the Wonder—one on the 475-foot level and the other on the bottom or 600-foot level.

Tintic *Miner*: Shipments from this district for the week are as follows: From the Bullion-Beck mine, 15 carloads ore; Centennial-Eureka, 3 carloads ore; Ajax, 5 carloads ore; Mammoth mill, 7 carloads concentrates; Swansea, 5 carloads ore; South Swansea, 7 carloads ore; Star Consolidated, 2 carloads ore; Four Aces, 1 carload ore; Dragon iron mine, 3 carloads ore.

A contract has been awarded for 100 feet of work on the Annandale. The contract price is $9 per foot.

H. Slade and B. Garfield have commenced work on their group of claims at Mt. Nebo.

Eureka *Democrat*: The shaft in the Lily of the West, located about a mile east of the Humbug, is now down 200 feet. A rich strike of gold-bearing rock is reported to have been encountered in the 100-foot level last week.

A new tunnel is to be started on the Uncle Sam near the northwest corner of the claim, which will give a depth of nearly 1000 feet. A shaft is also to be sunk from a point near the mouth of the present tunnel.

Mammoth *Record*: A contract has been let for sinking the shaft on the Cornucopia another 100 feet, which gives a depth of 420 feet.

A streak of excellent looking ore has been encountered in the bottom of the shaft at the Last Chance mine, which is now down 150 feet.

The machinery and lumber for the Alaska have arrived, and when the new hoist is in place the active development of the property will again be resumed.

Bingham *Bulletin*: In the Giant Chief from the new working shaft the vein has been tapped, and there is now showing 4 feet of galena ore. Former assays from upper workings have given over 50 per cent lead and 30 to 50 ounces silver, but the ore from the new strike is higher grade.

The shipments from the Old Jordan are heavier than usual this week.

A 70-ton test lot of copper ore from the vein crossed this spring by the Highland Boy working tunnel is coming down for shipment.

Concentrates are coming down from the Brooks & Co. steam jigs at the Old Jordan. A crusher will soon be running in connection with the jigs.

Sinking was lately done a few feet below the tunnel level of the Nast and ore encountered carrying 76 per cent lead.

The shipments from the Phœnix and Coramandel the past few days foot up about 160 tons.

IDAHO.

Spokane *Chronicle*: In Jerome Creek camp the Daisy, which has been in litigation for some time, is nearing a settlement. The stamp mill will be put in operation again as soon as the settlement can be effected.

The Blackfoot Mining and Milling Company has let a contract for an additional 100 feet on the Gold Nugget.

Some additional work is being done on the Gold Bug; and as soon as the Daisy's stamp mill begins, work will commence on the Gold Bug on full time.

The Gypsy Mining Company has let a contract for a shaft on that property.

Spokesman-Review: The Idaho mine at Murray is to be worked on an extensive scale. The first change will be the addition of canvas tables to concentrate closer, and then there will be an addition of thirty more stamps. The work of putting in these stamps will be begun within thirty days. Altogether in the three veins there is 150 feet of ore that will pay for milling if worked on a large scale and with cheap power, while a large part of it will pay under more expensive methods.

A 10-stamp mill has been ordered for the Badger Gold Mining Company for their property at Elk City. A shaft has been sunk about 100 feet and 200 feet of drifting has been done.

In the Pierce district, placer miners, who depend upon the melting snow and rains for their water supply, are complaining of the scarcity now, and are shutting down.

The American Placer Mining Company has thirteen men at work washing dirt, and are running double crews.

Ex-Congressman Willis Sweet has a force of fifteen men on his property, putting a 5-stamp mill in.

The Bingham Placer Company, near Gibbonsville, expects soon to have five miles of flume completed and the water turned on.

MONTANA.

(Special Correspondence).—Large deposits of gold-bearing quartz have recently been discovered at Libby in addition to the big ledges discovered in late years, among which is the Snow Shoe, where a 100-ton-capacity concentrator is running to its utmost capacity, employing in the neighborhood of 180 men. On the same contact are the Silver Cable group and the Buzz Saw or Shaughnessy Hill group, at each of which places large concentrators are in course of erection. There are two hydraulics working at good pay on Libby creek, and several ledges have recently been unearthed where arrastras, or stamp mills, will be put in. There is a demand for men experienced in the building and handling of arrastras at that point. There is a new paper established at the camp known as the *Weekly Montanian*, with D. A. Hendricks as editor, to whom parties desiring further information might write.

Butte *Miner*: At the Original mine workmen are cutting a station at the 1000 level and in a few days crosscutting will commence.

The Hesperus Leasing Company has commenced crosscutting from the Parrot shaft, and the operators expect to cut the lead which shows up well on the surface in a short time.

The Anaconda company has abandoned the plan of sinking a shaft on the Orphan Boy for the present, one of the silver properties of the company situated west of Walkerville. It was announced some time ago that the company would sink a shaft down 1000 feet.

The German placer bar, near Virginia City, is being worked by a gravel plant, which promises good results. A big scraper car, carrying two tons of gravel at a load, travels along and is perfectly controlled by a system of cables operated to a nicety by levers in the engine-room of the plant. The cables run between the main tower and an "A" frame, probably 150 yards apart. When the car has traveled out to the gravel it is lowered and dragged along the gravel, loading automatically. It is then hoisted back to the main cable and conveyed above the big hopper in the tower, where it dumps its load automatically in the hopper.

The Boston and Montana Company recently started up six furnaces and increased the force of employes about fifty men. This is due to the increased shipment of ore from various mines throughout the district. A further increase in the force will probably be made. Many new changes are contemplated for the near future. Two new blast furnaces are to be added.

Mining World: The Iron Mountain Mining Company is operating a full force of men both at mine and mill. The monthly pay-roll amounts to $10,000. The output is principally of silver.

At Castle there are six mines that are taking out ore and shipping—the Broadwater, the Yellowstone, the California, the Great Eastern, the Judge and the Powderly. The Great Eastern alone is shipping a carload a day. The lease on this property expires in about a year, when the owners will in all probability operate the mine themselves.

At Sheridan in the Caroline on Georgia Gulch the drain tunnel is about completed, and the stoping of ore will be resumed in a short time.

An effort will be made to work Lazyman's Bar on Warm Spring creek, tributary of the Upper Ruby.

Superintendent John Allen of the Kennett mine reports that retimbering the shaft will be finished next week, and that the mine will resume operations immediately.

Inter-Mountain: The Noble mine on Wisconsin creek, Madison county, from which some rich gold ore has been shipped in years past, is bonded to J. P. Reins and others for St. Louis parties in the sum of $100,000.

In his report to the reorganization committee of the Butte and Boston Company, C. W. Goodale in estimating the value of reserves, gives the following cost of mining in 1894 and 1895:

	Mining and Hauling.	Concentrating.
Silver Bow	$3.78	.55
Gray Rock	5.12	.55
Blue Jay	7.22	.55
Smelting charges	4.47	...

COLORADO.

Republican: At Cripple Creek since the final decision in the Enterprise Rico-Aspen case was rendered by the Supreme Court there has been nothing to precipitate any new litigation between the tunnel drivers and surface workers, but there are evidences that the opportunities for contest that have been presented in advance of the decision are being followed up by the parties interested and suits prepared for the courts.

Both railroads entering the district have notified the mines that they will receive no more ore for the valley mills until further notice. Their cars are all loaded, the side tracks are full, and the mills seem unable to take any more ore.

The Victor mine is down to thirty tons of ore a day, and cannot produce less unless all development work is stopped. The ore body in the ninth level is said to be much greater than that in the eighth.

The present capacity of the process plants is 450 tons a day, made up by the Metallic Extraction, the El Paso at Gillett, the Brodie and the Colorado City. The new mills going up are the El Paso at Florence and the Turner at Arequa, with the page at Florence to be restarted. These, with eighty tons additional to be given the Colorado City and 180 increase at the Metallic Extraction raises the total capacity to 1015 tons daily, when all the plants and enlargements are running to their full capacity.

A vein of ore identical to the Tom Boy has been opened up on the North Chicago and the owners are confident that they have the extension, while the Tom Boy people are positive that it runs on the Mono, or they would not have purchased it and the Lake Views last spring for a big consideration. The matter, however, will be determined in the near future.

A Hartford, Conn., company has almost completed a modern chlorination plant in Boulder, with capacity for the daily treatment of fifty tons, erected for the special treatment of ores from Magnolia. The same company has purchased and is now operating three properties at Magnolia.

The El Paso-Gold King in Poverty gulch has started a new sinker pump and with it is holding the water level and is able to resume sinking the shaft. The shaft is now 485 feet deep and at the 500-foot point it is proposed to cut a station and put in a permanent pump.

At Idaho Springs the Stanley mine has been under development for four years, and now 400 men could be advantageously placed at mining the ores in sight. As development proceeds the stulls and chutes for ore are placed in position ready for breaking down. But it is proposed to sink the shaft 1000 feet before beginning to mine, and at that depth the levels, as driven into the hills, will have gained a depth of about 2000 feet, opening out the lode for about a mile in length. Some of the levels have now been run into the hills for 3000 feet, and others are going into them as fast as men and air drills can do it. The company is shipping from ten to twelve carloads of ore to the smelters each month, and treating its low-grade ores at the Salisbury mill.

At Central City in the Wautauga mine in Russell gulch, operated by the Calumet Gold Mining and Milling Company, extensive operations have been carried on for the past month, which are now finished and give this mine one of the best equipped plants in that section.

The Robert Emmett mine in Chase gulch is to be equipped with a first-class plant of machinery within the next week, and a larger shaft house will be built.

At Aspen the ore body in the Argentum-Juniata has been driven into on the sixth level for a distance of 37 feet, and the drift is still in ore. Developments on the seventh level show the ore body to be richer than on the sixth.

Aspen *Tribune*: The extent of the rich strike in the Mollie Gibson, made last week, has now been determined, and it appears to be one of those rich pockets so characteristic of that portion of the property. The lease still shows a considerable quantity of 1000-ounce ore, but it is now conceded that the strike is not in the nature of a chute or a large ore body.

Telluride *Journal*: Ten stamps of the Telluride Power Transmission Company's 120-stamp mill on Bear creek started to work last week on a lot of quartz recently extracted from the Canton mine.

In the Smuggler-Union heavy development work in the mines is progressing and the seventh tunnel level is now pretty well blocked out, opening up large areas of ore, and the deep tunnel level is 600 feet north of the Union shaft and going ahead. The property was never in better condition for a large production than at present.

Telegraph: At Cripple Creek for the week ending May 29 the Elkton Consolidated Company shipped a total of twelve cars of ore. Of this number two contained high grade, two second, and eight third grade.

The Union Company shipped six broad-gauge cars of ore during the week, evenly divided between the mills and the smelters.

Shipments from the Moon-Anchor mine for this week, 100 tons of mill ore, 45 tons of smelting ore and one consignment of very high-grade ore.

The lessees who are developing the Monument, a Battle Mountain property owned in this city, shipped three cars of ore this week.

ALABAMA.

The mineral production of the State of Alabama during the month of April, 1897, as ascertained from the report made by the several producers, is as follows: Coal, 382,462 tons; coke, 108,015 tons; pig iron, 81,824 tons; iron ore, 243,808 tons; limestone and dolomite, for flux, 20,200 tons; building stone, 12,000 cubic feet; bauxite, 879 long tons; number of employes engaged in mineral industries, 13,500.

LOWER CALIFORNIA.

Lower Californian: Work on the Providencia, a prospect in the Jacalitos district recently purchased by F. M. Bradshaw et al., is progressing rapidly. A large force of men are busy grading roads and a three-compartment shaft is being sunk on the ledge, which is described as a very extensive body of high-grade ore.

The mill on the Piedad mine, which has been leased by Mr. Bradshaw, closed its run this week on ore from the Angulo mines in Burro canyon, in which T. A. Ripperdan and San Diego parties were interested. This mill will be used in developing the Providencia mine.

NEW MEXICO.

(Special Correspondence).—In Hell canyon, twenty miles southeast of Albuquerque, the most noted mine is the Millagors, owned and operated by Pueblo parties. The general run of its ore samples about $16 per ton. The property has a mill, which operates on the roll and crusher plan, with copper plates, but it is reported that it is being overhauled for the purpose of making changes.

The Bellevue and the Folsom, in the same locality, have large ore bodies which are, in the main, low-grade. A company is being organized on the Bellevue, with the object in view of building a mill. This company is being promoted by Messrs. Fitchett, MacMas-

ter and Propper, the last-named being a resident of Albuquerque.

The Star mine, also in Hell canyon, has been a producer of gold, but is now closed down. The ores are oxidized iron, which run into copper at greater depth. The property belongs to H. T. McKinney, of Hell canyon.

The Little Pittsburgh, owned by a company of that name, is in the same locality. Its shaft is down about 120 feet, in the course of which several streaks of high-grade ore were encountered. The full ledge of ore runs about $14 in gold. The property is not now working on account of surplus water.

The Gray Eagle has a large body of ore, averaging $12 per ton, and the work is as yet close to the surface.

The Cochiti mining district is fifty miles from Albuquerque and twenty-five miles west from Thornton station, on the Santa Fe railroad. The ores in this district are gray sulphurets, and run very high-grade in silver near the surface. At greater depth the silver values decrease and those of gold increase. The workings as yet are shallow, the greatest depths being only about 100 feet. The ores are best adapted to the smelter. Among the properties which ship ore from Cochiti district are the Washington, Crown Point, Lone Star, Albemarl and Black Girl. One concentrating mill in the district is operating and another is to be built at Allerton, six miles east of Bland, which latter is the main town of the district.

The San Pedro district is forty miles east of Albuquerque and is, in the main, a gold-producing camp, a considerable proportion of the ore being free milling. Three or four mills are operating there. The large smelter, built there several years ago by the Santa Fe Copper Company, has not been running for about five years. The closing down of these works is said to have been the result of differences among the members of the company, and not by reason of any difficulty in treating the ore profitably or obtaining a supply of ore.

The ores which do not amalgamate are shipped to Pueblo smelters. Besides carrying gold, the ores of San Pedro district carry lead in form of galena and copper in the form of pyrites.

The Lincoln Lucky, which has been a considerable producer, has been inactive for some time, pending litigation with owners of adjoining property.

The Gold Standard produces, in the main, a free-milling ore, and its supply of ore keeps the two mills in San Pedro operating.

The C. C. Company, same district, has lately put in a 25 H. P. gasoline hoist. A shaft is being sunk to connect with a tunnel which is in 200 feet. The ores from this property run $60 per ton in gold, silver and lead.

At Magdalena the Graphic Mining and Smelting Company's lead smelter is running at full capacity, which is 100 tons of ore per day, and they ship three cars of bullion per week. The smelter is run principally on ores from the company's own mines. The ores are both galena and carbonate of lead.

The Kelly mine, near Magdalena, produces the same grade of ore as that described above, which is shipped to El Paso smelters. There are other mines, west of the Magdalena mountains, where 2-stamp mills are operated on free-milling ore. This is in Water canyon, and a company is being organized in the East to build a smelter there. WASCOTT.

Albuquerque, N. M., May, '97.

ARIZONA.

(Special Correspondence).—The many shipments of mining and milling machinery into every mining district of the Territory of Arizona may be cited as an excellent confirmation of the reports which come from the camps everywhere of new strikes and rich developments. Prescott is the supply center for the various mining regions of central Arizona, included in which are the Rio Verde country, Black Hills, Chaparral, Big Bug, Bradshaw, Congress, Stanton, Crowned King, Harqua Hala, as well as Lynx Creek and other nearer points. All these districts are more or less connected, forming a mineral belt from Jerome to Harqua Hala. The ores carry gold, silver and copper, as a general proposition. Some of them—such, for instance, as the United Verde—are chiefly copper, with light values in gold and silver; while others—such as the McCabe or Henrietta—are known as gold properties, with some values in silver and copper.

The Chaparral district, about twenty miles southeast from Prescott, is one of more than ordinary promise, because it embodies the groundwork for a great many mines. At present it comprises the Chaparral district proper and the Big Bug region, two to four miles southward. The hills and mountain spurs in this section are smooth and easily traversed, and contain a growth of scrubby-oak timber, which serves a good purpose at the mines, mills and camps. Still farther southward, on the mesas of the Bradshaw mountains, are belts of heavy timber. The water supply, especially at this season of the year, is abundant from small mountain streams and springs, while most of the mines furnish more water than is required for ordinary purposes.

In Chaparral proper are the McCabe mine and mill and the Little Jessie mine and mill, while in Big Bug gulch are the Providence group, the Henrietta and the Lottie, each of which is equipped with its own mill.

The McCabe has just put in a new 80 H. P. boiler, which was fired up on the 10th inst. In this property the main shaft is down 470 feet and the entire workings consist of about 2500 feet of shafts and winzes and 7000 feet of drifts. The production is that which results from carying out the general plan of development. A 10-stamp mill is in operation. The ore milled runs in value from $35 to $40 per ton. That shipped directly to the Pueblo smelters is higher grade, running from $60 to $100 per ton. For the first 150 feet in depth the ores were oxidized and quite free milling, but at present depth they become more refractory, and the milling process becomes largely one of concentration. The vein is vertical, the walls well defined, the vein matter being from 2 to 22 feet wide. The property output is paying for all improvements and developments and some dividends besides. Forty men are employed.

The little Jessie, located about two miles west of the McCabe, is in a good state of development and has a 20-stamp mill, only ten of which are now dropping. The ores of the Jessie are of a siliceous nature, carrying gold, silver and practically no copper. In this mill part of the values are saved on the amalgam plates and the remainder in the concentrates. The depth of the main shaft is about 700 feet, with 500 feet of drifting at second level and 600 at first. The output is about twenty to thirty tons per day, the values running from $40 to $200 per ton. This property is being worked under the direction of a receiver and it is believed it is being put in good condition.

The Henrietta mine and mill are operating steadily and have for some time made an excellent record. The ore is handled through a main tunnel, 1300 feet long, which intersects a shaft at 900 feet from the mouth. The depth of the shaft is 428 feet. The Henrietta vein is almost vertical, from 16 to 18 feet between walls, with a pay streak well defined and continuous. As is characteristic of the district, the ores are a sulphide. The mill has twenty stamps, ten of which are running, and six vanners. About half the values are saved on the plates and half in the concentrates. From seventeen to twenty tons of ore are milled daily. The values range about $30 per ton in gold, silver and copper. The copper and silver product is said to be sufficient to pay for the shipment of the concentrates.

The Providence group consists of the Anna mine and mill, the U. S. Treasury and the Eugenia. The new 10-stamp, rapid-drop mill, with three 6-foot vanners, is an up-to-date, well-regulated property, and, like other mills mentioned, its work is that of concentration and amalgamation. The ores from the Anna are sulphides, heavy in copper and gold. While they were considerably oxidized near the surface, as greater depth is attained there are greater values in copper and gold, and they become more of a concentration proposition. The work of the company is largely one of development, and their plans contemplate making a big property. The shaft is down 230 feet, with 400 feet of drifting therefrom. About thirty tons per day are being handled. The ore is rated high grade, the concentrates being shipped to El Paso smelters. The Providence Company's U. S. Treasury property comprises sixteen claims, on which a tunnel is being driven to cut three veins on the property. The Eugenia tunnel, now in 180 feet, is being retimbered. The ores from this property are rather base and lower grade than those of the Anna. This company contemplate erecting a smelter on the ground to treat their ores.

The Lottie group, located in the upper end of the Big Bug gulch, has a 10-stamp mill, with Triumph concentrators, and the proprietors are putting in a new 60-horse power boiler. The main workings in this property are from a 500-foot tunnel, from which there are 1200 feet of drifts and a 320-foot shaft. About twenty tons of ore per day are being milled. No attempt is made at amalgamation, all the savings being in the concentrates.

On the Boggs copper property, in the lower end of the district, there are some developments, consisting of an 80-foot shaft, 80 feet of drifts and stopes, all said to be in ore which averages 15 per cent in copper. It is claimed this is an extensive lead, the ore being very much oxidized.

The Poland group, in the upper end of the Big Bug district, has some very extensive development, and it is claimed there are 24,000 tons of ore blocked out, while no milling facilities are as yet provided. The ores are said to be high grade.

Lynx Creek district, located about fourteen miles from Prescott, comprises some properties which are in a fair state of development. Among these are the Fortune group, consisting of fourteen claims, on each of which are some positive developments. A 10-stamp mill is running, with plates and concentrators. On the plates from $15 to $25 per ton is saved and $60 to $75 in concentrates.

In the Bradshaw mountains, some forty-five to fifty miles south of Prescott, is the well-known Crowned King mine, which was for many years listed in the category of prospects, but which for the past five years has paid a dividend approximating $10,000 per month, with a 10-stamp mill. The ore is gold, copper and zinc. About $12 to $14 per ton is saved on the amalgam plates and the rest in concentrates.

Results of developments on the Monte Christo, six miles southeast of Prescott, are very reassuring and the property will doubtless become a good mine. A tunnel has been driven 250 feet on a ledge containing solid ore 2 feet thick, rich in wire gold and wire silver, shipments from which are said to have run $200 per ton.

The Chicago Gold Mining & Reduction Company is erecting a mill at its property on Cherry creek, east of Prescott. The mill will contain crushers and vanners. There is said to be a good showing of ore on this property.

With the application of additional capital and energy to the development of the great mineral belt known to extend through the section partially described, each district will become the center of a mining industry of an extensive and most substantial character.

Prescott, Ariz., April, 1897. WASCOTT.

(Special Correspondence).—In the Sirerrita mountains, in Pima county, 28 miles southwest of Tucson, are the eleven claims of the Baxter group, which are producing a good grade of copper in the course of development.

The Silver Hill district, which is 60 miles southwest of Tucson, in the Sirerrita region, is the center of some positive development, and a few miles to the south of it is the Arivacca district, which, as a prospecting region, is promising. The ores carry gold and silver. Jos. Danker has erected a custom mill here.

At Oro Blanco, nine miles southeast of Arivacca, is the Old Glory mine, which was worked for some time, but has closed down by reason of an insufficient water supply. The Oro Mining Company is operating a 10-stamp mill in this section.

The Harsha mining district, eleven miles east of Crittenden, has developed to the extent of becoming a shipper of ore.

South of Harsha, near the international line, is the Patigonia district, where the Duquesne Mining Company is operating, and which is working six or eight claims, which yield copper ores. W. A. Clark, of the United Verde, has some interests in this district.

The Washington camp, 20 miles east of Crittenden, is becoming a producing camp of importance, the ores being primarily copper. A smelter is being erected at that point.

The Omego & Columbia copper camp has several mines working.

At Rosemont the smelter is employing 75 men.

An effort is being made by W. M. Jacobs and associates, of Tucson, to develop the rich placers in Horseshoe Basin, 90 miles west of Tucson. It is claimed the gravel and sand of a large area there runs on an average 40c. to 60c. per cubic yard in gold. It is proposed to purchase the old Cornish pump which was put in at the Quijotoa mines several years ago and divert its five miles of pipe line to the gravel beds of Horseshoe Basin. WASCOTT.

Tucson, May, '97.

WHITE HILLS DISTRICT.

There is every prospect that the White Hills country will become an extensive field of operations for gold and silver mining. The district has been undergoing developments and prospecting since 1892, a considerable portion of which has been the work of leasers. Up to the date of this writing, May 1st, some forty or fifty leasers have been almost constantly at work, and some of them have made snug little fortunes. But within the past few months practically the prospected and partially developed grounds in this vicinity have been purchased by and are now under the control of the Excelsior Mining and Milling Company and the subordinate companies connected with it; and as the company contemplates working all its claims directly, the leases have all been terminated, or not renewed, leaving the lessees either to seek employment with the company or go to other fields.

Retracing a little, I will say that the locality known as the White Hills is in Mojave county, fifty miles north of Kingman, and is reached by a stage line from the latter place. Going from Kingman to the White Hills the traveler goes through the Sacramento valley for a distance of about forty miles—a valley ten to twenty miles wide and of superb beauty; and well grown over with bunch grass, sagebrush and various plants. The name "White Hills," is not a misnomer, for the hills when seen in the distance have an ashen whiteness.

About thirty-five miles further northward is the great bend of the Colorado river, at which point, known as Temple Bar, a large hydraulic mining plant is being put in by the Temple Bar Consolidated Mining Company. Piers are being erected in the river, from which a boom will be put in to catch driftwood. Between White Hills and Temple Bar are several basins, on the outskirts of which some effective prospecting has been done.

The town of White Hills is built on an entirely smooth surface, at the foot of the hills, and contains possibly 400 persons. Like many similar localities the progress and growth has been largely a question of water. Thus far, the water for domestic use has been hauled from springs seven miles to the west. The water for steam use and milling purposes has been supplied from the veins of the mines. However, the Excelsior and White Hills Mining Companies are to put in a water system by which water will be piped from the springs some distance away to the mills, mines and town.

The mining operations now in progress are from five different shafts and inclines, which vary in depth from 250 to 500 feet. About 250 men are being employed at the different mines and at the 10-stamp mill now in operation in the northern part of the district. In the south end of the district, where the larger mines are located, the company is building a new mill of 40 stamps, twenty-four amalgamating pans, twelve settlers, two 120-horse power engines, four crushers, automatic feeders and a good sized dynamo.

From the character of the mills the reader will see that the ores from the White Hills are free milling and that concentration is not a part of the process at present. The ores are in chlorides, the base being iron, and the amalgam produced has its chief value in silver, though the gold is an important item. Those ores have run as high as 600 or 800 ounces in silver, but a safe generalization places the values from $50 to $100 to the ton of ore.

While the producing mines of the White Hills are confined at present to a comparatively small area, there is no reason to assume that the actual mineral belt is thus limited.

On the way to White Hills from Kingman, but a few miles off the main road, are the rather important camps of Chloride, Mineral Park and Cerbat, wherein work in several mines is going on. Ores from the three camps named are hauled largely to Kingman and sold to the sampling company at that place, which ships, in the main, to Pueblo.

Kingman is the outfitting point for the camps named, as well as others along the Colorado river, and is the initial point from which a railroad may be built to take in White Hills and other mining camps between Kingman and the Colorado river bend.

White Hills, Ariz., May 1, '97.

Scientific Progress.

The Synchronograph.

In a paper before the American Institute of Electrical Engineers, on the synchronograph, A. C. Creehore and G. O. Squier say:

It is of interest to inquire what effects a system of telegraphy capable of sending continuously 3,000 words a minute would have on the existing methods. To take a single example of the business between New York and Chicago, where about 40,000 letters are carried daily, it would require but two lines in continuous operation to handle the entire business. At present it takes three days to receive by mail a business reply between New York and Chicago. This transmission by machine telegraphy could be accomplished easily the same day.

Among the possibilities is the simultaneous publication of the same newspaper in different parts of the country. For example, in an edition of a daily paper having twelve pages and eight columns per page, making ninety-six columns in all, there are less than 185,000 words. At the rate of 3,000 words per minute it would only require about an hour to transmit the entire contents of the paper. This calculation furthermore assumes that the whole paper is uniformly printed in fine type. It would require a single operator, working by hand and averaging twenty words per minute, over six days of twenty-four hours each to send this amount.

The system proposed is especially adapted to meet the demands of this class of business; for the great flexibility of the alternating current, as employed, permits if necessary considerable amounts of power to be transmitted over the line which may be used for making simultaneous manifold copies of the same dispatches in each of widely separated cities. In this manner each of the several newspaper company subscribers in each city receives the identical service with the minimum delay, since each copy received is an original. Each additional subscriber to this service represents no appreciable expense to the company, since it requires but another receiving needle. Furthermore, the use of the alternating current permits the line to be used quadruplex at very rapid speeds, that is, four entirely different dispatches may be sent over one wire at the same time, two in each direction, and any number of copies of one or all the dispatches may be received independently at the same time.

It is thought that a telegraph company of the future will fulfill a somewhat different function from the present ones. The company will own its wires and rights of way as now, but the tendency of the offices proper will be to transmit and receive letters already prepared rather than to undertake the preparation of the letters as well. The income of the company will be derived from the rent of its lines at a fixed price per minute, or a fixed price per hundred words. The service of the telegraph office then becomes like that of the post office, its duty being to receive and deliver letters already prepared, as the post office does. The difference between the two offices is in the manner in which this is accomplished. The telegraph office becomes a post office which employs an electric current in a copper wire to carry its letters instead of a railroad train. The advantages in point of speed of delivering letters by the former method are apparent. Instead of requiring twenty-four hours to deliver letters between New York and Chicago, it will require but a few hours at most, and make it possible to receive a reply the same day. It is probable that such a system would take more business from the present postal system than any other; for when telegraph letters can be sent at reasonable rates comparable with postage, in a few hours instead of many days, a certain amount of present post office business will be diverted. More than this, when business can be done with greater

facility than at present, the total volume of business will undoubtedly be increased, because transactions may take place in a day which formerly required a week.

It is understood that these telegraph letters are sent by mail in envelopes in the usual manner, except that the envelope contains the prepared message ready to be sent through the transmitter, and thus the telegraph office becomes relieved of the preparation of the letters which is not strictly a part of its business. When the system comes into general use, business offices will have their own perforators, and it will become necessary for the operator to learn the telegraph alphabet as a part of his preparation as a stenographer and typewriter. The three-key perforating machine is comparatively inexpensive, but undoubtedly a machine could be devised at an early date, as an attachment to the present typewriter, for the purpose of perforating letters at the same time that they are being written by the typewriter in the usual way. This could be constructed to operate by the use of electro-magnets, and can be attached to a typewriter without interfering in any way with its operation.

The telegraph line of the future will comprise substantial poles carrying a few copper wires worked to their full capacity for transmitting electric signals. The cost of maintenance of such a line when once constructed will be little more than for an ordinary iron wire now used, while its carrying capacity for intelligence at 3,000 words per minute simplex will be about equal to 160 wires used for hand transmission simplex. By duplexing the line, the carrying capacity is doubled and becomes 6,000 words per minute, which is about equal to 160 wires worked duplex, or to 80 wires worked by hand quadruplex.

An Aztec Manuscript Found in Iowa.

The archæological museum at the Ohio State University has become possessed of an Aztec manuscript—the fifth so far known to be in existence in the entire world, and the only one now in America, the others all being in European museums. J. T. Griffith, a laboring man, of Fairfield, Iowa, while engaged in excavating, brought to light what was apparently an ordinary chunk of wood, except that its surface was encrusted with a coating of pitch. The object was found about 3 feet below the surface, the dimensions being 1 foot in length by 8 inches in width, and 5 or 6 inches in thickness. A stroke with the pick caused it to break open, revealing a space that had been scooped out of the center, in which lay a roll of birch bark, covered on one side with strange looking hieroglyphics. The bark is of extreme thinness, and is of the character which was ordinarily employed by the Aztecs in their writings. The hieroglyphics are made with red pigment, and remain fresh and distinct. The natural color of the bark is also well preserved. The three pieces into which the manuscript is divided are from 3 to 4 inches long and from 2 to 3 inches wide. The edges are broken in two or three places, impairing a portion of the writing.

The wooden case in which the manuscript was inclosed is in a fair state of preservation. It is of hickory and the inside is charred. It had been rudely fashioned with a stone ax. But for its coating of pitch it must long since have gone to decay and its precious contents with it. Accompanying the relic were two photographs of the spot on which it was found. The scene is an open prairie, evidently the extreme suburbs of the little city. All doubt is set at rest as to the character of the relic. Its Aztec origin was speedily determined by Prof. Moorehead, whose extensive researches in archæology in connection with the Smithsonian Institute, at Washington, D. C., make him familiar with the signs employed by this race in their writings. Many interesting questions are aroused at sight of this fragmentary reminder of an extinct people.

Electrical Progress.

Electricity Displacing the Locomotive.

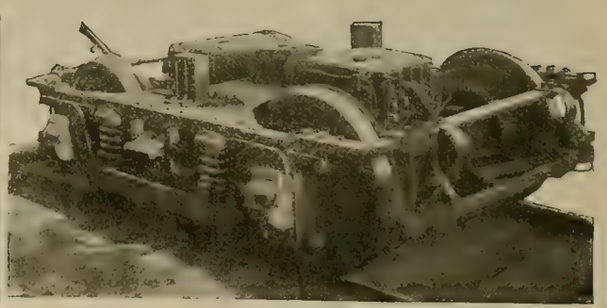
The New York, New Haven and Hartford Railway directorate has made another advance in the application of electricity in the operation of its road, the steam locomotive, the successful operation of this line from the point of view both of electrical efficiency and financial economy tends towards hastening the time when steam locomotives will eventually be relegated to the obsolescence of half-remembered though faithful servants.

This section is the longest section of any railroad in the world, hitherto exclusively operated by steam locomotives, to be equipped for electric traction. The total distance is 12.3 miles.

This system differs in its electrical equipment from that at Nantasket in that the trolley system of contact is not used. That adopted is the third rail system, the conductor or third rail being laid along the center of the track between the running rails.

The boilers are tubular, ten in number, each of 300 H. P., set in two batteries of five each. In the construction of the boiler-front a new method, devised by Col. N. H. Heft, chief of the electrical department of the Consolidated road, who has carried out the entire electrical installation, is followed. The entire boiler front is capable of being taken down without disturbing the rest of the boiler setting, the front being bolted to a plate attached to the dividing wall, instead of to the wall itself

SWITCHBOARD.



VIEW OF BOILER ROOM.

TRAIN, ONE MOTOR CAR AND ONE PASSENGER COACH.

850 KILOWATT DYNAMO DIRECT CONNECTED TO 1200 H. P. ENGINE.

TRUCK OF MOTOR CAR WITH TWO G. E. 2000 MOTORS.

in the electrical equipment of its line running from Berlin to New Britain and to Hartford.

The first electric car was run over the electric-equipped track on the 11th ult. Unlike the experiments at Nantasket and East Weymouth, this length of the newly equipped lines gives it an appearance of permanence, which removes it from the region of new experiments, and, while it is still difficult to predict with any assurance of immediate realization the supersession of

There are two feed water pumps, either pump being capable of supplying water to both batteries at once. The piping from the boilers is in duplicate and will be covered with non-conductive covering. The flues enter a brick stack 125 feet high, located immediately in the rear of the center of the present building.

The projected extension of the building will hold three more, and as each engine will have a capacity of 1200 H. P. the total capacity of the station

when completed will be 7200 H. P. nominal, which can readily be raised to 12,000 H. P. The engine at present in position is a Greene-Corliss improved cross-compound, condensing, rated at 1200 H. P. nominal, with dimensions 28x48x48, 4-foot stroke, running at 100 revolutions per minute.

To the engines is directly connected a General Electric Co. standard 10-pole 850-kilowatt generator of the iron-clad type, with the method of construction of which our readers are familiar. The dynamos are over-compounded and furnish current at 600 volts, no load, and 650 volts, full load. The switchboard in the bay is of the General Electric standard panel type, built up of seven panels, four of which are at present blank. Of the three equipped, two are generating panels, while the third is a totalizing panel. The first two carry automatic circuit breakers, with magnetic blowout, ammeter and the usual generator panel equipment. The totalizing panel carries a form G Thomson recording wattmeter, showing the total output from the generators. A traveler with two cranes—one of 35 tons, the other of 5 tons capacity—runs the length of the engine room. From the switchboard run four cables, each of 850,000 circular mils, cross-section to the third rail.

The top of the third rail is about 1 inch higher than the level of the tops of the running rails. The conductors are bonded, not by the ordinary leaf or stranded copper bond, but by plates of sheet copper ¼-inch thick, 12 inches long and 4½ inches wide. These are fastened to the underside of the third rail joints by means of a drop-forged iron angle-plate bolted by sixteen bolts, eight for each copper plate, on each side of the third rail joint, the nuts being outside the rail. Each bond has a capacity of about 900,000 circular mils, the total bond at each joint having about twice the carrying capacity of the rail itself, while its measured resistance is less than equal length of the 93-pound third rail. One of the most striking facts in this installation is the absence of feeders, entire dependence being placed on the carrying capacity of the well-bonded rail.

On the Berlin branch are four grade crossings. On the New Britain and Hartford line eighteen. At all of these crossings the third rail is omitted, the circuit being continued underground by stranded bare copper cables of 500,000 circular mils, and, in some cases, 850,000 circular mils. These cables are first drawn into creosoted wooden conduits filled with an insulating material made of residuum and asphalt. They are then laid in creosoted wooden troughs in turn filled with the same compound and then boxed over and buried. The broken ends of the third rail are fitted with wooden inclines, or approach blocks, to allow the shoe to rise upon the rail without danger of catching and breaking.

The motor equipment will consist at first of five motor cars. These are open cars 50 feet in length used last season at Nantasket, but deprived of the trolley. Each car weighs about 32 tons. Each is equipped with two G. E. 2000 motors and two "L" series parallel controllers. The car cut-out is a K. automatic circuit breaker fixed beneath the hood. Each motor car is fitted with air brakes, two gongs and a chime whistle.

Air for the brakes and whistle is furnished by a vertical double-cylinder air pump driven by a motor automatically controlled by special switch which is opened when the pressure in the main tank reaches 90 pounds and closed when it falls below that.

Contact is made with the third rail by means of sliding shoes. These are of cast iron 12 inches long and 4 inches wide weighing about 20 pounds. They are suspended by two links from a casting fastened to a beam set immediately beneath the king pin of each truck, connection between motor and shoes being made by flexible cables. The distance between the two shoes is about 33 feet.

Many of the grade crossings are wider than this; and, to avoid carrying the train over the crossing by momentum, another shoe is fitted to each truck of the second car of the train, a connection running from this shoe to the motors. Thus, by the time the last shoe has left the third rail at one end, the first shoe is in contact with the next section of the rail.

Credit for this installation must be awarded to President Clark for the courageous advance he has made in the application of electricity to travel on the steam line, to Col. N. H. Heft, the practical chief of the Electrical Department, who laid out and supervised the installations at Nantasket, East Weymouth and Berlin, and to the General Electric Company, whose long experience and perfected apparatus rendered the installation possible.

Mechanical Progress.

The Limitations of Government in Water-Power Plants.

By MARK A. REPLOGLE, Engineer.

The regulation of the speed of a water-wheel in a power plant is determined by four distinct factors:

1. Changes in load or requirements for power.
2. Time required for gravity to generate power.
3. Capacity of the plant for stored energy; and,
4. The governor or mechanism that should automatically combine the above three factors in such a manner as to obtain even speed or good regulation.

These factors, clearly defined, are bases from which intelligent calculations can be made showing the possible efficiency of government in any water-power plant.

Let it be understood that the word "government" refers to that regularity of motion or speed that is so desirable and necessary in our finest manufacturing and electrical power plants. Absolutely uniform speed can be maintained only when there is no change in the power supply and no change in the friction or work of the plant; but if the above factors are carefully considered and judiciously manipulated or applied, the variations of speed may be so reduced that the results can be called perfect government.

The speed of a plant at all times is a resultant of opposing forces establishing an equilibrium or balance. The power supply has a tendency to increase speed and the work has a tendency to decrease it. Speed may be varied by increasing the power supply or by decreasing the power supply; by increasing the amount of work performed, or by decreasing the amount of work performed; and any one of the above changes causes instantly a change in the speed; but the amount of change in speed depends entirely upon the amount of change in load, the time it takes gravity to generate power, the quantity of energy in store, and the operation of the governor in opening or closing gate.

Since it is impossible for any automatic governor to change the power supply at the instant a change has been made in the load or work of a power plant, it is very plain that there must be fluctuations in the speed. The problem of government is to narrow these fluctuations to such an extent that the speed will be constant as far as practical operation is concerned. The finest government ever obtained consisted of changes in speed, but within narrow limits. The speed of a well governed single-crank engine changes four times every revolution.

The first factor in governing, "the changes in load," is a variable one, and is limited only by the character of the work done by the water wheel. The changes may range from zero to the full power of the wheel instantly, making government a more difficult problem than it would be if the changes were limited in number or quantity. It is plain that if an even speed is retained when a change in load is made, there must be at the same instant a corresponding change in the power supply. This is an impossibility in automatic governing, for several reasons: the speed must change in order to inspire the speed governor; following this, the speed governor causes the valve or gate-moving mechanism to operate, which operation requires time; and again, it requires time for gravity to overcome the inertia of the increased quantity of water that must pass through the wheel before an increase in power can be had. During all this time, the speed of plant has been decreasing if the load was increased, or increasing if the load was decreased, and the amount of change in speed depends entirely upon what ratio the change in load bears to the stored energy in the moving parts of the plant. A heavy change in load will of course cause a greater change in speed before the power supply is changed than a light change in load. The problem is, therefore, to proportion properly the power storage to the changes of load that must be imposed upon the plant, because this power storage, or the capacity to store power, must take care of all changes in load until the power supply, or gravity effects, can compensate for said changes.

The second factor, "time required for gravity to generate power," is more constant than the first. In fact, the limits are established in the construction of the water-power plant, and, of course, remain so. The point we wish to emphasize most in the time requirements is the inertia and momentum effects of the water.

A locomotive can propel a train of cars at a rapid speed; but it takes time to acquire such speed. When the locomotive has brought enough pressure to bear upon the train, it moves, at first slowly, but keeps increasing in speed often many seconds before it reaches full motion. The locomotive may be limited in strength to 250 H. P. per second. The train in full motion may represent 25,000 H. P. for a second. In such case, it will take the locomotive 100 seconds to bring the train to speed if we do not consider the frictional losses. Water has no power in itself; but must be put in motion by gravity in the same manner that the locomotive starts the train of cars, and a long train of water acted upon by a constant gravity effect, is put in motion in the same manner that the train of cars is by the locomotive. It is plain, then, that the time element must be considered in the government of water power. The water wheel cannot furnish power until it brings to rest the water to which the gravity has given motion, and it can receive no power from the water until the water has sufficient motion for the moving wheel to retard. It is also plain that there must be changes in the flow and velocity of water for every change made in the load of the water wheel; also the change in the flow of water must occur before there can be a change in the power supply.

It is well known that water has practically no elasticity; hence, if enclosed in a long pipe, the whole body must be put in motion at the same time. If the pipe or flume consists of several hundred feet of horizontal length and only a few feet of vertical pipe or "head" which alone gives gravity effects on the wheel, it is a similar proposition to the locomotive and train of cars. It is very evident, then, that long horizontal pipes should be avoided in order to reduce to a minimum the time required to get gravity effects, because the speed of water wheels will keep changing, after a change in load, until the effects from gravity can correct it in the power supply.

Gravity effects at best are very slow as compared with steam, and for this reason a water power is handicapped in the matter of government. The logical conclusion is, that in water powers the water or power supply should all be under the direct action of gravity and move in line with it. This reduces the time necessary to furnish increased or decreased power, to the shortest limit.

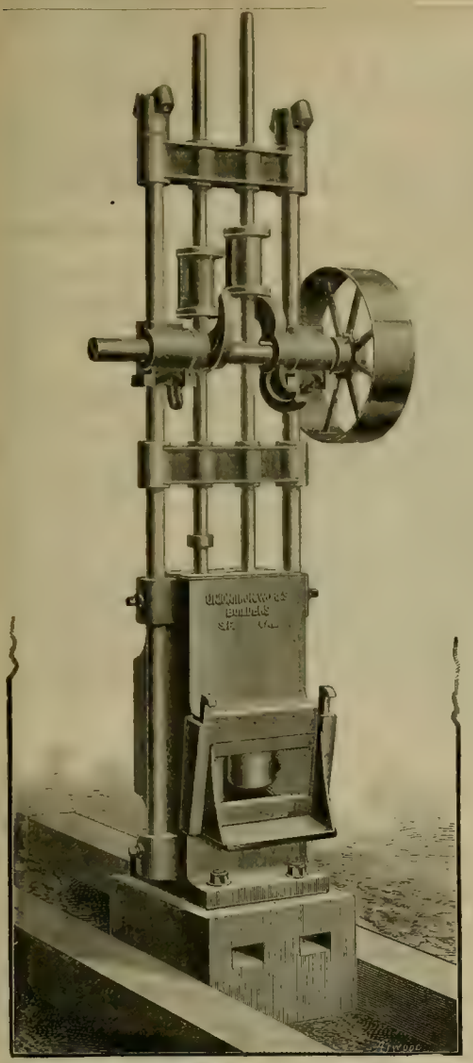
The Use of Compressed Air for Mining Purposes.

NUMBER IV.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

As an instance of the relation of storage to intermittent work I will cite the case of the Banner mine, at Oroville, Cal., that has a compressor having a single double-acting 10½x12 air cylinder; the piston makes 300 feet per minute, and the machine is probably delivering 150 cubic feet of free air per minute. This size of machine is rated by builders as a two-drill compressor, yet it is driving two 3½-inch machines, one 3½, one 2¾, and on occasion a 2-inch also. The united requirements of these machines, should they be running at the same time, would be 285 cubic feet per minute—almost double the output of the compressor. The explanation lies in a very large and unusual reservoir capacity—in fact ten times larger than ordinarily employed with a compressor of that size. The wisdom and economy, however, of such large receiver capacity is apparent and this example should be followed, especially as receivers are very inexpensive.

As an example of the advantage of reservoir capacity with a hoist, I call attention to the hoist at the North Star mine, Grass Valley, which develops 80 to 90 H. P. when running, but calls on the compressor to exert but from 25 to 30 H. P. to maintain it. There are probably not five mines in the State with proper air reservoir capacity, and if it were possible to arrange contracts with the mine owners to yield up 50% of the saving effected by putting in proper pipes and receivers, more than one person could earn a comfortable income by making such changes in this State alone.



Receivers should be placed at any general distributing point in the mine, as well as upon the surface. Anyone managing a mine, by keeping a record for two days only, of the length of time his intermittent machines are running during the day, can readily calculate the proper receiver capacity required.

Coming now to the machinery proper, for the mine, first in order of installation is the hoisting works which we will consider only from the standpoint of economy and utility. It is supposed, of course, that the elements of strength, safety, capacity and everything, have all been properly considered by whomever was the designing engineer. It is almost a rule that a mine that can afford to have an economical transmission plant has use for a hoist of sufficient capacity to enable it to be one of the highest motor type, and for this purpose I should install a compound hoist, direct connected, that is to say, there will be no gearing whatever on the hoist, the shaft carrying the drums being at the same time the engine shaft. The cylinders are proportioned with reference to the initial and final pressures desired, and also with respect to the amount of expansion done by reheating. To get the largest amount of work from a hoist of this character the air should be reheated to about 400° before passing into the initial cylinder. It will be exhausted from there back into the second compartment of the compound reheater, and heated again to 400°; from there it will pass to the low pressure cylinder, perform its work and be exhausted to the atmospheric pressure.

It does not require any particular amount of calculation to show that with this double reheating the volume of the air may be practically increased from 60 to 80%, with a corresponding degree of economy.

For the second reheating there is practically no extra fuel required, the second reheater being placed above the first one and absorbing the heat after it has passed through the first series of tubes. The piping on a plant of this kind should be so arranged that either cylinder can take the high pressure air, for either cylinder exhausts it directly into the atmosphere, as well as the piping for the operation of compounding.

(To be Continued..)

PROSPECTING BATTERY.

UNION IRON WORKS,

222 Market Street, San Francisco, Cal.

THIS : :

Two-Stamp Self-Contained Battery

IS DESIGNED BY

THE UNION IRON WORKS

Expressly for Prospecting Work.

It was awarded First Prize at the recent Mechanics' and Manufacturers' Fair, where it was in daily operation, crushing ores from various mines throughout the State.

Weight of stamps, 275 pounds each; capacity of battery, determined by actual work, 200 pounds per hour, through a No. 7 slot-punched screen.

Entire battery weighs about 3000 pounds; heaviest piece, mortar, weighing 1200 pounds.

Can be taken apart and transported to any locality.

Electrical Engineering Co.,

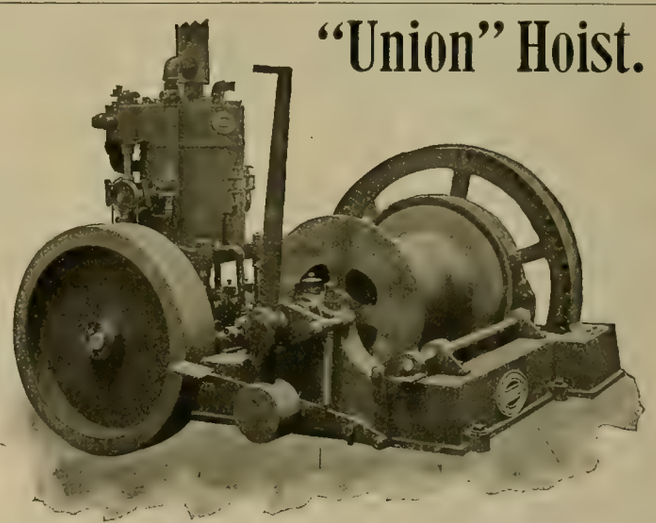
34-36 MAIN STREET,

SAN FRANCISCO, CAL.

Manufacturers of All Kinds of

Electric Machinery

For Mines, Mills and Hoists.



Girard Water Wheel Co.,

34-36 MAIN STREET,

SAN FRANCISCO, CAL.

These wheels are durable, highly efficient, and are the only wheels which have perfect regulation, which feature makes them especially suitable for the operation of electric machinery.

"Union" Hoist.

The above cut represents our 10 h. p. Double Cylinder Engine of latest type, and Hoist combined on strong iron base. This hoist is designed to raise one ton 125 feet per minute from an inclined shaft, or 1500 pounds at the same speed vertical lift. The drum will hold over 600 feet of ⅝-inch cable. The outfit weighs 3500 pounds.

THE UNION GAS ENGINE CO.

—BUILD THE—

"Union" Gas Engines,

Which use either Manufactured or Natural Gas, Ordinary Stove Gasoline (Naphtha or Benzine), Distillate or Kerosene.

STATIONARY ENGINES for All Kinds of Work, Built in Sizes from 3 to 200 h. p.
"UNION" COMBINED HOISTS in Sizes from 2 to 40 h. p.
"UNION" COMBINED COMPRESSORS—20, 30, 40 h. p.
HOISTS and COMPRESSORS Can Be Built in Larger Sizes to Order.
"UNION" MARINE ENGINES, 4 to 200 h. p., of Single, Double and Four-Cylinder Types.
TEN YEARS' EXPERIENCE Building Gas and Oil Engines.
"UNION" ENGINES Are In Use All Over the United States.
"UNION" ENGINES Are Simple, Durable and Economical.

Office: 314 HOWARD ST., SAN FRANCISCO, CAL.

Coast Industrial Notes.

—The San Joaquin Valley Road is now completed to Hanford, Cal.

—Williams, Arizona, is to have the largest creosote works west of the Rocky mountains.

—The California Wine Association has cut the price of California wine to 22 cents per gallon.

—A $75,000 steam tug is to be built at the Mare Island Navy Yard for the Port Orchard dry dock.

—The principal shops of the Atlantic & Pacific are to be removed to Los Angeles from Albuquerque.

—The track on the Sierra Railway has been laid to Maxwell, twenty-five miles east of Oakdale, Cal.

—The S. P. and U. P. roads have established closer commercial relations, and northern business over the S. P. will go via Sacramento.

—Colonel Suter will shortly let contracts for improvement work in Oakland harbor, for which the sundry civil bill carries appropriations of $680,000.

—A Stockton, Cal., harvester works is building a machine that will cut a swath 50 feet wide through a field of grain. It will be drawn by thirty horses.

—A concession recently granted by the Mexican Government to Jesse Grant and associates calls for the development of the different resources of Lower California.

—The Treasury Department announces that the supervising architect's office will be ready to advertise for bids for the construction of the San Francisco postoffice by the 15th inst.

—The orange shipments from Riverside, Cal., for the season aggregate 707,440 boxes. Nearly 100 carloads more will be shipped, bringing the season's total up to over 2500 carloads.

—A press dispatch announces that the Missouri River and Los Angeles Railway Company, capitalized at $420,000,000, was incorporated at Dakota City, Neb., last week. It plans to build a line from the Missouri river to the Pacific.

—A decision by the United States Land Commissioner at Los Angeles invalidates the title to the Morena reservoir site, wanted for a city water system for San Diego, and prevents the fulfillment of the $1,500,000 contract between the city and the water company.

—The San Francisco chemical works are adopting a new system in their manufacture of sulphuric acid. Instead of buying sulphur direct, they buy sulphurets from a mining company, by roasting expel the fumes, and thus secure the base for the manufacture of the acid.

—The bonds for the completion of the entire canal system of the Turlock Irrigation District have been sold and the work of construction will be pushed to completion. The district comprises 176,000 acres in Stanislaus and Merced counties. Eight hundred thousand dollars has already been expended on the canal and diverting dam.

—It is reported in Tacoma that the Blakeley Mill Company has awarded A. S. Kerry a contract to cut 180,000,000 feet of timber standing along the Stillaguamish river, in Snohomish and Skagit counties. About 20,000,000 feet will be cut annually. Eighty men are at work building a seven-mile logging railroad from Port Susan on the Sound into the heart of the timber.

—At Eureka, Cal., the Excelsior Redwood and Humboldt Logging Company wants the privilege of extending their railroad from Freshwater over the State tide lands to Woodley island, three and a half miles, where they will construct an 800-foot wharf, warehouses, booms, etc. The company is also contemplating the building of a modern redwood mill at Freshwater, the entire plant to be run by electricity.

—The new State Department of Highways has been organized, and will establish a system of State, county and district highways, exploring every part of the State for the best and economical supplies of road materials, keeping up the agitation for good roads, holding public meetings, publishing road information, advising road-builders everywhere, and getting ready a batch of road laws to risk on the next Legislature.

—The Auditing Board of the Commissioner of Public Works has agreed to authorize the engineers to have the Newton Shoals in the Sacramento river bored, to ascertain the nature of this menace to navigation, and they were also authorized to formulate and present at the next meeting, or as soon as possible, an estimate of the probable cost of the proposed work on the Sacramento and San Joaquin rivers, and to consult and act in conjunction with Captain C. Gillette.

—The plant of the Shasta Lumber Company which failed some time ago for nearly $1,000,000, has been sold under a trust deed to the San Jose Deposit Bank of Savings of $100,000 to the Friend & Terry Lumber Company. The property includes a broad-gauge railroad sixteen miles in length from Anderson, Shasta county, to the end of the company's flume; a flume thirty-two miles long, carrying 2500 miners' inches of water; a box factory and drying kilns at the dump end of the flume; a complete sawmill plant with a capacity of 10,000,000 feet of lumber a season, and 28,000 acres of Shasta county timber land, on which, it is claimed, are 500,000,000 feet of lumber in sight.

—Word comes from Hermosillo, Mexico, that the formal transfer of the Sonora railway to the Southern Pacific by the Santa Fe took place June 1. It is announced that substantial improvements will be made. It is also stated that Hugh Tudor Richards, formerly general manager of the Sonora railway and holder of a concession for orange lands, has procured an option on the Occidental railway of Sinaloa. Richards represents a syndicate whose intention is to complete the road to Durango and also make its port terminus in the harbor recently discovered by Colonel Wrotnosky, twenty miles south of Altata, at the new mouth of the Culiacan river.

—The discovery of one of the largest coal fields in the world is reported to the State Department by the United States consul at Carthagena, Colombia: "The fields are in the department of Bolivar, in Colombia, eight to twelve miles from the Bay of Cispati, and 48 miles from Carthagena. The coal is semi-anthracite and anthracite, and is good steam coal. The fields contain about 300,000,000 tons, and comprise about 215,000 acres."

—A Russian correspondent informs London *Machinery Markets* "that there is now a great opening for locomotives and wagons in Russia. He states that the Russian railways require 300 locomotives at once, and more than 1,000 wagons annually, and he suggests that a company should be formed with a capital of about 3,000,000 rubles to establish wagon and locomotive works near the newly discovered iron and coal mines in the south of the empire. Such a company, he estimates, might fairly expect to receive dividends of from 15 to 20 per cent."

—In a letter from James J. Hill to a Western senator on the remarkable increase in the export trade in flour to China and Japan, Mr. Hill stated that, of the last year's crop of wheat of the Pacific coast States, about 28,000,000 bushels or its equivalent in flour has gone across the Pacific to make bread for Asiatic consumers. This is about 20 per cent of the whole crop of that region and the effect of this new commercial movement has been to raise the price of wheat in California, Oregon and Washington materially. Of the gain of 20 to 25 cents per bushel in present prices over the lowest range in recent years, Mr. Hill attributes 15 to 18 cents to the withdrawal of the Pacific wheat from European markets. Mr. Hill errs, however, in allowing the inference to be drawn from his letter that the entire new movement of flour to Asiatic countries is to be attributed to the establishment of a line of Japanese steamers sailing from Seattle in connection with the Great Northern Railroad. The real fact is that these Japanese boats have thus far taken out only three cargoes, and that a large part of those cargoes consisted of flour coming over the Northern Pacific Railway to Seattle. Without the help of the Northern Pacific the steamers would not have been able to get cargoes. The new Japanese line is maintained in part by a subsidy from the Japanese Government. It has materially reduced the ocean freight rate, but a reduction of perhaps 10c a barrel on three cargoes of flour by no means accounts for the great Asiatic demand. That demand has been growing steadily for a number of years. But this comparatively new commercial movement seems destined in time to absorb the whole wheat surplus of the Pacific coast States, and to maintain a price for wheat in those States equal, at least, to that which prevails in Chicago and Duluth. The benefits to the agricultural communities and to the towns and cities of the Pacific coast will be very great. An addition of 10c to 20c per bushel in the selling price of wheat in that region means a large measure of prosperity to the whole community.

Commercial Paragraphs.

THE Colorado Iron Works are putting in a 20-stamp mill on the Lucky Boy, in the State of Idaho. They have shipped a 10-stamp mill to Mexico. They are supplying two slag cars for the Arkansas Valley smelter at Leadville, and one car to the United Verde Copper Company of Jerome, Arizona. They have recently equipped the Beam gold and silver process mill with a set of 14x27 Cazin rolls.

THE Fulton Engineering and Shipbuilding Works, 213 First street, San Francisco, are putting in a complete cyanide plant for the Montana Co., Ltd., Marysville, Montana, including six tanks, each 30 feet diameter, air compressor, conveying apparatus, etc. They are also delivering two underground hoists, complete, to the Alaska-Treadwell Co., one 10x12, the other 5x7, and furnishing a complete hoisting outfit to the Gold Blossom mine, Ophir district, Placer county, Cal.

Recent California Mining Incorporations.

Crawford G. M. Co., San Francisco; E. Painter, E. M. Adams, C. Bier, M. R. Philips, J. M. Downer; capital stock, $100,000—subscribed, $250.

Belle M. Co., San Francisco; W. C. and R. E. Murdoch, H. F. Emeric, T. W. Wells, G. Blake; capital stock, $1,000,000: subscribed, $150.

Giant G. M. Co., Oakland, Cal.; K. A. Hughson, A. H. Ackerman, W. G. Hawkett, G. L. Nusbaumer, N. K. Foster; capital stock, $100,000; subscribed, $50,000.

Personal.

THOMAS J. BARBOUR of this city went to Butte, Montana, last week.

SCHUYLER DURYEE of New York has been appointed manager of the Gold Creek mines in Nevada.

MARSDEN MANSON has been elected President of the new Department of Highways of California.

C. W. WATSON has been appointed manager of the Winnamuck mine at Bingham, Utah, by the new owners.

W. S. HUTCHINSON has been appointed manager of the American Development Mining Company's properties at Gibbonsville, Idaho.

ALEXANDER HILL, until recently manager of the Mountain Copper Company, in Shasta county, Cal., has gone to London on mining business.

GENERAL E. C. HUMPHREY of Denver and Frank H. Pettingell of Colorado Springs, Col., arrived in San Francisco last Tuesday and are staying at the Palace.

MARCO VAROZZA has been appointed by the Governor Lake Tahoe wagon road commissioner. The last legislature appropriated $10,000 to construct and maintain a road from Placerville to Lake Tahoe.

CHARLES S. HERZIG, mining engineer, formerly with the Anaconda Mining Company in Butte and lately with the Boston and Montana Company of Great Falls, Mont., left on May 31st to take a position as engineer for the Playa de Oro Mining Company at their mines in Ecuador, S. A.

Recently Declared Mining Dividends.

Le Roi, Rossland, B. C., $25,000; payable May 29; the total to date is $400,000.

Pennsylvania mine, Grass Valley, 5 cents a share; payable June 1.

Daniel Best Crude Oil Engine,
Kinkead Quartz Mill,
Smith Striking Stamp Mill.

Springer Ore Concentrator,
Truax Ore Cars,
Rock Breakers, Hoists, Etc.

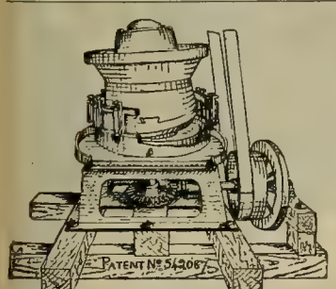
Why the Springer Concentrator is the Best:

It will do more and cleaner work than any rubber belt machine.
It weighs only one-half as much as some of the six-foot concentrators.
Is the most simple in its construction of any machine in the market, and only one-third as many pieces in it as in some of the others. Was invented by an old miner of forty years' experience handling every known concentrator on the market.
Should any piece need repairing, it can be removed without disturbing any other part of the machine.
Can be set up by any inexperienced miner.
Its distributor is perfection itself, distributing the pulp evenly over the entire surface of the belt.
Grade of shaking frame can be changed while the machine is running at full speed.
It is the strongest, lightest running and most inexpensive to keep in repair of any
Will save more of the fine slimes than any other machine.
Is cheaper than any other six-foot machine, costing only $350.00 f. o. b. cars or boat, San Francisco.
Will handle the pulp from five stamps better than any other Concentrator.
Has adjustable eccentrics, and any length of stroke can be had, thereby giving different speeds per minute.
The belt is very durable, being made of No. 3 Canvas, woven especially for the Springer concentrator.
This machine requires so little attention that one man will easily attend to a dozen of them.
It has a solid rubber flange, which no other canvas belt has.
Wear and tear upon this machine is not one-third as much as upon some of the other concentrators.

THE HALLIDIE ROPEWAY

Stands pre-eminent for the transportation of Ore, Fuel and other materials over mountainous and rugged country.

Parties desiring to remove large quantities of Sand, Gravel, Earth, Ore, Rock, to construct Dams, Levees or Embankments, etc., can do more efficient work at less cost by the



Hallidie System of Ropeway Transportation

Than by any other known system.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

FOLDING GATE.—John T. McCormick, San Francisco, Cal. No. 583,235. May 25, 1897. This invention relates to improvements in that class of gates which are designed to form a temporary lattice or open work closure for passages or hall-ways, windows, and for other like purposes. It consists in a means for making the gates more rigid and lighter than the ordinary constructions. The vertical bars are made angular in cross sections, having slots or channels formed in them and diagonally disposed connecting bars extend between these vertical bars, angular blocks fit the interior angles of the vertical bars, and by means of slots are slidable vertically therein, pins extending from the blocks through the slots and connecting the blocks with the angular bars. Horizontal bars are fixed to the inner ends of the gate sections entending through slots or other connections in the vertical bars, and being cut away and adapted to overlap at their meeting ends so that these overlapping ends when the gate sections are extended are united by two or more of the vertical bars which slide over them, thus greatly increasing the rigidity of the structure.

CARBURETOR.—B. L. Ryder, San Jose, Cal. No. 583,126. Dated May 25, 1897. This invention relates to that class of vaporizers of gas generators especially adapted for use in connection with explosive engines in which gasoline or other vaporizable liquid is supplied to an absorbent material through which air is drawn to form an explosive mixture. The invention consists of an exterior shell, having a recess of depression for the vaporizable liquid in its lower portion, a protecting shield around the well having its bottom apertured and its top provided with a screen, a cap for the casing having a downwardly extending flange, an outlet pipe passing through the cap, a holding ring suspended from the flange of the cover having a diameter sufficiently less than that of the shell or casing to leave a circumscribing space, also being sufficiently shorter to leave an underlying space, an inlet for the liquid directing it to the absorbent material and into the well with a valve and float and intermediate connections whereby the valve and the air inlet are automatically operated.

LETTER COPYING PRESS.—Martin P. Boss, San Francisco, Cal. No. 583,245. Dated May 25, 1897. This invention relates to that class of copying presses for letters and other documents in which a vertically movable presser plate descends upon the copying book with its confined pads and letter, and forces the book against the bed-plate. It consists essentially of a tilting pressure-plate adapted when raised from the book to tilt by gravity to afford space for the removal and insertion of the book with a minimum of adjustment. It also consists in a lever and novel connections whereby the plate is operated and in combination with the operating connections of a means by which the initial adjustment of the pressure plate is effected.

Scientific Books Our catalogue S is sent free for the asking. It lists books pertaining to all the sciences. A copy should be had for ready reference by those desiring electrical, medical, engineering, scientific, mining and technical books, which we sell to everybody at wholesale prices.

A Great Mining Triumph.

Capt. J. R. DeLamar, of New York City, is one of the largest owners and workers of Gold Mines in the world. After the most careful investigation he purchased in August, 1895, two Griffin Mills, and his report is so remarkable as to demand the careful attention of every one interested in Gold Mining. We give it in his own words.

NEW YORK, Jan. 9, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—The two Griffin Mills have been in operation now for 90 days on the hardest rock, with the exception of corundum, that I have ever met during my mining life. They have taken the rock direct from the breaker and they average about 20 tons to each machine, 40 mesh fine, without elevating or bolting. We simply put a ¼ mesh screen around the Griffin Mill, and the stuff comes out 40 mesh fine or over, which makes it an excellent pulp for leaching by cyanide or chlorination, therefore we have concluded to order **10 more Griffin Mills.** We have tried high-speed rolls and dry stamps, and after looking into the Huntington Dry Pulverizer, the Narod Pulverizer, the Stedman Pulverizer, the Frisbie Lucop, the Cook, and various other dry pulverizers, unhesitatingly recommend your Griffin Mill to any one.

Yours truly, (Signed) J. R. DELAMAR.

HOW 10 GRIFFIN MILLS WORK.

DELAMAR'S NEVADA GOLD MINING CO.,
SALT LAKE CITY, UTAH, Nov. 24, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—In answer to your inquiry as to what the "Griffin Mill" is doing at our DeLamar Mill, DeLamar, Nevada, we beg to state that we often run 150 tons per day with 10 of your mills in operation, and on one occasion these 10 mills produced 408 tons in one day. I have no hesitancy in stating that they will regularly produce at least 30 tons per day each on our ore, which is extremely and unusually hard.

Yours very truly, H. A. COHEN, *General Manager.*

These strong letters coming from such representative men are conclusive evidence that we are right in claiming that the "Griffin Mill" will produce a larger amount of finer pulp at less cost than any other stamp or pulverizer made.

Let us send you a free copy of our illustrated pamphlet, which will tell you all about the Mill and bring to you other evidence of its great achievements.

BRADLEY PULVERIZER CO., 92 State St., Boston, Mass.

The right of the advertiser to know the measure of his purchase in circulation is no less than the right of the publisher to know the weight of print paper received from the mill.

VULCAN ROPEWAY

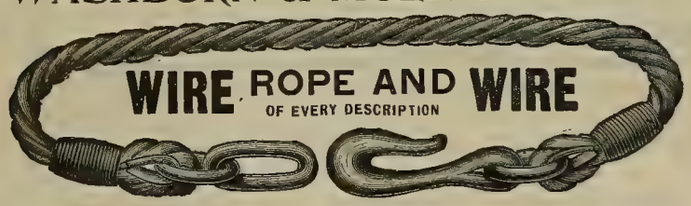
—WITH—

AUTOMATIC ORE LOADER AND AUTOMATIC DUMPING DEVICE.

For Conveying Ore, Cordwood, Etc.

EMPIRE, NEVADA, April 17, 1896.

Vulcan Iron Works.—GENTLEMEN: The Ropeway furnished by your company to convey tailings from Morgan Mill to Mexican Mill, a distance of seven-eighths of a mile, is giving entire satisfaction. We transport 200 tons of tailings in ten hours; one man does the whole business, including elevating tailings from hopper in the ground, operating Vulcan self-loader, and attending to the Ropeway generally. The self dumper requires no attention whatever. The Vulcan loader I consider the best feature in the whole Ropeway, making it possible for one man to load 200 tons in ten hours.



Yours very truly, J. P. WOODBURY, Supt.

Our 100 page illustrated catalogue FREE.

Cheap Power!

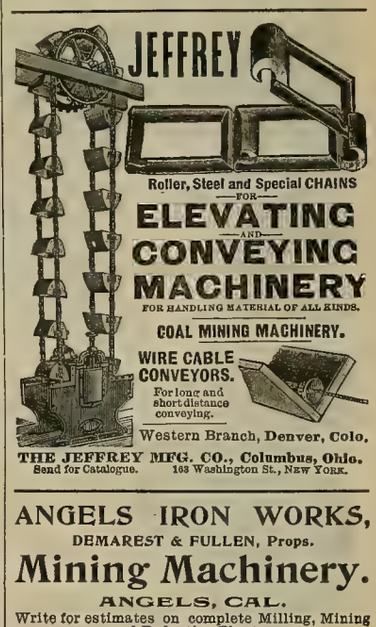
SAVE MONEY BY USING

—THE—

"DANIEL BEST" Crude Oil Engine.

This Engine can be operated on either Crude Oil, Distillate, Gasoline, or Kerosene. **It is the cheapest power on earth** and is not tied to any one kind of Oil, but can use any kind that will make gas and is not handicapped by being compelled to use a certain Oil. Do not forget this when in need of an Engine.

We guarantee our Engines to work perfectly on California Crude Oil, or Distillate, or any other kind of gaseous Oil; we however prefer CALIFORNIA CRUDE OIL, from Coalinga, Fresno county, for the reason that gas from Crude Oil will produce more power from the number of feet of gas used than from any other Oil, and it is also a natural lubricant as well, the valves being always lubricated sufficiently to prevent them from sticking, thus assuring greater durability of the working parts than it otherwise would be in using dry gas. And another advantage we claim is, that danger from explosions is reduced to a minimum, there being no accumulation of gas, but is used by the Engine as fast as it is generated and hence is absolutely safe. The following is a test that we made with one of our Five-Horse Power Crude Oil Engines, running ten hours on the different gas oils:



California Crude Oil, 40 grav.,	7½	gals. at	5c.,	$.37½
Distillate	40	" 7½	" 8c.,	.60
Domestic Coal Oil	40	" 7½	" 12½c.,	.93¾
Gasoline	74	" 8¾	" 15c.,	1.31¼
City Gas	1000	feet,		2.00

We manufacture all sizes from two-horse power up, and will guarantee that our Engines will run cheaper and are more simple in construction, have fewer parts and hence are more durable than any other Gas Engines on the market. Seeing is believing; don't take our word for it, but come and investigate for yourselves. You can always see one in operation at our works. We will be pleased to see you and will at all times take pleasure in showing them up. Our Engines are specially adapted for running well and mining machinery—in fact, for any kind of power desired. We are the pioneers and first inventors of Crude Oil and Distillate Engines. **We always lead and never follow.** Send for Catalogue and Price List of the only genuine Crude Oil and Distillate Engine made.

PELATAN-CLERICI PROCESS.

Patented in U. S. and Other Countries. Capital, £100,000.

London Head Office.....8 Drapers Gardens.

Laboratory and Ore Testing Plant, 1530 Wynkoop St., Denver, Colo.

This process has a well-demonstrated merit in treatment of low-grade Gold and Silver Ores, especially those of a complex character, talcose and clayey combinations or slimes, which class of ore, as is well known, cannot be treated by leaching or lixiviation.

Gold and silver values, both fine and coarse particles, are by the PELATAN-CLERICI PROCESS recovered direct from ore without roasting as pure amalgam, and the precious metals are saved in the form of fine bullion without any refining costs.

F. CLERICI, Manager for U. S.

IMPROVED PORTABLE HOISTING ENGINES.

Improved Self-Contained Three or Five Stamp Mill,

Saves bill for heavy timbers, millwright and mechanics' labor, and a large amount of space. The term self-contained means a great deal for the mine owner, and can be readily recognized and appreciated in making an estimate for an ordinary plant when the comparative cost is considered.

FIRST: There is saved a large bill for heavy timbers, in many instances obtained at great expense and loss of time.

SECOND: The saving in millwright and mechanics labor in framing and erecting.

THIRD: The large amount of space saved.

FOURTH: The great saving of freight,

THE WOODBURY ORE CONCENTRATOR WITH IMPROVED BELTS

was awarded the Highest (Bronze Medal) Premium at Mechanics' Institute, 1890 and 1891. MORE THAN DOUBLE THIS CAPACITY with one-half less power and occupying less than one-half the space of any other concentrator. Built of best Steel and Wrought Iron. Strong and durable. Price $575 f. o. b. Send for Catalogue and Testimonials. The annexed cut shows the belt in its improved form, which consists of corrugated edges, to form an expanding top edge. THE IMPROVED MACHINE HAS THE FOLLOWING MERITS: First—The Improved belts, which consist of seven, are constructed and arranged so as to allow each belt to receive a portion of the pulp in such a manner as to relieve the machine of its load, thereby giving it twice the capacity of other concentrators, and enabling it to work from 12 to 15 tons of ore per day. Second—The machine equalizes the load by several compartments, thereby working more regularly and with much less attention than is necessary to give other concentrators using wide belts. Each of the belts on this machine takes care of the pulp that is allowed to it—in this way preventing the pulp from running to the lower side of it, as is the case when a machine becomes out of level where wide belts are used. Third—The belts run on a perfect line, needing no adjustment to prevent their running from side to side, as in other concentrators. Fourth—The belt surfaces are improved by indentations and corrugations, causing the Concentrator to save fine sulphurets and quicksilver, and perform close work. Fifth—The belts have fluted or corrugated edges, to form an expanded top edge, which effectually prevents from cracking. Sixth—The feed arrangement is perfect. Seventh—The machine is constructed of iron, with steel crank-shaft self-oiling boxes, and everything made in the most thorough manner, enabling it to run with very little attention or wear.

Geo. E. Woodbury,
Manufacturer,
141 to 143
First St.
San Francisco. Cal.

PATENTED, Aug. 19, 1890.

This Concentrator took the 1st prize at the San Francisco Mechanics' Institute in 1890, 1891 and 1892, and at the California State Fair in 1892; it took the 1st. prize at the World's Columbian Exposition 1893, and at the San Francisco Midwinter Fair, 1895.

THE GUTTA PERCHA AND RUBBER M'F'G CO.

30 and 32 FREMONT ST., SAN FRANCISCO.

Spadone's Concentrator Belts. Patented.

The "SPADONE" Curved Edge Concentrator Belt is attracting much attention among mining men, its merits appealing to the millman of practical experience.

Illustration (Fig. 1.) shows a cross-section, and (Fig. 2.) shows the edge flanging outwardly as it passes over the pulley. This relieves the strain from the top and bottom of the edge by directing the strain automatically to the inside face surface of the edges. Heretofore all belts have been so constructed that when they pass over the pulleys or rolls, a direct strain comes upon the top or at the base of the edges, causing the edges to break away from the body of the belts in a very short time. *We avoid this Mechanical Defect by our Spadone Curved Edge.* Belts made to fit any machine—4, 5 and 6 feet wide. Prices and samples on application.

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.

This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly, [SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession. ✦ ✦ ✦

Market Reports.

The Markets.

SAN FRANCISCO, June 3, 1897.

With the grocery and hardware trade the volume of goods going out is in excess of last year, but the value footings do not show much difference, owing to the lower prices ruling, caused largely by strong competition. The very general opinion prevails with the trade that in many lines better prices ought to rule this fall, and also that there should be a large increase in the volume of goods going out. This opinion is formed from confirmed advices through correspondence and also by information by traveling salesmen that crops in this State, and, as for that, throughout the Coast, will be larger than last year. This will call for the employment of more hands. Besides this, there has been a steady influx of miners and others into new mining districts. There has been, also, an accession to the population in the older mining districts by reason of renewed activity in gold mining, with older mines being more actively worked, abandoned ones being opened up, and work being done on new property.

The local money market is practically unchanged. The call for funds is light, considering that the harvest season is at hand. It is stated that about all requirements are being met by interior banks, while each week there are shipments of stuff on which advances have been made. This unties more funds. It is a disputed point, as yet, regarding requirements for crop-moving purposes. This, no doubt, is due to no definite information as to whether farmers will generally meet the market by selling their grain or store the larger proportion. If the latter is done then more money will be required. The movements of green fruits to the East are assuming larger proportions, which is giving more Eastern exchanges, yet the supply is not up to the demand yet, which causes high rates of premiums to rule. The East reports a continued plethora of available funds, but with a revival of dealing in speculative securities, there is an improving inquiry for call loans. The commercial and manufacturing interests are not in the market for funds to any extent, as yet. European advices report easy money markets with good loans quickly placed.

New York Silver Prices.

NEW YORK, June 3.—Following are the closing prices for the week:

	London.	N. Y.
Friday	27 9-16	60⅛
Saturday	27 9-16	60⅛
Monday		
Tuesday	27⅝	60⅛
Wednesday	27 9-16	60
Thursday	27 9-16	60

	Copper.	Lead.	Iron.	Tin.
Fri.	10 75 @11 25	3 25	10 00@12 00	13 60
Sat.	10 75 @11 25	3 25	10 00@12 00	13 60
Mon.	@	@	@	
Tue.	10 90 @11 25	3 27½	10 00@12 00	13 55
Wed.	10 90 @11 20	3 27½	10 00@12 00	13 45
Thur.	10 90 @11 20	3 27½	10 00@12 00	13 45

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	15c Prem
New York Telegraphic Transfer	17½c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.85
London Sight Bankers	$4.88½
Refined Silver, per oz., 1000 fine	60
Mexican Dollars	49@50

SILVER.—The market at the East has strengthened slightly, in sympathy with London, which moved up a peg under a little improvement in the demand from India. The wants of China and the Straits continue small, compared with previous years. Press telegrams from abroad report changing views regarding bimetallism. It is stated that there is a growing sentiment favorable to an international convention on the subject. It looks, if this is so, as if the market value of the white metal ought to advance; therefore the reports are discredited or else exaggerated.

MEXICAN DOLLARS.—The demand continues light and confined to small quantities. Large remitters prefer exchange, which can be had for slightly less money.

QUICKSILVER. — The market is fairly steady. Export clearance for Mexican ports the past month aggregate 100 flasks.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—Our market is steady. Eastern advices are practically unchanged. The production continues large, which keeps prices slightly in favor of buyers, notwithstanding the very heavy consumption abroad.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	½ & 5-16, 20c; ⅜ and larger, 17

TIN.—The market for pig at the East and abroad strengthened some, but towards the close they were easier. Our market held steady. The tone is said to be firm both at home and abroad.

We quote as follows in a jobbing way:

Pig, per lb	14c@ —
Plate, I C coke, heavy, per box	$4 00@ 4 15
" " " light, " "	3 90@ —

LEAD.—There is a good consumption demand both here and at the East, but it is met by sellers without any advance in prices.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—There is a fair jobbing demand.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—The demand from the mines seems to be increasing.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—The feeling is stronger in anticipation of higher tariff.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—Our market is irregular, with some cutting reported. At the East there is continued strong competition between sellers. Shipments abroad continue to be made by Southern furnacemen.

AMERICAN.	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50
ENGLISH.		
Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—The consumption of steam shows a slight increase. Imports are lighter. The market is reported steady.

We quote as follows:

SPOT FROM YARD—PER TON.	
Wellington	$8 00@— —
Greta	6 00@ 6 50
Nanaimo	6 50@ 7 00
Gilman	5 50@ 6 00
Seattle	5 50@ 6 00
Coos Bay	—@ 4 75
Cannel	8 00@— —
Egg, hard	12 00@13 00
Wallsend	6 50@— —
TO ARRIVE—CARGO LOTS.	
Australian	5 50
Liverpool Steam	6 25
Scotch Splint	— —
Cardiff	6 25
Lehigh Lump	9 00
Cumberland	13 00
Egg, hard	10 00
West Hartley	6 50

COKE.—The market is quoted as follows:

Gas Companies'	— —		— —
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is dull and easy.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7⅛c for Cookson's, 6⅞@7⅛c for Hallett's and 6⅞@7c for Japanese.

NAILS.—The market is strong at an advance, with still higher figures looked for.

Wire, carloads, basis per keg	— —
" jobbing, " "	$2 35
Cut, carloads, " "	— —
" jobbing, " "	2 25

PLATINUM.—Very little doing.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is firm at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steady.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

There is absolutely nothing new to report in our market. Tariff legislation is being watched and until the character of the bill is well assured no changes are looked for. Outside of a slight advance in sal soda at the East, no changes are reported there.

SPELTER.—The market is slow but holders are firm.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—The market is firmer.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is easy.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—There is a good shipping demand.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is steady at 3c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a fair demand at 2½c a pound from stores.

NITRATE OF SODA.—The movement is light.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL. — Our market is fairly steady.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, June 3, 1897.

The market has been spasmodically active with the bulk of trading reported in the informal session, when cross-orders worked successfully to either depress or advance prices. Chollar continued the leader for shares in the middle group of mines and Con. Virginia for the north end. The south end or Gold Hill shares did not sympathize much. Chollar fluctuated between $1.10 and $1.25 and Con. Virginia between $1.75 and $1.95. The showing of ore in the former on the Brunswick lode ought to cause better prices, and would have done so years ago, before the trading public lost considerable confidence. Last week over 260 tons of ore was extracted and milled which assayed over $20 in gold and 18 ounces in silver to the ton. This is a good showing, when it is remembered that work in the mine has shown up large quantities of ore that can be extracted at a profit. From the general tenor of our advices the ore runs into Potosi, and it ought not to cause surprise if the latter mine prove the richer. This, of course, can be determined only by running a crossdrift in Potosi near the Chollar line. The work that is being done in Con. Virginia is showing well for the mine. It looks as if it is being done for the purpose of more fully developing the ore found in the workings from the 1650-foot level, for the purpose of extracting more ore; but it takes considerable to meet the current expenses of the company, owing to the amount of active work that is being done. Last week 115 tons of ore were raised and milled, which went over $72 to the ton. News from the long joint west crossdrift of Con. Imperial-Challenge-Confidence was at last official advices in soft vein matter, which affords encouragement to long-suffering shareholders. Unless the work is stopped, it ought to strike the west lode within the next sixty days; but before this is done they may have to quit work temporarily, so as to let the water drain off, which common report says is in the west. The Standard Company, in the Bodie district, is getting everything in readiness for a more active season, both in the mine and milling of ore. It is the belief that the company will resume dividends before the year is out, notwithstanding it is said to be under considerable expense at present to get everything in readiness.

The news from the mines state that in about all good work is being done when the number of men employed is taken into consideration. In Utah they have started a north drift from the main west crossdrift. Work in the east crossdrift has been suspended. The west crossdrift from the Layton tunnel in Sierra Nevada has been extended a total distance of 450 feet without anything of special mention being discovered. Work is continued in it. In Union work is confined to the 900-foot level. They have started a south drift. The south drift on the 1000-foot level of Mexican was extended in 17 feet in a southwesterly direction. Total distance is about 180 feet. It passed through porphyry, seams of clay and streaks of low-grade quartz; total distance 174 feet. In Ophir work is confined to the central tunnel and 1000-foot levels. No change is reported in the west crossdrifts that are being run on these two levels. The official letter, which is confirmed by private advices, reports active and interesting work on the 1650-foot and 1750-foot levels. It indicates that considerable ground is being opened up for working more advantageously. As noted in the introductory above there was an increase in the number of tons taken out and assay value also. The work by Best & Belcher and Gould & Curry is done jointly to the east from the 800-foot Bonner shaft level. The distance in is about 500 feet. In Andes they are still running the north drift on the 175-foot level. In Savage and also Hale & Norcross there is nothing new to report. No work in Chollar. The work in Potosi is said to be largely of a dead character preparatory to more active work later on. The north drift in Bullion is being driven slowly ahead. They are driving ahead on the west crossdrift on the 500-foot level in Alpha. At last advices they were in a little over 500 feet. Particulars are given above about the Con. Imperial, Challenge-Confidence joint west crossdrift. In Confidence they are not raising ore, but they are in Overman. The latter milled over 130 tons going over $30 to the ton. Fair progress is being made jointly by Yellow Jacket, Kentuck and Crown Point to the west. From Crown Point nothing new is at hand. In Belcher private advices indicate more active work before long. Ore continues to be raised. They are still working on the 725-foot level of Alta.

From the Brunswick lode there is nothing new reported in the joint work of Con. Virginia, Best & Belcher, and Gould & Curry; neither is there anything new from Savage. Work in Occidental is continued on the 550-foot and 650-foot levels, with varying encouragement. In Chollar, work is being done from the 200-foot level to the 600-foot level. Persons familiar with the situation express satisfaction at the way the work is being done. This is always the case where large quanti-

MINE BELL SIGNALS. **Adopted, Used and in Force in Accordance with State Law.**

FOR THE CONVENIENCE OF OUR READERS IN THE MINING COUNTIES WE PRINT IN legal size, 12x36 inches, the Mine Bell Signals and Rules provided for in the Voorhies Act, passed by the State Legislature and approved March 8, 1893. The law is entitled "An Act to Establish a Uniform System of Mine Bell Signals to Be Used in All Mines Operated in the State of California, for the Protection of Miners." We furnish these Signals and rules, printed on cloth so as to withstand dampness, for 50 cents a copy. MINING AND SCIENTIFIC PRESS, 220 Market St., San Francisco.

Gilt Edge Stock!

In one of the best mines in the State, with a past record of over One Million Dollars. Large plant in operation, with rich ore. A few thousand shares can be secured by addressing "Investment," care of Mining and Scientific Press.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from Hoey & Lewis, in the Parsons Gravel and Timber Claim in Brownsville Mining District, El Dorado Co., to deposit tailings in Little South Fork of Cosumnes River; from Daniel McLaughlin in the Morristown Mine at Morristown, Sierra Co., to deposit tailings in the Morristown Ravine; from Henry Northrop and Robert C. Nicholson, in the Etta Placer Mine near Sierra City, Sierra Co., to deposit tailings in North Fork of Yuba River; and from J. P. West, in the Mountain View Mine near Coutolenc, Butte Co., to deposit tailings in Little Butte Creek, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on June 14, 1897, at 1:30 P. M.

In the Superior Court of the City and County of San Francisco, State of California, Department No. 8. John V. Kimball, plaintiff, vs. Mabel L. Kimball, defendant. Action brought in the Superior Court, City and County of San Francisco, State of California, and the complaint filed in said City and County of San Francisco, in the office of the clerk of said Superior Court. The people of the State of California send greeting to Mabel L. Kimball, defendant. You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court, City and County of San Francisco, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this county; or, if served elsewhere, within thirty days. The said action is brought to dissolve the bands of matrimony now existing between yourself and plaintiff, on the ground of habitual intemperance on your part for more than one year past. All of which will more fully appear in the complaint on file herein to which you are hereby referred. And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the said plaintiff will apply to the said Court for the relief prayed for in the complaint. Given under my hand and seal of said Superior Court at the City and County of San Francisco, State of California, this 9th day of April, in the year of our Lord, one thousand eight hundred and ninety-seven. C. F. Curry, Clerk. By Joseph Riordan, Deputy Clerk. R. Thompson, Attorney for Plaintiff.

Assessment Notices.

JAMISON MINING COMPANY. Location of principal place of business, San Francisco, California; location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9) of 5 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of May, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on WEDNESDAY, the 23rd day of June, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 18th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 14th day of April, 1897, an assessment (No. 6) of .02½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44 Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 22d day of May, 1897, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 14th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

POSTPONEMENT.

The date of delinquency of the above assessment has been postponed to June 7th, 1897, and the day of sale to SATURDAY, June 26th, 1897, by order of the Board of Directors. A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

CHALLENGE CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Gold Hill, Nevada.

Notice is hereby given that at a meeting of the Board of Directors, held on the 13th day of May, 1897, an assessment (No. 23) of Ten cents (10c) per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, room 35, third floor, Mills building, corner Bush and Montgomery streets, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 16th day of June, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on THURSDAY, the 8th day of July, 1897, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

By order of the Board of Directors.

C. L. McCOY, Secretary.

Office—Room 35, third floor, Mills building, San Francisco, California.

OCCIDENTAL CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California. Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 11th day of May, 1897, an assessment (No. 27) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 12th day of June, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on THURSDAY, the 1st day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office—Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

THE BEST BOOKS

Are always the **CHEAPEST.** All the latest and best works on **Mining, Metallurgical, Electrical and kindred subjects** can always be obtained through the office of the MINING AND SCIENTIFIC PRESS. Below will be found a list of standard books in their various lines. If you do not find what you want in it, send for catalogue and price list of **Standard Mining Works and Scientific Publications.**

MINING AND SCIENTIFIC PRESS,

220 Market Street..... San Francisco, Cal.

Assaying.—Part I—Gold and Silver Ores.

Third edition; Just Out. Rewritten and Improved by the Author, C. H. Aaron. Embraces 180 12-mo pages, with illustrations; well bound in cloth; 1896. Price, postpaid.....$1 00

Assaying.—Parts II & III—Gold and Silver Bullion, Lead, Copper, Tin, Etc.

Latest edition. Contains 161 pages with illustrations, and is strongly bound in cloth. Much of the original text is replaced by new matter. Price, postpaid.....$1 75

Notes on Assaying and Assay Schemes.

By P. De Peyster Ricketts, E. M., Ph. D., Professor in Assaying in the School of Mines, Columbia College, N. Y. Prepared with special reference to the wants of the student and practical assayer. Containing also Rules for the Examination of Mines, Assayer's Outfit, Treatment of Ores, etc. Fifteenth edition. 8vo., cloth.....$3 00

Prospector's Field Book and Guide.

By H. S. Osborn.....$1 50

A Practical Guide for Prospectors and Miners.

By C. W. Moore. With numerous illustrations.....$4 75

Roasting of Gold and Silver Ores and the Extraction of their Respective Metals Without Quicksilver.

Second edition. By Guido Kustel, M. E. Contains 156 pages, embracing illustrations of furnaces, supplements and working apparatus. Price, postpaid.....$3 00

The Lixiviation of Silver Ores with Hyposulphite Solutions.

With special reference to the Russell Process. Second edition. Completely revised. By Carl A. Stetefeldt. Price, bound in cloth.....$5 00

Modern Copper Smelting.

By Edward Dyer Peters, Jr. Seventh edition. Rewritten and enlarged. Profusely illustrated....$5 00

Electricity in Mining.

By Sylvanus P. Thompson..... 80 cts.

Practical Treatise on Hydraulic Mining.

By Aug. J. Bowie, Jr. On the use and construction of Ditches, Flumes, Dams, Pipes, Flow of Water on heavy grades, methods of mining shallow and deep placers, history and development of mines, records of gold washing, mechanical appliances, such as nozzles, hurdy-gurdys, rockers, undercurrents, etc.; also describes methods of blasting; tunnels and sluices; tailings and dump; duty of miners' inch, etc Price, postpaid.....$5 00

Practical Hydraulics.

A book for Civil Engineers, Miners, Millmen, Hydraulicians, Mining Engineers and Irrigators. By P. M. Randall. Contains useful tables for ready reference, in which the results of abstruse calculations are all placed in a form so that one can find what he wants in a moment. For the engineer the principles, formulæ, coefficients, etc., are given; and for those not familiar with higher mathematics, examples, rules and tables are prepared. Is specially applicable to the Pacific Coast. Price, postpaid, $2

The Metallurgy of Silver.

By M. Eissler. Profusely illustrated.....$4 00

Manual of Mining.

For the use of Mining Engineers and Technical Schools. Treating of Preparatory and Exploratory Work, Methods of Mining, Hoisting Machinery, Pumping, Ventilation Shafts, Tunnels, Blasting, Timbering, etc., etc. By Prof. Magnus C. Ihlseng, E. M., Ph. D. Second edition, with Appendix. 500 pages, 8vo., cloth.....$4 00

The Explorer's and Assayers' Companion.

A third edition of selected portions of the "Explorer's, Miner's and Metallurgist's Companion." By J. S. Phillips, M. E. A practical exposition of the various departments of Geology, Exploration, Mining, Engineering, Assaying and Metallurgy. Price, postpaid.....$6 00

Aaron's Leaching Gold and Silver Ores.

By C. H. Aaron. The most complete handbook on the subject extant; 164 pages, octavo. Illustrated by twelve lithographic engravings and four wood cuts. Fully indexed. Plainly written for practical men. In cloth, postpaid.....$3 00

Manual of Assaying—Gold, Silver, Copper and Lead Ores.

By Walter Lee Brown, B. Sc. One colored plate; 132 illustrations on wood. Fifth edition. 12 mo. 533 pp. Price, postpaid.....$2 50

The Metallurgy of Gold.

By M. Eissler. Profusely illustrated.....$5 00

A Text Book of Mineralogy.

Based upon the System of Mineralogy of Prof. J. D. Dana. Embracing an extended Treatise on Crystallography and Physical Mineralogy. By Edw. S. Dana, Curator of Mineralogy, Yale College. With upward of 800 woodcuts and one colored plate. Seventeenth edition. 8vo., cloth.....$3 50

Notes on the Treatment of Gold Ores.

By Florence O'Driscoll, Associate Member of Institute of Civil Engineers. 8vo., cloth.....$2 00

A Practical Manual of Minerals, Mines and Mining.

By H. S. Osborn.....$4 50

Cyanide Processes for Gold and Silver Ores.

By E. B. Wilson, E. M. 12mo., cloth.....$1 5

Practical Metallurgy and Assaying.

By A. H. Hiorns.....$1 50

The Practical Metal Worker's Assistant.

By Oliver Byrne. Illustrated.....$5 00

Quartz Operator's Handbook.

By P. M. Randall.....$2 00

Assayer's Guide.

By Oscar M. Lieber.....$1 50

Assayer's Manual.

By Bruno Kerl. Illustrated.....$3 00

Metallurgy of Silver, Gold and Mercury in the United States.

Showing the latest practice pursued in American Metallurgical Establishments. With 186 engravings and folding plates, tables, etc. By Prof. Thos. Egleston, School of Mines, Columbia College. With corrections. Vol. I.—SILVER. 8vo.....$7 00

Metallurgy of Silver, Gold and Mercury—Continued.

Vol. II.—GOLD, MERCURY, Etc. Illustrated with 140 engravings and folding plates; 935 pages, 8vo., cloth.....$7 50

Manual of Determinative Mineralogy.

With an Introduction on Blow-Pipe Analysis (constituting the Determinative Part of Dana's Mineralogy). By Prof. Geo. J. Brush. Thirteenth edition, translated into the new system. 8vo., cloth....$3 50

Skeleton Mining Report.

Of great practical value to miners and mine owners in making a comprehensive report on mining properties. Useful and convenient to mining engineers as a field notebook. Price, postpaid....50 cts.

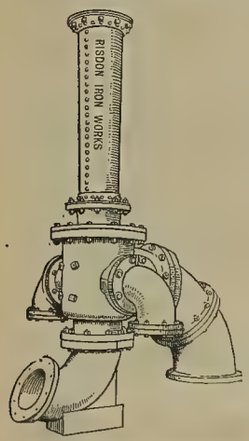
THE BROWNELL "PATENT LIP" FLANGE FRUE VANNER BELTS.

It has taken years of ceaseless testing and experimenting to produce the superior belt which we now offer, with elastic flanges and pliable body reinforced with specially woven duck. Every belt is manufactured by experienced workmen, and carefully tested on machines especially built for that purpose; consequently we are to day manufacturing the best belts that mechanical ingenuity, combined with honesty of construction, can possibly produce.

ORIGINAL EMPIRE MILL & MINING COMPANY,
GRASS VALLEY, NEVADA CO., CAL., Feb. 20, 1897.

JAS. S. BROWNELL, ESQ., San Francisco, Cal.—DEAR SIR: The Brownell Patent Lip flange belt for ore concentrators, which I bought of you nearly two years ago, has been in constant use and is in good order and gives us perfect satisfaction. We have several other kinds of belts in the mill, and your belt and flange I consider the best of all. Yours respectfully, ROBT. WALKER, Superintendent.

ROANOKE MINING COMPANY,
MOKELUMNE HILL, March 5, 1897.



MR. JAS. S. BROWNELL, 132 Market St., San Francisco, Cal.—DEAR SIR: We have in our 20-stamp mill at this place five Frue vanners; three of these are equipped with the Patent Lip flange belt and two with the plain flange belt. We certainly consider the former a great improvement on the latter. They will certainly wear much longer, as cracking now seems out of the question. Any one purchasing the Frue vanning machine should see that it is equipped with the Patent Lip flange belt. Very truly yours, ROANOKE MINING COMPANY, Per G. M. WILDE, Acting Superintendent.

For any information regarding Frue Vanner or Belts, call on or address

ROPP STRAIGHT LINE FURNACE

FOR ROASTING, CHLORINATING AND DESULPHURIZING ORES.

Extracts from Letters Received from Mr. Philip Argall, Manager Metallic Extraction Co., Cyanide, Colorado:

January 2, 1897.

"The roasting is invariably good. We can do 80 tons per day to [illegible] sulphur, when everything runs smooth. Our month record which, of course, includes all delays [illegible] tons, from 1.94% sulphur to 0.16%."

February 19, 1897.

"Our furnace is now running very nicely indeed, averaging [illegible] per day to 0.10% sulphur, and doing excellent work; in fact, it has improved right along and we are highly pleased with it.

"For 24 hours ending 7 A. M. to-day 102 tons were roasted."

The ROPP FURNACE is now in successful operation at the following reduction works: The Hanauer Smelting Works, Salt Lake City, Utah (one furnace); The Metallic Extraction Co., Cyanide, Colo. (one furnace); The Colorado-Philadelphia Reduction Co., Colorado City, Colo. (three furnaces); The Selby Smelting & Lead Co., Selby, Cal; (one furnace); The Mount Morgan Gold Mining Co., Rockhampton, Queensland (one furnace); and Broken Hill Proprietary Co., Broken Hill, New South Wales (two furnaces).

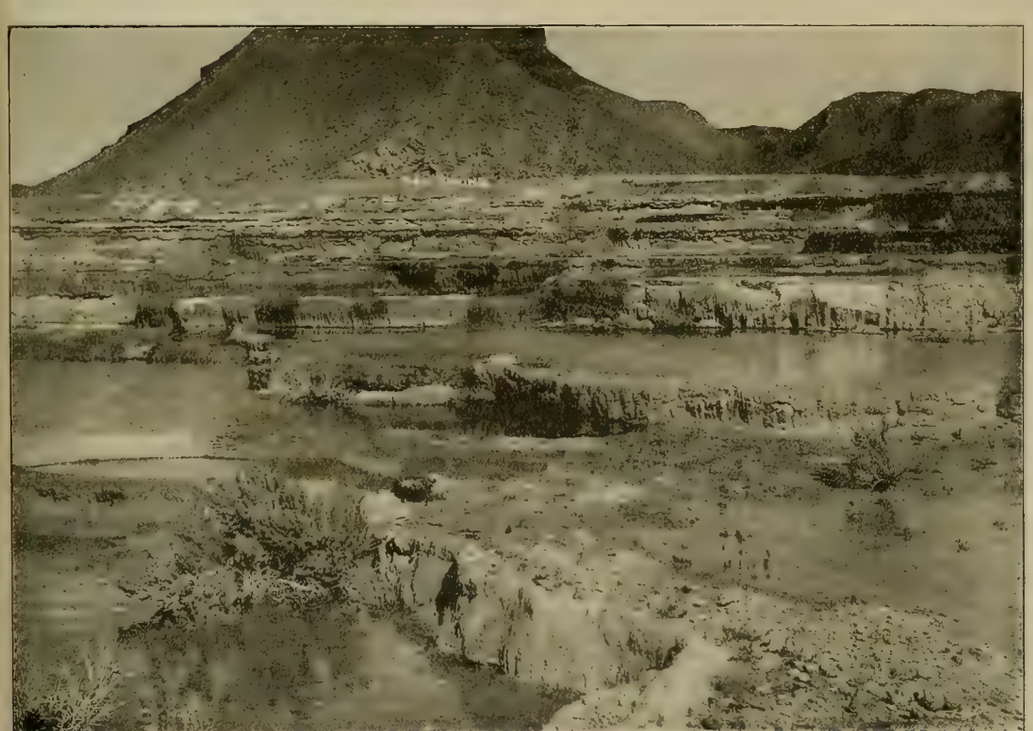
This book is DUE on the last date stamped below

The Big Horn Hot Springs.



The State Engineer of Wyoming, Elwood Mead, in his last annual report gives an account of the hot springs along the Big Horn river in the Shoshone Indian reservation. The Big Horn hot springs have attractive surroundings, being situated in a mountainous and extremely picturesque region. The springs, of which there are a great number within a radius of half a mile, are at an altitude of about 4500 feet above sea level. Some of these well up from the bed of the Big Horn river, but the largest one is about 300 yards distant. The waters from this one fall over a precipice 40 feet high, reaching the river by a beautiful cascade. A fair idea of its volume can be formed by stating that it requires a rapidly running ditch 6 feet wide and 3 feet deep to carry the flow from this spring. Wherever it overflows the adjacent ground, it deposits its salts, notably those of lime and silica, causing the formation to look as white as snow. The country around is undoubtedly volcanic. Extinct craters, some of which are filled with water, are seen in the immediate neighborhood of the springs. These waters are rich with different salts. It abounds in sulphur, both in free sulphuretted hydrogen gas and in combination with lime and magnesium; it possesses a liberal amount of the alkaline salts of sulphate of magnesium and alkaline chlorides of sodium and potassium, and has in addition a great amount of the calcareous earths, such as carbonate of lime and silica. In addition, it has some ferrous oxide, and there is also present, when it bubbles up from the gorge, a considerable amount of carbonic gas which, however, escapes readily. The temperature of the water is 135 degrees Fahrenheit.

SECTION OF THE FORMATION, BIG HORN HOT SPRINGS.

The springs closely resemble in their different properties the famous European springs of Carlsbad, Marienbad, Ems, Teplitz and Aix-la-Chapelle.

The discharge of the springs last October was found to be 13.15 cubic feet per second, or 18,500,000 gallons per day. The original surroundings were beautiful, but as a result of interference with the natural flow of water and the depredations of specimen collectors, who have carried away large quantities of the most striking and peculiar of these formations, many of the pools are now dry and the surrounding walls are disintegrating into a crumbling, unsightly mass. Although on the Indian reservation these springs are far removed from the headquarters of the reservation authorities, but little attention is paid by them to the conduct of affairs. Being on a national reservation the civil authorities of the State can exercise no police supervision. It is to be hoped that so valuable a sanitarium may be placed under such control as will permit of its proper management. The illustrations are from photographs taken for Mr. Mead last October.

TERRACES AT THE BIG HORN HOT SPRINGS.

A New Coal Supply Reported.

A report from Hermosillo, Sonora, Mexico, is to the effect that extensive anthracite coal fields near there are about to be developed. It is further stated that Clarence King has pronounced this coal as good as any ever produced and that there is enough to supply the Pacific coast for years. This coast, and particularly California, possesses many advantages over all other parts of the Union, such as the climate which will enable all work to be conducted 365 days in the year; water power in torrential streams for generating electricity not equaled anywhere else, and a greater variety of raw material to be drawn from the farms, forests and mines of the State. Yet with all this, there has been one great drawback in the want of an abundant supply of good anthracite coal. If the report that comes from Mexico is true, it will mean much for the Pacific coast.

MINING AND SCIENTIFIC PRESS.

ESTABLISHED 1860.

Oldest Mining Journal on the American Continent.

Office, No. 220 Market Street, Northeast Corner Front, San Francisco.
☞ *Take the Elevator, No. 12 Front Street.*

ANNUAL SUBSCRIPTION:

United States, Mexico and Canada..... $3 00
All Other Countries in the Postal Union..... 4 00

Entered at the S. F. Postoffice as second-class mail matter.

Our latest forms go to press on Thursday evening.

J. F. HALLORAN.....General Manager

TO THE PUBLIC.

No one is authorized to solicit business for this paper unless in possession of proper credentials and regularly numbered and stamped blank subscription receipts.

San Francisco, June 12, 1897.

TABLE OF CONTENTS.

ILLUSTRATIONS.—Section of the Formation, Big Horn Hot Springs; Terraces at the Big Horn Hot Springs, 493. Waterfall, Big Horn Hot Springs, 497. The Largest Compressor Engine in Canada, 501.

EDITORIAL.—The Big Horn Hot Springs; A New Coal Supply Reported, 493. Judge Ross and the Caminetti Act; Local Capital for Mining; Mining Location Boundaries, 494.

MINING SUMMARY.—From the Various Counties of California, Nevada and Other Pacific Coast States and Territories, 498-9.

SCIENTIFIC PROGRESS.—Are Rocks and Pebbles Organic? Areas of Disease; Alcohol Effect on Animal Life; Seventh International Geological Congress; A Curious Instance of the Ignition of Coal Dust; Direct Union of Carbon and Iron; Extraordinary Power; The Transformation of the Diamond into Graphite, 500.

ELECTRICAL PROGRESS.—Alternating Current Dynamos in Parallel; A Novel Engineering Work; Electricity in Machine Shops; The Copper Supply, 500. Electric Power in Houses, 501.

MECHANICAL PROGRESS.—The Largest Compressor Engine in Canada; The Use of Compressed Air for Mining Purposes, 501.

THE MARKETS.—Eastern and Local Markets; Mining Share Market; Sales in San Francisco Stock Board; Notices of Assessments, etc., 510-11.

MISCELLANEOUS.—Concentrates, 495. The Solution and Precipitation of the Cyanide of Gold; Suggestions as to River Dredging for Gold, 496. The Superintendent Used Precaution; Practical Notes on Hydraulic Mining; Mixture Used for Calcic Carbide; A Settlement Has Taken Place; Advisability of Starting a Powder Factory in Denver, 497. Coast Industrial Notes; Personal; Recent California Mining Incorporations; Commercial Paragraphs; Recently Declared Mining Dividends; List of U. S. Patents for Pacific Coast Inventors; Notices of Recent Patents, 503.

Local Capital for Mining.

In California less than in any other mining district in the world do the miners invest in shares in local mines sold in the open market, and in this particular direction Californians—and particularly San Franciscans—are doing very little for the development of the mining industry. The lesson they learned from the Comstock was to leave all mining shares alone. However, the Comstock mines were silver mines, in which the difference of formation allowed much greater latitude for purely speculative investment than do gold mines.

Miners on the Rand in South Africa invest in shares sold publicly. Miners in the Kootenay district, merchants and business men of Spokane and other cities in the neighborhood all take treasury shares in mines it is proposed to develop. So it is in and near all large mining districts of the world, with the exception of California. In San Francisco shares are never sold publicly in any mine in the State. Nor are shares sold in any of the mining towns of California in local mines, with the exception of Grass Valley and Nevada City. In Nevada City and Grass Valley, cities only four miles apart, with a combined population of over 20,000 inhabitants, the people are all miners, or dependent entirely upon mining for their incomes, and they have been ever since the mines were opened.

It is a custom there, and always has been, for the merchants, mine owners and even working miners to take shares in new properties and pay assessments until they are developed. In this way nearly all of the large mines of the district have been opened. The W. Y. O. D. mine was opened and developed by working miners who took their pay one-half in stock and one-half in money. So with the Pennsylvania. This mine is owned by working miners, merchants and others in the district who for many years paid assessments before there was any proof that they had a good property. A small 5-stamp mill worked what little ore they found from three stringers; and finally, after working to a considerable depth and paying out large sums of money, a large and rich mine has been opened up.

Such has, in a general way, been the history of many mines of the district, and it is safe to say that for the money expended probably better and more work has been done than in most mines opened up under different auspices. It is for this reason, to a great extent, that Nevada county to-day contains as prosperous a people as may be found anywhere in the world.

It might be well for miners of other districts in California to study the lesson to be learned in Nevada county. There are many mines throughout the State that might be opened by local capital, providing it could be induced to combine in this way. The store keepers, bankers, lawyers, public officials, all of whom are dependent entirely upon the prosperity of their respective districts, might well emulate the example set them in Nevada county. In Nevada a man who is not interested in some way directly in mining is an exception; but this is not the case in other counties.

Mining Location Boundaries.

If the owners of mining claims would, whenever they have complied with the requirements and are able to do so, obtain patents for them, they would remove a very fruitful source of litigation. There are very few mines located correctly. Proper surveying and accurate measurements are seldom made when mines are located. It has been proposed that the State Legislature enact that where a locator has the boundaries and corners of his claim established by a United States deputy mineral surveyor and his claim connected with a corner of the public survey, and incorporates in the record of the claim the field notes of such survey, that this will be sufficient to identify the claim. But even were such a provision made, very few would take advantage of it.

Considering the value of the property involved, less care has been taken in perfecting titles to mining claims than in anything else. Of course, the laws have been faulty and left much to the individual locator, and his carelessness has been the cause of an immense amount of litigation and confusion. Now that the new law as to locating mining claims has been adopted and that there is such a great increase in the number of claims being located all over the State, it becomes all the more important that great care should be exercised not only as to complying with the requirements as to the notices but particularly as to the fixing of the boundaries accurately. These should, wherever possible, be surveyed by a competent surveyor and tied up to Government monuments.

But until a patent is obtained the owner of the claim can never be certain of his title. In proportion to the number of mines located, there have been far less patents taken out in this State than in Colorado and Montana, where the value of patents seems to be much better appreciated.

During the week the United States Circuit Court of Appeals, sitting in San Francisco, affirmed the decision of the Circuit Court in the case of the Waterloo Mining Company v. Doe's Executors. In this case it was claimed that the company had lost the extra lateral right, because the end lines of its claim were not made parallel at the time of its location. It was shown that when patent was applied for, several years after location, that the Deputy United States Surveyor straightened this line at the time of the official survey by cutting off so much of the west end of the claim as was necessary to make that end line parallel with the eastern end line, and that patent had issued to the applicant in conformity with such survey. And the Court held that, as the patent gives the location parallel lines and grants the right to follow all lodes on their dip outside of the side lines of the same whose apex is within the surface lines of the claim, and whose strike is cut by the end lines of the claim extended perpendicularly downward, that the right of the mine owner must be determined by the terms of its patent.

"Looking, then, at the patent," says the Court, "we observe that appellant was granted extra lateral rights. If then appellant in entering the premises embraced within the lines of appellant's claim beneath the surface, followed down on its dip a lode whose apex was within its ground and whose strike was cut by the end lines of its claim as patented, it was pursuing a course to which it had a legal right."

This same question was substantially passed upon by the Supreme Court of the State of California in the case of Doe v. Sanger, who was the grantor of the Waterloo Company (83 Cal., 203), and there Mr. Justice McFarland said that a substantial compliance with Section 2320 of the Revised Statutes of the United States, requiring the end lines of each claim located upon a vein or lode to be parellel is all that is required. A location may be made in such an irregular and many sided shapes as to destroy the right to work the vein beyond the surface lines; (see Iron S. M. Co. v. Elgin M. Co., 118 U. S., 196, known as the "Horse-shoe case";) but the object of the statute is sufficiently met to sustain that right if the location is made lengthwise of the vein in a quadrangular shape, though the end lines are not exactly parallel; and the locator has a right, and perhaps it is his duty, within any reasonable time, to make the end lines parallel; if such change does not interfere with the substantial property rights of any other person. The purpose of the statute is to prevent a party from claiming more width of vein outside his surface lines than within them. "That the intention of the statute was to make the valuable rights of lode miners to depend upon things more substantial and important than the mere trick of a perfectly correct measurement of surface ground, or a mathematically correct survey."

The appellant was represented in the Circuit Court of Appeals by A. H. Ricketts and the appellee by John Garber.

Judge Ross and the Caminetti Act.

Judge Ross, in the United States Circuit Court last week, in the case of the United States against the North Bloomfield Gravel Mining Company, held that the Caminetti act was constitutional, and so construed the law that hydraulic miners will now know better where they stand in the matter. The action was to enjoin the company from carrying on hydraulic mining until it complied with the requirements of the Caminetti act. The complaint set forth that the company had failed to ask of the California Debris Commission a permit to carry on hydraulic mining, and that proper provision had not been taken to prevent the debris from being carried into the navigable streams below.

The defendants denied that debris from their mines impeded navigation and attacked the constitutionality of the Caminetti act. So the issues were broadly enough drawn.

Judge Ross upholds the constitutionality of the act and the right of the Commission to regulate hydraulic mining. In concluding his decision, he uses the following language:

So here Congress has created a commission under the direction of the Secretary of War and the supervision of the chief of engineers of the army to ascertain whether the various hydraulic mines within the territory drained by the Sacramento and San Joaquin river systems can be operated by impounding and other reservoirs without injury to those navigable waters; and if so the act of Congress permits them to be operated in such a prescribed way as will prevent any such injury. Until the matters of fact committed to the commission have been ascertained and the extent and methods of the work are prescribed the act of Congress prohibits the operation of any mine by the hydraulic process within the territory drained by the Sacramento and San Joaquin river systems from which any debris matter flows into those waters.

This, in my opinion, is the true construction of the act, and to it as thus construed I see no constitutional objection. It is too late now for any one to question the power on the part of Congress to declare that debris of any character, or other thing, constitutes an obstruction to the navigable waters within its control and to prohibit the use of such waters or other thing. The power to prevent absolutely the use of such waters for the objectionable purposes necessarily includes the power to prescribe the terms and conditions upon which they may be so used.

The provision of section 10 of the act, requiring the surrender to the United States of the right to regulate the manner in which the debris resulting from the working of such mine or mines shall be restrained and what amount shall be produced therefrom, only constitutes one of the conditions to such use required by Congress. As Congress already had that power of regulation it needed no conveyance from the mine owner to vest it. For this reason the insertion of that requirement by Congress as a condition to the granting of a patent to mine by the hydraulic process does not render the act obnoxious to any of the objections urged against it. A decree will be entered for the complainant as prayed for.

Concentrates.

A DISCOVERY of rich gravel is reported near Robinsonville, Oregon.

SEVERAL holes are to be bored to prospect for oil near Chino, California.

A COPPER LEDGE 4 feet wide has been located in Shasta valley, Siskiyou county, Cal.

SENATOR W. M. STEWART is endeavoring to have cyanide of potassium put on the free list.

AT the Kennedy mine, Amador Co., Cal., pay ore is being extracted at a depth of 2200 feet.

THE Boston & Montana Company is turning out over 3,000,000 pounds of electrolytic copper monthly.

THE Denver *Republican* estimates the output of Cripple Creek for May at 26,576 tons, valued at $1,082,780.

THE Boston & Montana Company has taken an option of purchase on the Anderson mine in Montana for $75,000.

THERE is unusual activity in the placers in the Virginia Dale district, in San Bernardino county, California.

A NEW mining stock exchange was opened for business in Los Angeles last Monday, and 62,000 shares handled.

TWELVE tributers have for seven weeks averaged $12 per day each in a drift in the Massachusetts Hill mine, Grass Valley, Cal.

FOR the first five months of 1897 the Le Roi mine at Rossland, B. C., shipped 17,056 tons of ore of an average value of about $70 per ton.

THE Palmer mountain tunnel, to be run 3000 feet to cut the leuges on that mountain, is in 300 feet and air compressor drills are being put in.

THE First National Bank of Helena, Montana, has commenced foreclosure proceedings against the Hope Company of Basin on its $75,000 mortgage.

THE International Gold Miners' Convention at Denver next month will be largely attended. The topics discussed will be practical and of general value.

THE county recorder received one day last week from Bingham district in Utah fifty location notices for filing and nearly all were made by one man.

TWO DREDGERS are being built near Park's Bar on the Yuba river to mine for gold. The capacity of each will be about 100 tons of material an hour, it is claimed.

THE Peruvian Government has discontinued the coinage of silver. All silver coins which have been exported are not allowed to return except as merchandise.

IT is estimated that there is in present circulation $1,500,000 in silver half dollars coined elsewhere than in the U. S. mints, of full weight and so well executed as to pass readily.

A DISCOVERY has been made of a large bed-vein of manganese near the line of the Union Pacific, in Utah, and arrangements are being made to ship 1000 tons per month.

PRESS DISPATCHES from Randsburg, Cal., announce that the Wedge mine has opened a 4½-foot body of ore, the counterpart of the strike made three weeks ago in the Kinyon mine.

A BOILER in the mill at the Oro Grande mine, in San Bernardino county, Cal., last Tuesday, killed one man, wounded several others and wrecked the plant. The loss is about $10,000.

RECEIVER W. W. STEWART reports refusal of the English offer of $750,000 for the Golden Cross M. Co.'s group of thirteen mines at Hedges, San Diego Co., Cal., $1,000,000 being the price asked.

THE U. S. Surveyor-General has awarded a contract for surveying the boundaries of the Yosemite grant. For the first time in this State on Government surveys cast-iron monuments will be used.

A PRESS dispatch from Phœnix, Arizona, announces that the Santa Locea group of mines near Dragoon Summit, owned by Bell & Stephens of Silver City, New Mexico, has been sold to St. Louis capitalists.

THERE were 413 new mineral locations filed for record in Nelson, B. C., from May 1st to 27th, inclusive. Calculated at fifty acres to a location, over 20,000 acres of land are represented by the filings.

IT has been reported by the United States Consul at Carthagena, United States of Colombia, that the coal fields of Bolivar are in extent over 200,000 acres, and contain anthracite and semi-anthracite of good quality.

GROUND has been purchased at Florence, Colo., for the site of a new reduction plant, to be built immediately, being the fifth ore reduction plant at Florence, with a smelter. Another reduction mill is under consideration.

THE recent decision of the Supreme Court of the United States in relation to tunnel rights has caused many people to locate tunnel rights in Colorado. In nearly every available place about Georgetown sites have been recorded.

THE management of the company which is to build a 350-ton smelter in the Seven Devils copper district in Idaho, state that it is their intention ultimately to construct a railroad from some point on the Union Pacific to the district.

THE gold deposits at the Denver, Colo., mint for the first five months of '98 aggregated $484,199.48. For the corresponding period of '97 the gold deposits there aggregated $3,739,848.27, which means a whole lot in and to Colorado.

SEVERAL capitalists at Los Angeles, California, are considering the subject of building a smelter at San Pedro if the harbor is constructed there. The nearest smelters now to southern California are at San Francisco and Pueblo, Colorado.

W. L. WATTS, field assistant of the State Mining Bureau, returned to San Luis Obispo from a six weeks' trip through the Sisquoc country, where he has been examining the bituminous deposits. These, he states, make the largest bituminous field yet discovered.

TWO SUBSCRIBERS—one in Baker City, Oregon, the other in Prescott, Arizona,—write simultaneously asking: "Are there any known cases where only part of a charge of giant powder has exploded, leaving a part of the charge intact, which was exploded later with another primer?"

MINERS have left for Gold Creek, in the Santiam district, Oregon, to try to locate mines which were worked by the Hudson Bay Company before Oregon became a State. Many prospectors have discovered remains of the work done at that time.

THE onyx mines near Prescott, Arizona, lately purchased by Congressman Fowler of New Jersey, are being investigated by experts, and it is announced that as soon as the proposed duty is placed upon that article by Congress a large force of men will be put to work.

THE English owners of the Bon Accord placer mine, near Bannock, Montana, are about to build a dredger to handle from 5000 to 6000 yards of gravel per day. It is claimed that the dredger in Grasshopper creek, near there, last year, has proved a success.

THE following item from the Grass Valley *Union* might well refer to mines in any part of the State: "The ledge recently struck at the California mine in God's country is said to be a good one. It is large in size and the owners expect to have a big mine up there."

IN Clear Creek county, Colorado, is a mine curiously named the Merryweather, at an altitude of 14,405 feet, on Irwin's peak and within 35 feet of the crest. It was located by a sailor. Another mine on King Solomon mountain, Colorado, is at an altitude of 14,000 feet.

THE exports of copper from the United States for the first five months of each year for some time has been as follows: 1894, 32,793 long tons; 1895, 25,615; 1896, 48,521; 1897, 49,509. The total deliveries in Europe for the first five months of 1897 amounted to 89,164 tons.

NEAR Leesburg, Idaho, the Summit Valley Placer Company has fifteen men working a dredging plant in Big creek, mining for stream tin. They obtain pebbles in size from small shot to hen's eggs, which assay 50 per cent tin and some gold. This is sent East to be smelted.

THE copper production of the United States for April is estimated at 17,454 long tons, an increase of 342 tons over April, 1896. The product for the first four months of 1897 is placed at 70,193 long tons, against 68,622 tons in the corresponding period of 1896, an increase of 1571 tons.

AT a meeting of the directors of the American Flat Development Company, in Virginia City, Nevada, last week, it transpired that few of the mine owners had consented to sign the agreement proposed. The Sutro Tunnel directors asked that a committee for a conference be appointed to meet in New York.

APPLICATIONS have been made to the California Debris Commission for permits to mine by the hydraulic process from Hoey & Lewis, for the Parsons claim, in Eldorado county; from the Morristown Mining Company, Sierra county; the Etta Company, and for the Mountain View claim, in Sierra City.

THE Great Northern Cripple Creek Tunnel and Transportation Company has been organized in Cripple Creek, Colo. The plans of the corporation contemplate a tunnel through Straub, Battle and Bull mountains. It is proposed to make it purely a transportation and drainage tunnel. The authorized capital stock is $5,000,000.

THE Dominion Government has agreed to the terms to be given the Canadian Pacific to build the Crow's Nest Pass road, and the company is making contracts and going ahead with the work. The construction of this road will do much toward building up the mining industry in the Fort Steele and other districts.

AT the Daly-West mine at Park City, Utah, twenty-five men were laid off last week, owing to increased railroad and smelter charges and price of powder. At Tintic the *Miner* says: "The local mining situation has not improved since our last issue, and the great reduction in the week's shipments is very noticeable in our report."

IN the Hidden Treasure drift mine, in Placer county, California, the main tunnel is now over 6000 feet in length, and with horse power it is difficult to handle the gravel fast enough. Harold T. Power, the superintendent, is arranging to construct an electric plant to run the cars in the mine, light it, and also run blowers, etc.

THE season now is more propititous for the myths of the Northwest than those of the South. The "Pegleg" will not be discovered again until late in the fall, when the prospectors wander southward again. Just now the "Lost Cabin," of Washington, Idaho and other parts of the Northwest is being sought for and occasionally discovered.

THE financial statement of the Anaconda Copper Mining Company of Butte, Montana, shows that the gross earnings of the company for the year ending May 30th were $17,375,000; the working and other expenses of production are given at $13,000,000, leaving $4,375,000 as the net proceeds of the year, an increase of over $1,000,000 over the net proceeds of last year.

AT the shareholders' meeting of the War Eagle Mine Co. at Toronto the financial statement of the Rossland, B. C., property for the four months ending April 30th showed the expenses to be $43,043.27, while the proceeds from ore sales were $40,635.20. The rates of freight and treatment now average $10 a ton, while the Crow's Nest Railway will reduce this at least $2.

COLORADO calculates that since '70 the cost of gold production in that State has fallen 80%. While gold can, according to that, be mined there for one-fifth the cost twenty-seven years ago, the refined product is to-day worth just what it was then—$20.67 per ounce. This is one of the reasons why in this west half of America gold mining is the most prominent and profitable present industry.

WORK has been stopped on three large properties in the Rossland district, B. C.—the Palo Alto, Monte Cristo and California—because the managers state mining stocks have generally gone down and they could not obtain enough for their treasury stock to warrant their selling. It is claimed by some that the mining stock exchanges have been the cause of the trouble more than anything else.

THE Silver City, Utah, *Star*, speaking of the present depression, says that it must shortly be overcome. "It is stated by people in a position to know that the former railroad rate will be restored. We are also advised that there is a man in Salt Lake who represents a syndicate looking for powder contracts, and if the principal mines of the State will make contracts for their powder, a factory will be started in Utah."

A PRESS DISPATCH announces the sale of the Black Diamond copper mine, ten miles from the Iron Mountain, in Shasta county, Cal., by Messrs. Kahny, Klaukens & Holden to Homer Wilson of San Francisco, representing New York capital, for $115,000. The mine is on the same lead as the Iron Mountain. The ore body, as far as prospected, shows a width at its narrowest point of over 250 feet, and is a mile and a half in length. The copper assays so far made do not run less than 7 per cent, it is claimed, with some gold and silver.

A DISPATCH from Gunnison, Colorado, says that last Tuesday a large body of sulphur in the Vulcan mine caught fire, by a miner dropping a candle, and a furious fire was raging underground. The smoke was also spreading to the Mammoth chimney, 400 feet away, and the men have been compelled to stop work. No one knows the extent of the sulphur, nor how long it may burn.

THE Iron Mountain Copper Company is producing 400 tons of copper matte per month, which is refined at the New Jersey Extraction Company's works at Elizabethport, N. J., most of the stock in which is owned by Mountain Copper people. As the total output of copper last year in California was a little less than two million pounds, with the work done by the Shasta Company this year's yield will be a very important item in the mineral output.

A SUIT involving the mines which Burcham, Singleton, Reddy and others own in Randsburg, Cal., has been brought in Los Angeles. The complaint was filed by the Rand Mountain Mining Company against the Sunlight Gold Mining Company, (C. A. Burcham, J. Singleton, P. Reddy, J. C. Campbell, W. H. Metson), claiming that, under contracts, they are entitled to an interest in the Rand, Olympus, Trilby, Singleton, Johannesburg and Desert View mines.

DURING May the Calumet and Hecla Company placed nearly 10,000,000 pounds of copper, while the total sold was about 20,000,000 pounds. In Europe the demand is considerably greater than it was last year. There is a notable increase in consumption in Germany especially, and that country is now apparently consuming more copper than France. England alone is, perhaps, using as much, if not more copper than the United States, while England, France and Germany together are estimated as consuming about 36,500,000 pounds per month, against estimates of about 15,000,000 pounds consumption per month in this country.

THE Hauraki Gold Mining Company paid 160 per cent dividend in 1896. The following figures are from their report for the year: Returns from sales of gold, £83,445; interest, etc., £1069; total, £84,514. Expenses in New Zealand, £25,325; expenses in London, £3065; dividends, £64,000; income tax on dividends, £2134; total, £94,524. The total amount of development work was 9593 feet, of which 129 feet was shaft sinking. The total ore treated was 4425 tons, yielding 27,121 ounces gold, or 6.25 ounces per ton. At the value given for the gold this was equivalent to 19,647 fine ounces. The total return was $91.77 per ton; total expenses, $30.89, leaving a profit of $60.88 per ton worked.

A CORRESPONDENT in Idaho asks the best method of cleaning quicksilver. Some put water on top and dissolve cyanide of potassium in it and then stir up the quicksilver. Concentrated lye or dilute sulphuric or nitric acid are often used. The best thing to do is to retort it if it becomes very foul. A method is given for cleaning where electricity may be obtained. Take a flat earthen vessel, pour sulphate of soda solution into it and lay a long strip of lead across it which can be bent in the center. Into this vessel place a semi-spherical, non-glazed earthenware basin, large enough to fit the bottom vessel, and into this pour the quicksilver with a little water. Put the positive wire in contact with the lead strip, and the negative wire with the quicksilver. The quicksilver will soon be brightened.

THE report of the Alaska-Mexican Gold Mining Company for the year ending December 31, 1896, shows that the total receipts from ore worked were $245,862; the expenses were $184,212, leaving a net balance of $61,650. Dividends paid were $72,000, or 8 per cent on the stock. Of the bullion obtained, $76,330 or about 31 per cent was from sulphurets collected by concentration and treated by chlorination. The total quantity of ore taken out and milled during the year was 101,702 tons, and 1290 tons of waste rock were removed. The total development work amounted to 2395 feet. The estimate of ore in sight at the end of the year is 607,266 tons, or over five years' supply for the mill. The cost per ton for mining and milling 101,702 tons was 181.12 cents, made up of the following items: Mining, 114.11; milling, 39.11; chlorination, 15.99; general expenses—Douglas Island, 5.59; San Francisco, 2.32; London, .58; Paris, .18; consulting engineer at San Francisco, .26; freight, insurance, and refining bullion, 2.68. The returns of bullion averaged 271.74 cents per ton, leaving a net average profit of 90.62 cents per ton. Wages were on an average a little higher than in California quartz mines.

UNDER the new Canadian tariff by an amendment which went into legal effect May 26, 1897, the following mining machinery goes into the Province free of duty: Pressure or exhaust fans, rotary pressure blowers, coal cutting machines (except percussion coal cutters), coal heading machines, coal augers and rotary coal drills, core drills, miners' safety lamps, coal washing machinery, coke making machinery, ore drying machinery, ore roasting machinery, electric or magnetic machines for separating or concentrating iron ores, blast furnace water jackets, converters for metallurgical processes in iron or copper, briquette making machines, ball grinding machines, copper plates (plated or not), machinery for extraction of precious metals by the chlorination or cyanide processes, monitors, giants and elevators for hydraulic mining, amalgam safes, automatic ore samplers, automatic feeders, jigs, classifiers, separators, retorts, buddles, vanners, mercury pumps, pyrometers, bullion furnaces, amalgam cleaners, gold mining slime tables, blast furnace blowing engines, wrought iron tubing, butt or lap welded, threaded or coupled or not, not less than 2½ inches diameter, when imported for use exclusively in mining, smelting, reducing or refining.

THE Executive Committee of the Gold Mining Convention, to meet in Denver, Colorado, next month, has made choice of the following as some of the questions to be discussed: The demands for a Federal Secretary of Mines and Mining; Federal and State legislation as affecting mines and mining; Federal and State statistics of mines and mining; Gold mining a safe proposition, gold value being established by law; The relation of gold and silver in mining the precious metals; Does gold and silver production keep pace with the increase of population and the demands of commerce? Can enough gold be mined to safely make it the only redemption metal money? The opening of Indian lands that have mineral deposits; Mineral lands and their development offer opportunity; Are the timber reservations and Federal game preserves injurious to the development of mining? Progress made by science and improved methods of saving the precious metals in the past twenty-five years; Hydraulic and placer mining; Does the known area and gold deposits of placers offer opportunity for profitable development? Railroad transportation and improvement of county wagon roads necessary for the increase and development of mining.

The Solution and Precipitation of the Cyanide of Gold.

Professor S. B. Christy's article on the above subject, published in the MINING AND SCIENTIFIC PRESS, has been the subject of world-wide discussion. The following is taken from the proceedings of the Chemical and Metallurgical Society of Johannesburg, South Africa, and read by H. T. Durant:

It has been pointed out to me that a discussion on the subject might be of some interest to the members of this society, its subject being so intimately connected with our work. Professor Christy, whilst noticing the earliest writers on the cyanide process, omits to mention the "Notes on Gold Extraction" written and published early in 1894 by our president, Mr. W. R. Feldtmann, and since extensively quoted, as in Scheidel's "Cyanide Process," p. 55, *et seq.* In the first section of the paper the solubility of gold in solutions of potassium cyanide is considered; the well-known equation of Elsner is proved, although previously verified by Maclaurin (J. C. S., 1893, vol. lxiii., p. 724), but at one time doubted by MacArthur and Louis Janin Jr. (Mineral Industry, 1892, pp. 262-263). This equation is too well known—at least in this country—to need repeating; it shows that under favorable conditions one atom of oxygen causes the solution of two atoms of gold, or, in other words, if oxygen were as soluble in dilute solutions as in water, one ton of a cyanide solution saturated with air contains enough oxygen to dissolve 6.9 troy ounces of gold, the theoretical strength of the solution actually required being .0155 per cent. This presupposes the absence of reducing substances, which, if present, must be specially considered. Whilst considering the supply of oxygen by chemical means, or the avoidance of its necessity, Professor Christy considers the use of cyanogen bromide. If the equation below put forward by Sulman and Teed is correct, then oxygen is not necessary for the solution of gold:

$$3KCN+2Au+CNBr=KBr+2(KCN, AuCN).$$

Great stress is laid on this means of obtaining "nascent cyanogen." It is not at first sight clear how this can be. Assume that cyanide bromide is added to a cyanide solution and the reaction is as stated in Sulman's equation, then cyanogen is liberated for the moment nascent, and, if in contact with gold, it can act at once by virtue of its nascent activity; but, if such contact is not the case, it immediately joins up into the molecule C_2N_2, and it is questionable whether molecular cyanogen is active under the conditions obtainable. In the treatment of tailings or ore generally it is difficult to imagine how it is possible to arrange matters so that the solution can be in contact with the tailings or ore at the moment the cyanogen group is liberated—unless, indeed, the reaction indicated by Sulman and Teed only goes slowly; but an ideal state is easily conceived in the treatment of slimes. Now, in the case of aqueous solution of potassium cyanide—or, in fact, of almost all salts—dissolution of KCN into its ions takes place in proportion to its dilution and other factors, so that any such solution really contains the KCN molecules dissociated into atoms of K and single CN groups, but charged respectively with enormous quantities of positive and negative electricity, so that the two ions do not under those conditions exhibit their characteristic molecular properties; but when on the one hand an electro-negative element like oxygen, and on the other hand an electro-positive element as gold, is present, the potassium unites with the oxygen and the gold with the cyanogen radicle. Referring to the weights of bromine, chlorine and oxygen, respectively, required to aid potassium cyanide in the solution of gold, the figures for bromine and oxygen are accidentally transposed. They should read:

(Sulman) 1 part by weight of bromine causes solution of 4.92 parts of gold by weight.

(Elsner) 1 part by weight of oxygen causes solution of 24.6 parts of gold by weight.

Dealing with the precipitation of gold from cyanide solutions, Professor Christy remarks on the extreme stability of (AuCN, KCN). Many who are here have perhaps at some time been aware of that. On acidifying a dilute solution of the above double salt, aurocyanhydric acid $HAu(CN)_2$ is probably present, and remains in solution. On concentrating, AuCN separates, and under less favorable conditions of concentration and temperature the aurous cyanide is decomposed. This is perfectly analogous to the behavior of $HAu(CN)_4$ and $HAuCl_4$. When dealing with solutions carrying only a few dwts. to the ton, it is extremely difficult to precipitate totally aurous cyanide either by double decomposition reactions—with the exception of silver nitrate—or as gold by reducing or oxidizing agents. Assuming that from such a dilute solution the gold were precipitated as such, it is highly probable that it would be in such a fine state of division that it could not be filtered out by ordinary methods, and, since salts which are absolutely insoluble are rare, it is doubtful if there is any gold salt which could be totally precipitated from solutions carrying such minute percentages of gold as is customarily met with. Barium sulphate, for example, is for ordinary purposes regarded as insoluble in cold water, and yet water dissolves at ordinary temperatures about .0043 per cent. I cannot find that the solubility or otherwise of aurous cyanide has been accurately determined, but it is commonly stated to be insoluble in water; if it were half as soluble as barium sulphate it would indicate that from a solution of $KAu(CN_2)$ about 12 dwts. of AuCN per ton would still remain in solution after decomposing the double cyanyde of gold and potassium by the addition of one of the various salts which answer that purpose.

Referring to regeneration of potassium cyanide from dilute solutions, Professor Christy mentions three methods. The first is his own, the second Professor de Wilde's, and the third is the subject of an American patent:

(*a*) Briefly, this method consists in acidifying the cyanide solution and steam distilling into caustic alkali.

There are two things mentioned which appear scarcely correct: (1) It is stated that a 1 per cent solution of potassium cyanide, when acidified, gives not the least apparent trace of escape of hydrocyanic acid. Such a solution contains .41 per cent of hydrocyanic acid. It would be difficult to say how dilute an aqueous solution of that acid must be not to be easily recognized by its odor, but certainly very many times more dilute than the above. (2) Novelty and utility are claimed for the above method. It certainly does not possess the former, and is open to much question as to whether, even if necessary, it could be profitably employed at works.

(*b*) Professor de Wilde's method consists in adding ferrous sulphate to the cyanide solution and obtaining a precipitate of ferrous cyanide.

At first the latter may be obtained, but the final result is a mixture of complex cyanides. This precipitate is presumably treated with acid, and the hydrocyanic acid recovered by caustic alkali. This process, like the first, can be worked experimentally, but the cyanogen radicle is not as easily recovered from complex cyanides as from simple ones.

(*c*) This is a method for a long time well known and consists of the precipitation of cyanogen radicle by the addition of zinc sulphate and subsequent recovery of the acid radicle from the zinc cyanide.

As regards its utility in work, I think this latter method is comparable with either *a* or *b*. Professor Christy has given much attention to the regeneration of potassium cyanide, but if that were even necessary it is questionable whether it could be done profitably in the case of very dilute solutions.

Precipitation of gold from $KAu(CN)_2$ by charcoal: The conclusion is arrived at by Professor Christy, as a result of his experiments, that "a given amount of charcoal has a definite capacity for precipitation," but no reason is given to account for this; there is little doubt that the carbon acts by virtue of its absorbed gases—the ones concerned are probably hydrogen, carbon monoxide and unsaturated hydrocarbons; there is evidence that these and the other gases existing in charcoal are in a state of peculiar activity. In the reference at my disposal I have not found the results of any accurate work on the use of charcoal for this purpose, the exact part it plays, and what follows after it ceases to act, if it does cease. Professor Christy gives details of an experiment in which in the presence of potassium cyanide a large percentage of the total gold is precipitated; towards the end of the trial the charcoal was apparently spent or nearly so, and free cyanide was still present to the extent of nearly 60 per cent of the original quantity; the question suggests itself if the charcoal finally ceases *entirely* to act and cyanide is present what prevents the gold going into solution again. It is scarcely possible that the charcoal can absorb the oxygen as fast as it goes into solution and so protect the gold. Dr. Keith (Rose's "Metallurgy of Gold," second edition, page 348) states that the gold in contact with finely divided charcoal in a solution of potassium cyanide goes into solution more rapidly than if no charcoal were present. His theory is the formation of gold-carbon couples, the electro-positive element being acted on by the KCN solution, and necessarily hydrogen would be evolved on the surface of the charcoal. Charcoal was used to reduce solutions of gold chloride probably for the first time nearly thirty years ago by Percy; according to Rose, it is under the disadvantage that it does not destroy the chlorine, which, therefore, is first expelled by heat or a current of air, to prevent the re-solution of the gold.

Precipitation of the $KAu(CN)_2$ by copper and its compounds: Professor Christy's experiments on the decomposition of the double cyanide by cuprous salts are of extreme interest, and, if there is total precipitation, with slight modifications, a new method for assaying gold solutions is suggested; but I fail to see its use, for instance, on a slimes plant dealing with more than a thousand tons of solution every twenty-four hours. The action of zinc chloride on the double cyanide of gold and potassium is similar to that of silver nitrate, cobalt nitrate and other salts, but considerably less efficient; and if the right conditions are obtained, zinc cyanide would be precipitated with gold cyanide. It is stated that when the zinc chloride is formed from the oxide and acid, a solution of zinc oxychloride is obtained; this latter salt is not appreciably soluble in water, so that the solution obtained must have been normal zinc chloride. Speaking generally, I think all the precipitation experiments have been done with solutions far too rich, losing thereby any practical interest which they might otherwise possess, as, if the amount not precipitated in any one experiment is a fairly constant quantity for any strength gold solutions, this amount looks small when expressed as a percentage of say 600 dwts. per ton solution; but the same quantity presents a different appearance when expressed as a percentage of a 1 dwt. per ton, solution. There is, of course, the possibility that when experimenting on a rich solution gold salts might be mechanically carried down by a bulky precipitate, thus giving conditions which are not obtained in operating on solutions of reasonable strength. In the final section of Professor Christy's paper reference is made to the constant tendency among cyanide workers to reduce the strength of their solutions. It is probable that even here those solutions which are now regarded "weak" will shortly be considered "strong," and, as a matter of fact, Professor Christy's forecast of the use of .01 per cent solution has for some time been more than realized at the Rand Central Ore Reduction Company's plant for treating Robinson slimes, where solutions containing only .008 per cent cyanide are successfully employed for dissolving the gold. Professor Christy also states that both the electrical zinc precipitation processes find in these dilute solutions their greatest difficulty, though this may be true as regards zinc, at the plant above referred to, where the Siemens-Halske process is employed, the precipitation is excellent and has in no way been affected by reduction in the strength of solution.

Suggestions as to River Dredging for Gold.

TO THE EDITOR:—In your issue No. 1921 of May 1st you have some remarks upon dredger mining that, while brief, indicate the general result in this field of operations. The experience in the Fraser and Quesnelle rivers is but a repetition of what has occurred in nearly every case of mining for subaqueous gold, the history of which reaches back at least twenty years on this coast.

The main impediment is no doubt one that you mention — the uncertainty of deposits in rapid streams. The Feather river is an example. People proceed on the theory that gravity will retain gold in the beds of torrential streams, but this is a mistake, graphically described by an old miner I met at Oroville some years ago, who, in speaking of the Pierce tunnel diversion scheme, said: "There is no gold in the bottom of Feather river. Why, if the rocks were all galvanized with gold they would be scoured clean every season."

There is however, outside of these rapid mountain streams, unlimited territory where the success of dredge mining is undoubtedly limited by the want of mechanical expedients and their proper management. For example, there may be no gold in Feather river worth seeking until this river reaches its debouchement into the level plain at Oroville, but certainly there are deposits of exceeding richness there that await the successful operation of dredging or other apparatus to raise the gravel from 40 to 60 feet below the water level.

That the gold is there is proved not only by the physical circumstances of the case, but by the fact that all the gravel or sand procurable at even a moderate depth, is panned out and pays; even in digging shallow wells the bottom material is rich, and Chinamen formerly worked in pits by diving under water to fill their pans with sand and gravel.

The precipitation of gold in any stream that flows through auriferous regions will take place when the waters reach a level grade, are spread out and lose their velocity. The Arroyo Seco mine in Amador county is an example, and there are dozens more that you can yourself recall.

In illustration of the failure of mechanical means for successful dredge mining, I will mention a parallel in the pneumatic caisson plant at Oroville, set on foot by the late L. L. Robinson about twelve years ago, intended to penetrate to the suballuvial deposits where the Feather river stills its waters and has shifted its bed within recent times.

This venture, which was based upon promises of the most logical kind, did not succeed for want of "evolution," so to speak. The air-compressing engines were taken from stock adapted to work at a pressure of 75 lbs. per inch instead of 20 lbs. required in the caisson, consequently were racked by speed to supply volume. The caisson was blown out for want of proper fastenings, and finally the water could not be expelled, for some reason not understood. Experts, including myself, were sent up to examine the plant, with the result that the company was disincorporated, the machinery sold and the whole scheme closed out.

I had the questionable honor of discovering, too late, the immediate or principal cause of the failure to expel the water, which was the depth of the heading in the drift. The tunnel or drift was in the bedrock and sloped upward from the caisson. This slope, with the height of the tunnel added, made a

pneumatic heading of about 10 feet, and a difference in air pressure at the top and bottom of about 4.3 lbs. per inch. When the air pressure was sufficient to expel the water at the bottom of this heading and slope, the pressure at the top was so much in excess of the water pressure that the air escaped in fissures faster than the engines could supply; the tendency for the escape of air being as the depth of what I have called the pneumatic heading.

Now, here was a case the same as in dredge mining: its success depending upon some simple conditions that were not foreseen and provided for. It is the same in all operations of a novel kind; the impediments are unforeseen and unprovided for.

I have prepared designs for a number of centrifugal pumps to be used for gold dredging, including one for the Murray river in Australia, and from conversation with a number of people interested in this matter I have formed the opinion that the main impediment to dredge mining is want of skill and the "evolution" which produces it.

The "boulders" offer great difficulty. One person's idea is to pass them through the pumps; another, to raise them by separate tackle or apparatus; a third, to move and stir but not raise them; all of which may be right or wrong, as the nature of the material and other circumstances may determine.

The circulation of average or common spoil by centrifugal pumps and means of extraction seem to be the only determined points of general application, and even these have to be widely modified. In the Murray river, where dredge mining has succeeded so far as to be continued for a number of years, the material was fine and boulders were not a serious impediment. The same plans would no doubt succeed in the alluvial reaches of our rivers or in the bay.

These plans, so far as I can learn, invoke machinery and apparatus of the best quality, designed and made by competent engineers, not for experiment but for "work," a feature wanting, so far as I have seen and been informed, in the ventures here.

I am conscious of not, in these remarks, imparting anything of much use to your readers, and, indeed, must assert skepticism respecting all methods of blind operating under water in the torrential rivers that flow from the Coast Range of mountains into the Pacific ocean; but I do believe that the resources of mechanical engineering are far from exhausted in respect to the deep deposits at the mouths of our rivers or where they enter the plains.

I always regretted the circumstance of not having a "try" at the Oroville scheme, and hope yet to some time have the privilege of tackling the problem under more favorable circumstances.

San Francisco, May 29th, '97. J. RICHARDS.

AT the recent burning of the Mexican International Railroad shop at Piedras Negras the superintendent saw that the building could not be saved, and instructed the fire department to throw no water on it, but to allow all the men available to shovel sand and earth upon the embers covering the fine machine tools. This precaution caused the metal to cool slowly. Few of the tools were warped, nearly all being put to work satisfactorily soon after the fire.

Practical Notes on Hydraulic Mining.*

NUMBER X.—CONCLUDED.

Written for the MINING AND SCIENTIFIC PRESS by GEORGE H. EVANS, C.E., M.E., General Manager Cons. G. Mines of Cal., Ld. Oroville, Cal.

It is well known by those who have gone into the efficiency of the hydraulic elevator that, unless the various parts are well proportioned, it is a most wasteful machine; but, as against this, the enormous amount of work they are capable of doing with a minimum cost for repairs and attendance, make them especially valuable for hydraulic mining, and, when constructed on proper lines, there is no difficulty in obtaining from 40 to 50 per cent efficiency from same.

In this country there are many instances where 10 per cent, and even less, is only obtained, which is partly due to the machine being wrongly constructed and a good deal to the fact that most of those at present using elevators, with few exceptions, do not know how to get the best work from them.

There are cases where superintendents of elevator claims appear to think that, as long as their machines can be made to handle boulders, in some cases 20 and 30 inches in diameter, that is a certain test of their efficiency. Such is not the case, as there is no difficulty in lifting stones double or treble the size, providing plenty of water and pressure be available.

To be successful in elevating auriferous deposits, unless exceedingly rich, one must make up their mind to use the smallest quantity of water, in both elevating jet and giants, so that the proportion of gravel or other auriferous material lifted in comparison with the water required for lifting and piping, will be of a maximum quantity. If this rule was followed by many of the present elevator claims, they would be lifting and treating, in many cases, three and four times the quantity of auriferous material they are now doing.

There are cases, of course, where it may be necessary for a short time in opening a claim to elevate the largest stones for the purpose of making room, but to continue such course is a great mistake—far better stack the larger stones in the paddock and use the extra quantity of water required for lifting such stones, in working a second or third elevator, and, in such manner, be treating three and four times more *pay dirt*, than working one heavy and wasteful machine to lift large boulders, etc.

Let any reader of this paper carefully work out the power there is in the water used through their elevator jet, then find out the power required to lift the weight of water used for elevating, plus the weight of the minimum quantity of necessary water for piping, and plus the weight of gravel or material sluiced and lifted by elevator; it will then be seen at a glance whether you are getting the proper work from the machine or not.

I know of an instance where a manager of an elevating claim in this State kicked because he was not getting 75 per cent from his head of water, when using a special form of water wheel, while he was using an elevator not yielding him 12 per cent in the same claim; it never occurred to him to try the efficiency of his elevator, as from the *appearance* of the huge quantity of water and the large and small rocks coming through the elevator, he was satisfied the efficiency could not be better. In some respects this was true, but the owners of the claim were paying him to lift auriferous material, not water and large stones, *occasionally* mixed with a few tons of pay dirt.

These machines are made in convenient pieces for mule transportation, so that where it is possible to take a mule there will be no difficulty in erecting and working an elevator. In connection with further particulars I may add that, through the editor of this valuable paper, I will be pleased at all times to answer any inquiries in connection with elevators, or, in fact, in connection with any mining work.

Grades and Sizes of Sluices.—There seems to be a great diversity of opinion, especially among the older miners, as to the size of sluices. Many of them stick to the idea that the best results are obtained from a narrow or deep form of sluice, and will try and make others believe that such a sluice is most easily kept in good running order. Now, this is not correct by any means, the reverse being the case, it having been conclusively proven by practical results that a wide sluice will carry more material, and save more gold, with considerable less grade, than a narrow and deep sluice.

It is a well-known fact in relation to gold saving that one of the first principles is to have as thin a film of water and material in the sluices as is possible, with, of course, due regard to the fact that there must be a sufficient depth of water to just cover the largest stones that are sent down the gold-saving sluices. I have noticed on more than one occasion when using narrow sluices that it takes much less time to cause a block than in wide ones, and when I state that I have worked sluices through ground containing nearly 10 per cent of titaniferous iron, or black sand, a good many miners will realize the difficulty in getting rid of from 2000 to 2400 tons of such a deposit per day, on a grade of 2 inches to 12 feet, and in doing this I soon found out the fallacy of using narrow and deep sluices.

With reference to the grade of sluices, experiments made in river gravel have shown that, with a grade of from 1 in 20 to 1 in 25, 40 miners' inches, or 60 cubic feet, per minute will wash from about 140 to 170 cubic yards per day of 24 hours, and with light grades the depth of water in sluices must be as shallow as possible, just so that it will move the largest stones and prevent the sand from packing. Mr. Gordon says that when there is a large proportion of heavy stones the best results are obtained by having about from 10 to 12 inches of depth of water in the sluice, this, of course, assuming that the large stones do not run over 10 to 12 inches in diameter.

In concluding this paper it is hardly necessary to remind the reader that the different formulæ are not original; but in several instances they have been simplified to meet the result of my own practical experience. The information and data, on the whole, are compiled from figures, formulæ, data and notes accumulated in my private pocket book, and if what has been written proves of the same assistance to any of my fellow miners or to those interested in mining as myself, I will feel amply repaid for the time taken in preparing this paper.

WATERFALL, BIG HORN HOT SPRINGS. (*See page 493.*)

SOME experiments have been recently made with the object of ascertaining whether it would be possible to obtain a continuity in smelting metallic ores in the electric furnace in a similar way to the blast furnace. The slags from the ores are usually poor conductors, and their presence in the furnace entails the liability of the breaking of the current and a stop being put to the operation. Mr. Heibling, however, has succeeded, as it is stated in a Paris contemporary, in securing a slag which would be a good conductor, by using a flux consisting of a mixture of lime and carbon. This is, of course, the mixture used for calcic carbide. Under the action of the arc part of the carbon takes up the oxygen in the ore under treatment, while another part combines with the lime, forming carbides which are fusible and good conductors. The fused carbides take up and hold the infusible portions of the ore in suspension, while the metal settles at the bottom of the surface. The slag remaining is not worthless consisting of a carbide of calcium of great impurity, but not so much so as to be without a certain commercial value.—Industries.

A SETTLEMENT has taken place of long-standing difficulties between owners and claimants of the large copper properties in the Cananea mountains of Sonora, Mexico. The properties involved not only include the rich copper mines recently operated by the Cananea Copper Company and those formerly operated by the Sonora Copper Company, but also embraces the Cobre Grande and adjacent mines formerly operated by Gen. Pesqueira. At the Cobre Grande are ruins of old works in operation over a century ago.

THE Nobel Dynamite Company is considering the advisability of starting a powder factory in Denver, Colo. They propose to erect two or three factories in this country.

Mining Summary.

CALIFORNIA.

Amador.

Ledger: Underground development of the Argonaut is progressing in the mine, while a large force of mechanics are busy preparing for the placing of the machinery of the mill.

D. Gutmann has a bond on the Muldoon property and this week has some men at work.

The new hoist at the new shaft of the South Eureka is almost completed.

It will be several weeks yet before work is resumed at the Zeila.

A roller mill is being erected on the Robinson.

Republican: P. L. Shuman, owner of the North Star gravel mine near Mokelumne Hill and the Paragon group of mines near Railroad Flat, Calaveras county, is operating the Ulysses. He is driving a cross formation tunnel, cutting the three leads at 400 feet depth. The total length required to cut all the leads is 900 feet, of which 525 feet is complete.

The Bellweather closed down last Monday for, it is said, a period of two weeks.

The chlorination works at the Kennedy were started up last week. The machinery for this mine will be put in place this month. Work of sinking is going forward. The shaft will probably be sunk to a depth of 3000 feet in time.

The Zeila mine will put on a few men from time to time, but Mr. Detert states that the mill will not be started for several weeks.

Calaveras.

Ledger: The management of the Gwin mine has decided to reopen the old south shaft of that property and, when that is done, to sink a new shaft to the east. Plans are being perfected for the commencement of work very soon. The general idea now is to pipe their used water from their present works to the river, and either put in a large compressor and convey the power back to the works to operate the pump and hoist at the new works or put in an electric plant and operate them with electricity. Between the 1200 and 1300 levels in the stopes a streak of iron pyrites was encountered a few days ago which seems to be continuous.

The 4-stamp mill at the Juda mine in Spring gulch was completed last week. Water is the motive power for both mill and hoist, and the latter is of sufficient capacity to carry on work to a depth of 1000 feet.

Citizen: The Crown mine at Albany Flat is being equipped with new hoisting works.

On the Thorn crevice on San Antone creek another 8-inch pump was put in last week in order to cope with the water. There are now two 8-inch pumps at work night and day. The gravel that has been taken out so far prospects well.

Kern.

Randsburg *Miner*: The Val Verde has put on more men and is now producing pay ore.

There are about twenty men working on the Rand mine.

Good progress is being made on the shaft of the Butte.

A recent run of seven tons and 600 pounds of ore form the W. J. Bryan mine, owned by Montgomery Bros., produced $800.

The King Solomon people are taking out good ore at a depth of about 300 feet.

The Little Butte's No. 1 shaft is down 135 feet, and they are drifting south to strike the ledge, which they hope to do within a week or so.

The Alameda is growing richer as greater depth is attained,

The owners of the Wedge are still pushing work on their shaft. They will be down 415 feet within a week or so, when the new power hoist will be placed in position and sinking to a depth of 1000 feet continued.

Mariposa.

(Special Correspondence).—The Merced Gold Mining Co.'s 40-stamp mill has been entirely overhauled and put in better order than when first built. The last ten stamps were unlatched on May 29th. One-half the stamps are running on ore from the Melvina mine, large quantities of which were left broken in the chutes and stopes by the old management, and the rest are running on ore from the Mary Harrison, which is brought to the mill in three-ton cars over a new gravity railway 3½ miles long. The mill is handling about 100 tons in twenty-four hours. The Bigelow shaft has reached a depth of 1000 feet vertical, and on completion of the sump a station will be cut at that point. As the shaft passed through the vein at the 950 level, but a short crosscut will be required to cut the ledge. Work on the Nelson shaft at the Louisa mine has been suspended indefinitely, the pumps pulled and the engine dismantled. It is said no ore that could be profitably milled with the present plant was uncovered on the mine. The company's dam on Black creek, which was partially wrecked during the winter floods, has been repaired, and the storage reservoir has been nearly filled by the construction of a ditch from Maxwell creek. This insures water for milling purposes till late in the summer.

Nothing is being done on the Penon Blanco property, which is reported as under bond; but it is understood that work will be begun there on a large scale some time during June.

The Virginia mine is being worked under bond to the California Exploration Co. Two shafts have been sunk to depths respectively of 50 and 90 feet on good bodies of ore, the old tunnels have been cleared out and the old incline shaft reopened to the 400-foot level, where drifting is now in progress. All reports on the property are very favorable.

At the Bully Hill mine, in the McAlpine district, some eight men are prospecting along the ledge.

George Treadwell and F. H. Hill have bonded the Porter Ranch property comprising about 350 acres along the west vein, about two miles south of Coulterville. A few men are already at work preparing for development work with a larger force.

Work progresses on the Bunker Hill with the usual force, considerable surface improvements are being made and a mill will be placed on the property during the summer.

At the Red Banks no progress is being made in the mines, and only enough men to keep the workings in order are employed.

The Louisiana, which was closed during the winter on account of bad roads and scarcity of fuel, will resume operations in a few days. A small prospecting mill will be erected at once.

The Bondurant, which shut down for a month to install a boiler and air compressor, is again working on the crosscut tunnel which will cut the vein 800 feet vertically below the collar of the old shaft. The tunnel is now under to a distance of 400 feet, and it is expected to tap the vein in about 100 feet more, when drifting will begin.

At the Burton, near the Louisiana, the 2-stamp mill is running and bullion shipments are being regularly made. This is the only quartz mine in the district where the employment of Chinese is countenanced.

The Fair View mine, near the preceding, has been bonded to ex-Governor Van Armin of Arizona, and Supt. Anthony is putting down an incline shaft on the ledge.

At the Contention drifting still progresses on the 200 level in a good grade of milling ore.

The Blue Lead, on Bull creek, has been sold by A. Bertanni to Gov. Blaisdell and others and will be reopened.

Hedges and Koenig are working the old Hilliard mine, on the head of Bull creek, and taking out considerable quantities of high-grade ore, which is worked in an arrastra at the mine.

Coulterville, Cal., June 6, '97.

Placer.

Sentinel: At the Horse Shoe Bar Consolidated mine, four miles below Michigan Bluff, on the middle fork of the American river, the hydraulic elevators have been started and sinking to bedrock commenced. They are run under a head of 400 feet pressure. The suction pipes, of which there are two to each elevator, draws up sand and gravel to the size of 7 inches, as well as the water which is used to sluice the material to the pumps.

A tunnel 35 feet wide and 12 feet high has been cut through solid slate rock for a distance of 200 feet, which drains the loop, or horseshoe, for over a mile of channel. A flume and ditch, carrying 1200 inches of water, which required half a million feet of lumber, was run over some of the most precipitous parts of the country and gained them a free water right.

At Sunny South the Hidden Treasure Company have ceased breasting gravel and about twenty men are working on tribute.

About seventy-five men are employed by the Hidden Treasure Company at their works at Centerville.

At the Blue Canyon Mining and Development Company property work has been discontinued on the big tunnel, preparatory to putting in power drills.

W. Rabin has eight men in his Bartley drift gravel mine at Dutch Flat. The main tunnel is now in 800 feet and a crosscut of 310 feet has been made, which opens up a large body of good wash gravel.

The Glen Consolidated Company have six men at work at the mine above Forest Hill.

Plumas.

National-Bulletin: Shinn and Perkins have returned from Granite basin, where they have secured a bond on a mine owned by Mrs. Christie, and will develop it. This mine has yielded some rich ore.

Superintendent Challen is pushing work on the Topaz-Centennial.

At the Robinson mine the shaft is 100 feet deep. The Chicago capitalists who have the mine bonded are preparing to drift from the bottom.

Nevada.

Telegraph: The Pennsylvania mine is looking well and in a very short time great improvements will be made at the works. The mill will be run by electricity, the machinery for that purpose having already arrived. Besides this the company will soon add five or ten stamps to the mill

At the Brunswick mine the water is being lowered fast and Superintendent Chris. Mallon states that they now have it lowered to near the 700 level within the past three days.

Transcript: A new and larger hoisting plant is to be erected on the Home mine, Deer creek. Pumping and other machinery will be put in and a new two-compartment shaft sunk, to which raises will be made from the present underground workings.

A strike has been made in the old Hirschman gravel mine west of Grass Valley. The tunnel is several hundred feet long. The channel is the continuation of the old Live Oak, Nebraska and Manzanita gravel channel.

Union: In the Live Yankee gravel mine at Graniteville a fine body of gravel has been encountered, which has the appearance of growing in richness as progress is made. The mine is being operated by about twenty citizens of Graniteville and North Bloomfield.

The Gray Eagle mine near Maybert is in good rock and a crushing recently made yielded $16 to the ton. Tiernan & Richards own the mine.

Shasta.

Free Press: H. L. Shannon is developing the Keystone and Peach Orchard on Flat creek. He has run a crosscut tunnel 240 feet on the last named property, but has yet 60 feet to run before reaching the ledge. He also has a drift in 140 feet on the ledge, and during the month intends extending it 60 feet.

A side track will be put in on the line of the Southern Pacific Company a half mile north of Keswick station. A short tramway will be built from the mine to the side track and the shipping of the ore to the smelter of the Mountain Copper Company will be commenced.

At Harrison gulch the Roberts Company has men employed overhauling the mill, and an additional force has been put to work in the mine. A cyanide plant is being put in at the mill.

Searchlight: The Mountain Copper Co. have their 300 H. P. engine about in position. They have let a contract for the erection of forty more cottages. This will make fifty-three in all.

The Mammoth Garfield mine at Old Diggings has resumed work. The company, of which S. Cheney is the controlling stockholder, have contracted to furnish the Mountain Copper Company with thirty tons of ore or more daily. The ore will be conducted to the S. P. railroad by ropeway, and from there to the smelters by rail.

At Harrison Gulch the Gold Hill ledge has been struck in the crosscut at a depth of 300 feet. The size of the ledge is about 5 feet and the quartz is of the same character as the Lucky Baldwin. The owners immediately increased the working force of miners, who are now extracting ore and doing more development work.

Mr. Senn during the past week purchased the Delta quartz mine from M. D. Butler & Son. This mine is located five miles north of Delta. Mr. Senn has also secured possession of the Gold Standard group, near by, and now virtually owns the whole of Treasury hill. Active operations will at once be commenced in the way of sinking, putting up mill plants and erecting reduction works.

Sierra.

(Special Correspondence).—To the observing stranger that comes to this place it seems at first glance wonderful why more mines are not in operation. Even the stately buildings which five years ago were the abode of 300 busy miners in the employ of the Sierra Buttes Company no longer resound to labor's busy hammer. But upon inquiry I learn that the prospects are promising for the reopening of the entire plant.

There are several other properties which were the scenes of activity and they, too, are idle. But the day is not far distant when capital will come to the rescue and redeem these storehouses of wealth from their present condition. Better management, improved mining and milling methods will all be important factors in reopening some of the properties.

The permanent, abundant and cheap water power available makes it possible to operate not only power drills, which have not yet been put in use here, and the facilities for compressed air offer probably nowhere so good a field as here.

The formation is such as mining men desire. The ore bodies are of fair size and value. Roads are good and climate is charming. Prices and opportunities for obtaining working bonds are quite reasonable and favorable. Sierra City is but fifty-eight miles from Nevada City and is easily reached in a day's travel over one of the best stage lines in California. J. F. L.

Sierra City, June 7, '97.

Mountain Messenger: The Gibraltar Mining Company has commenced operations again.

P. Doray is working a number of men on Wallace creek.

D. Corbett has started up his mine at the Slate creek house.

The Garnett Mining Company is working with full crews at its mines at Hepsidam and Bunker Hill.

The Liberator Company is running the main tunnel on its claim at Deadwood with two shifts. Gravel is expected in about 100 feet.

Siskiyou.

Reporter: A quartz ledge 5 feet in width and carrying a 36-inch pay streak has been opened up at the American mine in Deadwood district.

E. Sheffield is working the Osceda mine. Under the same location the development shows two ledges 90 feet apart, 10 and 12 feet wide respectively.

T. Tempest is building an arrastra on the Midwinter mine.

The Salmon River Mining Company have abandoned work at their present place of operations and have decided to open up Robinson Flat.

News: Men are employed at the Morrison mine in Quartz valley making room for a larger force and will soon begin extracting ore. The mill is being fitted up to crush custom rock.

Sovy and Vincent have leased the Nebraska mine on Cherry creek and have had a small crushing of ore in the Barnes arrastra. The result was satisfactory.

C. Sears is working his mine on main Hungry creek with good success.

Richey & Letner, who have been working on the Prosperity mine, on the blue gravel deposit in Salmon River district, have recently constructed a light 1-stamp mill.

There is now a possibility that the Sterling quartz mine, on a tributary to Hungry creek, will be started up. The mine has been idle for two years on account of the inability of the owners to put in the necessary machinery.

Journal: The most promising reports come from the different mining sections of our county this season, and Siskiyou's gold product should be larger this year than ever.

The Klamath River Flume and Mining Company have started nearly all of their freight down the river. The machinery will soon be in place after it is on the ground. This will be the most extensive plant in the county when in operation, and a large tract of land is to be mined.

Journal: On the Klamath river the Distlehorst-Barton dredger is doing splendidly below Oak Bar, where they have been working for some time. The dredger handles a large amount of gravel, and it does not require very rich ground to pay well.

Sovey and Vincent, who have the Nebraska mine on Cherry creek leased for five years, have ten tons of ore out which they are crushing in the arrastra.

C. Casedy has been having some ore crushed at Lamb's mill in this place, taken from his ledge, west of Yreka. The rock averaged well, and work will be continued.

No sale of the Mabel quartz ledge, on the divide between Oak Bar and Scott Bar, has been made yet, although it is expected that one will soon be.

The Columbia ledge which adjoins the Mabel mine has been producing a large quantity of ore this year, but at present not much work is being done.

Trinity.

Free Press: The Altoona Company has three huge steam pumps running steadily night and day pumping the water out of the mine. At the present rate it is estimated that it will require from fifteen to twenty days to free the mine of the water. The inflow is very irregular. In one day the water was reduced 17 feet and on the following day gained 6 feet upon the level of the previous day, notwithstanding the pumps were running constantly. The flooding of the mine has been a loss to the company of over $40,000. As soon as the mine is in proper shape, the company will resume mining on a larger scale than ever before.

Tuolumne.

Democratic Banner: The Black Oak Company is adding ten stamps and making other improvements.

It is said that the Parole, which has been idle, will soon resume operations.

At the Keltz the company has placed in new concentrators and other machinery.

Wm. Sharwood has a force of men developing the old Grizzly, which has been idle for some years.

Some rich ore has been taken out of the Golden Dawn, near the Junction, which is owned by John and R. A. Nicholls.

Work on the Junction, under the management of Mr. Storms, is being pushed rapidly.

Wm. Floyd is trying to arrange with a company to open up the Easterbrook mine near the Hazel Dell and Evans.

NEVADA.

LINCOLN COUNTY.

S. T. Godbe of Bullionville has sold a part of the old Raymond & Ely tailings to Peck Bros., who will work them by the centrifugal process.

Pioche *Record*: The Magnolia mine is working its usual force of men, and is opening up some fine ore bodies which are being blocked out.

The Smith Bros. are working a small force on the Oro mine, which is improving as depth is attained.

Development work on a large number of promising claims situated near De Lamar is being pushed with vigor. Several of them are good milling propositions, but rock that is rich enough to ship to market is not so plentiful, it requiring ore that will reach the hundreds to ship to advantage.

Walker Lake *Bulletin*: At Silver Peak the men who were experting the Blair property have finished their work.

In the Mary tunnel the ledge carries 6 feet of first-class ore. There is room now for more men and stoping will begin in a day or two. The dump is full of ore.

At Gold Mountain they have found a good streak of very rich rock in the old Oriental.

Silver State: Near Lovelock, in Trinity district, within the past year T. Ellsworth of San Francisco, who was the original locator and organizer of the Evening Star Company in 1862, purchased the mine, and is now, in conjunction with others, following up the work where left off. They are developing the upper workings by drifts and tunnels, one of which is 364 feet in length, to tap the original shaft and drain the mine to this point.

Dayton *Times*: At Pumpkin Hollow W. T. Warren in the Lottie has a well defined ledge, about 16 inches in width.

Pratt and Martindale are still sinking on their claim; the shaft is down 84 feet; ledge is good and strong and about three feet in width.

On the Irma Faye mine, owned by L. W. Stark, he has a shaft down about 34 feet and a good strong ledge in the bottom.

M. Pritchard has commenced to sink a shaft on the first south extension of the Lookout mine, and is taking out some good rock.

Central Nevadan: The coal mines in Crum Canyon near Battle Mountain are developing into a very important factor for the future of this section. The coal is first class, now being used for blacksmithing and fuel purposes. A 7-foot vein is now in the shaft.

The Nevada Reduction Company are working old Pittsburg tailings.

Morning Star has a large force of men in the mine and their 10-stamp mill is kept running day and night.

D. Finn is producing good ore at Webber canyon.

Copper canyon under managoment of a Salt Lake company is making regular shipments of copper.

The Gold King Mining Company near Galena are driving a tunnel to cut the ledge at the bottom of Prospect shaft which shows a rich gold ledge in the shaft.

The gold mines adjoining Gold King, the property of Dr. Emerson, is being opened under the management of Supt. F. E. Chagnon.

Buena Vista mines, Galena property of John Mellander, is now producing large quantities of high grade gold and silver ore.

OREGON.

Rogue River *Courier*: Slate creek and Deer creek are the only streams in Josephine county where no mining is done.

Crow & Taylor are packing some 1500 pounds of ore daily out from their Galice creek mine and caching it at Mr. Crow's place preparatory to hauling it by wagon to Merlin.

Medford *Mail*: Rich diggings have been

reported on Silver creek that pay $15 per man. This creek was famous in the early days and at one time furnished employment to several hundred men.

Utilizing the water of Rogue river for mining is becoming more general. Trefern & Snowgoose are now putting in a pumping plant near Grant's Pass. There are many acres of placer ground along the banks of the Rogue which can in no other way be worked than by means of pumping plants, but these plants to be made profitable must be constructed with the object of cheapness in operating. Several plants of this nature already put in are too costly in operating. A floating water wheel for this purpose has been suggested as possible and economical.

Jacksonville *Times*: The Shorty-Hope Mining Company of Ashland district are advertising for bids for the construction of 375 rods of ditch at their mine.

The Portland parties who have leased the Braden mine, in Gold Hill district, have a force of men at work getting out ore, and will start the mill in a few days.

J. Chapman has sold his mining claim on Applegate to S. Cole of Medford.

S. T. Call, of Calvert & Call, has sold his interest in their hydraulic mine in Pleasant creek district to J. D. Stevens of Jacksonville.

BRITISH COLUMBIA.

The following are returns of the product of the mines of the Kootenay country for 1897 up to May 29:

ORE EXPORTED.

	Tons.
From Slocan via Kaslo	10,841¼
Slocan via Nakusp	2,642¼
Rossland via Northport	6,891¼
Rossland via Nelson	52
Total	20,445¼

	Value.
Through Nelson Custom House	$1,197,665.41
Through Revelstoke (Nakusp)	292,110.65
Total	$1,489,776.06
Average value per ton	$72.866

PRODUCE OF SMELTERS.

	Tons.
Nelson (Hull Mines) Matte	582
Trail Smelter Matte	2,843¼
Total	3,425¼
Total value	$1,534,462 98
Total value of ore and matte exported	$3,024,239.04

Spokesman-Review: In the Slocan the Ruth has thirty carloads broken down and sorted, and is waiting for good roads.

The Slocan Star is preparing to cut the fifth level. The fourth level has been run about 900 feet, and they expect to reach the ore in a few days. The fifth level tunnel will run fully 2000 feet to reach the ore body.

The Reco, heretofore a winter shipper, has contracted for ore to be taken out on pack trains until their tramway is finished.

A 6-inch vein of galena has been struck in the St. Keverne, adjoining the Payne group, in the Slocan. The strike was made in the crosscut at a depth of 218 feet.

The Payne mines in the Slocan are soon to have a tramway, surveyors being engaged on the preliminary work. The elevation will be about 2000 feet.

The Le Roi has made another rich strike at a depth of 570 feet in the shaft. The War Eagle is now in the best kind of ore, and the leading mines generally never had better showings than they have to-day.

A group of claims above the O. K. called the Bean Pot, are turning out well. They have made a crosscut to the 100-foot level and have 16 feet of solid ore.

The final cash payment has been made on the Sullivan group. This property, which includes the Hope, Hamlet and Shylock claims, near the North Star mine, in the Fort Steele country, is owned by the Sullivan Group Mining Company, which have set men to sinking, building a wagon road and erecting buildings. A report from the mine says they are sinking on fine ore. It is a silver-lead proposition. The company is considering the building of a steamer to transport its own ores and supplies.

At Silverton in the Galena Farm in laying pipes for water and within a 500 feet of the working shaft a body of high-grade galena was uncovered 30 feet in width, averaging, it is said, 200 ounces of silver.

Rosslander: A strike has been made on the Sunset No. 2. A ledge of copper ore had been traced for a distance of 100 feet, maintaining a width of from 10 to 14 inches. Last week the vein widened to 18 inches and is still solid copper ore.

W. L. Parrish has sold his quarter interest in the Pine Rine Gold Mining Company, owning mineral claims at Deer Park, to J. B. McArthur for $3000.

Rossland *Miner:* At Salmo on the Nelly Bly the owners have struck an 8-foot ledge of solid ore which shows free gold. A wagon road will soon be put in to the property and shipping will commence in a few weeks.

Boyd & Hamill on the Arlington have a ledge from 40 to 100 feet wide and can be traced the full length of three claims. The company has three shafts and eleven open cuts on it now, and a wagon road will be built at once in order to put the machinery in which the company has already ordered. This is a free gold proposition.

The Donaldson Mining Company has resumed work on the Johannesburg with a large crew of men. They are also working a crew on the Erne.

The Red Mountain Company started a long crosscut tunnel several months ago. This was driven 470 feet when a ledge was cut carrying some very pretty ore. Another ore body averaging from 1 to 2 feet in width has been found. This ore is high in copper and resembles very much the ore found in the shaft which is sunk on the main or north vein.

Spokane *Chronicle*: There is a deal on foot for the purchase of the White Water mine in the Slocan country for $500,000.

The last payment of $13,000 has been paid on the Argo and Belt mineral claims, by the Argo Mines of Sandon. A force of men has been put to work developing the property.

A bond of $25,000 has been obtained by Messrs. Leighton on the Evening Star and Keystone mines.

At Fairview the owners of the Tinhorn are bringing in a 20-stamp mill to work the ore taken from the property.

ALASKA.

Miner: Placer mining has commenced at the Basin. The season is two weeks ahead of last year. The Nowell Gold Mining Company has a force of men at work at their placers, and they will shortly be in full swing there. The Basin will be the scene of much activity this season. The Juneau Alaska Company will conduct extensive operations, and the Ebner mill will be running to its full capacity.

At Berners Bay the Comet mill of the Berners Bay Mining and Milling Company is dropping thirty stamps. The ore bodies are large and the outlook encouraging. In a few days ten more stamps will be in operation at this mill.

From Bostwick Inlet to Dall Head the whole of Gravina island has been the scene of prospecting for the past three months.

UTAH.

Bingham *Bulletin*: Following are the shipments in tons from Bingham for the month ending May 31st: Old Jordan & Galena, 1400; Northern Chief, 50; Tiawaukee, 20; Neptune, 25; Burning Moscow, 22; Highland Boy, 86; Live Pine, 25; Utah, 40; Black Hawk, 50; Old Telegraph, 697; Phœnix, 100; Stewart No. 2, 20; York, 50; Last Chance, 50; Niagara, 25; Summit, 26; Julia Dean and leases, 18; Dalton & Lark, 420; Sampson, 25; Fortune, 200; Revere, 50; all other sources, 100; total tons, 3599.

Tintic *Miner*: It is to be noted that the feeling of depression is growing less general and that local business has a healthy aspect. The shutting down of the Mammoth mill has, of course, thrown a considerable number of men out of employment, while the Ajax has also made its expected draft. During the past week a total of about 125 men in the district have lost their positions. As to the railroad and smelter situation, which is the cause of all the trouble, there seems to be a general feeling that the difficulty will be righted, which accounts for the cheerful aspect as compared to last week. It is rumored that the mining companies have succeeded in impressing upon the railroad and smelter combine the necessity of returning to old rates if their business is to be continued, and that an adjustment will probably follow in the course of a week or two. It is also reported that arrangements will probably be made at the June meeting of the Mammoth directors to again resume operations at the Mammoth mill.

Shipments from the district for the week are as follows: From the Bullion-Beck mine, 17 carloads ore; Centennial Eureka, 5 carloads ore; Eureka Hill mill, 7 carloads concentrates; Uncle Sam, 6 carloads ore; Ajax, 5 carloads ore; Swansea, 4 carloads ore; South Swansea, 6 carloads ore; Northern Spy, 1 carload ore; Morning Glory, 1 carload ore; Grand Central, 1 carload ore.

Supt. Green of the Buckeye reports a new strike made Wednesday in the bottom of the shaft in that property. The ore showed 3 feet wide.

Supt. McChrystal reports that considerable shipping ore is being encountered in the Eagle mine in the course of development, together with a great deal of ore of a good milling grade.

The Snowflake Mining Company is advertising for bids to sink the shaft in that property 100 feet deeper. The shaft is now down nearly 200 feet.

The Buckeye commenced sinking this week from the 350 level, and will send the shaft down to the 450 level. A shipment of ore will go out in a few days.

Mercur *Mercury*: On the Gold Point the shaft is now down over 200 feet.

A force of men has been put to work this week on the South Daisy, owned practically by the same company as the Daisy.

At Stockton the Hercules mine is shipping a sixty-ton lot of first-class ore. The shaft is down 200 feet, and the ore body at that point appears to be a better grade and a larger body than it was at the 150-foot level, where it was first encountered.

E. P. Mitchner & Co., owners of the Yellow Metal group of mines, between Stockton and Dry canyon, have let a contract to sink a 50-foot shaft on the silver vein, also a contract to run a 100-foot tunnel on the gold vein on the same property.

Mercur *Miner*: At the Brickyard it is believed that the ore body is a continuation of the vein of the Geyser, but the ore is of a little different character. There are two veins each of about 15 feet in thickness. There is already blocked out a body of ore 200x225 feet. If we take the usual estimate of a ton to 14 cubic feet, it will be seen that there is already about 100,000 tons blocked out. It is the intention to continue drifting so that probably 200,000 tons will be blocked out by the time the mill is ready for operation.

Silver City *Star*: The work of sinking the main shaft of the Buckeye was commenced last week and an additional 100 feet will be sunk. The shaft is now about 350 feet deep and when the 400 level is reached a station will probably be cut.

Park City *Record*: On the Constellation very little work is being done on the surface, the management confining its energies to driving the crosscut from the 300 level to tap the gold-bearing ledge.

IDAHO.

Spokesman-Review: At Wallace the Sunset Peak Development Company has bonded the Ula and Try Me for $50,000 and commenced work.

Spokesman-Review: The Tiger-Poorman mine at Burke, in the Cœur d'Alenes, shipped 1980 tons of concentrates for the twenty-seven working days in May. Its new plant is believed to be the biggest single concentrater plant on the Pacific coast. They are hoisting 400 tons of ore daily from the 1100-foot level. One hundred and fifty men are employed, and the mine and mill are working night and day. The monthly expenditures are about $27,000, and the average wages are $3.72 per day. In the mine development work is well ahead. They are still sinking on the main shaft, which is now down 1200 feet, with a 14-foot ore body.

On Lake Pend d'Oreille the Keep Cool mine is making regular shipments, running as high as 100 tons a week, which pays a heavy dividend after allowing for all improvements that are being made and the regular running expenses. A new concentrater is nearly completed.

The Weber mines are not being operated at present, but parties interested have been making an examination of the property during the last month with a view of resuming work.

On the Bunker Hill-Sullivan, at Wardner, the management is now running one and a third miles into the mountain, which will give a depth of 750 feet. This tunnel when completed will relieve the mine of the use of its tramway. The tunnel will also drain the mine and stop pumping. The mine has a 40-foot ore body, and employs between 400 and 450 men.

Spokane *Chronicle*: At Elk City the Howe mine—bought by G. C. Howe of Duluth last fall, he paying $50,000 for a half interest—has a ledge 4 feet wide which is spread over the hill like a blanket, the development work having so far failed to show where the ledge goes down into the ground. The mill is now en route to the mines to work the ore.

In placer the American and Buffalo Hill companies are running all the year round, as they have plenty of water and are making big cleanups. The Gold Hill, owned by Eaves, Knepper and other Lewistonians, is about to run, the machinery being on the way. A Tacoma company is building seven miles of ditch on Crooked river to open the McEntee property. F. Smith is tunneling the hill across a bend in the Newsome creek, through which he will divert the creek's water and work the bed of the stream.

Salt Lake *Tribune*: On Salmon river, on the Bohannan bar, near Salmon, eighty men are at work, with six streams running.

This has been an unusual season along the Salmon river, and but little fall of snow was had to insure a long running season.

Crismon brothers of Salt Lake have just put in a 10-stamp mill on their property on the divide of the mountains, forming the Idaho-Montana line.

The Blackbird, a copper and gold property near Leesburgh, which is bonded to Mr. Swift of Hailey, has large bodies of fine ore exposed.

A 20-stamp mill is going up on the Bonanza at Shoup.

MONTANA.

Inter-Mountain: Work will shortly be resumed at the properties of the Horr Coal and Coke Co., in Park county. The company owns 4000 acres of valuable ground and it is understood that soon the force will be increased one-third. This will mean the employment of about 500 men.

Much attention is being paid this year to the gold properties abandoned years ago because they were considered too low grade to work profitably. Butte people recently interested themselves in a group of gold claims near old Moose town, south of Butte, and it is understood a small mill will be erected this summer if the ore now being tested in Butte turns out as well as expected.

Sinking has been in progress for two months at the Pennsylvania shaft, one of the Boston and Montana properties, and the station at the eighth level is now being cut. This level is, however, 890 feet from the surface, the first station being cut at a depth of 190 feet.

About 150 men are employed in development work at the Butte and Boston properties.

The Anderson mine in the Ground Squirrel district has passed into the hands of the Boston and Montana Company under lease and bond, the latter being in the neighborhood of $75,000. There is said to be a good body of ore at the 200-level of the Anderson, and the company will begin there and at the same time develop the shaft from that level downward.

In the Red Bluff district S. A. Harsh, until recently superintendent of the Revenue, has taken hold of the Bradley, upon which there is a vein 30 feet in width. A test of the 30-ton lot is now being made at the Revenue.

Frank B. Turner of Butte, A. B. Smead of Missoula, and A. F. McDonald of Meadow creek, have purchased a half interest in a lease and bond on the Michigan lode for $5000, and will erect a cyanide mill to treat 100 tons of ore a day.

At Sheridan the Ruby Placer Mining Company, which constructed a big flume on Wisconsin creek two years ago to open up a rich stretch of placer ground, has struck bedrock, and will at once begin to wash out the ground.

Butte *Miner*: Ore is now being shipped from the Original mine. Workmen are now drifting on a good body of ore at the 900-level, while crosscutting is still being done at the 1000-level.

New ore has been encountered in the lower levels of the Clipper mine, near Pony. The mill at Pony is to be operated as soon as the road from the mine is in good shape.

Frank D. Smith of Butte has taken a bond and lease on the June Bug, in the Mayflower district, near Gaylord. The property is owned by the Invincible Gold Mining Company. It is developed by a 35-foot shaft. The bond runs for eighteen months from June 1st, and is for $50,000.

The Sweepstake, at the head of Rochester basin, is now being worked by Hodley, Steel, Stanchfield and Young, under a lease and bond. They have been sinking a shaft and are down about 80 feet.

Sinking on the Nippur claim is in progress at the 300-level and depth is gained at the rate of about 3 feet a day.

Preliminaries are under way looking to the early commencement of operations on the famous old Elgin mine, near the camp of Rochester in Madison county. It is the purpose to sink a double compartment shaft west of the apex of the vein.

The shaft work of unwatering the famous old Silver Bow, No. 2 mine, southeast of the Anaconda mine, having been practically accomplished, active repairing operations are under way.

COLORADO.

Republican: At Cripple Creek the output from the district during the month of May was within a few thousand of that of April. The mines have turned out a slightly increased tonnage of smelting ores, but the grade has been lowered because the managements have been sending to the smelters ores in the common class.

The Metallic Extraction plant at Florence handled 7200 tons of an average value of $25; the Colorado-Philadelphia at Colorado City put through 4450; the El Paso at Gillett, 1400; the Brodie at Mound City, 1776—all averaging $30 and giving 7627 tons at this figure. The stamp mills are estimated at 2000 tons of $12 average, and the railroads have hauled to the smelters 10,000 tons that would average at least $65. These figures make the total 26,576 tons, of a gross value of $1,082,780. There is little show for any immediate increase in these figures through the present month; neither is there for a decrease.

The Frank lease on the Modoc is producing steadily ore of a good grade in several levels from the surface to 400 feet depth, and sinking the shaft will be resumed within a few days.

The new plant on the Cranks is now in operation and the vertical shaft will be sunk from its present depth of 240 feet to 300 feet, at which point crosscuts will be run to both sides of the property.

The Moon-Anchor is turning out ore from the new south chute rapidly.

The Pharmacist will start its usual weekly shipment of about fifty tons.

The four miners who are working under lease the old Golden Fleece Company's shaft on the Colorado City are getting out ore from two of the levels and have pushed the 80-foot drift into a good body of ore.

A. G. White & Co., leasing the Hull City placer, shipped 300 tons of ore last month that averaged fully $30 a ton, and are doing almost as well at the present time.

Hoskins & Clark are getting on an average of five tons a day from their lease on the Mountain Monarch.

George Crawford has made arrangements by which the Little Annie and San Juan Consolidated mines at Summitville, Rio Grande county, are to be operated, after an idleness of more than twelve years.

Near Central City, in the Gilpin district, sinking is progressing on the Friend lode, which is one of the seven claims recently leased and bonded for $10,000 to an Eastern lady. The Friend vein is one of the largest in camp, and shows up well with present depth.

J. Hogan of Denver has taken a lease of the Mineral Point claim owned by J. Gilchrist and intends to start up work in a few days.

Work has been resumed on the Populist lode, which shows up as well as any claim in the district.

Sinking is being carried on in the None Such claim, and will be continued until a depth of 100 feet is reached.

The Poor Man property of Groceclose Bros. & Co. has been sold to New York parties for $10,000.

On the Chase tributers are stoping between the twenty-second and twenty-third levels, and a good grade of ore is being taken out. The milling ore taken out from the east and west 300 levels shows increased values of late.

At the Gettysburg mine on Bates hill, the sale of which was recently made to Wabash, Ind., parties, twenty men are employed and daily shipments amounting to thirty tons of ore are being made to mills.

At Georgetown the Dunderberg, owned by New York parties, has been and is producing large quantities of high-grade ore.

The Mendota is owned by Prof. R. O. Old of Georgetown and has been developed for more than twenty-five years. The property has yielded hundreds of thousands of dollars, and to-day it is keeping up its reputation as a producer.

The Diamond Tunnel Company of Baltimore, Md., which owns the Corry City and other mines, has been steadily prosecuting work on its properties for the past twenty-five years, with good results. To-day the property looks better than ever and regular shipments of ore continue to be made.

ARIZONA.

Republican: At Placerita Camp the Placerita mine is in operation again with about twenty men. A strike of ore running high was made in the Bonanza mine, which is now being operated by the Placerita Company.

Arnold Bros. have four claims with shafts on three claims at a depth of 100 feet.

From Congress is reported the bonding of the Tooker claims and Reese & Holden's Last Chance, together with the purchase of the Gibson ranch on Date creek for water rights and mill site. The purchasers are Rochester, N. Y., parties.

A bond has been given by W. Holmes on his mining property near Turquoise, in the Dragoon mountains, to Clark & Hoyt of Los Angeles.

At Yarnell the Devonshire has an incline shaft of 183 feet. There is 400 feet of development work. The ledge runs to a width of 18 inches and considerable free gold is found. The greater part is base, which is shipped to smelters.

The Yarnell mine will start up again soon. It is owned by the Big Four Gold Company of Baltimore. There is a 20-stamp mill, which is now running on custom ore.

Scientific Progress.

Are Rocks and Pebbles Organic?

To the Editor:—The following press dispatch seems to me worthy of comment:

Chicago.—Professor Edouard von Holst is carrying about with him the details of what he says will prove an astounding scientific revelation, one of the most far-reaching discoveries of modern times, and fit to rank with Darwin's great discovery of fifty years ago. It is no less a matter than the absolute demonstration that crystals, rocks, pebbles—anything which we have been used to consider as dead things—are in reality organic, that they contain life.

The discovery of the new scientific fact, which will vastly broaden not only science but philosophy, is that of Professor von Schroen, one of the faculty of Naples University, a Bavarian by birth, sixty years of age, and a man whose whole life has been devoted to science.

Professor Edouard von Holst seems just to have wakened up to this idea, while dozens of professors and philosophers have asserted the same in the past fifty years, as I here propose to show by quotations.

The German philosopher Loetze holds "that all atoms are conscious and of a spiritual nature." The consciousness of atoms extends to all material objects, *even to crystals.*

Professor T. Sterry Hunt says "crystals certainly live. When it is considered that these stone plants are affected by light, it can be realized that they are not so insensible as popularly supposed. The life of crystals is a different kind of life than that of plants, but, if I understand the term, they live in their own way quite as decidedly as do plants and animals."

Thomas A. Edison, in an interview with the *Republican*, says: "All matter lives and everything that lives possesses intelligence. A crystal is devoid of this principle, they say, and yet certain kinds of atoms invariably arrange themselves in a particular way to form a crystal. They did that in geological periods antedating the appearance of any forms of life, and have been doing it ever since in precisely the same way. Some crystals form in branches like a fern. Why is there not life in the growth of a crystal?"

Mrs. Anne Besant says: "The whole universe is a manifestation of central life, which is present in every atom of matter."

Professor Evan Hopkins, C. E., F. G. S., in his work published in 1851, entitled "Geology and Terrestrial Magnetism," says: "These crystals gradually grow until the aggregated calcareous mass form a systematic figure." Again: "It will, therefore, be evident that the mineral kingdom is like the vegetable, moist and in a constant state of activity, and, although this action is invisible to those who are confined on the surface, and so slow as not to be perceptible to the multitude, allowing them to build and live undisturbed. To conclude, we may briefly state that minerals grow out of rocks into all kinds of fractures."

Solomon J. Silberstein, in his recent work entitled "Disclosures of the Universal Mysteries," reaches still further on the same line of thought.

Almarin B. Paul.

San Francisco, May, '97.

Areas of Disease.

It is a common knowledge that diseases have, as a rule, their local habitations, says the London *Saturday Review.* Some, like tropical animals and plants, live only in the tropics; some, like consumption, are gradually spreading over the whole earth; others, like leprosy and small-pox, are gradually becoming limited in their distribution, and may actually be tending toward extinction. Again, there are regions to which diseases have never reached. On the summits of high mountain ranges and in the circumpolar snowfields the earth and air and water are as barren of the microbes of disease as they are of animal life. Without question, if Nansen and his companion had been exposed to the same hardships and the same unsanitary conditions in these islands, the lowered vitality of their bodies certainly would have been unable to resist the continual bombardment of germs to which we are all subjected. In a country like Britain, thickly populated for many centuries, and with the freest circulation of population, it cannot be doubted that every yard of surface contains the germs of the more common diseases, and the native of some newer land, brought over here, falls a victim to our plague-stricken soil. By generations of a destructive elimination we have become highly resistant to our native diseases, just as the Gold Coast natives are less susceptible than we are to their own local diseases. But we are not fully protected, and cancer and consumption—two of our common scourges—still take a large annual toll. It may be assumed that both are due to micro-organisms, the microbe of consumption being well known, that of cancer being as yet only suspected. Probably no inhabitant of Britain escapes infection by the cancer organism; certainly none escape infection by the microbe of tubercle. Most of us, fortunately, resist the intruders and are unaffected by the disease.

Alcohol Effect on Animal Life.

Professor C. F. Hodge, who has been conducting experiments on the influence of alcohol on the processes of life, in an article in *Popular Science Monthly* describes the effect upon a number of dogs which had been subjected to its influence.

One marked and striking effect of the alcohol—evidently the effect of that—was to make the two of the dogs that had been chiefly subjected to the test, full of groundless fear. Though treated with the utmost and unvarying kindness, they approached a kindly call, or extended hand, "with cringing and trembling, like a Chinese culprit before his executioner." Professor Hodge cannot avoid calling attention to the fact already well established, that in the human being alcohol, persistently drank, produces fear. The worst of all forms of dread is manifested in the horrible alarms of the victims of delirium tremens. The experiments are to be continued for at least one more year—if not, as Professor Hodge hopes, through the complete life story of these dogs. No doubt the effects of alcohol on beasts do not in all ways correspond to those produced in man; but the essential effects, or some of them, are at least very similar—and Professor Hodge's experiments seem to be of great value and importance. They tend to confirm scientifically facts which have been the subject of common observation in the habitual whisky drinker.

The committee of the seventh International Geological Congress has issued a circular specifying the order of business for the meetings in St. Petersburg on August 29 to September 4. The subjects to be considered by the congress are general principles of international importance. First, the congress is asked to decide whether geology shall adopt the artificial classification, based solely on historical data, or the natural classification, based on the changes of physical geography or fauna, and not on the accidental limits of various divisions called after the name of the country where they have first been determined. Secondly, rules will be drawn up to be followed in the introduction of new terms in stratigraphical nomenclature. Lastly, another question of equal importance is that of petrographical nomenclature. Some agreement as to its principles is urgently required. The flood of new terms has attained such dimensions that soon no human memory will be able to retain the mass of new words, and the reading of each paper will necessitate the use of a special dictionary.

A curious instance of the ignition of coal dust by the sun's rays is recorded in *Glueckauf.* At the Maybach colliery, in the Star district, the surface works are chiefly of iron, and the floating dust in the course of time formed a deposit more than an inch thick on some girders. It was found that the layers of coal had extended along the whole length of the south wall, and, heated by the sun, the metal plates ignited it. This affords a possible explanation of fires at similar surface works.

H. Moissan has presented to the French Academy of Sciences the results of his recent researches on the direct union of carbon and iron at a high temperature. When pure iron and carbon are melted together in the electric furnace and allowed to cool slowly, the metal is found to contain only a very small quantity of combined carbon, a grey pig iron being obtained that solidifies at 1150° C. By suddenly cooling in water iron saturated with carbon at 3000°, the metal became crystalline in structure, and from it was separated brilliant crystals of the carbide of iron Fe_2C, identical with that occurring in steel. Curiously enough, although this was one of the first metallic carbides known, it has proved to be the last to be prepared in quantity by direct synthesis.

Extraordinary power is claimed for the new signaling light of Col. Milklashevski, of the Russian engineers. Its signals have been read at a distance of thirty-four miles, and it is hoped the distance may be increased to nearly sixty miles by the use of reflecting mirrors. The light is produced by spirit, which is colored by a red and a green powder of secret composition. The lantern embraces two tubes, ending with pear-shaped balls, which, on being pressed, emit respectively brilliant red and green flashes, by which the signals are transmitted. The apparatus weighs only seven pounds.

The *Comptes Rendus* of the French Academy of Science announces that the black coating produced on diamonds exposed to cathode rays is a very stable form of graphite. The transformation of the diamond into graphite requires a temperature of at least 2000° C.

Electrical Progress.

Alternating Current Dynamos in Parallel.

The disadvantages of the prevailing system of running each machine on a separate circuit are set forth in a paper by J. E. Woodbridge in the *Electrical Engineer:* "The number of circuits increases necessarily with the number of machines, and the problem of properly distributing the loads on those circuits, so that in the evening each generator shall do its full share of the work, and yet not be overloaded by some unanticipated addition, is a serious one. A compromise which results in poor economy always has to be made with loads which are subject to sudden changes that cannot be foreseen in the central station, such as the theater and church loads, etc. Then constant attendance is necessary, as the load rises and falls through its daily range, to start up the fresh dynamos as they are needed, and switch on to them the different lines; and again, when the load falls off, to properly branch the lines on certain dynamos, so as to keep the machines which are running always as near to their most efficient loads as possible. No little ingenuity is needed when the dynamos in the house are of various sizes and capacities. When the conditions are further complicated by the necessity of giving the longer feeders a higher voltage than the shorter ones, the increase in that voltage being proportioned roughly to the load, the switch-board man has no easy job. Added to that, is the necessity of carrying over his circuits as nearly instantaneously as possible to prevent too long 'wink' in the lights; and the risk of accidentally throwing two machines in multiple by a mistake in the manipulation of his switches."

Mr. Woodbridge goes on to show that all the disadvantages which he has comprehensively enumerated are completely removed by "running all the alternators in a station in multiple on one set of bus-bars, from which all the feeders are tapped off, either direct or, in the case of long feeders, through adjustable boosting converters." He proceeds to show how the number of feeders can be thus much reduced and economy increased.

A Novel Engineering Work.

A novel engineering work has just been commenced at Rouen, France. It is called a "pont transbordeur," and serves all the purposes of a bridge while not interfering with the free passage of ships, even of those with masts 150 feet high. Two diminutive Eiffel towers are to be erected—one on each bank of the Seine, three-quarters of a mile below the lowest existing bridge at Rouen—and a narrow iron bridge will be suspended by chain cables between their heads. It is to be not less than 160 feet from the level of the quays, but it is not intended either for carriages or for foot passengers. Several lines of rail are to be carried along it, and on these a skeleton carriage or platform on wheels will run. This will be dragged from side to side of the river by steel ropes passing over a driving wheel, to be worked by steam or electricity from one of the banks. To the skeleton platform will be hung, by steel hawsers, at the level of the quays, or 160 feet below the bridge, the transbordeur—a slung carriage—within which passengers and vehicles will be transported from one bank to the other. This carriage is to be 40 feet in width by 33 feet in length. The electric tramways running on the quays on both sides of the river are to make a connection at this point, and the transbordeur will be fitted to carry the tram cars so that passengers by them will cross the river without changing their seats.

Electricity in Machine Shops.

Overlooking the whole field, the application of electricity to mechanical processes seems to divide into three parts. First, in point of time and aggregate commercial importance, stands the introduction of electric motive power into machine-operating establishments.

The inducement to this step is simply the lessened cost of power that comes from a method of distribution the most efficient yet devised, with the added advantage that comes from generating power in large units, rather than small ones.

Second in order of present importance come electric labor-saving devices—those applications of electric power which are primarily directed, not so much toward the cheapening of the power used, as toward its employment in the most direct way and with the minimum amount of labor. There are many operations in which the change from crude to refined motive power means an enormous reduction in the use of the human machine, and such change is in this country of particular economic importance.

Finally, we must consider the profoundly interesting class of cases in which the employment of electrical energy has not merely cheapened and facilitated some mechanical operation, but has radically changed the process itself, giving us not only new conveniences, but new methods. Here electricity comes to the rescue by revising or replacing old ways of doing things, and thus saving power, or labor, or both.—Louis Bell in Engineering Magazine.

The Copper Supply.

Electricity without copper would be somewhat like astronomy without telescopes, but whilst everyone reads with avidity news of gold discoveries, who troubles about copper? At the moment the copper miners of the world are working their hardest to keep pace with the enormous demand for electrical purposes, and the available stock of metal is lower than it has been for very many years. It is possible that in a few years' time the earth will be searched

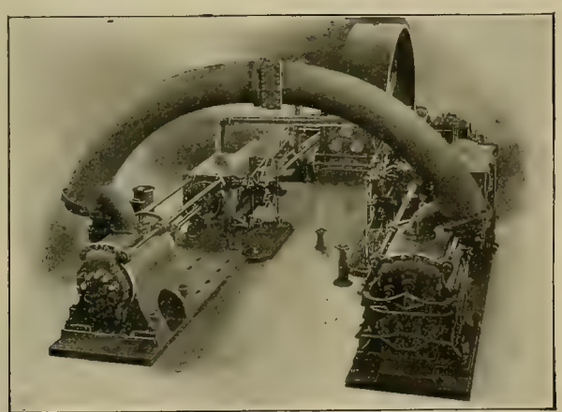
as diligently for copper as it is for gold, as the demand goes on increasing, and must continue to do so with electricity still in its infancy. With demands increasing and stocks decreasing, the natural conclusion of the business man would be that we should see a rise in the value of the metal, but the obliging bears have been good enough to depress prices for reasons of their own, and consumers are thankful. Less than two years ago there were 40,472 tons, whereas, by the latest returns, the available stock is only 18,595 tons, whilst the price has recently fallen about £5 a ton. Whether we may expect a copper famine or whether the operators, notwithstanding the lowness of the stocks, are keeping down the price with the view to a big "corner" later on, we cannot say, but it would be well for consumers not to run short of supplies.—Machinery.

THE supplying of electric power to working people in their houses is making considerable progress in France. A British consul writes that whilst in Lyons there are several companies with large capital engaged in the experiment, still they are not sufficiently advanced to indicate their chances of success, but in St. Etienne the problem appears to be already solved. At the present moment 1200 looms, of which about two-thirds are situated in the town, and remainder in the surrounding districts, even as far as thirty miles away, are driven by power distributed by the company of St. Victor-sur-Loire. This company, founded in in 1893, with 1000 H. P., has since that date added 400 H. P., now working, 1200 H. P. on the point of being used, and now propose to add another 3000. The electrical energy is furnished at the price per loom of 8s per month, and the time when the loom is not working is allowed for at the rate of 4d per diem.

Mechanical Progress.

The Largest Compressor Engine in Canada.

The compressor engine shown in engraving is the largest ever put in operation in Canada, and was recently installed at the famous LeRoi mine, Rossland, B. C.



It was built by the Rand Drill Company, of 100 Broadway, New York city, in their Canadian shop at Sherbrooke, P. Q., and is described as a beautiful piece of mechanism as it was shown standing on the shop floor at time of inspection.

On the steam end the engine is of the Corliss type, made in the form of a cross-compound condensing machine. The high pressure cylinder is 22 inches in diameter by 48-inch stroke, taking steam through a pipe 6 inches in diameter. The low pressure cylinder on the opposite side of the machine is 40 inches in diameter by 48-inch stroke. Both cylinders are fitted with the Corliss liberating type valve, with vacuum dash pot, and with a sensitive governor operating on the release gear, to be operated automatically from six or eight revolutions to the maximum number of revolutions per minute. The main shaft is 14 inches in diameter by 13 feet long, weighing about 5500 pounds. The shaft is fitted with cranks pressed on under immense pressure. The connecting rod forgings and piston rod forgings are well and carefully finished.

The air end of the machine is fitted tandem with the steam cylinders, and is also compound, the high pressure air cylinder being 22 inches in diameter by 48-inch stroke. The valve motion supplying these cylinders is Rand's most economical type, being in the form of mechanical valves. By this means the low pressure cylinder is insured being filled with air at atmospheric pressure, which fact largely affects the efficiency of the machine, for were the cylinders either not completely filled, or were the air hot and expanded, in just such a ratio would the efficiency be decreased.

The inlet valves of the low pressure or intake cylinder are surrounded by a hood, which is connected to a flue for the introduction of cold air from out of doors.

Between the high and low pressure cylinders is an intercooler of the latest type. Through this intercooler the air passes over a system of water-circulating pipes and is cooled in the process. This giant compressor engine will be used for running all the pumps and hoists at the mine, in addition to operating forty drills.

THE LARGEST COMPRESSOR ENGINE IN CANADA.

The Use of Compressed Air for Mining Purposes.

NUMBER V.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

A hoist of the character referred to will be found much easier to care for than one operated by steam, for there will be no condensed water to be carried off, and the machine is ready to start in instant operation at a second's notice. There is no other manipulation, as far as the motive power is concerned, except the opening of the throttle valve.

In the operation of a hoist of this character the service of storage reservoirs in conjunction with compressed air service becomes very apparent, and, as stated before, a hoist which required from 80 to 100 H. P. to operate while it is in service would in the average mine require but 25 to 30 H. P. at constant work delivered by the compressor. The advantage of this is apparent, and while it is approached by steam power, cannot be matched by any other service excepting by a water wheel plant having large reservoir capacity.

And for the reasons which I have heretofore stated, it is evidently the very worst proposition for the economical use of electricity, and the greater the proportion of the entire power used by the mine, that is devoted to an electric hoist, the poorer will be the efficiency of the whole system, for the maximum amount of power required by the hoist must be purchased and brought to the hoist motor ready for consumption at any time. Of course this loss will be obviated whenever storage batteries become possible for every day use.

The next surface motor of importance around a mine will be the mill engine, which as a general rule has a constant load. It is only in the smaller mills that the power required for the rock breaker is intermittent, but in such a plant as we have been considering the rock breakers will probably be of such a size that they can run continuously from the ore bins, which will render the total power required from the mill engine a constant.

In this case, for compressed air the engine will probably be, for ordinary purposes, a straight running simple Corliss engine using reheated air. If the mill requires a considerable power, it would be advisable to install a tandem compound Corliss engine, where the air will be reheated twice, as in the case of the hoisting engine.

Compressed air can claim no particular advantage over electricity in its economy for driving this constant load, nor for that matter, over a high efficiency water wheel or a compound condensing steam engine. The honors are practically easy all along the line.

Our general system being compressed air, therefore, there is no loss or disadvantage in using it for the constant load. The same course of reasoning will apply to engines which may be used for driving Cornish pumps from the surface, or any other constant load requirement, such as driving fans or tramways. For intermittent work, such as a saw mill, in connection with a mine, compressed air would have the same economy with a properly designed motor, as for the hoist.

Outside of the requirements heretofore mentioned, the only other required service would be for furnishing lights. For an ordinary mine 10 or 15 H. P. would readily supply this. Compressed air of course will have to be transformed, through an air motor and dynamo, into electricity, for furnishing lights, and this naturally must be at considerable loss, and of course in this instance furnishing the electric current direct would be very much more economical, but the amount of power required for this service is so insignificant in reference to the balance required by the mine that it need not be seriously considered.

For underground work there are practically but three kinds of work required—hoisting from winzes, running of rock drills and pumping.

Owing to the fact that as a general rule it is not desirable to place large or expensive hoisting plants under ground, the character of the engines used is not very economical, but the work is so intermittent in its character—much more so as a general rule than the hoist on the surface—that even these uneconomical engines can be operated with compressed air much less than by electricity. In many cases it is desirable to reheat this air, which can be done with perfect ease, either by means of an externally fired furnace using either wood or coal where an old shaft or a proper system of ventilation will take the gases of combustion, or the air may be heated by an internally fired furnace in which coke is placed at proper intervals of time in sealed chambers made to withstand the air pressure, and through which the compressed air passes, furnishing oxygen for the combustion.

It is always well in installing underground hoists of all kinds to place in close proximity as large reservoir capacity as possible.

For underground pumping, ordinary direct acting steam pumps, using air for actuating them, are the most uneconomical machines that can possibly be employed in the use of any power and should never be used unless their utility more than counterbalances their waterfulness of power.

In sinking pumps, especially in confined spaces, there is scarcely any other form of pump that can be used with any degree of satisfaction, and utility is the only thing to be considered. A power driven pump would be undesirable under such circumstances. For large spaces, compound direct acting pumps, for sinking pumps and even station pumps, have a reasonable degree of economy but would at the same time require an element of utility to be considered in order to counterbalance the economy of an electrically driven station pump. The latter, however, possesses so many disadvantages in the fact that gears are nearly always introduced for the reduction of speed and are subjected to tremendous wear, that their use is limited.

(To be Continued.)

WANTED.--Assay Outfit,
IN GOOD CONDITION.
Call on or address JOHN G. SMITH, 474 Edwards St., Oakland, Cal.

SITUATION WANTED.

Young man, single, steady worker, wants situation as assayer or other work around mine. Can also keep books. Will go anywhere. Salary secondary. Good references.

Address W., this office.

WANTED.

Old Iron Shafting,
5 to 15 in. Diameter.
Address "IRON," Mining and Scientific Press.

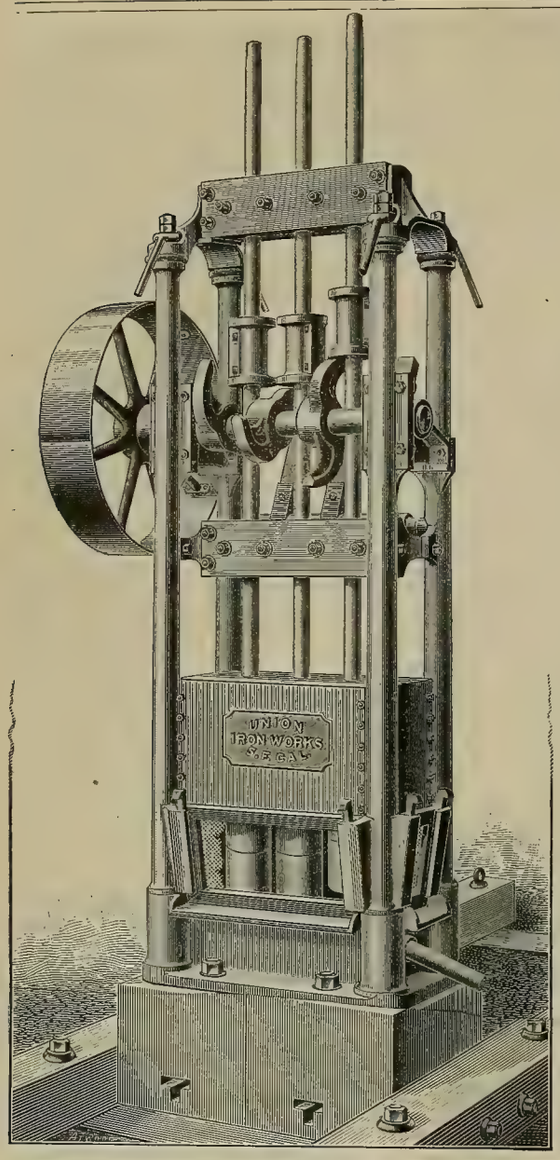
FOR SALE.

A GOOD PAYING MEDICAL PRACTICE
In a Thriving California Mining Town,
Insuring a steady income from mine and outside practice. An unusually favorable opportunity. Price $350. All statements guaranteed. Address L. T., this office.

FOR SALE CHEAP.

First-Class Air Compressor (Steam Driven) and Drill, New.
Also, 3-Ton Capacity Pulverizer.
A. L. FISH, 59-61 FIRST STREET, S. F.

British Columbia.



E. S. TOPPING, TRAIL, B. C.,
Has prospects for sale in Trail Creek and the whole of the Columbia basin. Will buy legitimate stock and mines for investors. Will examine mines. Has lots for sale in Trail and Deer Park.

DEWEY & CO'S
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American reports, with full copies of U. S. patents since 1872. All worthy inventions patented through Dewey & Co's Patent Agency will have the benefit of a description in the *Mining and Scientific Press*. We transact every branch of patent business, and obtain patents in all countries which grant protection to inventors. The large majority of U. S. and foreign patents issued to inventors on the Pacific Coast have been obtained through our agency. We can give the best and *most reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior.
Advice and Circulars free.

Coast Industrial Notes.

—A branch road will be built next fall to Globe City, Arizona.

—San Diego, Cal., exported fifty tons of honey last year.

—The San Joaquin Valley road is now in operation to Hanford, Cal., and tracklaying continues south.

—The S. F. Board of Supervisors have petitioned Congress not to abrogate the Hawaiian reciprocity treaty.

—Preliminary surveys are being made by C. Harlow for a railroad from San Diego, Cal., to Ramona via Lakeside and Santa Maria, forty miles.

—A company has been incorporated in San Bernardino to erect a cannery there to pack and can deciduous fruits annually raised in that neighborhood.

—A syndicate of Chicago and Milwaukee capitalists has just bought 3,000,000 acres of coffee land in the Territory of Tepic, Mexico, for $900,000 in Mexican silver.

—The Union Iron Works have made the Government an offer to provide diagonal armor plate for the battleship Wisconsin, now building at their works in this city.

—In '90 the assessed value of the counties comprising southern California aggregated $109,000,000; in '96 it was $136,000,000. In '90 the population of that area was 201,352; in '96, 309,000.

—A contract has been let by the Treasury Department at Washington for the purchase and removal of buildings now on Seventh and Mission streets, San Francisco, the site for the new postoffice.

—At Port Angeles, Wash., last Tuesday, the sawmill which was built by the Puget Sound co-operative colony in 1887 was totally destroyed by fire, together with the wharf. The loss is about $20,000.

—Field & Marshall are starting a factory at North Ontario, Cal., in which to manufacture citric acid from lemon culls. Most of this article is now made in Italy. There is a duty on it of five cents per pound.

—A big irrigation scheme is under way in Whitman county, Wash. The Palouse Irrigation Company has been organized and will build sixteen miles of ditch this summer. It is planned to supply 200,000 acres with water.

—Santa Fe road surveyors are at work on a route through from Deming to Globe. The proposed route will come in as direct a line as possible to Duncan and from there almost direct to Solomonville and then on through the valley to Globe.

—It is reported at Hermosillo, Mexico, that concessions have been granted to the people representing the Southern Pacific and the Banam Steamship Company to build a line across the republic from the Gulf of Mexico to the Pacific coast.

—There was filed last Thursday at Albany, N. Y., a certificate of incorporation of the Rio Grande, Sierra Madre & Pacific Railroad of Mexico; capital stock, $3,120,000. The company purposes to construct a road from Ciudad Juarez, Chihuahua, to Corralitos, 56 miles.

—The Sierra Railway Company's road now extends from Oakdale to Cooperstown, nineteen miles, and is doing business between those points. The rates are on ore and concentrates, value not to exceed $300 a ton, $2.65; lead, value not to exceed $100 a ton, $2.20; and base metal, copper matte, bar and block copper, value not to exceed $300 a ton, $2.65.

—The report of the San Francisco Produce Exchange for the month of May last shows the flour and grain remaining in the State of California on June 1st: Flour, barrels, 94,960; wheat, centals, 1,733,880; barley, centals, 758,600; oats, centals, 81,980; beans, sacks, 505,730; corn, centals, 61,280; rye, centals, 21,360.

—The Stanislaus county, Cal., Supervisors propose building a wagon road across the mountains between the Santa Clara and San Joaquin valleys. The State Highway Commissioners report that twenty-two miles of road between the Mount Hamilton Observatory and Newman, in the San Joaquin valley, would unite the two valleys.

—The report of the secretary of the Redlands Orange Growers' Association for the season shows that the association sold 3,009,310 pounds of Navel oranges, of which amount only 426,533 pounds were packed as seconds. The net average price of the first quality was 2.64 cents a pound. The amount realized from Navels was nearly $90,000 f. o. b. The total amount received of all kinds was 5,034,010 pounds, which made up 197 cars. The gross amount realized was $119,600.53. The net amount paid the growers was $92,815.11.

—The Southern California Power Company will put in an electric transmission plant to carry power eighty miles — more than twice as far as any other plant in existence, the next longest being thirty-five miles. The power station will be in Santa Ana canyon, twelve miles from Redlands and eighty miles from the point of development at Los Angeles. The current will be generated at 1000 volts and transformed into 33,000. The highest voltage that has ever been attempted ere this is 15,000. This pressure of 10,000 volts is now used by the Central California Electric Company in transmitting power from Newcastle to Sacramento, a distance of thirty-five miles. The power is derived from the waters of the Santa Ana river, which is to be directed from the stream by a canal, flume and tunnel work along the side of the canyon to a point where it drops through 2200 feet of pipe a distance of 750 feet to the water wheels. The power generated will be sold to companies in Los Angeles and Pasadena and used for street railway and lighting purposes. The company has closed contracts for equipment. The contract for the machinery for the generating station in Santa Ana canyon was given to the General Electric Company of New York. The Westinghouse Company of Pittsburg was given the contract for supplying the machinery for the distributing stations at Los Angeles and Pasadena. The two contracts amount to $140,000.

Personal.

JAMES CRONAN, formerly superintendent of the Hale & Norcross mine on the Comstock, is about to go to Rossland, B. C.

W. W. MONTAGUE, treasurer of the California State Miners' Association, has been designated Postmaster of San Francisco.

FRED G. RANSOME of the Department of Geology in the University of California has been appointed an assistant in the U. S. Geological Survey.

SAM GILSON, after whom the asphalt of the Uncompahgre reservation in Utah was called gilsonite, has taken a lease and bond on the Cherokee mine in Cherokee county, Georgia.

MARSDEN MANSON, president Department State Highways, will shortly leave San Francisco to attend the International Geologic Congress at St. Petersburg, Russia.

J. A. YEATMAN, late in the employ of the E. P. Allis Co., has been engaged by the Parke & Lacy Co. as consulting engineer and traveling salesman, with headquarters in this city.

FRANK A. LEACH of Oakland, editor of the *Enquirer*, has been appointed Superintendent of the branch United States Mint at San Francisco to succeed John Daggett, whose term will expire about July 1st.

Recent California Mining Incorporations.

Prince William Sound M. and T. Company, San Francisco; W. T. Farrar, W. W. Deamer, L. M. Hoefler, F. J. Burke, J. H. Jennings; capital stock, $1,000,000; subscribed, $250.

Kelso Creek Mining and Development Co., Los Angeles; J. H. Williams, B. F. Vruland, W. H. Davis, E. M. Hanna, E. S. Tomblin; capital stock, $300,000—$5020 subscribed.

Imperial G. M. Co., Stockton, Cal.; D. A. Vaughn, T. N. Moore, W. H. Chestnutwood, C. Moring; capital stock, $200,000; subscribed, $100,000.

German M. & M. Co., S. F.; C. O. Richards, R. J. A. Weir, L. A. Gibbons, M. E. DuBois, F. R. Deering; capital stock, $1,000,000; subscribed, $250.

Commercial Paragraphs.

C. H. EVANS & Co., formerly 110 Beale St., have removed their machine works to their large new brick building, 183-185-187 Fremont St., San Francisco.

THE Pacific Mining Machinery Co. of San Francisco has shipped a No. 3 Pacific amalgamator to be placed in the quartz mill of the Golden Grape Mining Co. near Acton, Cal.

THE Fulton Engineering and Shipbuilding Works, 213 First St., San Francisco, are building a pyritic desulphurizing furnace for the Mountain Copper Co., Keswick, Cal. They are also building a Falding pyritic furnace for a local manufacturer of sulphuric acid.

THE United Globe Mines Company of Globe, Arizona, have installed a new quadruple friction hoist, of the Hendrie & Boithoff make, at their mines at Globe. The Trade Dollar Mining and Milling Company of Silver City, Idaho, have also put in position a Bolthoff combined gear and friction hoist at their mine at Silver City.

THE Colorado Iron Works are putting in a plant of sampling machinery for the Kilton Ore Sampling Company of Breckinridge, Colo. The company recently sold an 8400-foot Finlayson wire-rope tramway for the Sunnyside mine at Silverton, Colo. One of these tramways is operating at Sanden, B. C., on the Noble Five mine.

THE Risdon Iron Works, Beale and Howard Sts., San Francisco, have supplied machinery for two river dredgers, now building at Marysville, for operations on the Yuba. In some respects the method is a novel one. The boats are each 90 feet long, 9 feet beam, drawing 26 inches, built together at bow and stern, the dredge buckets operating through a well hole between on an endless chain, to the end of a chute and back to the stern, where their contents are emptied into a perforated revolving cylinder, whence the finer material is dropped on an inclined apron of cocoa matting, the coarse gravel, etc., going overboard, the gold-bearing sand passing through a sluice box. Eighty tons per hour is the stated capacity. The work is in charge of W. H. Telford of the Archimedes Mining Company.

Recently Declared Mining Dividends.

Swansea Mining Company, Utah, of 5 cents per share, $5000; payable June 10th.

Champion Mining Co., Nevada City, Cal., 25 cents per share; payable June 15.

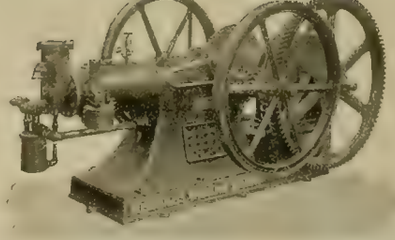
Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

WAVE MOTOR. — W. McDonald, Chicago Park, Cal. No. 583,689. Dated June 1, 1897.



This invention relates to an apparatus for applying the power produced by the movements of waves or ocean swell. It consists of a rising and falling float, with suitable guiding poles or posts to keep it in place, a mechanism by which the rise and fall is transmitted to produce a continuous rotary motion. This mechanism consists of shafts journaled upon guide posts above the opposite ends of the float, with sprocket wheels connected by a chain having oppositely disposed clutch mechanisms, and pawls, gear-wheels, rack bars yieldingly connected with the float and yokes by which the bars are retained in contact with the gear wheels, so that the rise of the float acts through a gear to rotate the shaft in one direction, and the fall of the floats acts to rotate it again in the same direction. By this construction the constant rise and fall of the waves or a swell in any exposed locality where the apparatus may be placed, will cause a corresponding rise and fall of the float, and the action through the connected mechanism serves to produce a continuous rotary motion, which will transmit the power of the waves so that it can be used in any suitable or desired manner.

HINGE. — T. M. Lash and S. A. Street, Sacramento, Cal. No. 582,687. Dated June 1, 1897. This invention relates to a hinge which is especially adapted for use upon hinge sashes, the parts of the hinge being attached to the casing and the sash and normally disengaged, so that the sash may be raised and lowered or thrown into engagement to complete the hinge and enable the sash to be turned about, so that the outside of the glass can be readily reached. The hinge consists of casings let into the window frame and the stile of the sash. A bar is pivoted in one of the casings adapted to be turned vertically, lie flush with the face thereof or turned into a horizontal position, and the bar in the other casing may also be turned from a vertical to a horizontal position, the two being pivoted or united to form a hinge when in use, and when not in use they are closed up within the respective parts of the window to leave a smooth surface.

A STEAM ORE STAMP.

One of the BONANZA MINES of the Black Hills was developed by a **TREMAIN STEAM STAMP MILL,** installed last summer at a cost of about $1600. After six months' run the superintendent wrote the following letter:

HILL CITY, S. D., Feb. 2, 1897.

Gates Iron Works, 650 Elston Ave., Chicago, Ill.—GENTLEMEN: It gives me great pleasure in informing you of our success with the Tremain Steam Stamp Mill which we have been running since last July. We have been running on hard, white quartz, some of it of a flinty character and a small portion of it slightly decomposed. We average about ten tons every 24 hours through a forty-mesh screen. If our financial standing had been a little better, so we could have put in a small engine and rock crusher, I am confident we could put through 14 to 15 tons in 24 hours. The wear and tear is considerably less than an ordinary stamp mill, it all being on the shoes and dies. The last we used of these were of the aluminum steel, which are the best wearing shoes and dies I have ever seen. The parts are all well made and durable, I having failed to see any weak point about the machinery.

We use one cord of pine wood in 24 hours, and run the mill with 70 to 80 lbs. of steam.

I have followed mining in connection with milling for thirty years and have never seen its equal for convenience, durability and cheapness. To parties wishing to purchase a quartz mill I cheerfully recommend the Tremain Steam Stamp Mill for its small cost, economy in operation and complete results of working. Very truly yours, [SIGNED] JAMES C McDONALD,
Supt. St. Elmo M. & M. Co.

This Mill has the capacity of a 5-stamp gravity mill and costs less than half to install. Automatic feeder of approved design. Weight of entire Mill 3300 lbs. Made sectional for mule-back transportation.

MINERS, ATTENTION!

We beg to call attention to our "RISDON HAMMERED" Shoes and Dies, which are made of a special quality of steel, are hammered and then compressed in moulds so as to give the greatest possible density.

These Shoes will outlast any other make and will not chip or cup.

We have attached a sketch showing sizes; fill in the size of your Shoes and Dies, and order a trial set.

Our prices are as low as any, and the article we offer should commend it to all mine owners and mill men.

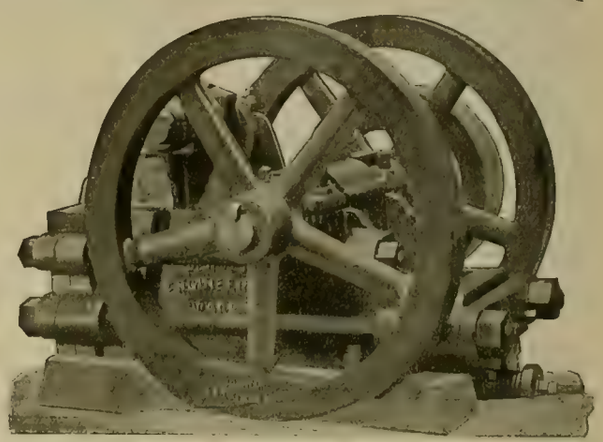
ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles. This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly,

[SIGNED] S. I. HALLETT.



These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

Market Reports.

The Markets.

SAN FRANCISCO, June 10, 1897.

The slow progress made in the Senate on tariff legislation, combined with the change of front on several important items, is doing no little in restricting trade from first hands by causing jobbers to keep stocks in many lines to as low a point as it is consistent with their trade. From every jobber and importer spoken to there is but one response, viz., no pressing for business or stocking up on goods until a clearer insight is obtainable into what Congress will do on the tariff bill now in the Senate. Manufacturers in about every branch are in the same position. They hardly know how to figure on large contracts owing to their not knowing what the tariff on the raw product will be. With this the case, dealers and manufacturers represent themselves as sitting on the fence, waiting for developments. The large crops of fruits, hops, etc., are giving employment to more hands in the fruit growing and agricultural districts. There is also a steady call for more hands in several of the gold mining districts. This means more money going into distribution and an increase in the call for food products and wearing apparel.

In the local money market the supply of available funds continues in excess of requirements, although signs are not wanting of a call setting in soon for crop moving purposes. The receipts of gold bullion from the mines have been so far this year quite free—larger, if anything, than during the corresponding time last year. It is reported in well-informed circles that the output of the mines on this coast this year will show quite an increase over that of 1896. New York advices state that there is a speculative revival in railroad and industrial securities, with a marked advance in the price of the leaders. There is also a growing disposition at New York and Boston to embark in enterprises offering opportunities for fair returns on money invested. The rates of interest at New York still favor borrowers, although it is claimed that, with crops beginning to move, a steady demand would set in from the central States. Shipments of gold to Europe are light.

New York Silver Prices.

NEW YORK, June 10.—Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	27 9-16	60
Saturday	27 9-16	60
Monday	27 9-16	60
Tuesday	27 9-16	60
Wednesday	27 9-16	60
Thursday	27½	59⅞

	Copper.	Lead.	Iron.	Tin.

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.85
London Sight Bankers	$4.88½
Refined Silver, per oz., 1000 fine	59⅞
Mexican Dollars	49

SILVER.—The market held to steady prices up to to-day, when it eased off at home and abroad. The European demand is slow, which shows itself when there is any selling pressure from this side. So many countries adopting the gold standard is restricting still more the employment of the white metal. This, naturally, is showing itself in the market value of silver. With accredited authorities it is asserted that if holders in the United States were to create a selling pressure the price of silver would go considerably below the lowest recorded figure. The mainstay of the market seems to depend largely on what the silver committee sent to Europe accomplishes looking to an international convention on the subject. The last steamer for China took out 187,000 ounces.

MEXICAN DOLLARS.—The market is easy at quotations. The last steamer for China took out 253,600 dollars.

QUICKSILVER.—The market values are unchanged. The demand continues fair. The last steamer for Mexico took out 115 flasks.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—The market has held steady throughout the week. The consumption in Europe continues very heavy, while in this country it is increasing. The output of the mines continues large.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—The market is practically unchanged, both at home and abroad. New business with us is slow, both in plates and ingots, owing to consumers running on old supplies.

We quote as follows in a jobbing way:

Pig, per lb	14c@ —
Plate, I C coke, heavy, per box	$4 00@ 4 15
" " " light, "	3 90@ —

LEAD.—The uncertainty regarding tariff legislation is against any movement in the market. Values hold steady.

Our market is quoted in jobbing lots as follows:

Pig	4 00 @ 4 25
Bar	— @ 4 50
Sheet	5 62½@ 6 12½
Pipe	4 87½@ 5 37½

SHOT.—There is a better jobbing demand. Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—The demand from the mines continues active.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—No change is reported, pending tariff legislation.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—The market is hard to report correctly, although there seems to be a slightly stronger tone. Press telegrams state that there has been an improvement in the markets, but private advices do not as yet confirm it.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00

English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is quiet.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7½c for Cookson's, 6⅞@7¼c for Hallett's and 6⅝@7c for [illegible].

NAILS.—The market is strong.

Wire, carloads, basis per keg	....
" jobbing, " "	$2 35
Cut, carloads, " "	....
" jobbing, " "	2 25

PLATINUM.—Very little doing.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is firm at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steady.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

The market is practically unchanged. Both buyers and sellers do as little as possible pending tariff legislation.

SPELTER.—The market is quiet.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—The market is steady.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steady.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—There is nothing new to report.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

CAUSTIC SODA, 60%.—The market is slow at 3c per pound in a jobbing way.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—Market is quiet.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL.—Our market is quiet.

We quote in a jobbing way at 4½c per pound.

The following illustrates the changes of the week:

Mining Share Market.

SAN FRANCISCO, June 10, 1897.

The market has continued to fluctuate down in the absence of strong support. While there is an absence of support, all indications point to steady concentration of the shares of the more promising mines. How long this will continue it is hard to say, for the moneyed pool is not given to giving their business, unless more money can be made by doing so. There can be no question that a good-sized deal can be made, for the general business interest of this country is on a better basis than for several years, while at the East a strong bull campaign has been inaugurated in railroad and industrial securities. Aside from that, the feeling prevails that, with the tariff out of the way, better prices and freer trading would follow in many lines of goods. A revival of speculation in Kaffir and Westralia gold mining shares in England is reported, which may possibly have a favorable influence on gold mining securities in this country; but this may not be felt only to a certain extent by the Comstock mining shares, owing to the ore of the mines running from 40 to 65 per cent silver. If the management of these mines should work on business principles the gold-bearing ore in that district, then a better result might follow. But perhaps they do not want a mining deal at present. The news from the mines, taken as a whole, is far from discouraging, and under ordinary circumstances would be promotive of higher prices for shares. The quantity of ore that is being shown in Chollar is on the Brunswick lode. The quantity extracted and milled each week and also the bullion returns ought to be convincing evidence that the shares on merit alone are worth more than they are selling at, but perhaps they are waiting results from the work now under way on the 500-foot and 600-foot levels. If the ore extends down and does not show a decrease in gold or width, then strong buying ought to follow. Active and promising work is being done in Con. Virginia and two or three other mines on the Comstock. The bullion return of Chollar for the month of May was $24,000 in gold coin.

The news from the Comstock continues to report more or less activity in the leading mines, with more favorable formation in one or two. In Alta they are still prosecuting work in a kill-time kind of way, which helps to eat up money, even if does not do much towards showing up ore. From Caledonia and Overman nothing new has come to hand. In the latter a few tons of ore are being raised. From Seg. Belcher we do not get anything new. In Belcher, it is stated, they are about ready to resume active operations on the 1200-foot level. Ore is still raised from another part of the mine. In Crown Point active work is continued on several levels. The work to the west in the surface level of Kentuck is continued jointly by Crown Point, Kentuck and Yellow Jacket. Nothing of importance has come to hand from it. The west crossdrift that is being run jointly by Confidence, Challenge and Con. Imperial is being pushed ahead. This crossdrift is being closely watched by mining men, for those contending that the west lode is clear and distinct from the old or Comstock lode believe that the crossdrift will find that the lode dips slightly to the west, and also that it is gold-bearing. In Alpha nothing new has come to hand. The work is reported to be confined to the 500-foot level. The crossdrift is to the west. At last advices the north drift in Bullion was in soft material. They ought to be near the Potosi line. More active work has been resumed in Potosi on the surface tunnel. Nothing of interest is reported in official letters. Work has not been resumed in Chollar. A change in the superintendency of Hale & Norcross has delayed work to some extent. From Savage nothing new has come to hand so far as work is concerned. There is no change in the joint work of Best & Belcher and Gould & Curry. The joint crossdrift is still to the east. Work is continued in Con. Virginia on the 1000-foot, 1550-foot and 1650-foot levels. On the 1550-foot level they are raising on a double compartment incline along the foot wall. At last advices one-half was in ore assaying from $4 to $20 a ton. The most active work is being done on the 1650-foot level, and which is being closely watched. They are doing considerable exploiting work, about all of which looks well. From this level there were extracted last week 92 tons of ore assaying by sample $56.48 per ton. In Ophir they are driving slowly ahead No. 3 west crossdrift on the 1000-foot level. On the Central tunnel they are still running a south drift. They pass through poor to fair material. On the 1000-foot level of Mexican they are still running the south drift from the northwesterly workings. From Union nothing new has come to hand. They are working in the various directions heretofore reported. There is a report of a slight improvement in the west crossdrift in Sierra Nevada that is being run on the Layton tunnel. As yet it is not calculated to set the world on fire, but it was enough to make short sellers fill and a few chronic bulls to buy long. No change is reported from either Utah or Andes.

From the mines on the Brunswick lode nothing new is reported in the joint work of Con. Virginia, Best & Belcher and Gould & Curry. They are still sinking shaft No. 2 and at the same time exploiting the 300-foot level. From Chollar the ore was cut off on the 13th floor above the 200-foot level. Above the 300-foot level the ore is pinching, while the grade is lower. Connection has been made with the upraise from the 400-foot level. This will admit of more active work on these two levels. On the 500-foot level they are still driving ahead on the main south drift. Hopes are entertained that the crossdrifts on this level will strike the downward continuation of the ore above. The south drift on the 600-foot level is in Chollar ground. In Occidental they are doing work on the 550-foot and 650-foot levels. So far as official advices go no material change has occurred the past week.

The following illustrates the changes of the week:

Gilt Edge Stock!

In one of the best mines in the State, with a past record of over One Million Dollars. Large plant in operation, with rich ore. A few thousand shares can be secured by addressing "Investment," care of Mining and Scientific Press.

not especially active during the week just closing, unless certain of the gold securities be again excepted. The somewhat uncertain future of silver is causing a continued depression in the silver-lead section, although prices there have reached a very low and consequently attractive level. Outside inquiry has been largely for the gold stocks, especially the dividend payers, and all of these have at least maintained their strength where they have not advanced.

Ajax was persistently beared with very light offerings. Regardless of the silver situation, it now looks very cheap. The mines are looking well, although only the highest grade gold-copper-silver ore is being extracted. Anchor was weaker and sold under the $1 mark. Bullion-Beck was not active and the tendency still continued downward. It is not at all likely that a dividend will be paid this month. The mines are looking slightly better on the deepest levels, but shipments are not heavy. Buckeye did comparatively little. Some nice ore is coming in from the properties, where the showing is reported to be highly satisfactory.

The continuous offering of several odd blocks of Centennial-Eureka on an already depressed and quiet market caused an added shading of open quotations. It is only the weak holders being weeded out, however, as the great majority of the stockholders are fully satisfied with the recently adopted policy of the management in refusing to sacrifice the ore reserves. Only light business was done in Dalton and prices remained unchanged. The Dalys were inactive and neither recorded any material change. An order to resume full operations at the Daly's mill has not yet been given. A steal of about $25,000 in bullion and cyanides was discovered at the Dexter. Several arrests were made. The stock did little and quotations remained unchanged.

Eagle's assessment of 25 cents per share is delinquent. The stock has taken up a portion of the assessment. East Golden Gate is absolutely without activity, and was offered at its lowest figure. Four Aces did but little business and that at unchanged quotations. Galena was shaded again somewhat on account of the continued delay in dividends. On the 1st Geyser-Marion paid its May dividend. There should be no interruption of payments, unless some catastrophe occurs. The cleanup made on the 3rd was the most satisfactory for the same length of time yet made by the company. At the mines the show is very flattering. The stock was active and, while no special advance occurred, great strength was displayed. Little Pittsburg was active but practically unchanged.

An increased inquiry for Mercur followed the reaction in price, and the stock regained much of its lost strength. The mill is operating to full capacity and the mines are making a splendid showing. Mammoth was again beared on very light business. Offerings are not heavy and a recovery should soon occur. The company is confining its efforts to the extraction of high-grade ore, and to new development work. Northern Light was active, but slightly lower. Two small cleanups have been made at the mill.

The regular dividend on Ontario has been paid. But little business was done in the stock and quotations were lower. More free offerings of Silver King shaded prices somewhat. The usual dividend is expected on time. Sacramento was several points lower, on a cessation of the buying movement. Swansea has just declared its June dividend, but fears of a delay caused the stock to decline somewhat. A slight recovery occurred at the close. South Swansea was also weaker. It is uncertain yet regarding the June dividend. An effort is being made to resume full operations at the Sunshine, either by the company or at the hands of leasers. Utah was comparatively strong, although the payment of dividends has not yet been resumed. This strength is due to the continued fine showing at the properties.

Assessment Notices.

JAMISON MINING COMPANY. Location of principal place of business, San Francisco, California. location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 25th day of November, 1896, an assessment (No. 9), of 3 cents per share, was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office—Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897 will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of May, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on WEDNESDAY, the 23rd day of June, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 18th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

CHALLENGE CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Gold Hill, Nevada.

Notice is hereby given that at a meeting of the Board of Directors, held on the 13th day of May, 1897, an assessment (No. 23) of Ten cents (10c) per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, room 35, third floor, Mills building, corner Bush and Montgomery streets, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 16th day of June, 1897, will be delinquent, and advertised for sale at public auction; and, unless payment is made before, will be sold on THURSDAY, the 8th day of July, 1897, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

By order of the Board of Directors.

C. L. MCCOY, Secretary.

Office—Room 35, third floor. Mills building, San Francisco, California.

OCCIDENTAL CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California. Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 11th day of May, 1897, an assessment (No. 27) of 10 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, Room No. 69, Nevada Block, No. 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 12th day of June, 1897, will be delinquent, and advertised for sale at public auction, and, unless payment is made before, will be sold on THURSDAY, the 1st day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DURBROW, Secretary.

Office—Room No. 69, Nevada block, No. 309 Montgomery street, San Francisco, California.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 9th day of June, 1897, an assessment (No. 7) of 2½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44, Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 17th day of July, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 9th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

THE CALIFORNIA DEBRIS COMMISSION, having received applications to mine by the hydraulic process from Hoey & Lewis, in the Parsons Gravel and Timber Claim in Brownsville Mining District, El Dorado Co., to deposit tailings in Little South Fork of Cosumnes River, from Daniel McLaughlin in the Morristown Mine at Morristown, Sierra Co., to deposit tailings in the Morristown Ravines; from Henry Northrop and Robert C. Nicholson in the Etta Placer Mine near Sierra City, Sierra Co., to deposit tailings in North Fork of Yuba River; and from J. P. West, in the Mountain View Mine near Coutolene, Butte Co., to deposit tailings in Little Butte Creek, gives notice that a meeting will be held at room 59, Flood Building, San Francisco, Cal., on June 14, 1897, at 1:30 P. M.

In the Superior Court of the City and County of San Francisco, State of California, Department No. 8. John V. Kimball, plaintiff, vs. Mabel L. Kimball, defendant. Action brought in the Superior Court, City and County of San Francisco, State of California, and the complaint filed in said City and County of San Francisco in the office of the clerk of said Superior Court. The people of the State of California send greeting to Mabel L. Kimball, defendant. You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court, City and County of San Francisco, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this county, or, if served elsewhere, within thirty days. The said action is brought to dissolve the bands of matrimony now existing between yourself and plaintiff, on the ground of habitual intemperance on your part for more than one year past. All of which will more fully appear in the complaint on file herein to which you are hereby referred. And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the said plaintiff will apply to the said Court for the relief prayed for in the complaint. Given under my hand and seal of said Superior Court at the City and County of San Francisco, State of California, this 9th day of April, in the year of our Lord one thousand eight hundred and ninety-seven. C. F. Curry, Clerk. By Joseph Riordan, Deputy Clerk. R. Thompson, Attorney for Plaintiff.

GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work rebellious ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Plata, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. Novel Appliances for Hydraulic Mining.

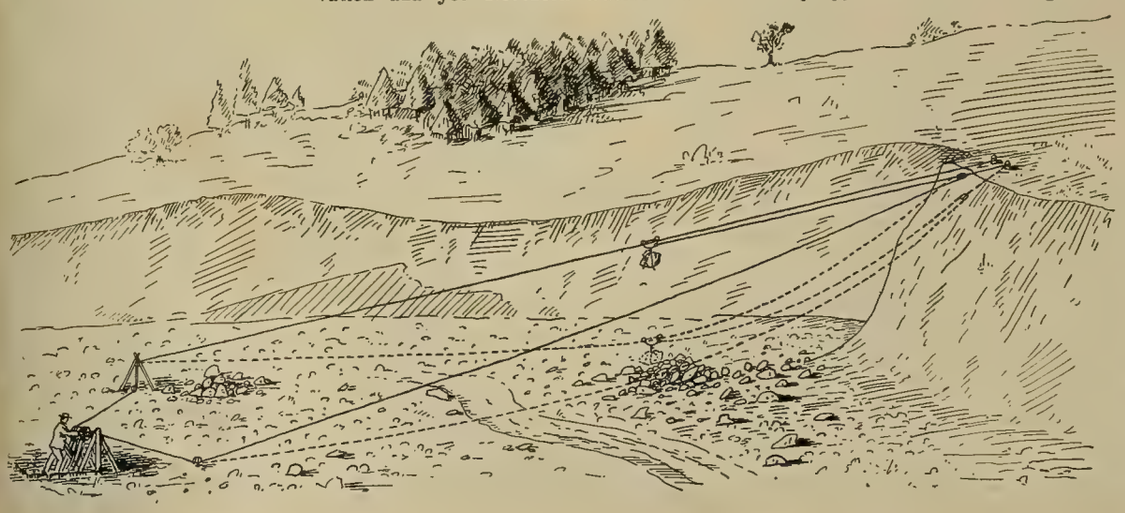
Derricks are used generally to handle the large boulders in hydraulic mines in this State, and in many cases expensive rigs have been put up capable of handling rocks weighing several tons each. Derricks are especially necessary in those mines where the gravel is worked with hydraulic elevators. In the old Hayes and Pickett mine, opposite Junction City, in Trinity county, California, owned by the Compagnie Francaise des Placers Hydrauliques, the banks are so high that derricks cannot be made use of to remove the boulders without great danger of their being covered up and destroyed. For a time blasting was resorted to, but the outlay for powder and labor was very heavy. Besides that, the sharp edges of the pieces caused a rapid wearing away of the wooden blocks with which the flumes were paved.

In order to reduce these expenses the manager, E. Saladin, devised an ingenious system of blocks, cables and a carrier or trolley to remove these boulders from the face of the bank. This has been in use for over a year and is doing good work. The plant is illustrated on this page. Boulders weighing as much as two tons are picked up and removed to the back end of the pit. The usual method of timbering the bedrock tunnels for the sluice boxes has been changed somewhat, in order to reduce the amount of excavation and yet furnish enough height for the workmen to walk along the flume.



CONVEYOR REELS OF CIE FRANCAISE DE HYDRAULIC.

FLUME TUNNEL.

The mine has a supply of 6000 miners' inches of water, which keeps half a dozen large giants in use. The company owns its own sawmill and has telephones and electric lights on the property.

ROCK CONVEYOR – COMPAGNIE FRANCAISE DES PLACERS HYDRAULICS.

The Land Office and Petroleum.

An effort is being made before the Secretary of the Interior to induce him to reverse the ruling of the General Land Office, made last year, to the effect that petroleum lands were not mineral. Commissioner Lamoureux, in the case of Aldritt vs. the Northern Pacific Railroad Company, ruled that while the department had from time to time allowed entries to be made for rock, chalk, kaolin, gypsum and petroleum as placer claims, they were allowed under a strained construction of the statute. This decision works a particular hardship in this State, where so much petroleum land is within the limits of the railroad land grants. The decision of the commissioner narrows the right of placer locators to such lands as contain metalliferous ores only. For the purpose of taking up and developing such deposits as were excepted by the ruling there was no more fair and convenient method to be devised than under the mineral land act. It would certainly not be logical to take them up as agricultural lands, nor would it be right to allow the railroads to obtain them as if they were agricultural lands. Certainly, if the public have no right to locate them that does not in itself give the railroads any title to them.

THE California delegation in Congress is asking that a duty of about $6 per ton on mineral paint be included in the proposed tariff act. While there is obtained all over this State mineral paint of good quality, it has been found unprofitable to work. The president of the Healdsburg paint mine, which is the principal producer, stated last week that they were starting up again in anticipation of tariff legislation. The red paint, he said, is equal to the best imported, but could not compete in price with Venetian red from Europe.

Coast Industrial Notes; Personal; Recently Declared Mining Dividends; Commercial Paragraphs; Recent California Mining Incorporations; Obituary, 524.

Removal.

Increasing business renders necessary more and better office room. Accordingly, the sixth floor of the fine new building, 330 Market St., has been leased, and after July 1st, '97, that will be the home of the MINING AND SCIENTIFIC PRESS. The new building compares favorably in every way with the modern buildings now being erected. The paper has outgrown its present quarters, which have been occupied for nearly twenty years. It is designed that even more than in the past this office shall be headquarters for mining information, and mining men resident or visiting the city are invited to make use at any time of its facilities.

The MINING AND SCIENTIFIC PRESS Patent Agency, long and intimately associated with this paper, also transfers its offices adjoining those of the paper. It is, of course, well known that the patent agency in the firm name of Dewey & Co. is under the personal administration of Mr. Geo. H. Strong, whose experience and ability have ever been manifest in successfully conducting that branch of the business.

The Denver Convention.

The international Gold Mining Convention to be held in Denver, Colorado, next month, gives promise of being a success from the point of view of the miners themselves. That it will be primarily a miners' convention and not a political convention nor a stock-jobbing gathering seems assured. It is the desire of the committee in charge that all papers read and all discussions be confined to those subjects which are germane to mines and mining, and that the convention shall in no sense be partisan.

The delegations thus far appointed from the different States and Territories and from outside the limits of the United States assure a large attendance. The Governor of California, the California State Miners' Convention and the various county miners' associations have appointed representative miners who have announced their intention of attending the convention.

The future of the mining industry in the West can be very much improved by annual conventions if this first starts off right and under proper auspices. The management must now and in the future be kept free from the baneful influence of stock jobbers and politicians.

The good work that has been done by the California Miners' Association is an indication of what may be done in a larger field by the International Gold Mining Convention. While many questions of legislation affecting the industry will be most apparent in the deliberations, probably from an educational point of view will the gatherings of miners be of most importance in the end. Gold mining, and, indeed, silver and copper mining, as industries, are yet crude in many respects. Much has been done toward improving methods during the past few years, but the great changes constantly going on show that much more is to be learned. Nearly every district has new methods, unknown to others, and a meeting of the best miners from these different districts should do much good.

Mineral Lands Patented by the Railroads.

The chairman of the Mineral Lands Committee of the California Miners' Association, Mr. A. H. Ricketts, has prepared the following statement:

In view of the recent announcement that a committee had been appointed by Congress to investigate the matter of issuing patents to the subsidized Pacific Coast railroads, the following figures, taken from reports of the late Commissioner Lamoreux as to the disposition of the public lands lying within the limits of the several railroad grants, is of more than passing interest:

On July 30, 1894, the estimated area in grants to the Central Pacific Railroad Company in Nevada, Utah and California was 7,997,600 acres; to the California and Oregon Railroad Company, in California, 3,724,800 acres; to the Western Pacific Railroad Company, in California, 1,100,000 acres; to the Oregon and California Railroad Company, in Oregon, 3,884,000; to the Southern Pacific Railroad Company, in California, 11,964,160 acres; or a total of 28,626,560; of which, says the Commission, "it has been estimated by the best authority obtainable that one-third of the land within the railroad grant in the twelve mineral States and Territories is mineral land." Acreage patented in the above-named States up to July 30, 1894: 7,829,213.73. Up to June 30, 1896, the acreage patented to the Central Pacific and its associates of lands lying in the above-named States was: In California, 7,092,183.87 acres; in Nevada, 755,338.89 acres; in Oregon, 2,180,366.07; in Utah, 849,294.18 acres; or a total of 10,877,183.01 acres. Assuming these figures to be accurate, and they are compiled from the official reports of the General Land office, it appears that in twenty-three months the Central Pacific Railroad Company and its associates have received patents for 3,047,969.28 acres, of which one-third, or, say, 1,000,000 acres in round numbers, was mineral land and excluded by act of Congress from the grants, or, in all, say, 3,500,000 acres have, under the estimate of the Commissioner, been given to the railroad company in defiance of the act of Congress.

These figures are startling in the extreme and show an unwonted industry upon the part of the Central Pacific Railroad Company in seeking patents since the action of the California Miners' Convention of 1894, out of which grew the appointment of its mineral land committee and the presentation to Congress of the mineral land bill. The fate of this bill, because of the arbitrary action of Speaker Reed, is still fresh in the minds of the community. A similar bill has been introduced at the present session, and unless its progress is forced there will be but little work for the committee to do, that is, if the past is an earnest of the future. The necessity for prompt action is emphasized by the following detailed statement of railroad lands patented in California during the fiscal year ending June 30, 1895:

	Acres.
Central Pacific	109,293.97
Central Pacific (successor to the California-Oregon Railroad Company)	306,692.81
Southern Pacific (main line)	616,728.38
Southern Pacific (branch line)	72,548.01
A total of	1,035,263.17

And for the fiscal year ending June 30, 1896:

Central Pacific (successor to Western)	1,345.15
Central Pacific (successor to the California-Oregon Railroad Company)	1,114,213.14
Southern Pacific (main line)	220,610.78
Southern Pacific (branch line)	39,746.22
A total of	1,376,516.29

Or a grand total in this State alone of 2,412,779.46 acres patented within the two years during which the mineral land bill may be said to have been pending before Congress.

In addition to this amount, there was pending in the General Land Office, June 30, 1896, unpatented railroad selections in California amounting to 1,058,629.92 acres; but how much of this land has since been patented to the railroad company I have no present knowledge, but it is quite possible that all of it has been patented to it.

As all mineral lands lying within the several railroad grants are excluded therefrom, it is apparent that the lands patented to the railroad company have been determined to be non-mineral in character. In the case of Barden vs. Northern Pacific (104 U. S. 331), Mr. Justice Field, in delivering the opinion of the court, says: "A patent issued in proper form upon a judgment rendered after a due examination of the subject by officers of the Land Department, charged with its preparation and issue, that the lands were non-mineral would, unless set aside and annulled by direct proceedings, estop the Government from contending to the contrary; and, as we have already said, in the absence of fraud in the offices of the Department would be conclusive in subsequent proceedings respecting the title."

The examination as to the character of the land, which is the duty of the Land Department, has been notoriously perfunctory in character, and particularly so since the adoption of the rules of July 9, 1894, concerning which it has been said by W. W. Dixon, one of the counsel for Barden: "I do not wish to misrepresent the regulations of the Secretary. They provide for protests and contests against the classification of lands by the railroad company, but under such conditions and restrictions as will in most cases make opposition useless. I do not believe that the railroad company itself could devise more effectual means to enable it, in the teeth of the decision of the Supreme Court, to get title to large tracts of mineral land, than these rules and regulations, if put into practical operation, would afford. I say this without disrespect to the Land Department, or any imputation upon its good intentions. The Department seems to consider the subject as of importance only to the railroad company and adverse mineral claimants, not regarding the interest of the Government in the mineral lands and its duty to see that they are preserved to the people."

County and District Recorders.

Some correspondence in reference to some phases of the new mining law has been handed to the MINING AND SCIENTIFIC PRESS, and is of particular interest to the local mining districts. A firm in this city was asked by one of their correspondents in Bodie the following questions:

"First—What about the right of the Legislature *abolishing* the office of *Mining Recorder* and transmitting records to County Recorder? Under Section 2324, Revised Statutes of the United States, privilege is granted and always recognized that miners have the right of electing a Recorder and recording their claims in the district, which law has been *in force and recognized in Bodie mining district* upwards of *twenty-five* years. Second—Can the Legislature *legislate* an officer out of office for the term for which he was elected? Mining Recorders are generally elected for one year, from January 1st to January 1st succeeding. The records and seal are purchased by the Mining Recorder and have always been considered the property of the mining district. The last mining law also fails to provide a penalty for failure to transmit mining records to County Recorders. The general opinion of mine owners and miners here is that the above part of the law is clearly unconstitutional."

These questions submitted to J. F. Cowdery elicited the following reply:

"Notwithstanding the act of March 27, 1897, I think the miners of a district have a right to meet and adopt rules and regulations not in conflict with the State law and the laws of the United States. They may add to the State law a rule that notice of location shall state whether the lines of the location are parallel to or about, upon a claim already located, the character of the ledge, or, in case of placers, whether the claim is in a river, on a flat or on a seashore and the like. As to the place where a notice is to be recorded, I think the miners of a district have no right to require a notice to be recorded at any place other than the County Recorder's office nor by any other person than the County Recorder; and this because the United States mining law permits the miners of a district to make laws not in *conflict* with the laws of the United States *or* with the laws of the State or Territory where the mine is situated. The State, by the acts of March 31, 1891, Sts., page 219, and the act of 1897, has directed the aforesaid notices to be recorded in the County Recorder's office, and that direction is final. If I lived in a mining district I would advocate the holding of a miners' meeting and I would also advocate the passage of a resolution abolishing the office of District Recorder and requiring all locations to conform to the California law of March 27, 1897. If this is not done, a locator may (in contested cases) have trouble in proving his location; or, if he applies for a United States patent for his mine, he may have trouble. I think the Legislature had a right to anticipate that miners would do substantially as above indicated, and that District Recorders would turn over their books of record to the County Recorder. Section 74 of our Penal Code provides that every person who intrudes himself into a public office is guilty of a misdemeanor, and Sec. 76 says that 'Every officer whose office is abolished by law, who withholds or detains from his successor the records of his office, is guilty of a *felony*.' I am inclined to the opinion that the office of Recorder for a mining district was abolished by the act of 1897 and that a Recorder under the old law will be liable if he refuses to obey the new."

Concentrates.

THE Spokane Mining Stock Exchange has been closed for the summer.

THE cyanide plant at the Eureka mill, Lyon Co., Nev., began operations this week.

THE owners of the Fern mine at Nelson, B. C., are preparing to erect a 20-stamp mill.

ARGUMENT continues in the Senate over the proposed duty on lead ore of 1½ cents per pound.

IN Hungary there are in operation 62 gold mines, 23 silver mines and 13 gold and silver mines.

P. A. BUELL and others of Stockton, Cal., say they will build a smelter there to cost $250,000.

BRITISH COLUMBIA can boast in Grand Forks of a mining town in which saloons are not allowed.

CONSIDERABLE ore is hauled from mines to reduction works in Butte, Montana, over the street car lines.

THE Standard mill at Bodie has shut down. It will be refitted and probably started up again within a month.

THE railway bills for transportation of troops in connection with the Leadville, Col., strike of last year amount to $20,109.

THE Yankee Doodle on Carbonate Hill, Leadville, Colo., has been sold to an Eastern syndicate. The price is about $100,000.

THE Hall Mines Co., Limited, of London has bonded the Black Cock mine in the Salmon river district, B. C., for $70,000.

THE Anderson mine, in the Parrot addition, Butte, Montana, has been bonded and leased to the Butte and Boston Company for $75,000.

AT the onyx quarry at Big Bug, Ariz., twelve men have been put to work and machinery is being ordered to handle a large output.

A REPRESENTATIVE of Chicago capital has begun work to develop copper deposits in the big bend of Pitt river in Shasta county, Cal.

THE Maggie Jerome Mining and Milling Company propose to erect a mill immediately on their property at Jerome Creek, Idaho.

A PROJECT is on foot to supply Deep creek, Utah, with 1500 horse power, to be generated by waste water, to supply the mines and mills.

PREPARATIONS are being made to add enough tanks to the Mercur mill at Mercur, Utah, to bring the tonnage treated up to 350 tons a day.

BRITISH GUIANA from January 1 to May 10, 1897, exported gold valued at $611,919, against $566,282 for the corresponding period of last year.

C. D. LANE is reported to be arranging a plan to divert the waters of the Carson river, Alpine Co., Cal., to the Pine Nut, Nevada, mines.

THE owners of the Cleveland mine at Sierra City, Cal., are about to build a 10-stamp mill to take the place of the one recently destroyed by fire.

AT THE Mexican mine in Sonora, Mexico, there is a check system in use to prevent drunkenness among the men. Only three drinks a day are allowed.

THE United Verde Copper Company at Jerome, Ariz., is shipping a large amount of machinery. Last year they doubled the capacity of their plant.

THE American expedition which has been exploring in Tierra del Fuego has been successful in finding gold in quantities which will yield a large profit.

INVESTIGATIONS by experts on Piney creek near Buffalo, Wyoming, have led to filing on lands which contain a semi-anthracite said to be of good quality.

A NEW YORK capitalist has purchased the San Xavier, Arizona, copper mines. These properties were located some forty years ago and contain extensive ore bodies.

B. A. CARDWELL has twenty-five men at work building a wagon road from Cisco, Cal., to the Meadow Lake mines, over which to haul the refractory ores of the district.

THE fish commissioner of Colorado is trying to make the mill men, sluice and quartz miners in the vicinity of Aspen impound their debris in the interest of the trout.

THE mill at the Plymouth Rock mine near Milton, in Calaveras county, Cal., has been closed down temporarily preparatory to making some large additions to the plant.

THE Guggenheims, the owners of the Aguas Calientes smelters in Mexico, have purchased for $150,000, Mexican, a copper mine south of Jimenez, State of Chihuahua.

THERE will be an extra 6000 copies of next week's issue—that is, in addition to the regular number of copies, there will be an additional 6000 copies of the issue of the 26th inst.

IN the Julian mining district in San Diego county, California, there are nine quartz mills with a total of ninety stamps. Three mills are running and twenty mines are being worked.

THE United States Supreme Court has decided that all the mineral belt of the Cochiti mining district in New Mexico is outside of the Canada De Cochiti grant and on the public domain.

THE business part of Georgetown, California, was almost wholly destroyed by fire last Sunday night, and by an explosion of powder two people were killed. The loss is estimated at $125,000.

ON a claim taken up prior to May 25, 1897, under the old law or on or after January 1, 1897, the locator will have until January 1, 1899, in which to do the first $100 worth of assessment work.

THE Golden Cross mine, Hedges, San Diego county, Cal., for which $1,000,000 was recently refused, is reported bonded for $1,500,000 to Messrs. Carman & Rogers, representing New York men.

IT is believed that, by the close of this century, the demand for gold, great as it is, will be exceeded by the demand for copper. Copper will be king in the sunrise years of the twentieth century.

AT Cochiti, New Mexico, a miners' protective association has been formed, the object of which is to bring about arbitration in cases of conflictions or disputes affecting mining claims in the district.

THE company which has contracted to work the tailings of the Holmes Mining Company at Belleville, Nev., is the Northern Belle Mining Co., Limited, of London. The plant will be in operation in a few days.

FOR May the Alaska-Treadwell reports as follows: Period since last return, 30 days; bullion shipment, $40,928; ore milled, 26,383 tons; sulphurets treated, 295 tons. Of bullion there came from sulphurets $10,597.

SEVEN teams entered a rock-drilling contest at Baker City, Or., on the 11th inst. Chisholman and Pherson of the Rachael mine won, drilling 23¼ inches in 15 minutes; Ashton and Ash of the Con. Va. second, 20⅜ inches.

THE Texas Consolidated mine in Old Diggings district, Shasta county, Cal., has been closed down this week owing to closing off the water supply from the well. A suit between the owners and lessees of the water is the cause.

J. D. LODER, who has bonded some claims at Gold creek, states that he will build a pyritic smelter at Elko, Nevada, if an examination of the country surrounding justifies the estimate that it will contribute 150 tons of ore daily.

LEADVILLE, COLO., advices are that a New York syndicate has purchased the Yankee Doodle property on Carbonate Hill for $100,000. It has a record of about half a million in production of ore, and it is expected to be producing 200 tons daily by August.

PATRICK CLARK and associates have paid $105,000 for one-third of the stock in the Republic Mining and Milling Company which owns a free-milling gold property in the Colville reservation, Washington. This is a new mine, practically undeveloped.

AT the annual meeting of the Nobel Dynamite Trust Co. in London lately it was stated by the chairman that in order to protect the trade in the United States they were considering the advisability of establishing factories both in the East and the West.

IT is reported that the Blair group of mines at Silver Peak, Nevada, has been sold to J. B. Haggin, Marcus Daly and J. B. Conda, son-in-law of the owner, John W. Mackay and George D. Roberts, upon a report made by James D. Hague and Alexander Womble.

THE Le Roi Mining Company of Rossland, B. C., has purchased the machinery for its smelter. The purchase price was $25,000, and it is to be erected within seventy days. The site has not been chosen, but it will probably be erected at Rossland or Northport.

THE question whether one man may take up several contiguous mining claims in his own name is asked almost daily. He may. It does not make any difference whether they adjoin or not. He must see that $100 worth of work or improvements is put on each claim annually.

CAPTAIN J. R. DELAMAR, who owns a half interest in the Brickyard mine at Mercur, Utah, has secured an option on the other half, and is said to be making an offer for the Gold Dust and the Mercur. He controls the Golden Gate and has purchased the Gold Belt Water Co.'s line.

AT a meeting of the directors of the El Dorado county Miners' Association last week, called to take action in reference to restraining dams, a committee consisting of the president, H. E. Pickett, and Thomas Alderson was appointed to ascertain the best location for such dams.

THE owners of the copper and mineral paint mines at Spenceville, Nevada county, Cal., have contracted to furnish one of the powder companies with 500 tons of low-grade ore from which to obtain sulphuric acid. If this experiment proves satisfactory, there will be considerable required.

THE first steam dredger to work for gold on this coast was shipped out here from the East and went up the Sacramento river in 1849. After a short trial it was found that nothing could be made in that way and the boat was used to carry freight on the upper waters of the Sacramento.

THE shipments of ore from Trail Creek, B. C., camp for the first five months of 1897 have aggregated 24,350 tons, as follows: Le Roi 17,056, War Eagle 4740, Iron Mask 1414, Columbia & Kootenay 519, O K 172, Jumbo 91, Josie 140, Cliff 101, Red Mountain 56, Evening Star 21, Giant 21, I X L 12.

FROM the Kootenay, up to June 5, the exports of ore amounted to 21,162¼ tons, valued at $1,511,438.06, an average of $71.42 per ton. In addition to this the product of the Nelson and Trail smelters was valued at $1,581,592.04, making the total output of the mines for 1897 to June 5 $3,093,030.10.

SUIT has been brought by the Mountain Copper Co. against O. H. Garlock & Co., at Redding, Cal., to determine the ownership of adjacent water rights. The latter were using some of the water in generating electric power to run their mines, which are now shut down awaiting the outcome of the litigation.

THE district recorder at Virginia Dale, San Bernardino county, Cal., refuses to turn his books over to the county recorder without an order of court. This may bring up a test case on the new California mining law, which abolishes district recorders and requires records of mining locations to be made with county recorders.

HAMILTON SMITH and his associates have bonded the property of Mrs. Frederick McCrellish for $125,000 and that of Alfred Wertenweiler for $100,000. These claims adjoin and are near the southern boundary of the Mariposa grant, in which Smith and his associates lately bought a one-sixth interest from Alvinza Hayward.

THERE is some stir in southern Oregon over discoveries of quartz on the headwaters of Elk creek, about forty miles north of Medford, and many people from that and other towns have gone to the scene. The mines are reported to cover a territory five miles by ten. The formation is said to be a blanket under a covering of lava.

SINCE the refusal of the Southern California Railroad to pay over $1 a barrel for oil at Los Angeles producers have been disorganized. Last week, however, the producers in the field in Los Angeles perfected a closer organization and entered into an agreement to ship 10,000 barrels, but they refuse to say when it is to be shipped.

AT a rock-drilling contest in Helena, Mont., on the 13th inst., Davy and Freethy of Butte won first money, drilling 41 15-16 inches in fifteen minutes; the same team made a record of 39 inches in Spokane, Wash., last year. W. Bieber of Lump Gulch, Mont., single-handed drilled 15⅝ inches in ten minutes. There were 1000 miners on the ground.

A PECULIAR freak was played by lightning at the Silver King mine at Park City, Utah, last week. A bolt first struck and shattered the flagstaff at the entrance to the main shaft, after which it ran down the shaft on an air pipe to the 800-foot level. At this point it struck a drift which it followed for a distance of 400 feet, knocking down a miner who was loading a car.

SEVENTY-FIVE years ago some Indians brought from the State of Guerrero, Mexico, specimens of what they called "crystal chips," and presented them to Gen. Vicente Guerrero, who discovered that they were valuable diamonds, and which were equal to the best Indians from Golconda. Traces of the beds were lost, and it is now believed that they have been found again.

THE Escondido mines in San Diego county, California, have been sold to the Du Quesne Gold and Silver Mining and Milling Company, principal office at Pittsburg, Pa. The company also owns and operates mines at Ames, Colo. These mines were discovered thirty-six years ago and work has been done on them by several companies. The new owners will begin extensive development work at once.

A SMELTER is to be built at Seattle, Wash., according to a dispatch, which says that specific terms have been agreed upon between leading citizens of that city and the representatives of a Milwaukee, Salt Lake and Portland syndicate, whereby the latter is to expend $400,000 in the establishment of a smelter and refining plant in Seattle. It is announced that work will commence within thirty days.

AT a recent meeting of the Executive Committee of the California Miners' Association a report was made of the progress of work among the county associations. President Neff appointed delegates to the International Gold Mining Convention at Denver, Col., and the Trans-Mississippi Convention, Salt Lake City, Utah. A committee was appointed to confer with a like committee from the valley regarding co-operation in the matter of river improvement, etc.

UNDER the agreement between the Canadian Government and the Canadian Pacific Railway, in regard to the terms on which the Crow's Nest Pass road is to be built by the latter, there is to be no monopoly of the coal fields, the road giving 50,000 acres to the Government. Then the price of coal must not exceed $2 per ton f. o. b. cars, and in the third place the railroad cannot make a profit of over 75 cents a ton on coal. This will reduce the cost of coke at Rossland one-half and coal two-thirds.

IN one or two sections of Colorado "restriction" of the ore product is suggested, with the curious argument that the building of mills is being overdone and that it may occur that there will ultimately be more mills than there is ore. If such be the possibility, it were better to curtail the mill building rather than the ore production, but with the admirable Colorado system of railroad distribution such glut is unlikely. It is one of the things that regulates itself. So far, the ore product has kept ahead.

THE mining companies of Butte, Montana, have made reports of net proceeds for 1896, showing a total twice as large as for 1895. They are as follows for the leading mines: Anaconda, $4,375,010; Boston & Montana, $2,630,470; Montana Ore Purchasing Co., $160,000; Butte & Boston, $86,895; Colorado Co., $48,975; W. A. Clark's eight mines, $35,870; Alice Mining Co., $40,025; P. A. Largey, $2810; J. A. Murray, $2635; Arlington Mining Co., $1760; Lexington, $1115; Moulton Mining Co., $935; total, $7,386,700. Total for 1895, $3,634,595.

WITH the mills now in course of construction or arranged for, and those being enlarged, the total milling capacity of Cripple Creek will in a short time be 1250 tons per day. These will work low-grade ores which are now not handled, and it is claimed that with the continued shipments of high-grade ores to the smelters the output of the district will be doubled, or brought up to about $20,000,000 a year, provided the mines will supply the ore. At present the mills cannot handle the ore now offered, and with increased and cheaper milling facilities no doubt many new producers would be developed.

THE British Columbia Legislature has authorized the formation of four electric light and power companies, the Pend d'Oreille Power & Light Company to take 200,000 miners' inches of water from Pend d'Oreille and furnish light and power to any part of East Kootenay, the East Kootenay Company to furnish light and power to Rossland and Trail, the Cascade Company covering the unsecured rights within a radius of forty miles of Grand Forks, including 150,000 inches from the Kettle river at the falls, and the Kootenay Company. This latter is empowered to supply power and light by compressed air and electricity to all Kootenay, and can use the water in the Columbia and Kootenay rivers.

THE importance of accuracy in every step in securing legal title to mining property is illustrated in the contest over the Hull City placer of 130 acres on which the townsite of Independence in the Cripple Creek, Colorado, district is located, and which is rated in value at from $1,000,000 to $5,000,000. Validity of the patent issued to the placer claimants is assailed on the one point of whether or not $500 worth of work was put upon the ground as required by law to be done before the patent issues. The protestants previously carried the case, on decisions adverse to them, up through the General Land Office at Washington to the Secretary of the Interior, who allowed the case to be reopened on the one point mentioned above.

THE report of the Great Boulder Proprietary Gold Mines of Western Australia for 1896 shows that the receipts from the mine were £223,705, and the expenses £46,777, leaving a balance of £176,928, from which dividends to the amount of £160,000 were paid, being 100% on the stock. There were in all 16,729 tons of ore from the mine treated during the year, and 55,949 ounces gold obtained. At the value given this was equal to 52,592 fine ounces, or 3.14 ounces per ton worked. The average return per ton worked was therefore $65.07; while the expenses reported were: Mine, $5.25; mill, $5.27; general, $3.11; total $13.63 per ton. This leaves a profit of $51.44 per ton worked. During the year 5,616 feet development work were done, and the manager reports 49,653 tons of ore opened up and in sight.

SENATOR GEO. C. PERKINS reports that the Mineral Land bill (which was reported favorably by the Senate committee to which it was referred) has not yet been presented to the Senate for action thereon. At this special session of Congress it was agreed by managers of the Administration policy that nothing but tariff and currency measures should be considered. In the House of Representatives members are playing chess by telegraph with members of the British House of Commons. An exciting international game of checkers is next in order. In the Senate the tariff bill will, it is hoped, be voted upon after awhile. The only way the California Mineral Land bill can get before the Senate is by unanimous consent. Both California Senators stand ready to do all possible to further the passage of the bill, but there is very little show of present success. Probably by the time the lands in question will have been mostly absorbed by the railway corporation the bill may pass in an emasculated form.

Precipitation of Gold from Cyanide Solutions.*

Paper read by L. EHRMANN.

Extraction of gold from cyanide solutions is of such importance that we may say it is nearly the capital subject of communications to our society. The zinc process has been in great favor on account of its simplicity, and very successful in general practice; but there are cases when either it is to be considered too slow or the percentage of gold extracted from the solution too low. There is the reason why, principally with poor solutions, electrolytic process is used, when the simpler method of zinc boxes seems ineffective. There is no doubt that electrolytic processes for extraction of metals from solutions are, scientifically speaking, the best, as they can be regulated; but they require more care and technical knowledge than the ordinary zinc process. Electrolytic process can be made more simple if electrolysis of the solution is produced in the zinc boxes, by contact of two different metals, instead of being produced by an external source of electricity. The question of elevation of the temperature, so as to facilitate the chemicals' reactions to make them more complete and rapid, is also of extreme importance, and seems to have been generally neglected. I have made experiments in that way, and I have the pleasure to communicate the results to our society. Equal weights of zinc shavings have been kept in contact with equal volumes of gold cyanide solutions. In some cases zinc shavings were used in the ordinary way, in other cases they had been more or less coated with a very thin film of copper; the solution generally used, as giving the best results, being an ammonia-cupric solution, cheaper and more effective than tartrate or other organic solutions. The modus operandi to be subsequently described. The zinc coated with copper I call "zinc-copper couple." The zinc is to be only partially coated. Each series of the same sort of experiments being made, for the second lot of experiments, at the temperature of the laboratory, 19 to 22 C. (65 to 70 F.) and also at a temperature of 80 to 85 C. (175 to 185 F.) the conditions being always the same for the zinc and the zinc-copper couple. After my first visit to the Rand, where I had seen with the greatest interest those questions of cyanide process and the two different systems of precipitation, I had decided to make some experiments, on my return to my laboratory, from theoretical views my visit had suggested to me. But, being very busy with researches of another sort and my laboratory not being fitted with the requisite for assaying, I have only been able to make some preliminary experiments, and I had to abandon such researches till I came back to the Rand. I will relate briefly the result of the preliminary experiments on the comparative action of zinc and zinc-copper couple. First, I made from one gramme of zinc shavings three small balls, not too hardly pressed. No. 1 was left as it was; Nos. 2 and 3 have been slightly coated with copper; No. 3 more than No. 2. Three 100 c.c. gas-measuring tubes have been filled with water very slightly alkaline by soda and inverted on the same glass jar containing water; balls 1, 2 and 3 being placed in the lower part of each tube. The apparatus has been left for fifteen days, and then the quantity of hydrogen liberated in each tube has been measured, the quantities being: No. 1, nearly ½ c.c.; No. 2, 26 c.c.; No. 3, 24 c.c. The second experiment has been made with some balls, placed in the same quantity of gold cyanide solution —KCy per cent O, II. After three days, the quantity of gold precipitated has been: For No. 1, 5 milligrammes; for No. 2, 7 milligrammes; for No. 3, 7 milligrammes; corresponding to, taking 100 for zinc only, 140 for coated zinc, or 40 per cent more gold precipitated. The third experiment gave: No. 1, 18 milligrammes; Nos. 2 and 3, each the same weight, 28 milligrammes, or 55 per cent more gold precipitated. Being satisfied to see I was in the right way, and precipitation was largely increased by using zinc-copper couple, I had to abandon provisionally such experiments. On the beginning of this year, I paid a short visit to Johannesburg, and, thanks to my friend, Mr. H. Stephan, manager of the Wemmer, who had been formerly in the same laboratory as myself, a small experiment has been made on ordinary cyanide solutions. Experiments previously made in my laboratory, being on solutions made from pure gold and pure potassium cyanide. Although the zinc-copper couple had been prepared some months ago, and was far from being clean, the results have been satisfactory, as proved by the following figures:

Gold in original solution.....0.8.8. —equal to 100
After contact with zinc only.....0.4.0. —equal to 48
After contact with zinc-couple.....0.2.16.—equal to 32

52 per cent from total gold precipitated by zinc, and 68 per cent by zinc-copper couple, showing an increase of 30, 8 per cent.

We come now to experiments with cold and hot solutions. This new series of experiments has been made in E. B. laboratory. In those experiments, the time for cold treatment has been 24 hours, and only 18 hours for the last one; for hot treatment only two hours. If the duration of cold treatment had been only two hours, so as to be approximately on the same conditions as in usual practice, some one could have objected against zinc-copper couple that its action is more effective on the beginning, but that after two or more hours the efficacy of action of zinc-copper couple is partly destroyed and gradually diminishing when zinc is partly coated with gold. Such objection is answered beforehand, the length of experiment being 24 hours for cold treatment. Experiment A.—Four equal lots of zinc shavings, 25 grammes each, are put in glass flasks. Nos. 2 and 4 are prepared as zinc-copper couple. One litre of gold solution is poured in each flask. This solution is prepared from cyanuration of a mixed lot of all sorts of samples received for analysis, containing base metals. Nos. 1 and 2, cold treatment, 24 hours. Nos. 3 and 4, flasks kepts two hours in water-bath; temperature kept at 80 C. (175 F.) If we take 100 for gold precipitated by zinc, we have for zinc-copper couple 161, 7, cold treatment, 24 hours; showing a large increase in favor of zinc-copper couple. If we take 100 for the quantity of gold precipitated from cold solutions in 24 hours, we have for the quantity of gold precipitated by hot treatment in two hours, respectively: For zinc, only 109, 52; and for zinc-copper couple, 157, 14. We can say: Fresh zinc precipitates as much gold by hot treatment in two hours, as by cold treatment in 24 hours; we are to see from other experiments that this proportion is less when zinc is not fresh, but for zinc-copper couple it is much more regular, and nearly the same for 24 hours' cold treatment and two hours' hot treatment.

8. Zinc and copper.	0.04	3.26	0 0 6-10	98.78

1, 2, 5 and 6 cold treatment. 3, 4, 7 and 8 hot treatment.
Original solution—Gold per litre, 3.30 milligrammes.
Gold per ton, 1 dwt 22 1-10 grs.
" KCy per cent 0.013. KCy: G=39.4 (cyanide and gold quotient).

It is well known that the ratio of free KCy (potassium cyanide) to gold in solution, which I call cyanide-gold quotient, is a great factor in the precipitation of gold. In the experiment A, made with a rich gold solution, 7.0 dwts per ton and KCy 0.017 per cent, the quotient is 14.27. The experiment B has been made in very different condition. Gold per ton only 1 dwt 16 9-10 grs, but KCy 0.06 per cent, making the quotient 205.48, or nearly fifteen times greater than in experiment A. In such conditions, we see that with a very high cyanide-gold quotient the difference of action of zinc and zinc-copper couple for cold treatment has been only 100 to 104.1, or 4 per cent in favor of zinc-copper couple; but for hot treatment the difference is much greater. If we take 100 for gold precipitated by zinc in two hours' hot treatment, we have 125 for gold precipitated by zinc-copper couple. Other experiments, C, D, E, F, have been made in nearly the same conditions as previous experiments. In C, the zinc-copper couple have been retreated by ammonia-cupric solution; and for experiment E, I have added to each flask 25 grammes zinc, the Nos. 2, 4, 6 and 8 being treated by ammonia-copper solution. Experiment F made with same shavings as precedent experiment. The results of all experiments are in favor of the action of zinc-copper couple and hot treatment, and show that hot treatment precipitates as much gold in two hours as cold treatment in 24 hours, and practically 24 hours cold treatment is an impossibility.

The chairman was sure they had all listened with great interest to Mr. Ehrmann's paper. He might mention a zinc-copper couple was brought forward by a friend of his in London—Mr. Gladstone. He used it for many experiments in decomposing various solutions.

Mr. Butters: Did Mr. Ehrmann analyze his zinc? Was it pure zinc or ordinary commercial zinc?

Mr. Ehrmann: It was zinc I got in Johannesburg, because I know the action of pure zinc is very slight. Pure zinc is nearly free from being attacked, but when it contains some quantity of impurities the action of acids and alkalies is largely increased. I would not make experiments with pure zinc, because I wish to make experiments from a practical point of view.

Mr. Butters: Do I understand that in your paper you advise hot treatment?

Mr. Ehrmann: I think hot treatment gives quicker results.

Mr. Butters: Where there are 1000 tons of liquor handled in a day we cannot afford to raise the temperature.

Mr. Ehrmann: Why not?

Mr. Butters: It would be too expensive to raise the temperature of 1000 tons of liquor per day. The average temperature here would be somewhere in the neighborhood of 60 degrees. What temperature do you advise?

Mr. Ehrmann: 175 Fahrenheit.

Mr. Butters: So you would raise the temperature about 115 degrees Fahrenheit?

Mr. Ehrmann: About 60 some odd degrees C.

Mr. Butters: That would be absolutely impracticable, because, taking in all the cyanide works, we use 3000 or 4000 tons of solution per day.

Mr. Ehrmann: I made these experiments first to know what was the action of hot treatment. There are cases I know where 2 dwts of gold are left in the tailings.

Mr. Butters: In our ordinary zinc process the average amount is only 4, 5, or 6 grains. There are two questions I would like to ask. You are speaking of this as a practical thing; it would be absolutely impracticable to use hot solution. What greater efficiency would zinc-copper couple have over zinc itself if zinc-copper couple had been in use two or three weeks, because we do not clear out only once a month.

Mr. Ehrmann: I have not finished my experiments.

The Chairman: Do you notice any difference here in precipitation in the hottest summer months and the coldest months?

Mr. Butters: I have not noticed any experiments. I can answer the question by looking at our ledger, because we have kept very careful results.

The Chairman: Two or three years ago I made some experiments also in this way, but I did not arrive at any satisfactory result. There is another thing with regard to the heating question. If we heat the solution, what would be the effect generally? That is a question I will not answer. (Laughter.) The other question is: If you have got to heat 1000 tons of water to a certain number of degrees, find out how much coal you have to use to raise that water so many degrees. It might be more economical, instead of raising the temperature of 1000 tons of water 60 degrees, to generate electricity by using the coal. That is a very simple question.

Mr. Butters: It is a very simple question, but all these things are extremely interesting and well worth studying. I hope Mr. Ehrmann does not think that we depreciate the value of his paper because we ask questions.

Mr. Ehrmann: No, certainly not. I prefer to communicate the result of my experiments, so that they can be discussed.

The Chairman: If you get the solution going through two bottles, keeping it going through say for three or four weeks, the comparative result would be interesting.

Mr. Ehrmann: The difficulty is to have the same quantity of liquid flowing through two bottles. I was for some time making some such experiments, but I could not regulate the flow.

The Chairman: Yes, there is a difficulty in that.

Mr. Ehrmann: I would like some experiments to be made.

The Chairman said they would be very glad to hear Mr. Darling's opinion.

Mr. Darling: I am afraid I cannot give you any

* Trans. Chem. and Met. Soc., Johannesburg.

more information. I should prefer to read the printed report first.

The Chairman: Have you noticed any difference between summer and winter precipitation?

Mr. Darling: No, I can't say that I have.

Mr. Butters: In the United States they make a strong point of temperature. Dr. Loevy corrects me; it is more particularly with regard to extraction.

Mr. Ehrman said he had the same extraction in 2 hours 40 minutes in a hot solution as he had in 24 hours in a cold solution.

Dr. Loevy: About a year ago I made a series of experiments with regard to extraction from different temperatures. The difference was indeed a large one. I remember certain experiments which were made with slimes for the May Consolidated. The difference in the extraction was a very low one—only 52 per cent, but in the solution it went up to 72 per cent.

Mr. Ehrmann: One ton of coal will raise the temperature of about sixty tons of solution to 90 degrees.

The Chairman: Is that theoretically or practically?

Mr. Ehrmann: Practically.

The Chairman: It would be a good heating effect.

Mr. Ehrmann: We have not to get steam from water. If we have to turn water into steam we have to use a large quantity of coal, but we have only to heat the water. I can give figures at next meeting if you like.

Mr. Butters: If you please. I think there may be something in heating the solution. For instance, you might get a little higher extraction.

Some Artesian Wells.

The sinking of artesian wells in the more arid parts of California is yet in its infancy, notwithstanding the many thousands of acres that have already been redeemed from a desert condition. There is need for some work on the part of the State or counties to determine what are the probabilities of striking water in many places. State Mineralogist Cooper will doubtless include in his investigation of the water supply of the State this source. In many of the districts in the southern part of the State, which were of barren and desert appearance a few years ago, and are now fruitful, the wells are flowing, while in many others pumping must be resorted to. In the latter case small gasoline engines or windmills are generally used. However, the Bakersfield Electric Power Transmission Company, when organized, looked upon the furnishing of power to the owners of wells in Kern county as one of the best sources of income. In the northern and central parts of San Joaquin valley, in this county, are numerous flowing wells in certain townships, the better ones flowing from 1,000,000 to 2,000,000 gallons daily. The wells are from 225 to 800 feet deep. On this page is illustrated a well on the property of the Miramonte colony.

The second illustration is of a well in Fresno county at the residence of G. Heminghaus, near Mendota. It is 8 inches in diameter, 740 feet deep and flows 500,000 gallons daily.

MIRAMONTE COLONY'S ARTESIAN WELL, KERN COUNTY.

HEMINGHAUS' ARTESIAN WELL, FRESNO COUNTY.

From Mine to Mint.

NUMBER IV.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia.

Fine Bars.—The bullion thus purified is now ready for issue to the public for industrial use, or to enter on its second stage toward coinage.

The consumption of gold and silver in the industrial arts is much greater than is generally supposed.

During the year ending June 30, 1895, gold and silver bars for industrial use were manufactured in the Philadelphia mint and the assay office at New York to the coinage value of $17,818,581, in about equal proportions as to value. Private refineries furnished not less than $5,000,000 more. This first cost for what to the gold beater, jeweler, watch case maker, etc., is simply raw material represents an enormous industry when we consider the amount of high-grade labor which is bestowed on gold and silver wares. These bars are 0.999 fine and are furnished to the public by what may be called a system of exchange.

A depositor may bring crude bullion in any quantity ($100 or more in value) and receive either fine gold bars or coin, at his option, to the full value of the gold in his deposit, less a trifling charge for melting, assaying, parting, etc. These charges vary according to the nature of the deposit, but may amount to 5 cents per ounce. The bars or coin are delivered from stock on hand as soon as the value of the deposit is ascertained by assay, usually the following day. For the silver contained in gold deposit the owner may either receive pure silver or be paid in silver dollars or currency, at the market value of silver.

Ingots for Coinage.—Having a stock of refined gold and silver nearly pure, the first step toward conversion into coin is to make an alloy with copper, in such proportions as will produce standard planchets or "blanks" in the hands of the coiner. While the standard fineness of gold and silver coin is the same, yet, as will appear later, the quantity of copper to be used in the two cases differs a little, yet materially.

Weighed quantities of gold and copper, or of silver and copper, are melted together in a large black-lead crucible, the molten metals thoroughly mixed and then poured into cast-iron moulds to produce what are known as ingots. These are rectangular bars, differing in size according to the kind of coin for which they are intended. The ingot for silver dollar coinage is $1\frac{5}{8}$ inches wide by $\frac{1}{2}$ inch thick and $12\frac{1}{2}$ inches long. Some seventy such ingot bars are made from one "melt," and weigh collectively about 3300 ounces (220 pounds).

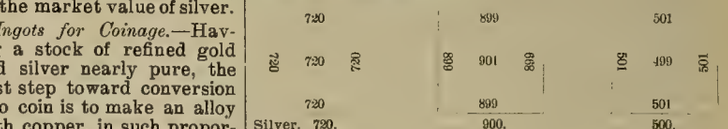
All the ingots are stamped with the melt number, of which a record is kept by the melter and refiner, by the assayer, and by the superintendent.

The crucible is set for the day's work in a furnace peculiarly adapted to the purpose, and a continuous fire maintained, using the best stone coal and a natural draft. Five or six melts are made in each furnace during the eight hours; and if the crucibles were taken out of the furnace at each time of pouring much time would be lost in resetting and surrounding it with a fresh fire.

The metal, when melted, is thoroughly mixed by stirring with a tool not unlike a churn dasher, and it is then ladled out into the molds with what is called a "dipping cup." This is a small black-lead pot made with a lip on one side and a straight edge on the opposite side, so formed as not to be crushed when firmly gripped by a pair of nipping tongs.

The molten metal is slowly poured from the dipping cup into upright molds, of which some twenty are placed in a shallow iron pan convenient to the furnace. As soon as a mold is filled it is removed by an attendant helper, and passed by him to another, who opens it on an iron-covered table and throws out the red-hot ingots. These are chilled in water and then immersed for a few minutes in very dilute sulphuric acid. This latter removes a slight coating of copper oxide and gives the ingot a bright matte color. The "gate" end of the ingot is then cut off in a "topping machine," which has a shear knife driven by steam power. The little fringe left on the ingot by the parting line of the mold is removed by a file, and then each ingot receives the number indicating the melt from which it was made.

The mold, when ready for use, consists of three pieces, clamped together by a band and set screw.



* * * * * * *

Standard coin is composed of 900 parts of gold (or silver) and 100 parts of purest copper in each 1000. While the law allows a slight margin in the fineness of our coins, to provide for the limitations of all human workmanship, yet this margin is sharply defined, and is but a fraction of 1 per cent. Small as this margin is, no mint work would be considered good which did not produce coin very far within its limits. Our gold coin rarely varies from standard fineness by more than three one-hundredths of 1 per cent. Silver coin, which is much more difficult to make uniform, as will be explained, may vary by as much as one-tenth of 1 per cent in individual pieces, though the average is almost exactly correct.

It may seem to be a rather simple problem to first calculate the quantity of copper required to be added to bullion of known fineness and then to so apportion the metals on an accurate balance as to get an almost mathematical result after blending them by fusion.

If this were so, the formula for the production of gold and silver ingots would be identical.

In fact, the practice is very different in alloying the two metals for the production of standard coin. If gold and copper are melted together in any proportion and thoroughly mixed while fluid, the resulting bar or ingot will be uniform throughout in composition. But when silver is alloyed with copper only one proportion is known which will give a uniform casting. This proportion is 72 per cent silver to 28 of copper, and differs widely enough from our standard alloy to complicate matters in a marked degree. With more silver than 72 per cent the center of a cast bar will be richer than the outside, which chills first, while with a less percentage than 72 per cent the center of the bar will be poorer and the outside richer than the average. This characteristic of silver-copper alloys is known to metallurgists as "segregation."

Section through silver-copper bars, showing effect of "segregation."

It would seem that any alloy of silver and copper containing either more or less silver than 72 per cent has a lower melting point or remains fluid longer than the 72 per cent alloy. Hence the last portion of metal to chill in the center of a bar will in the one case be richer and in the other poorer than the average fineness of the molten metal poured into the mold when cold. A cutting from the outside of such a bar is, therefore, never taken for an assay. Only when the bar approaches fine silver can "a cutting" be relied on by the assayer. When ingots are made for standard silver coin samples are taken from each melt by the assayer, whose certificate is necessary before the ingots can pass to the coiner. Since a cutting from single ingots, or even a sample bar cast from the melt, would be misleading, what is called a "granulation" is taken. When a "melt" is ready for pouring into the molds, a little of the molten metal is dropped into water, giving "grains" or large shot, which may be rolled out and used entire, or nearly so, for assay. Two such granulations are, in fact, taken, one at the commencement of the "pouring" and a second when the crucible is nearly empty. These granulations are each assayed, and must not only show the melt to be of proper fineness, but must agree with each other within some hundredths of 1 per cent before the ingots made from the melt are adjudged to be of proper fineness to pass the coiner.

(*To be Continued.*)

Mining Summary.

CALIFORNIA.

Amador.

Ledger: At the Monte Cristo the new mill with a capacity of 60 tons a day is nearly completed. The extent of the porphyry deposit is so far unknown, but the tunnel which taps it about 400 feet in the hill and runs into it 200 feet, where it is known to be 44 feet wide and the hanging wall is not yet encountered. The tunnel taps the ore body about 600 feet below the apex, through which a shaft has been sunk. At the bottom of the shaft the deposit is known to be 70 feet thick.

The new hoist is at work on the South Eureka new shaft, which is now down about 90 feet.

The people who have had an option on the Doyle mine have arranged to resume operations. They have interested new parties in the enterprise of which Doe, Bogard, Foye and Oliver are the principals. They intend to start work by continuing to sink the shaft.

At the Argonaut the Union Iron Works has the contract for the iron work of the Argonaut mill. Workmen are preparing the foundation for the mill opening up the tunnel to the shaft, which will connect with the ore bin, and through which the ore will be conveyed to the mill. The mill is to be forty stamps, with concentrator floor room for sixteen 4-foot concentrators.

The new hoisting works at the north shaft of the Kennedy is being built.

Butte.

Register: At Enterprise work on the mill at the Crystal Peak mines will soon be completed.

J. O. Carlisle is putting up two hydraulic derricks at his mine and has seventeen men at work.

B. P. Crandall and son are getting out timbers for putting their Winter mine in shape for hydraulic work.

At Hurleton, Wm. Butterfield is pushing work as fast as possible on the Phœnix and has eight men on the mine. They are now running a crosscut from the lower level, but will probably go to sinking again soon.

The new arrastra which was lately finished at the Pactolian mine was recently destroyed by fire.

Calaveras.

Chronicle: A portion of the old works at the El Encino mine were tapped a few days ago. The workmen in the new tunnel broke through into old excavations and a large volume of water soon worked its way out of the drain tunnel. The old works are badly caved and it will take some time to get the water out. A pump will be put in to remove the water in the new works below the drain level.

A large vein of rich ore was struck in the Lamphear last week on the 220-foot level. The vein at present is 5 feet wide and increases as work progresses, and the walls are 14 feet apart. The rock carries free gold and sulphurets. The mill has been started up.

Prospect: Several mines bonded by Mr. Willard in the Collier mining district, operations on which were temporarily suspended pending a report on the different properties by an expert from Boston, have resumed work under the supervision of John Heard.

DeLay & Harris of the May Day have commenced a tunnel on the Murphys grade, west of town, which will tap the May Day at a depth of over 600 feet.

The duration of the monitor's work in the Central Hill mine is nearing the end of the run for the season. Great progress has been made since they started up five months ago.

El Dorado.

Republican: The Grand Victory mine has placed its new pump in position and started to lower the water which flooded the mine some time ago. The last of the water was pumped out during the week, and now operations will be resumed.

Mr. Ish of San Francisco is preparing to work his mining claim in the south fork of the Cosumnes.

Inyo.

T. B. Phebey of San Francisco has bonded several prospects in the Panamint district and has ordered windlasses and lumber for three shafts, and twelve men are at work sinking three separate shafts to a depth of 100 feet.

Kern.

At Randsburg Baker and Ferris have purchased the Philadelphia, a short wedge-shaped claim adjoining the Butte, for $2000 cash. They have also bought the Whippoorwill claim.

Randsburg *Miner*: Fifteen men will be put to work next week on the Rand Mountain Mining Company's claims.

In the Wedge the shaft has reached a depth of about 350 feet, and in a drift being run off a new and rich pay streak has been struck. The work of sinking the shaft to the 415 foot level will again be taken up and pushed to completion.

In the Val Verde in the No. 2 shaft, which has heretofore been known as a low grade proposition, the ore running only about $8 per ton suddenly changed front this week and is now producing ore of higher grade.

Mariposa.

Gazette: The Selleck Gold Mining Co. at Haywards expect to have the hoisting works completed in about twenty days. The machinery for the mill is partly on the ground at present. The shaft on the mine is down about 200 feet and the rock taken from the vein is ribbon rock, which shows free gold and sulphurets. They have a large amount of ore on the dump and as soon as the hoisting works are completed sinking will be pushed ahead rapidly.

The Chileno Pete mine, near New Years, which is owned by Mr. Woodside, is about to be reopened. A company has been organized and operations will be commenced in a few days.

Nevada.

Union: In the German Bar mine owned by Buck Bros. of Moore's Flat in about three weeks time over $1000 was taken out with a hand mortar and the ledge keeps getting richer as depth is attained.

The 20-stamp mill at the Mountaineer mine has been started and will be kept running night and day. Superintendent Dennis has been doing considerable development work at the mine and the prospects are encouraging.

In the Providence mine in running a crosscut south from the 1700-foot level, a 5-foot ledge of the finest kind of milling ore was discovered last week. A few weeks ago the Providence laid off about forty-five men on account of the mine looking poorly, but they will now undoubtedly soon resume work.

Placer.

Sentinel: At La Trinidad mine, in Sailor canyon, the average width of the ore body is 20 feet, and the developments consist of five tunnels aggregating in length 1500 feet, from which crosscuts and prospecting drifts have been run to open up a body of ore ready for stoping, which justifies the company to erect a mill and reduction works. The mill will be run by water power, conducted by a pipe line of 4000 feet in length. The grading for the mill site will be finished this week. Material for building the mill is on the ground.

The Jupiter Consolidated and Winchester Gravel Mining Company, near Iowa Hill, are preparing to commence active development work on their property. The holdings of this company comprise about two miles of channel.

At the Mayflower mine the company is prospecting a new channel in the McCall pit and preparing to hydraulic next fall.

The big Eureka tunnel is now in 2090 feet. The rock is wet. An upraise will be commenced immediately.

San Diego.

In the suit of Golden Cross Mining and Milling Co. vs. J. Spiers et al., a stipulation has been filed in the Los Angeles court wherein it is agreed that the matter in dispute remain in statu quo for 105 days. If by the expiration of that time the company has not paid the indebtedness due the defendants, judgment may be entered in their favor. In such case the property will be held in trust for all concerned. The claims aggregate nearly $200,000.

Shasta.

Free Press: At Old Diggings men at the Evening Star mine are sinking the shaft and setting up a gasoline hoist.

Men are running a 1000-foot crosscut tunnel in the old Spanish mine. They will tap the ledge at a depth of 250 feet. The Hallidie wire ropeway is well under way. Fourteen of the twenty-five stations are already completed, and are from 12 to 50 feet in height. Thirty thousand feet of lumber will be used in their construction.

Murdoch, Thellar and Taylor of San Francisco have sold to C. O. Rose of Hornellsville, New York, for $15,000, the Sibyl quartz mine, above the Niagara mine; also the Monterey and Louisa quartz locations.

Sierra.

(Special Correspondence).—The Northern Belle Mining Co., owned by John Rosenfeld's sons of San Francisco, 2½ miles west of town, is operating five stamps. The company is prospecting through two tunnels. One is 400 feet along the line of the ledge, and a lateral tunnel is 775 feet. The ledge is 3 feet and the ore a fair grade. The sulphurets average one per cent and run $150 per ton. W. E. Murray is superintendent.

The Marguerite Gravel and Quartz Mining Co. of San Francisco, operating in Sierra and Nevada counties, have opened a tunnel on the ledge adjacent to their gravel property. The footwall is slate. The ore body is 45 feet wide and runs from $4 to $6 per ton. R. Phelan is superintendent.

The Tip Top and Bay Horse has a tunnel 50 feet following a 10-inch stringer leading to the ledge indicated by the croppings. This is an extension of the Butte Saddle mine, and is owned by P. Goff and others who offer favorable opportunities to capital.

The Cleveland mine, whose mill was recently destroyed by fire is erecting an 18-stamp mill. The tunnel is 2000 feet and taps a ledge of 30 feet whose footwall has not been reached. The formation is slate and porphyry. The ore averages $3.50 per ton.

A Milwaukee Co. has erected a cyanide plant on the Young America and is working the tailings at a net profit, it is stated, of $5 per ton. The America was closed four years ago, having worked the rich ore only out of the blanket lead. The low grade ore still remains.

The Bigelow, now known as the Sierra Buttes, is about to be reopened. This is the property of the progressive Martin brothers of Nevada City and some San Francisco merchants.

The Mountain mine, at one time a productive property, is in litigation.

The Wm. Tell mine comprises five claims. The footwall is porphyry and the hanging is a perfectly smooth slate. It has three tunnels. The upper is 150 feet, following the croppings, and the ledge is 2½ feet. The lower tunnel is 350 feet, tapping the ledge at 200 feet where it is 5 feet in width. The lower tunnel is 350 feet, tapping the ledge at 200 feet where it is 5 feet in width. The lowest tunnel is 450 feet and has not reached the ledge. The average ore value is $10, exclusive of sulphurets. A tunnel probably 1500 feet would cut the ledge at from 800 to 1000 feet depth. There is good timber, and water right available all the year. The company has exhausted its capital and the property awaits outside help.

Sierra City, Cal., June 12, '97.

Enterprise: Dr. Jump has bonded his mine in Sailor ravine to Robinson and Fairfax, who are now in possession and are working the property.

N. Hanson has struck gravel in his mine after running a tunnel in 200 feet. His tunnel is about 50 feet below the old Star tunnel, which was run years ago and abandoned because too high, the tunnel running over the channel.

Siskiyou.

Reporter: At Happy Camp the Klamath Flume and Mining Company within six months expect to complete nineteen miles waterway, half 8-foot ditch, remainder 6x4-foot flume. The company have decided to bring water from the east fork of Indian creek to a point on the Klamath 700 feet above the river, covering 1500 acres of ground. A sawmill which will cut 35,000 feet lumber daily will be built.

The Siskiyou mine on the river is now paying very well. The banks are over 100 feet in height. It is a high back channel of the river with plenty of dump. A 4-foot flume takes the ground. A ditch from Clear creek affords plenty of water for two giants, a 4 and 6-inch nozzle. The ditch is fifteen miles long and 5 feet wide. This, at the mine, gives a pressure of 200 feet.

The Pennsylvania Placer Company's mine has been worked for three seasons and the owners, Gordon & Sons, are well satisfied. They have 157 acres of ground, high channel of the river. A No. 2 giant supplied with a pipe tapering from 15 to 11 inches gives a pressure of 180 feet upper, 260 feet lower channel. Two flumes 2 feet wide, forty and twenty boxes respectively, tap the mine. A 30-inch ditch three miles long furnishes water for four months each season.

The Western Placer is a large property. The banks average 100 feet. Two miles of ditch furnishes water for two No. 2 giants. Three strings of boxes tap the mine.

Humphrey & Quigley, owners of the Commodore mine, have struck what they consider the best rock yet found. The vein is 26 inches wide in the new tunnel at a distance of 374 feet. They have started their twin arrastras.

The owners of the Brown Bear near Sawyer's Bar have struck a 2½-foot ledge that prospects well.

Journal: A San Francisco company expect to put in a plant on Salmon river between the Salmon River Mining Company's property and Sawyer's Bar. They have control of a large area of land and expect to work it on an extensive scale.

News: At Sawyer's Bar Hegler Brothers are taking out quartz from their lower tunnel.

The mill at the Fagundes mine is running on high-grade ore.

Finley & Co. have surveyed ground to build a new ditch and flume from White's gulch to their property near Sawyer's Bar.

The Oregon Company are packing ore to the Jumbo mill at an expense of $9 per ton, for packing and milling.

Trinity.

Journal: At Willow Creek, on the lower Trinity, the Clover Flat Mining Company, formerly the Bussell Mining Company, have commenced work on their mine. A new ditch will be constructed and the mine fitted up. About thirty men will be put to work and the new ditch will be completed by the middle of next month.

On Canyon creek the Globe mines have not yet started up; they are repairing machinery.

At the Maple mine they have discovered their main lode, and are putting on a heavy force of miners.

The Chloride mine under the management of Mr. Dedrick is increasing its force and driving tunnels and stoping out ore.

NEVADA.

Reno *Gazette*: In Olinghouse canyon there are between 75 and 100 tons of ore on the various dumps. Many tunnels are being run and shafts sunk.

Gold Creek *News*: J. S. Loder has taken a bond on the Empire property, owned by Parks and French at $25,000 and will begin work at once.

Pioche *Record*: Additional men have been put to work in the De Lamar mine and the company's mill is running full blast.

Dayton *Times*: The cyanide plant at the Eureka millsite is nearly completed. Only two tanks will be operated at first, and they will run on material that is on the ground. When this material is worked up, other tanks will be constructed, when tailings from the old Chollar reservoir and other places will be worked.

Eureka *Sentinel*: In White Pine district the force of men at the Chainman mine has been materially increased and more will be put on as fast as the material with which to work arrives.

Salt Lake *Tribune*: At Tuscarora last week the hoisting plant on No. 4 shaft of the Dexter was destroyed by fire; but the management is assured that there is sufficient ore on the dump to keep the mill in operation, and that the new hoister on the new shaft will be running by Saturday night. The reports from the property continue very encouraging, the ore bodies are in excellent condition and the outlook is bright.

OREGON.

Rogue River *Courier*: Harmon & Green are tapping Galice creek with a 1½-mile ditch. A giant and pipe will be in position this fall ready for the run.

Harrington Bros. have been getting out some rich rock from the Exchequer mine on Williams creek.

Medford *Mail*: F. V. Medynski on his Forrest creek quartz claim has an 18-foot ledge, which he is working on. The quartz is not especially rich, but the vast amount of it makes the proposition a valuable one.

The development work at the Shorty-Hope, near Ashland, has been showing up better rock lately than ever.

A 5-foot ledge has been struck in the Braden mine, Jackson county, in the 50-foot tunnel recently run. The 5-stamp mill connected with the mine has started up.

R. T. Shannon of Ashland and G. Bowers of San Francisco have leased, with an option of purchasing, the Oregon quartz mine on Little Applegate.

The Prescott Placer Dredging Company, capital $250,000, will send the dredger Anaconda, now working on the Seattle tide flats, about July 1 to Rogue river to take out gold-bearing sand from the banks and bottom of the river at the rate of 4000 cubic yards per day. This sand is said to run from 15 cents to $1 in gold per cubic yard. Sand yielding 15 cents per yard can be worked at a profit.

WASHINGTON.

Spokesman-Review: At Piere's Lake the Little Giant is working eight men in the 80-foot shaft, and the crosscut at the 70-foot level is in 20 feet. It is reported that shipping ore has been encountered in every opening made.

James Crawford, superintendent of the Piere's Lake and Flat Creek Company's properties, has reached a depth of 40 feet on shaft No. 1 on the Evening claim. The work at this depth has penetrated a heavy vein of sulphides of iron, carrying copper in various forms.

The Scotia Company, which was the first to open development work on Toulou mountain, has its machinery plant in operation and is making rapid progress on the ledge, and is sinking from the end of the 200-foot tunnel. The company is now taking out some shipping ore.

BRITISH COLUMBIA.

(Special Correspondence).—A British company—the Lillooet, Fraser River & Cariboo Gold Fields, Limited—claims ownership of a mine which is the biggest producer in this Province. This is the Lanark of the Illiciliwait district of northern West Kootenay. Last month this mine treated 3200 tons of ore and produced 430 tons of concentrates valued at $35,000. These concentrates were all shipped to San Francisco for refining by the Selby Smelting and Lead Co. A great deal more will go to California before the people of Vancouver are wide enough awake to establish a smelter in the city.

There is much depression in mining at present throughout the Province. All shares have fallen and the boom spirit has fled; but many claim that the sudden and unexpected depression is a historical feature of every mining country and every mining country's boom, and that it simply punctuates the death of the speculative feature in mining in this Province and heralds legitimate, slow mining business. In the meantime throughout eastern Canada and the States a large number of investors in British Columbia mines are loaded up with trashy stocks, and for the present the stock market is dead.

Vancouver, June 12, '97.

Spokesman-Review: Pack trains and prospectors' outfits leave Slocan every day for the headwaters of Lemon and Springer creeks. Not less than 300 prospectors are now in the contiguous mountains, and some rich finds have been made already this spring, although there is still plenty of snow in the higher altitudes.

There are thirty-six men at work on the Skylark and Ranger, on Lemon creek, which, with the Chapleau, are under bond to the Hall Exploration Company, Limited.

The Howard Fraction, on Lemon creek, which is being worked by the British Canadian Gold Fields syndicate, has begun shipping some of its high-grade ore.

In the American Boy, near Sandon, they have made a strike of about a 4-foot lead in tunnel No 1, of which about 2 feet is solid ore. The company has started another tunnel about 125 feet below No. 1, which is in about 20 feet. They expect to run about 175 feet to get below the upper winze and then drift.

The Sunshine Mining Company of Lardeau, B. C., has been floated in London. The properties owned comprise the Silver Cup, Sunshine and the Towser claims in the Lardeau country. Preparations are being made to develop them on a large scale.

Last week the Boundary Mines Company of New York put twelve men on to do assessment work on five of its claims in Central camp.

The tunnel on the Boundary Creek M. & M. Co.'s D. A. claim is now in more than 100 feet. The face is becoming more mineralized as it advances and the country rock is straightening up, so it is thought the ledge is not far ahead.

The Great Western will in a few days ship a carload a week up to the end of July. The lower tunnel is now being driven about 3 feet a day. It is now in about 108 feet, and they expect to get into the ore chute in another 100 feet.

The Blackock, on Wild Horse creek, near Salmon river, in British Columbia, has been bonded by the Hall Exploration Company from A. J. and Alexander Audit, the consideration being $70,000, of which $3000 is cash, $35,000 to be paid Nov. 1 next, and $32,000 June 1, 1898. The property has a shaft 30 feet on the footwall and, it is said, shows assays from $60 to $87 and some galena.

The Gopher, Maid of Erin, Homestake and R. E. Lee claims, north of the Rossland camp, have been transferred to the Homestake Consolidated Mines Company of London, Eng., which has a capital stock of $750,000, the intention being, it is said, to have the company start off, after everything has been paid for, with $100,000 in the treasury, with which to develop the properties. The deal is of course subject to ratification by stockholders.

A foot vein of high-grade free milling ore has been struck on the Great Western, on Toad mountain.

Spokane *Chronicle*: In and about Ainsworth

fully 200 miners are now at work. This is a larger number than at any time in the history of the camp.

Considerable excitement is expected over the new discoveries in the glacier basin between Lakes Kootenay and Slocan.

The syndicate which is working the Little Donald and the Black Diamond have about sixty men at work. They have a new steam hoist working on the Black Diamond. On these properties shafts are being sunk and a good grade of ore is coming to the surface.

This same syndicate has recently purchased the Lady of the Lake and the Mammie, and is working them from a shaft on the latter.

On the Tariff, Manager Langford is down 250 feet and has run three levels. The shaft is in quite rich ore all the way. About twenty-five men are at work.

The Mile Point, purchased by the British Columbia Gold Fields Exploration Company, has a large double shaft in a fine body of ore, some of which is wire silver.

D. S. Carriel, owner of the Rand property, will immediately commence an 800-foot tunnel.

L. J. McAtee is working a large force on the Twin, and will soon start a 1000-foot tunnel to tap the ore at a deeper level.

UTAH.

Salt Lake *Tribune*: There are indications that work will commence on the Gold Dust mill in a short time. The condition of the property is improving and the ore bodies are now among the largest in the district for the amount of work done.

The new pumping plant on the Alaska is now in operation and sinking from the 150 foot level will begin to-day.

Capt. Hank Smith says that at Tintic the work is devoted more to the blocking out of ore than to extraction. This is true of all the big mines at Eureka and Mammoth. At the Centennial Eureka only sufficient ore is being hoisted to meet the requirements of the payroll, upon which there are now about seventy-five men. From the Eureka Hill about twenty-five tons a day are being raised and put through the mill, while at the Keystone operations are going forward with but one shift. The same policy prevails at the Bullion-Beck, where some good ore is reported to have been recently uncovered in virgin ground, but the breaking down of it will not be commenced until such time as conditions in the metal market have improved.

The tonnage at the Eureka Hill mill is now averaging about 225 daily.

Ore is being extracted from the Japan lode at Ophir, and a shipment will very likely be made in the next few days. A shipment of ore is also booked to come from the Buckhorn, which has already made several this season.

Tintic *Miner*: Shipments from the district for the week are as follows: From the Bullion-Beck, twenty carloads ore; Centennial Eureka, three; Eureka Hill mill, twelve carloads concentrates; Uncle Sam, six carloads ore; Mammoth Mine, six; Mammoth mill, seven carloads concentrates; Swansea, four carloads ore; South Swansea, three; North Star, three; Joe Bowers No. 2, one; Luzerne, one; Domingo, one.

The development of the Orient property in West Tintic is being pushed and considerable good shipping ore is being taken out.

Spriggs and Millikin are developing their Wonder group northeast of Eureka. Their tunnel is now in about 145 feet and they expect to tap the vein before the month is out.

Good progress is being made in the lower tunnel of the Humbug and they expect to tap the vein before the end of the month.

The work of straightening up the shaft of the Martha Washington is nearly completed and development work can be commenced next week. The shaft is down 150 feet and makes a good showing of ore.

A new strike is reported in the Buckeye in a short drift from the 400 level. Superintendent Green states that the ore streak is 18 inches wide and assays 190 ounces silver, 63 per cent lead and $10 in gold.

The Swansea is drifting on the 650 level and is reported to be looking well. Sinking from the 650 will soon be recommenced.

Mercur *Mercury*: Since the enlargement of the Geyser mill about 100 tons daily are treated at that plant. As the ores of the property can be treated more easily and cheaply at this mill than at the Marion, the latter, pioneer mill in this part of the district, was closed down.

Col. Wall recently put a force of men at work on the Victor, between the Gold Dust and the Geyser-Marion, and they have encountered several feet of cinnabar.

There are indications that the Golden Gate mill will soon be in course of construction. Surveyors have been at work on the proposed millsite during the week.

Bingham *Bulletin*: At the Winnamuck on account of water it will take about a fortnight to reach the 300, when sinking of the incline is to be resumed, Manager Watson's intention being to go down 100 to 120 feet further and explore the vein in a new level. Some experiments are being made on second-class ore, which may result in additions to the machinery of the mill and its starting up.

The carbonate ore from the Black Dog mine is being treated by jigs, is yielding good concentrates, and a not unlikely result will be that a considerable tonnage will be worked. The dump of the Black Dog contains accumulations of years, amounting to hundreds of tons of similar ore.

The Giant Chief is proving the big ore body lately encountered to be continuous and important. The working force has been increased to sixteen, and it is the intention to put the property in shape for extensive production as speedily as possible.

Silver City *Star*: The Buckeye this week records a new strike in the drift below the 400-foot level. The ore assays 195 ounces silver, 63 per cent lead and $10 gold. The body is about 18 inches wide, and a winze following the ore body is being sunk.

J. G. Midgley states that the shaft on the Fissure has reached a depth of 223 feet and sinking is still being continued.

The work of sinking the Luzerne is still progressing and the ore body holds out well. A shipment of about twelve tons was made from the property last week.

IDAHO.

Spokesman Review: Superintendent H. B. King, of the Hiyu mine, in the Florence district, will put two shifts of men to work on his property about the middle of the month. Extensive machinery will soon be put in.

Spokane *Chronicle*: At Wallace the Poorman and Tiger mine is now being worked on the 1100-foot level, and are in a 14-foot ore body, with 6 feet of clean shipping ore.

The Standard mine is entering a big body of ore in the lower tunnel, and the shipments for the last twenty-four months have given a return of $70,000 to $90,000 per month clear of expenses. They have abandoned the upper tunnels, which have been purchased and are being used by the Mammoth mine. The tunnels will be extended on through to the Mammoth ore bodies, and the ore will be carried to the Gem mill, which they have leased. This mine gives employment to from 150 to 200 men.

The Frisco mine has been increasing its capacity and making improvements, but is now getting in shape to resume with a full force. There will be 300 more men employed on Canyon creek during the next three months than there has been during the last three.

Inter-Mountain: The Badger Gold Mining Company has purchased a 10-stamp mill, with agreement that it be completed within thirty days and shipped to Elk City, Idaho. The company owns two claims, the Badger and Homestake, but all of the development work is done on the Badger. It is free milling ore. A shaft has been sunk on the Badger about 100 feet, and 200 feet of drifting has been done. The company expects soon to put in a hoisting engine and continue sinking the shaft for development. The ore body is 3 to 7 feet in width. S. Silverman will resume the management of the property.

Boise *Statesman*: At the Flint mine in Owyhee county they have been working a lot of ore obtained from the dumps, and the company is so well pleased that it will probably reopen the mine and resume operations on a large scale.

At the De La Mar with the new Pelatan-Clerici process the ore is being worked up to 84 per cent.

MONTANA.

Inter-Mountain: The Gold Mountain Mining Company in Basin has purchased a 20-stamp mill and will have it on the ground within ten days.

From present indications there will be an enormous amount of development work done on the big mines of Butte during the year of 1897. At many of the Boston and Montana properties, preparations are being made to sink several hundred feet for the purpose of opening up new ore reserves. Sinking is now in progress at several of the Anaconda properties and at the present time preparations are being made to develop the shaft of the Green Mountain from the 1400 to the 1600-foot level.

Butte *Miner*: The Butte and Boston people will, now that they have bonded the Anderson, at once put in additional machinery and more men and develop the mine. The shaft will be sunk down much deeper and some extensive crosscutting will be done.

Regular shipments of copper ore of a good quality continue from the Original mine to the reduction works on the ore cars of the street railway company. The ore cars now in operation have proved a pronounced success, no accidents having ever occurred.

At Twin Bridges men have been set to work grading for the smelter to be erected by the Montana Smelting and Mining Company, an organization comprising several business men of Butte. The plant will have a capacity of thirty tons per day.

The Clipper group of claims, located about two miles from Pony, is furnishing about forty tons of ore daily for the mill, which yields about $20 per ton on the plates, and some $75 concentrates.

On the Alex Scott, east of Butte, operations are about to be resumed. The shaft is down 300 feet and several small shipments of ore which worked over 60 per cent copper have been made.

The Parrot Copper Mining Company is keeping its smelter in operation with ore from the Parrot and Moscow mines. A lease was recently let on the Little Minch claim. At the company's smelter at Gaylord about 130 men are employed.

In Park canyon at the 300-level in the Receiver there is a 4-foot lead on which drifting is being done.

WYOMING.

The manager of the New York and Western Mining Company, operating in the mountains about 17 miles from Saratoga, reports the discovery of a rich vein of gold ore with a pay streak 4½ feet. The ore yields about two ounces to the ton. The owners will at once let contracts for several thousand feet of tunneling on the vein and will commence shipments of the ore immediately.

Encouraging reports are received from Horse Shoe park prospects near Wheatland, where Johnson and Hammon have been developing claims showing silver-bearing galena. A vein 2 feet thick is being worked and ore taken out for a trial shipment.

Salt Lake *Tribune*: John Dern states that the properties and prospects south of Rawlins at Grand Encampment, as the spot has been christened, promises a scene of much activity the present season. Miners and mining men from many mining States are gathering on the ground, which has shown itself capable of great values. The Doan has sent out already about ten cars of ore that netted the producers at least $100 per ton on the haul to Denver, the ore showing a high percentage in copper. At the Golden Eagle he found a well-defined vein showing as much as ten inches, carrying free gold in pronounced quantity. The Gold King group, owned by Nebraskans, is another that presents a most promising appearance, and with abundant water and plenty of timber.

COLORADO.

Republican: At Cripple Creek there is new mill talk, and two new ones will be built—one at Florence and another at Colorado City. Each of these will handle 100 tons a day, and will raise the capacity for Cripple Creek ores to 1250 tons daily, counting the mills up, those in course of erection and the enlargements under way for plants now in operation. This is more than double the present capacity, and allows for handling 37,500 tons of mill ore a month, or nearly 500,000 tons a year. It is looking ahead to an annual production of low-grades equal to at least $10,000,000, and, with the smelting grades, to a total output of more than double that amount.

Von Hemert & Anstie, since taking hold of the C. O. D., have shipped 140 tons of mill dirt that ranged from $10 to $20 a ton, and twenty tons of high-grade that ran from 6 to 18 ounces a ton. In the 455-foot level they have an 8-foot body of mill ore, from which they are producing steadily. They are using the Rebecca shaft and working fifteen men.

A crosscut is now being run to prospect the Plymouth Rock ground from the bottom of the 1000-foot shaft.

The Portland is now in a body of ore of great width and high values, such as the mine has not been getting for months, having been encountered in the 700-foot level from the Burns shaft. The mine yields from fifty-five to sixty tons a day.

At the Gold Coin the product is 200 tons a week, and no increase can be expected while the surface work is in progress. The vein has been drifted on for 60 feet at the 320-foot level and shows good ore continuous.

The enormous body that was opened 20 feet wide in the west drift from 600 feet depth in the Granite is yielding an average of twenty tons a day.

The El Paso Gold King shaft has reached a point where it is proposed to cut the 500-foot station.

Hoskins, Clark & Keith have refound the ore in the Virginia M. by drifting west from the winze sunk from the Anaconda tunnel level.

By the last of June the Portland should be into the Anna Lee and the Isabella into the Smuggler chute. The Victor should have the new high-grade bodies in shape for stoping, and the Union will also, in all probability, be striking higher again; but until then no heavy increase can be expected. If, as expected, the enlargement of the Metallic Extraction plant is completed, the Turner mill going and the page again in operation, some 6000 tons more of mill ore should find a market in July, and from that time on the mill capacity hold that increase until about October, when the El Paso at Florence and the enlargements at Colorado City should bring about another increase in the output of the low-grade.

R. Mackey of Nevadaville, associated with mining men of Denver, has taken a lease and bond on the Golden Treasure mine in Nevadaville. Sinking with three eight-hour shifts is progressing at a depth of 1000 feet, and in driving the lower levels a good body of ore has been opened up. The ore bins are now piled high with ore, and from this on steady shipments will be made to mills and smelter.

The Last Dollar, on Beacon, produced during the month of May fourteen carloads of high-grade and twenty-two of mill ore, the grades running about $60 for the first and half as much for the second.

The Young lease on the Arequa townsite sent out twelve tons of $50 ore during the week, and the Roberts lease will make a shipment of sixteen tons of about $40 grade.

At Leadville, in the Yak tunnel, built mainly for drainage and transportation two or three months ago, an ore chute was discovered on the west of the tunnel line, and since then the shipments average fifty tons per day of ore running about $11 to the ton. The extension of the tunnel will tap the Little Johnny mine at the depth of from 1100 to 1300 feet below the surface. The breast of the tunnel is now in nearly two miles, and a contract has been authorized for 4000 feet farther.

Leadville district is gradually pushing its limits, until now it may be reasonably claimed that the territory known to be mineralized extends from the northern side of Big Evans gulch to the Park side of Weston pass, a distance of fully ten miles.

In the Twin Lakes district the Mountain Quail has opened up a vein of ore from 4 to 6 feet wide, with a pay streak of from 4 to 16 inches.

A large force of men is at work blocking out ore on the Gordon, and the property is being put in excellent shape pending negotiations for its sale.

Work will be started on the Mt. Elbert tunnel at an early day. A plant of machinery has been erected. The work will be done with air drills and the tunnel will be pushed in at least 5000 feet. It is already known that twenty veins cross the line of the bore of the tunnel, all of which will be cut at a great depth.

The Bwlgoch Company have been prosecuting underground development all winter, and will soon be ready to start its mill.

At Alma the Alma, Bucksin, Beaver, Tarryall and Lowe placers are now running with full force and the strongest head of water that has been supplied for years.

At Durango, at the Small Hopes mine, the company intends to enlarge the mill and to add the necessary machinery and appliances for recovering the silver values, and this will probably be done this year. The Small Hopes mine will soon have a large quantity of ore blocked out.

At the Columbus mine since last December from twenty-five to thirty men have been employed, and drifting at the 60 and 100-foot levels has been urged.

Near Central City the Next President Mining Company are operating their mine, and have let contracts for several hundred feet of sinking and crosscutting. The shaft is at present down 280 feet. The company intend to sink 900 feet.

The new machinery has been installed on the Randolph mine, in Russell gulch, and the new shaft is completed. Sinking will be commenced in a few days, the operators intending to sink at least 200 feet deeper.

The finishing touches are being put to the Pederson shaft house on Bobtail hill. The machinery is in place and sinking will be commenced.

The new shaft house is well under way at the Clifton Belle mine, on Pawabic mountain, and the new machinery is expected in a few days.

Kuengel brothers, who are managing the Galena mine for the Alpha Gold Mining Company, in extending the 500 west level, have struck a 4-foot body of ore.

ARIZONA.

Republican: The placer ground owned by the Lynx Creek Gold Mining Company covers ten square miles. It is an English company, which has been operating for the past five years. Their land lies in the basin traversed by Lynx creek and runs upon the slope of the hills on either side. The gravel runs to a depth of from 10 to 25 feet. The richest dirt is that lying 1 foot from bedrock. Some of this runs as high as 30 cents a cubic yard. The average value is 25 cents a cubic yard. It is more or less valuable from the grass roots, and colors are found all over their holdings. The ground contains but few large boulders, and is worked easily. The steam shovel handles about 400 cubic yards a day. The gravel is carried around to an incline bin, where it is washed down into a revolving washer, which throws the rocks into a carrier and drops the washed material into a basin below. From this basin it is pumped into the amalgamator, where the gold is caught by the plates and in the pockets at the end of each inclined plate. The water is carried out to a reservoir, from which it runs around through a series of settling basins into a large reservoir. From here it is pumped back and used over again.

Tucson *Citizen*: The Empire smelter at Crittenden has been running for seven days with much success, running eighty tons through per day. The Old Flux and Hardshell mines are furnishing the ore. About one hundred tons are being delivered per day at the smelter. These are lead, silver and gold ores.

Williams *News*: A shipment of forty tons of copper ore was made from the Bill Nellis mine last week. The ore, which goes to Pueblo, is a magnificent oxide, the average assay for the entire shipment being 37½ per cent copper.

The Anita Consolidated Copper Company is pushing developments rapidly and opening up large bodies of rich ore on several of their claims. The company has perfected arrangements to ship ore immediately.

The Tusayan Development Company has begun running a tunnel on the Hogan mine. This is a big body of copper sulphuret ore in the walls of the canyon that can be traced for a perpendicular height of 400 feet, with a width of 600 feet. It assays 25 per cent copper.

Journal-Miner: There has been unusual activity in mining during the past week. Work has been commenced as follows: On the Summit and Model mines in Weaver district; on the Buckeye mine in Turkey Creek district; on the C. O. D. mine in Big Bug district, and the Emmet mine in Mineral Point district.

The Sun Dance stamp mill and concentrators are running steadily on ore from the company's mines. L. A. Davies, superintendent of the property, expects to have his rolls and jigs ready to start up in a short time.

Parties have taken a bond on the Tucker mine, near Congress, and have commenced active work in the development of the property.

W. G. Press, who has taken a bond on the Storm Cloud group of mines, in Maple gulch, owned by Fred Williams, has just let a contract for 350 feet of work to be done on the property. He also expects to let another contract for sinking a shaft 100 feet.

NEW MEXICO.

Cerrillos *Rustler*: The McGhee Gold Mining and Milling Company's machinery for the mill is already built and ready for shipment, but will be held in the East until the entire plant is finished. The machinery and power will have a capacity of about fifty tons of ore daily, though at present the vat capacity will be about twelve tons, but will be increased very shortly.

At Santa Fe the turquoise properties near Cerrillos, owned by the American Turquoise company, has been sold under a mortgage held by the Farmers' Loan and Trust Company of New York. The mines sold were the Old Castillian, Morning Star, Muniz, Gem and Sky Blue and were bid in by C. W. Waterman for the Trust Company for $75,350. The supposed object of the sale is to bring about a reorganization of the affairs of the Turquoise company. The original debt was something like $225,000 borrowed money, of which all but $87,000, principal and interest, had been repaid.

It looks as if the turquoise product next season would be considerably enlarged in the region north of Cerrillos. Michael O'Neil and his partners are doing a large amount of development work on their claim adjoining the old Castillian and the Persian claim.

Mechanical Progress.

The Use of Compressed Air for Mining Purposes.

NUMBER VI.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

For a properly operated mine, having a considerable quantity of water to pump, a station pump, with compound engines, using reheated air, will give the greatest economy. When it comes to the subject of rock drilling, which forms as a general rule, two-thirds of the power required underground, at present compressed air has the field all to itself, and here utility alone is considered, for rock drills are as uneconomical in the use of air as a direct acting steam pump, still, they do such a tremendous amount of work in comparison to the cost for operating them, that their economy is measured only in the amount of rock or ore which they are instrumental in extracting, and not in the power which is required to drive them. It is evident, however, that it will take less power to furnish air for these machines, if such air is taken directly from the transmission main, than if it were furnished at the surface by water power or electrical or steam motor. Besides, a considerable portion of the cost of furnishing compressed air to these machines is offset by the pure air which is furnished to the miners underground and the readiness with which it blows the smoke caused by blasting from the various underground workings. For underground work it is also valuable in case of accident, and an air pipe leading back into a drift, a portion of which has caved and imprisoned miners beyond, has not only furnished them pure air but at the same time these pipes have given a means of communication with those outside.

The use of air around a mine is also in the nature of an insurance, especially where a mine has the apparatus for using steam. Air being used practically under similar conditions to steam can be utilized in the motors or engines and in case anything should happen to the pneumatic system, it will only take a few hours to close off the proper valves, fill the boilers with water, get up steam and proceed as before: whereas, it is impossible to use the electrical apparatus with anything but electricity.

As far as first cost is concerned, the average of a number of costs of installation which have come to my knowledge, show me that the air plant is from twenty-five to fifty per cent cheaper, depending upon the nature of the installation, the size of the power and the distance of the transmission.

As a general rule, the ordinary free gold milling mine in the State of California on a working basis would require motive power divided up nearly as follows:

Twenty-five per cent for the mill, 32% for the hoisting, 5% for direct acting pumps, 10% for station pumps, 23% for rock drills, and about 5% for lights.

Allowing that electricity to the amount of this 100% has to be purchased to operate this mine, using compressed air according to the manner that I have mentioned, I believe that there would be required about 74% in comparison to the electrical requirement, divided up as follows:

Twenty-five per cent for the mill, 10% for the hoist, 3% for the direct acting pumps, 13% for the station pumps, 16% for the rock drills, and 7% for the lights, making a total of 74%.

My opinions in the matter are somewhat borne out by the experience of electrical engineers themselves. For instance, in an article written in a pamphlet called "Stone," the following remark is made:

"You may not know that Mr. Thos. A Edison, the greatest electrician of the present time, has been for the last two or three years experimenting on a mammoth scale at Ogden, N. J., in which he quarries a low grade of iron ore, hoists and conveys the same by means of two cableways, delivers to the crusher, and after being crushed the material is gradually reduced to a powder, when by electrical process the particles are separated from the particles of stone, the iron particles being then compressed in the form of bricks and sold as a high grade iron ore.

Mr. Edison's quarrying operations involve the use of hoisting engines, drills, pumps, etc. Mr. Edison tried the Edison drill, which he told the writer he never saw until it was delivered to his quarry. The electric drill is being thrown out and the steam drill employed, though electric motors are used somewhat in the mill still. On all their hoisting apparatus steam hoisting engines are employed. Now it seems that until Mr. Edison can successfully use electricity in quarrying operations, it is useless for others to waste their time experimenting in this line. For anything like intermittent hoisting with a derrick, the electric hoist is not nearly so economical or efficient as steam hoisting engines."

I may add that for this same quarrying work it has been found recently at Jerome Park, in New York, where a very excellent compressed air plant has been installed by an Eastern compressed air engineering concern, that they are operating hoisting engines and rock drills very much cheaper by compressed air than they formerly did by steam.

Statements are made, which I have no means of verifying, that it is done with one-half the coal formerly required when steam was used direct. The contractor is making a large excavation, covering probably a square mile in extent, for a reservoir. He has established in the center of the work a 500 H. P. air compressor and is driving fourteen hoisting engines and fourteen rock drills at various parts of the work, and reheating the air prior to its use in the hoisting engines. The economy of this plant is so marked that at the present time a contractor in Philadelphia is installing a similar plant for work to be performed there.

These results seem to point to the fact that where steam, directly generated, cannot compete with compressed air it is useless for any other power to try to do so under the same conditions. It all lies in the fact that the work is intermittent and that is the principal claim made on this present occasion, that in determining the character of the power to be selected for any kind of an operation many things beside the efficiency of the apparatus at full load and constant operation, are to be considered. Very frequently a compressed air or water power plant, capable of storage capacity, would be more economical to use at a constant load efficiency of ninety. It is like the cost of a manufactured article, it matters very little what the rate of wages paid, provided the amount of wages which enters into the cost of the product be satisfactory. So it is in a power proposition, it is not the efficiency of five minutes operation, it is the total cost covering twenty-four hours.

From an engineering standpoint, if one were asked the most economical steam motor to operate an electric street railway plant, one would say, a compound or triple expansion Corliss engine, running condensing. But this depends entirely upon the cost of the coal, for it has been proved in parts of the United States where coal is as cheap as $1 per ton, that the difference in interest and depreciation between the condensing plant and the simple high pressure plant will more than offset the difference in the cost of fuel, even if the coal cost $1.40 a ton. This is an instance where high efficiency engines are not engines of great economy, and I have been particularly emphatic upon this point, because compressed air has suffered much on account of improper comparison with electricity in this manner.

We all know that there have been constructed electric generators and motors that will give an efficiency of from 92 to 95 per cent at full load, while compressed air generators and motors fall below these figures in mechanical efficiency, but in practical economy for such work as we have had in consideration, I claim 25% superiority in economy over the electrical installation. Mechanical operations are not conducted for amusement, but for profit, and that operation which produces equal results with another, for a less monthly or yearly cost, labor, material, fuel or power, interest depreciation, etc., being all given their proper value, is the more economical.

I claim that compressed air, for intermittent work (which is fully 50% of all work done by motors), has no rival for general economy or utility, and particularly is this true for mining work. It must always be borne in mind that economy in compressed air depends upon reheating, and then expansion, and my remarks are not directed towards that class of compressed air motors which use cold air or air at full pressure. Utility very frequently overbalances considerations of economy or efficiency, as may be illustrated in the air brakes which are attached to the locomotives throughout the world. These air brakes are most uneconomical in the use of steam, using it practically at full pressure, and are about the same class of motors as the direct acting steam pumps which have an efficiency of only about 20% as compared to a high class steam motor. I have heard it stated that there are 20,000 of these air brake motors working in the United States alone, absorbing about 10 H. P. each, making 200,000 H. P. devoted to this appliance alone, which completely overshadows all the rest of the compressed air installations in this country in magnitude, and yet no one hears of anyone attempting to replace this very inefficient motor with any other more efficient appliance for generating compressed air, for its utility is such and there is so much dependent upon it, that economy is a secondary consideration.

At the present time in the Eastern States there is a very marked revival of interests in compressed air, with reference to its application to street car motors. A considerable amount of money has been expended in experiments by two companies in New York City, during the last year which has resulted so favorably for compressed air motors that many street railway companies throughout the United States are preparing to make experiments on their roads, in order to determine the relative merits for their particular purposes of compressed air as against the cable or electricity.

Within the last month a car has been running in the streets of Washington, D. C., but I have not had any reports from it as yet. About this time the most elaborate experiment of all, namely, the running of a train drawn by a compressed air motor, will start from Rector street, New York City, and run to 58th street, on the 6th ave. elevated road at regular intervals. A 250 H. P. plant has been installed at a convenient point near one of the terminals and every precaution has been taken to insure the successful termination of this trial. This plant will undoubtedly be open to public inspection, so that all may satisfy themselves.

The struggle between the electric and the compressed air system, for supremacy, will not, as I have indicated before, be based upon the efficiency of engines or motors, but upon the general economy of the plant. This can be readily appreciated when we consider actual figures in connection with the operations of these plants. For instance, in a recently published report, of the operating expenses of twenty electric roads in Connecticut for 1896, the average cost of motive power and line repairs per car mile, for twenty of these roads, was three cents. With the compressed air system, with coal at $2.75 per ton, water at $1 per thousand cubic feet, or waste, the labor repairs and maintenance of power plant, depreciation and interest on the cost of the entire power plant, makes the cost per car mile, of the motive power, $0.023. In either of these plants the cost of coal per car mile does not exceed $.005, or an average of about one-fifth of the cost of the motive power, so that one can readily see that engines and motors of even medium economy would not effect the cost of the motive power to any perceptible extent, provided that the cost of maintenance was low, in fact maintenance is the principal expense in the motive power department, and what everybody is looking for at present is a system which places the cost of maintenance at the very lowest point.

My remarks become less true as the price of fuel increases, until of course there would come a point when the price of fuel would be the principal consideration. I should judge that on this coast we were about midway between these two factors.

While in New York and during this past month of April, 1897, I have had the pleasure of witnessing some experiments and of experimenting myself, with liquefied air, which I believe in the future is to be called "Aerine."

In one or two laboratories in Europe, air has been liquefied in extremely small quantities, but nothing of importance has been learned of its properties or of its possibilities in physical or engineering economy.

(*To be Continued.*)

Scientific Progress.

Comets.

In the field of the newer astronomy perhaps the most interesting work is that associated with comets. It must be confessed, however, that the spectroscope has rather increased than diminished the mystery which, in some respects, surrounds the constitution of these bodies. The older astronomy has satisfactorily accounted for their appearance, and we might also say for their origin and their end, so far as questions of origin can come into the domain of science. It is now known that comets are not wanderers through the celestial spaces from star to star, but must always have belonged to our system. But their orbits are so very elongated that thousands, or even hundreds of thousands, of years are required for a revolution. Sometimes, however, a comet passing near to Jupiter is so fascinated by that planet that, in its vain attempt to follow it, it loses so much of its primitive velocity as to circulate around the sun in a period of a few years, and thus to become, apparently, a new member of our system. If the orbit of such a comet, or in fact of any comet, chances to intersect that of the earth, the latter in passing the point of intersection encounters minute particles, which causes a meteoric shower. The great showers of November, which occur three times in a century and were well known in the years 1866–67, may be expected to reappear about 1900, after the passage of a comet which, since 1866, has been visiting the confines of our system, and is expected to return about two years hence.

But all this does not tell us much about the nature and make-up of a comet. Does it consist of nothing but isolated particles, or is there a solid nucleus, the attraction of which tends to keep the mass together? No one yet knows. The spectroscope, if we interpret the indications in the usual way, tells us that a comet is simply a mass of hydrocarbon vapor, shining by its own light. But there must be something wrong in this interpretation. That the light is reflected sunlight seems to follow necessarily from the increased brilliancy of the comet as it approaches the sun and its disappearance as it passes away.—From an address by Prof. Simon Newcomb.

A SYSTEM for the automatic lighting and extinguishment of gas jets from a distance is said to be in practical operation at Aix-les-Bains, France, having been developed by M. Egraz, director of the local gas works. The gas supply to each of the various burners in the system is controlled by an electric current acting on a special piece of inoxidizable steel, resting by its weight on

a seat in such a way as to close the orifice to the burner. The steel is moved to turn the gas on or off by magnetizing or demagnetizing, and, in case of turning on, the gas is lighted at the same time by either a spark or the incandescence of a special and practically infusible material.

Spontaneous Combustion.

The great number of fatal and destructive fires that take place, and many for which there cannot be any apparent cause assigned, is sometimes bewildering, but, says *Engineering*, when it is considered what a number of substances under certain conditions are capable of undergoing "spontaneous" decomposition with the production of the necessary amount of heat to effect their ignition, and withal the culpable ignorance and carelessness often displayed as to their proper storage, modes of conveyance and disposal, one cannot wonder at the inability of the authorities to elucidate the causes of so many fires. It is not always necessary that air should be present, or that there should be a gradual accumulation of heat, in order to bring about the "spontaneous" inflammation of a body. Substances that have their means of ignition often ignite or explode, out of contact with air, by mere molecular vibration, produced by such effects as thunder, etc.

The causes which produce spontaneous combustion, that is, the combustion of a body by natural or unintentional causes, may be divided into three classes: 1. Heat resulting from the gradual oxidation of a substance. 2. Decomposition produced by accidental vibration or concussion. 3. Ignition by lightning or electric sparks. The classes 2 and 3 may not be considered by many as being the causes productive of what is generally known as "spontaneous combustion." In the writer's mind the inflammation of a body containing its own means of ignition, by the molecular vibration produced by such effects as thunder, or the heat generated by lightning or electric sparks accidentally produced, are quite as legitimate causes of "spontaneous combustion" as the accumulation of heat resulting from the gradual oxidation of a substance. In any case there is a predominating external cause, whether it be resulting from oxidation, friction or electricity, and the word "spontaneous" cannot be here used in its literary sense. By far the most frequent source of fires from "spontaneous combustion" are those which result from heat produced by the absorption of atmospheric oxygen.

A frequent source of fires is the "spontaneous" ignition of various materials more or less saturated with oils or fats. The following is a list of common materials of the class which, when containing oily matters and when under favorable conditions, will often ignite naturally: Waste, tow, rags, sawdust, shavings, cotton and woolen cloth, roofing felt, and, in fact, all porous combustible bodies containing any oily or resinous substance having an affinity for oxygen. All vegetable and animal oils have more or less affinity for oxygen, while those produced from the distillation of petroleum and shale are practically unacted upon by the element. The oils which oxidize in the air most rapidly are the vegetable drying oils, such as linseed, hempseed, poppy oil, etc.

THE committee on international mails of the postal congress has decided that natural history specimens and articles for scientific collections be admitted to the mails as samples. This will permit of their being sent at the rate of one cent for every two ounces, whereas at present it is necessary to pay five cents for each half ounce or fraction thereof.

THE human body is an epitome in Nature of all mechanics, all hydraulics, all architecture, all machinery of every kind. There are more than three hundred and ten mechanical movements known to mechanics to-day, and all of these are but modifications of those found in the human body. Here are found all the bars, levers, joints, pulleys, pumps, pipes, wheels and axles, ball and socket movements, beams, girders, trusses, buffers, arches, columns, cables and supports known to science. At every point man's best mechanical work can be shown to be but adaptations of processes of the human body, a revelation of first principles used in nature.

A New Element.

A new element, bythium, is announced in the *Electrochemische Zeitschrift* by Theodor Gross. A fused mixture of silver sulphide and silver chloride is electrolyzed in a nitrogen atmosphere, using platinum electrodes free from iridium. In the melt is found a dark gray powder, insoluble in aqua regia and in ammonia. Fused with alkaline carbonate it gives a melt soluble in hydrochloric acid, from which hydrogen sulphide gives a brown precipitate. The yield of the new substance is 5 per cent of the original sulphur used. From the fact that there is a corresponding loss of sulphur, the author considers that this bythium is formed by the decomposition of sulphur, though he admits that since there is a small (3 per cent) loss of chlorine in the electrolytic reaction, it is possible that bythium may be formed by the decomposition of chlorine. An atomic weight determination will be looked for with interest.

AT the biennial congress on Weights and Measures, held last month at Paris, the discovery was announced of a new alloy of iron and nickel. This new material expands under the influence of heat less than any known alloy. Dr. Charles Guillaume of Neuchatel, the discoverer, prepared at the Imphy Works of the Commentry-Fourchambault Company a mixture of 36 parts of nickel and 64 parts of iron. Its extensibility is not more than one-tenth that of platinum. For measuring appliances that are subjected to changes in temperature, the discovery is of great importance.

Electrical Progress.

Electric Motors in Railroad Shops.

Recently the completion of the long-distance transmission line between Folsom and Sacramento, Cal., has placed it within the power of the Southern Pacific railroad to use electric motors in their shops at Sacramento with most satisfactory results. In their operation the motors have already shown considerable economy over the steam plant which they superseded.

FIG. 1.—TRANSFER TABLE IN SOUTHERN PACIFIC RAILWAY SHOPS, SACRAMENTO, CAL.

Three motors are used. The first is a direct-current motor, placed upon a table transfer used for shifting the locomotives. This motor is a G. E. 800, similar in every respect to those used on the ordinary trolley car, and is driven by a 500 volt railway current from the station. It is so geared that it operates, not only on the table, but also drives a drum carrying a wire cable used to haul the locomotives upon the table. This it does with perfect ease, hauling all sizes of locomotives. Instead of taking the current from the overhead wire by means of a trolley, the conductors are laid in an underground conduit and the contact is made by means of a plow running in this conduit. Some fears were at first expressed as to the result in rainy weather, but although considerable rain has fallen since the installation of this motor, no difficulty has been experienced. The transfer table and motor are shown in Fig. 1.

The motor used to operate the machinery in the boiler shop, as well as in the tender shop, is a 50 H. P. motor, driven by 440-volt current from the step-down transformers. The machinery in these shops is peculiar, in that each machine is provided with a heavy flywheel for carrying it over the sudden shocks which occur in punching and shearing and similar work. For three or four minutes the motor has an excessive amount of work thrown upon it in starting the machine from idleness and until the maximum speed is acquired. The load then drops to 30 H. P. Such sudden drops as this are calculated to demoralize motors of ordinary construction; with the induction motor the drop in the load is hardly noticed.

Fig. 2 shows the interior of the spring shop driven by a 10 H. P. motor; this motor also has to cope with sudden heavy loads. In this shop all the springs—spiral, elliptical and leaf—used in the construction of locomotives, etc., are made, and the most difficult piece of work done is the making of the spiral springs, some of which come to the machine as a bar of red hot iron, 1¼ inches in diameter. This, placed in the machine, is instantly wrapped around a mandril, and it is such work as this that throws for a few seconds an enormous load on the motor. Although it has been in use for some time, it shows no sign of strain.

The two motors last named are of the General Electric Company's three-phase induction type, without commutator, collecting rings or brushes. They are driven by 440-volt, three-phase alternating current from the transformers, which step down the 11,000-volt current transmitted twenty-four miles from the generating station at Folsom. This installation is only one of many made since the completion of the transmission from Folsom to Sacramento, which latter city is rapidly becoming dependent on electricity as its chief motive power.

FIG. 2.—INTERIOR OF SPRING SHOP, SOUTHERN PACIFIC RAILWAY SHOPS, SACRAMENTO, CAL.

CALIFORNIA is the present seat and center of large enterprises in electrical transmission. In the past three years several such schemes have been successfully planned and carried out, and, as previously noted herein, the question of distance is made a secondary consideration. At a pressure of 33,000 volts the Southern California Power Co. now proposes to transmit electrical power eighty miles. Contracts for considerable of the work have already been let, and operations have begun. The high voltage and the distance of transmission will attract world-wide attention, and every detail of the work will be of universal interest to electricians.

RUSSIA appears to be carrying out her traditional policy of stimulating the growth of internal industry by developing the arts depending upon electricity; an account of the extent to which progress in this direction has been made is given in the issue of *Die Elektricitat* for March 13. In order to encourage the development of electrical industries, liberal concessions have been made to foreign corporations, both for lighting and for tramways, while the installations thus operated are being made the subject of earnest study by Russian technologists.

CARL BARUS has measured the amplitude of the vibrations of a telephone diaphragm, says *Electricity*, and finds them to be less than one-millionth of a centimeter (four ten-millionths of an inch). Lord Rayleigh found that the vibrations of air of minimum audibility were considerably less, and that those of a whistle measured at a distance of half a mile from their source are only 8.1 one hundred millionths of a centimeter (twelve billionths of an inch).

AN American syndicate has secured control of the street railways of Monterey, Mexico, with a view of consolidation and then equipping them with electricity. About $6,000,000 is involved in the transaction.

UNION IRON WORKS,

★ ★ 222 Market Street, San Francisco, Cal. ★ ★

MANUFACTURERS OF

Mining & Milling Machinery,

Automatic Cut-Off Engines, High-Speed Engines, Hoisting Engines,
Quartz Mills, Manty Chili Mills,

PUMPS---CORNISH AND OTHER.

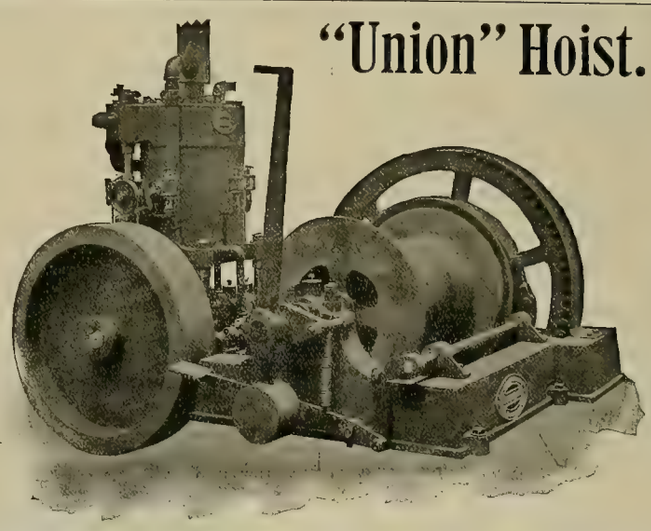
Rolls and Concentrating Machinery,
Copper and Lead Furnaces.

Electrical Engineering Co.,

34-36 MAIN STREET,
SAN FRANCISCO, CAL.

Manufacturers of All Kinds of

Electric Machinery



For Mines, Mills and Hoists.

Girard Water Wheel Co.,

34-36 MAIN STREET,
SAN FRANCISCO, CAL.

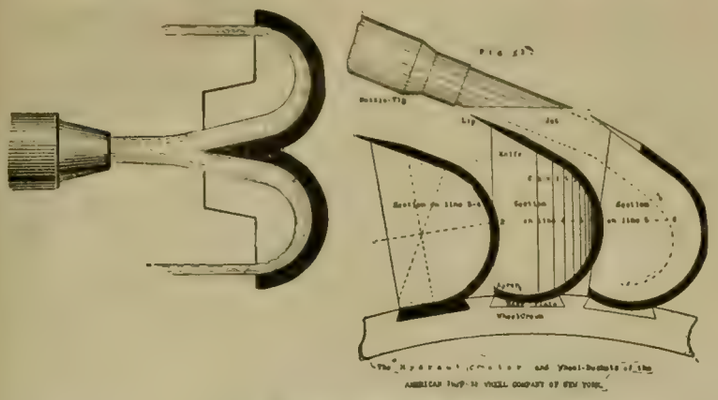
These wheels are durable, highly efficient, and are the only wheels which have perfect regulation, which feature makes them especially suitable for the operation of electric machinery.

"Union" Hoist.

The above cut represents our 10 h. p. Double Cylinder Engine of latest type, and Hoist combined on strong iron base. This hoist is designed to raise one ton 125 feet per minute from an inclined shaft, or 1500 pounds at the same speed vertical lift. The drum will hold over 600 feet of ⅝-inch cable. The outfit weighs 3500 pounds.

THE UNION GAS ENGINE CO.

—BUILD THE—



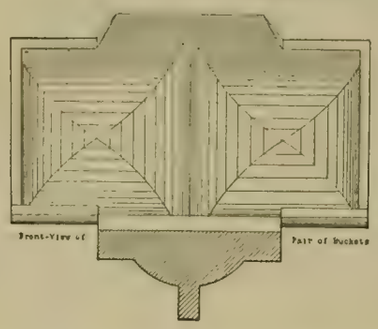
"Union" Gas Engines,

Which use either Manufactured or Natural Gas, Ordinary Stove Gasoline (Naphtha or Benzine), Distillate or Kerosene.

STATIONARY ENGINES for All Kinds of Work, Built in Sizes from 3 to 200 h. p.
"UNION" COMBINED HOISTS in Sizes from 2 to 40 h. p.
"UNION" COMBINED COMPRESSORS—20, 30, 40 h. p.
HOISTS and COMPRESSORS Can Be Built in Larger Sizes to Order.
"UNION" MARINE ENGINES, 4 to 200 h. p., of Single, Double and Four-Cylinder Types.
TEN YEARS' EXPERIENCE Building Gas and Oil Engines.
"UNION" ENGINES Are In Use All Over the United States.
"UNION" ENGINES Are Simple, Durable and Economical.

Office: 314 HOWARD ST., SAN FRANCISCO, CAL.

Front and Sectional Views of Bucket.



THE Cazin Wheel.

Patented March 16, 1897.

Can be operated as a Steam Wheel at Periods of Low Water.

The Only Wheel in the Market Complying with the Necessary Requirements to Maximum Efficiency.

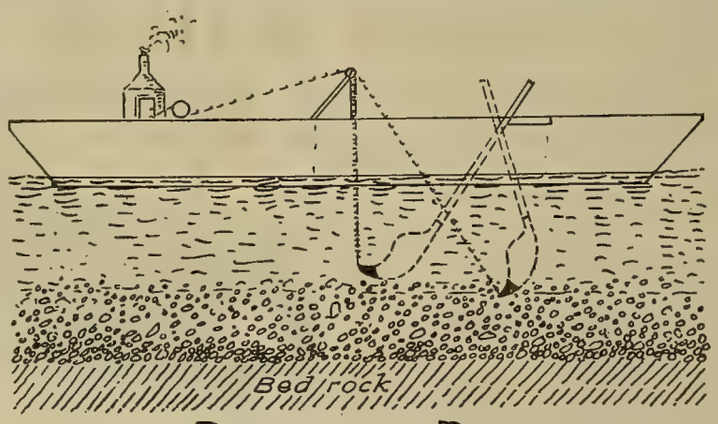
--FOR--
Electric Power Plants.
✦
Mills of all kinds.
✦
Mining Operations.
✦
Ice or Ventilating Machinery.

The Manufacturers of this Wheel request that all Engineers or Commercial Men Controlling or Developing Water Power Allow the Company Opportunity to Demonstrate the Merit of the CAZIN WHEEL Before Ordering Elsewhere.

DESCRIPTIVE PAMPHLET FURNISHED ON APPLICATION.

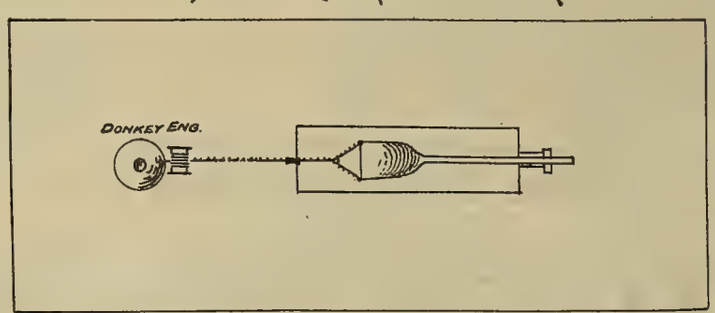
AMERICAN IMPULSE WHEEL CO.
OF NEW YORK,
120-122 Liberty Street, - - New York.

A Klamath River Dredger.



The question of dredging the beds of streams for gold is becoming of considerable importance, so far as the amount of money and effort being expended is concerned. There have been built and operated during the past two or three years in British Columbia, Idaho, Montana, Colorado and California certainly over a score of dredgers, which have cost from $5000 to $40,000 each. A majority of these dredgers have been total failures, a few partial successes, and three or four have been so successful that they are paying their way. In some cases the trouble has been with the dredgers mainly, while in others the main difficulty has been with the rapid current or large boulders.

Many inquiries have been made as to the work done by the Distlehorst-Barton dredger, now working on the Klamath river, in Siskiyou county, and which is proving a success, although the current of the Klamath is very rapid.



This dredger was built near Oak Bar, on the Klamath, last September. It consists of two flat boats 67 feet in length by 37 feet wide, joined together as one, upon which the machinery is operated. Between these boats is an opening about 8 feet wide where the dredger works. This consists of a large iron and steel scoop weighing about 1900 pounds, which is dropped through the opening of the boat into the water, thence to the gravel and boulders, working its way gradually by hoisting the dredge full of gravel at the rate of about forty trips to the hour until it reaches the bedrock. It continues hoisting bedrock and gravel and dumps it into a perforated grizzly that is kept in continual motion by machinery just over the sluice-boxes. Water is hoisted by a small Chinese pump over the grizzly onto the gravel which separates the fine gravel and gold into the sluice-boxes, running the large rocks over a platform, either back into the river outside of the boat or else into a derrick-tub used for that purpose which conveys and dumps the large rocks, 40 or 50 feet away from the boat, into the water or on the shore. The dredge will hoist up a cubic yard of gravel each time, and often hoists boulders weighing five and six tons.

The machinery is run by an engine of 25 H. P. The water for sluicing is pumped. The dredger is run day and night, three men being required for each shift. The daily average expense, including labor, fuel, etc., is $18. The gravel can be worked to a depth of 40 feet; a body of gravel from 10 to 25 feet is preferred. In such places from 400 to 500 cubic yards of gravel can be handled every ten hours. The cost of the dredger is about $7000 to $8000.

The accompanying cut represents a dredger built on the plan of that on the Klamath described above, and was worked on the Sacramento river above Redding.

DIESTELHORST DREDGER.

United States Coal Production.

The compilation of the statistics of coal production in the United States in 1896, which has just been completed by Statistician E. W. Parker of the United States Geological Survey, shows that the product in 1896 was 190,639,959 short tons, valued at $195,557,649, against 193,117,530 short tons, valued at $197,799,043, in 1895, a decrease of 2,477,571 short tons in amount and of $2,241,394 in value. The decrease in product was entirely in that of Pennsylvania anthracite. The output of bituminous coal shows an increase of about 1,750,000 tons. The anthracite product of Pennsylvania decreased nearly 4,250,000 tons. It is a notable feature, however, that there was a decrease in the value of the bituminous product of over $1,600,000, notwithstanding the increased output, and that there was a comparative increase in the value of anthracite, although, on account of the smaller production, it did not equal the value in 1895. The average price obtained for anthracite at the mines increased from $1.41 in 1895 to $1.51 in 1896. The average price for bituminous declined from 86 cents to 83 cents.

Among the important bituminous coal producing States, Pennsylvania, of course, stands first, with an output of nearly 50,000,000 tons. Illinois is an easy second with nearly 20,000,000 tons, or more than 75 per cemt of the combined product of Vest Virginia and Ohio, which come third and fourth respectively. The race between Ohio and West Virginia was very close in 1896, there being but a thousand tons difference and the output of each nearly 13,000,000 tons. These four States yield about 70 per cent of the total bituminous production.

Pennsylvania's bituminous product was a little more than a million tons less than in 1895. Ohio lost 480,000 tons. West Virginia increased her output about 1,500,000 tons, and Illinois about 2,000,000 tons. The other im-

portant States showing increased production were Alabama, Arkansas, Colorado, Indian Territory, Kentucky, Maryland, and Texas, while Indiana, Iowa, Kansas, Missouri, Montana, New Mexico, Tennessee, Utah, Virginia, Washington and Wyoming showed decreased production. West Virginia had the most important increase among the Appalachian States, Illinois in the Middle West, and Colorado was the only State in the Rocky Mountain region whose production increased.

The production by States is shown in the following table:

COAL PRODUCT OF UNITED STATES IN 1896 BY STATES.

States.	Total Production. Short Tons.	Total Value.
Alabama	5,745,617	$ 5,171,055
Arkansas	669,374	743,577
California and Alaska	93,776	220,523
Colorado	3,139,078	3,630,652
Georgia and N. Carolina	246,359	179,770
Illinois	19,786,626	15,809,736
Indiana	3,905,779	3,261,737
Indian Territory	1,366,646	1,918,115
Iowa	3,954,028	4,624,022
Kansas	2,764,801	3,175,032
Kentucky	3,183,478	2,496,806
Maryland	4,143,936	3,299,928
Michigan	92,882	150,631
Missouri	2,331,542	2,518,194
Montana	1,484,445	2,176,422
New Mexico	622,626	930,381
North Dakota	78,050	84,908
Ohio	12,875,202	10,253,461
Oregon	101,721	294,564
Penn'a Bituminous	49,101,148	35,024,918
Penn'a Anthracite	53,771,890	81,415,785
Tennessee	2,658,606	2,276,795
Texas	544,015	896,251
Utah	418,627	500,547
Virginia	1,254,723	848,851
Washington	1,195,504	2,396,078
West Virginia	12,876,296	8,336,685
Wyoming and Nebraska	2,233,184	2,918,225
Totals	190,639,959	$195,557,649

Coast Industrial Notes.

—There are 133 oil wells in California.

—A direct line telephone is building between San Francisco and Redding, Cal.

—A direct line of broad gauge railroad is building from Truckee, Cal., to Lake Tahoe.

—The first of California's wheat crop of '97 is being harvested in San Luis Obispo county.

—Since the 1st inst. the Southern California Railway Company pays but $1 per barrel for fuel oil.

—So far in the Senate tariff discussion California has received all her representatives asked for.

—Engineers have begun a survey of the proposed railroad to Ramona, in San Diego county, Cal.

—California men are buying beef steers in Nevada, paying $17 per head for two-year-olds, and $22 for three-year-olds.

—There are 3,000,000 pounds wool stored at The Dalles, Or. Twelve cents is the best offer this year.

—The total value of property in Los Angeles aggregates $58,000,000—an increase of about $6,000,000 over last year.

—Work began this week near Leavenworth, Wash., on the Great Northern railway tunnel through the Cascade mountains.

—This week the ship Moreton sailed from Tacoma, Wash., with 200 M. brick for South Africa, the initial shipment of the kind from this coast.

—Washington State reports the biggest wheat yield in its history. One Oregon county—Umatilla—reports a wheat crop of 6,000,000 bushels.

—The lumber mills of the Madera, Cal., Flume and Trading Company were burned last Monday. The mills gave employment to fifty men. The loss is estimated at $50,000.

—The Southern Pacific Company is negotiating for the purchase of the Visalia railroad, which is about eight miles long and connects Visalia with the Southern Pacific line at Goshen.

—Nearly eleven years ago a site was acquired for a new San Francisco postoffice. It is now hoped by the Government architect that preliminary work may begin on the new building next year.

—The Chino, Cal., beet sugar factory will this year spend $125,000 for crude petroleum fuel; will take $140,000 tons beets, extracting 18,000 tons sugar worth $1,365,000, paying the farmers about $500,000.

—As a result of personal investigation the California Labor Commissioner finds that 96 per cent of all the labor used in California beet fields is Chinese or Japanese, and that the latter are crowding the Chinese out.

—It is reported that the negotiations by which the Mount Lowe properties are to pass under the control of the Southern Pacific are progressing and a satisfactory arrangement is expected between now and August 1st.

—Representatives of the United States Government and a Hawaiian commissioner signed a treaty last Wednesday annexing Hawaii to the United States. The treaty will not be ratified by the United States Senate this session.

—B. F. Cheney, the largest individual stockholder in the Santa Fe Railway Company, is credited with intention to buy the estate and assets of the San Diego, Cal., Town and Land Company, the value of which is fixed at $901,383.

—The Slocan branch of the Columbia and Kootenay railroad will be finished by the Canadian Pacific Railway Company by October 15, '97, giving all-the-year-round communication from the main line at Revelstoke, B. C., to Nelson and Rossland.

—The Southern California Power Company, which will generate electricity at Santa Ana canyon and convey power seventy-five miles to Los Angeles, has given to E. S. Phelan of that city, for $95,000, the contract to build the stone canal to convey the water to the power house.

—In New York last week was incorporated the Rio Grande, Sierra Madre and Pacific Railroad of Mexico, with a capital stock of $3,120,000. The company proposes to construct a road from Ciudad Juarez, in the State of Chihuahua, to Corralitos, in the same State, a distance of fifty-six miles.

—The schooner Emma and Louisa has sailed from San Diego, Cal., to exploit Jesse R. Grant's guano concession. The schooner carries lumber to Guaymas to partly pay expenses, and from there will go to Tiburon island to look for gold and guano, thence to Angel de la Guardia for the same purpose.

—The Pacific Coast Electric Transmission Association was organized in San Francisco this week. It comprises the Blue Lakes Water Company of San Francisco, Big Creek Power Company of Santa Cruz, Southern California Power Company of Redlands, Central California Electric Company, Sacramento Electric, Gas and Railway Company of Sacramento, San Joaquin Electric Company of Fresno, Power Development Company of Bakersfield, Portland General Electric Company of Portland, Or., Nevada County Electric Power Company of Nevada City and the San Gabriel Electric Company of Los Angeles. President, C. P. Gilbert; vice-president, H. H. Sinclair; secretary and treasurer, Robert McF. Doble.

Personal.

CHARLES D. LANE of the Utica has gone to London.

J. W. CAMPBELL of Bingham, Utah, is to go to the Cœur d'Alene country.

COL. A. E. HEAD of San Francisco has been in the Fort Steele country, British Columbia.

JOHN W. MACKAY is expected out soon to visit the Allison Ranch mine at Grass Valley.

J. E. LESTER has been appointed superintendent of the Gold King mine near Ward, Colo.

GEO. E. AMES, JR., is now the resident agent of the Union Iron Works in the City of Mexico.

W. S. STRATTON of Cripple Creek, Colorado, owner of the Independence mine, is in San Francisco.

JAS. A. ABBOTT has returned to Yreka, Cal., from a five months' sojourn in the New England States.

R. E. BROWN, who has been for some time making his headquarters at Spokane, Wash., has gone to London.

J. O. HARRON, general manager of the Parke & Lacy Company, is expected back from Australia next month.

WILLIAM S. EDWARDS has been appointed engineer for the owners of a large mining concession in Dutch Guiana, South America.

THE United States Treasury Department has selected James H. Humphreys for superintendent of the new postoffice building to be erected here.

PRESIDENT JORDAN of Stanford University has gone on the U. S. steamer Gedney to the Guadaloupe islands, off the Mexican coast, to make a study of the seals.

HENRY BRATNOBER has started for Alaska. Captain Thomas Mein is already there, and it is probable that Hamilton Smith will join them before the end of summer

Recently Declared Mining Dividends.

Champion Mining Company, Nevada City, Cal., 25 cents per share; payable June 15.

Mercur, Utah, $25,000; payable June 20. Total to date, $725,000.

Champion Mining Co., Nevada City, Cal., 25 cents per share; payable June 15.

The Tamarack Copper Mining Company, Michigan, $180,000; payable June 30.

The Calumet & Hecla Copper Mining Company, Michigan, $250,000; payable July 7.

Silver King Mining Company, Utah, $37,500; payable June 14.

South Swansea, Utah, $7500; payable June 21.

Homestake, South Dakota, $31,250; payable June 25.

The Ontario Mining Company of Utah, $15,000; payable June 30.

Commercial Paragraphs.

THE first plant of machinery installed at Puma City, Colo., has been put in at the June mine, and is of the Bolthoff type.

MESSRS. HEWITT AND REARDON have bought the interest of E. A. Rix in the business of the Rix Compressed Air Machinery Co.

THE Stanley Electric Manufacturing Co. now occupy the former quarters of the Grangers' Bank, northwest corner Battery and California streets, San Francisco.

THE Leadville and Chicago Gold Mining Company has put in a 10x12 hoist at their property. The machinery was furnished by the Colorado Iron Works of Denver.

THE Parke & Lacey Co., 21 and 23 Fremont street, San Francisco, this week installed at the Providence mine, Nevada City, the largest air compressor in the district, the entire plant weighs twelve tons, including a twelve-foot wheel.

THE Kansas City Smelting and Refining Company have a contract with the Southern Pacific Company to monthly carry 2000 tons of ore from its mines in Mexico to Galveston, El Paso and other points. The Kansas City Smelting and Refining Company owns and operates several large mines in Mexico, and one of its smelting works is situated at El Paso. Much of the ore is destined for the latter place for refining, although some of the ore is exported by way of Galveston, but most of the refined product finds its way to New York for export.

THE Replogle Governor Works of Akron, Ohio, have recently placed considerable of their work on this coast, their governor being used by the San Joaquin Electric Company, the electric plant at Redlands, and at the Portland General Electric Company's plant at Oregon City, Oregon, where five of the Replogle governors are used. They have likewise put in some at Folsom, and several of their smaller governors have been used by the Pelton Water Wheel Company. They are now equipping a large electric light plant in Canada and sending two of their largest type of governors to a large electric plant in South Carolina; three more are going to British Columbia.

Recent California Mining Incorporations.

Excelsior G. M. & M. Co., San Francisco; W. S. Chapman, V. E. Mathews, J. I. Minear, L. H. Smith, G. Searle; capital stock, $500,000; subscribed.

Rodman Hill Mining Co., San Francisco; F. F. Weed, G. L. Fitch, G. P. Rixford, A. E. Williams, H. F. Lange; capital stock, $100,000; $5000 subscribed.

Milkmaid M. Co., S. F.; J. P. Jones, H. M. Gorham, W. E. Lester, D. B. Hunt, T. Anderson, J. B. Low, A. Waterman; capital stock, $10,000,000; subscribed, $3500.

Indianapolis and Canyon Springs G. M. Co., Los Angeles; A. C. and W. C. Hogaboom, E. E. Bowles, Los Angeles, and W. H. Webster and G. R. Wysong, Indianapolis, Ind.; capital stock, $1,000,000, all subscribed.

Golden Dexter Mining Company, Marysville, Cal.; F. W. Johnson, C. E. Swezy, G. W. Harney, C. Hapgood, W. S. Johnson; capital stock, $100,000; subscribed $69,400.

Acme Oil and Mining Company, San Francisco; F. Lux, B. S. Spencer, A. F. Imbrie, G. H. Lux, S. W. Dixon; capital stock, $50,000; subscribed $1000.

Doyle G. M. & M. Co., San Francisco; W. R. S. Fox, A. W. Bogart, C. D. Olney, L. B. Doe, C. E. Elliott; capital stock, $1,000,000—subscribed, $25.

Obituary.

While en route last week from South Africa to England "Barney Barnato" jumped from the steamship and was drowned. Thus ends the wonderful career of this extraordinary man. Isaac Bernstein was born in London in '52, was in youth a strolling actor, went to South Africa as a juggler, got a little financial foothold, acquired control, went into mining schemes on the most extensive scale, dazzled Europe with the magnitude of his operations, made himself worth many millions of pounds sterling, inaugurated an era of extravagant speculation, enriched and beggared thousands—and now the dismal end. The "Kaffir stocks," which in the past year have so greatly shrunk in value, have experienced further disastrous collapse since the news of his death.

Smith Striking Stamp Mill.

Springer Ore Concentrator,
Truax Ore Cars,
Rock Breakers, Hoists, Etc.

Why the Springer Concentrator is the Best:

It will do more and cleaner work than any rubber belt machine.
It weighs only one-half as much as some of the six-foot concentrators.
Is the most simple in its construction of any machine in the market, and only one-third as many pieces in it as in some of the others. Was invented by an old miner of forty years' experience handling every known concentrator on the market.
Should any piece need repairing, it can be removed without disturbing any other part of the machine.
Can be set up by any inexperienced miner.
Its distributor is perfection itself, distributing the pulp evenly over the entire surface of the belt.
Grade of shaking frame can be changed while the machine is running at full speed.
It is the strongest, lightest running and most inexpensive to keep in repair of any
Will save more of the fine slimes than any other machine.
Is cheaper than any other six-foot machine, costing only $350.00 f. o. b. cars or boat, San Francisco.
Will handle the pulp from five stamps better than any other Concentrator.
Has adjustable eccentrics, and any length of stroke can be had, thereby giving different speeds per minute.
The belt is very durable, being made of No. 3 Canvas, woven especially for the Springer concentrator.
This machine requires so little attention that one man will easily attend to a dozen of them.
It has a solid rubber flange, which no other canvas belt has.
Wear and tear upon this machine is not one-third as much as upon some of the other concentrators.

"NICKEL" Tool Cast Steel

A Great Mining Triumph.

Capt. J. R. DeLamar, of New York City, is one of the largest owners and workers of Gold Mines in the world. After the most careful investigation he purchased in August, 1895, two Griffin Mills, and his report is so remarkable as to demand the careful attention of every one interested in Gold Mining. We give it in his own words.

NEW YORK, Jan. 9, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—The two Griffin Mills have been in operation now for 100 days on the hardest rock, with the exception of corundum, that I have ever met during my mining life. They have taken the rock direct from the breaker and they average about 20 tons to each machine, 40 mesh fine, without crushing or bolting. We simply put a ¼ mesh screen around the Griffin Mill, and the stuff comes out 40 mesh fine or over, which makes it an excellent pulp for leaching by cyanide or chlorination; therefore we have concluded to order **10 more Griffin Mills.** We have tried high-speed rolls and dry stamps, and after looking into the Huntington Dry Pulverizer, the Naroid Pulverizer, the Stedman Pulverizer, the Frisbie Lucop, the Cook, and various other dry pulverizers, unhesitatingly recommend your Griffin Mill to any one.

Yours truly, (Signed) J. R. DeLAMAR.

HOW 10 GRIFFIN MILLS WORK.

DeLAMAR'S NEVADA GOLD MINING CO.,
SALT LAKE CITY, UTAH, Nov. 24, 1896.

BRADLEY PULVERIZER CO. *Gentlemen:*—In answer to your inquiry as to what the "Griffin Mill" is doing at our DeLamar Mill, DeLamar, Nevada, we beg to state that we often run 310 tons per day with 10 of your mills in operation, and on one occasion these 10 mills produced 408 tons in one day. I have no hesitancy in stating that they will regularly produce at least 30 tons per day each on our ore, which is extremely and unusually hard.

Yours very truly, H. A. COHEN, *General Manager.*

These strong letters coming from such representative men are conclusive evidence that we are right in claiming that the "Griffin Mill" will produce a larger amount of finer pulp at less cost than any other stamp or pulverizer made.

Let us send you a free copy of our illustrated pamphlet, which will tell you all about the Mill and bring to you other evidence of its great achievements.

BRADLEY PULVERIZER CO., 92 State St., Boston, Mass.

TUTTHILL WATER WHEEL.

The Best Jet Wheel in the Market, BARRING NONE.

Wheels, Buckets and Nozzles Designed to Suit Special Requirements, When Head and Conditions Are Given.

Theoretically as Well as Practically Perfect. Highest Efficiency Guaranteed.

We have a Sensitive, Simple Governor that will positively regulate speed of wheel. Specially adapted for electric railway and lighting plants.

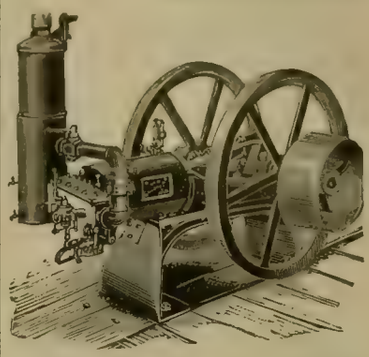
IMPROVED PORTABLE HOISTING ENGINES.

Improved Self-Contained Three or Five Stamp Mill,

Saves bill for heavy timbers, millwright and mechanics' labor, and a large amount of space. The term self-contained means a great deal for the mine owner, and can be readily recognized and appreciated in making an estimate for an ordinary plant when the comparative cost is considered.

FIRST: There is saved a large bill for heavy timbers, in many instances obtained at great expense and loss of time.



SECOND: The saving in millwright and mechanics labor in framing and erecting.

THIRD: The large amount of space saved.

FOURTH: The great saving of freight,

Send for Circulars and Price List.

Cheap Power!

SAVE MONEY BY USING —THE— "DANIEL BEST" Crude Oil Engine.

This Engine can be operated on either Crude Oil, Distillate, Gasoline, or Kerosene. **It is the cheapest power on earth** and is not tied to any one kind of Oil, but can use any kind that will make gas and is not handicapped by being compelled to use a certain Oil. Do not forget this when in need of an Engine.

We guarantee our Engines to work perfectly on California Crude Oil, or Distillate, or any other kind of gaseous Oil; we however prefer CALIFORNIA CRUDE OIL, from Coalinga, Fresno county, for the reason that gas from Crude Oil will produce more power from the number of feet of gas used than from any other Oil, and it is also a natural lubricant as well, the valves being always lubricated sufficiently to prevent them from sticking, thus assuring greater durability of the working parts than it otherwise would be in using dry gas. And another advantage we claim is, that danger from explosions is reduced to a minimum, there being no accumulation of gas, but is used by the Engine as fast as it is generated and hence is absolutely safe. The following is a test that we made with one of our Five-Horse Power Crude Oil Engines, running ten hours on the different gas oils:

California Crude Oil, 40 grav.,	7½	galls. at	5c.,	$.37½
Distillate	40	" 7½ "	8c.,	.60
Domestic Coal Oil	40	" 7½ "	12½c.,	.93¾
Gasoline	74	" 8¾ "	15c.,	1.31¼
City Gas	1000	feet,		2.00

We manufacture all sizes from two-horse power up, and will guarantee that our Engines will run cheaper and are more simple in construction, have fewer parts and hence are more durable than any other Gas Engines on the market. Seeing is believing; don't take our word for it, but come and investigate for yourselves. You can always see one in operation at our works. We will be pleased to see you and will at all times take pleasure in showing them up. Our Engines are specially adapted for running well and mining machinery—in fact, for any kind of power desired. We are the pioneers and first inventors of Crude Oil and Distillate Engines. **We always lead and never follow.** Send for Catalogue and Price List of the only genuine Crude Oil and Distillate Engine made.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

FLOOR, ROOF OR SIDEWALK CONSTRUCTION.—Peter H. Jackson, San Francisco, Cal. No. 583,685. Dated June 1, 1897. The object of this invention is to provide improvements in covering the surface of either roofs, floors, sidewalks or other covered or vaulted spaces in which corrugated metal plates or sheets form the bottom, and are adapted to resist tensile strains when loaded, said sheets also being so constructed as to form retaining channels which are filled with artificial stone, concrete or Portland cement, and which may have a supposed covering or slabs of natural stode cemented thereon and wholly or nearly so above the neutral axis line, so that while the lower metallic portion is adapted to resist tensile strain, the upper surface is in like manner adapted to resist the compressive strains which take place above this neutral axis. The metal sheets forming the lower surface have retaining channels for the reception of a plastic filling of cement and a top surface cemented directly to the said plastic filling, adapted to resist compressing force, said metallic surface being formed in sections and channel irons forced upon the ends of the corrugated metallic sheets. A sheet metal covering fits over the junction line of the channel plates and has a filling of cement and superposed surface, twisted wire rods or plates with roughened or uneven surfaces stretched transversely across the top of the corrugated sheets and are embedded within the filling of plastic cement, thus aiding to form a transverse bond.

BULLET HOLDING AND EXTRACTING TOOL.—H. Rogers, Salinas, Cal., assignor to I. B. Tucker of same place. No. 583,693. Dated June 1, 1897. This invention relates to a device which is especially adapted for holding bullets when dipping them into any lubricant, and afterwards inserting them into shells during the process of loading, so as to make a convenient way for holding the bullets and placing them in the shell without soiling the hands. It consists essentially of handles pivoted together, a spring between the handles whereby they are normally separated, parallel-socketed jaws at the opposite side of the pivot which are normally closed by the spring and projecting gripping points extending beyond these jaws. These gripping points are turned inwardly to leave an annular groove or channel around the jaws between the points for the escape of surplus lubricant. They serve also to limit the projection of the bullet. Adjacent to and in rear of the hinge points of the jaws is a grip adapted to remove the bullet from the shell or to grasp the cleaning rod if it has become fast in the barrel of the gun.

ORE GRINDING MACHINE.—Wm. A. Woods, San Francisco, Cal., assignor of one-half interest to Solon Pattee, same place. No. 584,086. Dated June 8, 1897. This invention relates to a machine for grinding and pulverizing ores, which I call a "ball arrastra. It consists essentially in the combination of a grinding pan, having a rounded inner concave at the junction of the sides and bottom; a central vertical sleeve, a vertical driving shaft with a driver secured thereto and extending down into the pan, a die fitting within the pan having a space between it and the bottom, into which the amalgam or mercury may collect. Within this die are a series of balls, which run upon the die as a track or race. The driver is so constructed as to propel the balls, causing them to roll upon the die, and thus crush any material which passes between the balls and the die. A central feeding tunnel receives the material to be pulverized, delivers it down exterior to the central zone, whence it passes between the die and the balls, being constantly returned by suitable wings and thus circulated until it is sufficiently pulverized. Screen openings are suitably made around the pan to discharge the material when fine enough, and an annular trough receives it, and, by reason of its inclination as it passes around the pan, the pulp is carried away and discharged at any desired point. In order to increase the power of the balls, a weighted cap rests upon the top of them, this cap moving slightly around as the balls roll beneath it.

AWNINGS.—Chris P. Fogh, San Francisco, Cal. No. 584,075. Dated June 8, 1897. This invention relates to that class of awnings which are carried by swinging arms and are adapted by means of suitable mechanism to be let down to an inclined position for shading the part to which they are attached and again rolled up out of the way when not needed. The invention consists of a roller to which the lower edge of the awning is attached and to which it may be rolled, a fixed connection for the upper edge of the awning, swinging arms to the end of which the roller is journaled, so that it winds and unwinds the awning, and a line secured to and winding upon the periphery of the roller, adapted to unwind the roller to extend the awning, and a second independent line adapted to turn the roller and wind it up. This independent line passes freely over both sides of the awning and around the roller for this purpose; but where the awnings are adjacent to each other, one of them may be made in a plane slightly higher than the other and have the side arms extending over this other one, overlapping sufficiently to close the joint.

SEPARATOR AND AMALGAMATOR.—Peter Litter and Hippolyte L. Vandre, San Francisco, Cal. No. 584,080. Dated June 8, 1897. This invention relates to a process and apparatus which is especially designed for the separation of gold from black sand or other heavy material with which it is often found associated. This gold being in the form, in many cases, of light, thin scales, which an ordinary oscillating or shaking apparatus would not separate from material which is very similar in weight. This invention consists of shaking screen surfaces disposed at different levels, one in advance of the other, all pointing in the same direction, and upon which the sand and gold are distributed in thin strata. These screen surfaces have perforations of successively decreasing areas from first to last, whereby a separation occurs in each screen. In conjunction with this is an arrangement of perforated screens, whereby water may be discharged from a height above in a fine shower, falling vertically upon each screen and its contents, so that the gold and sand which are too fine to pass over the screen are driven through it. Each screen has a discharge chute delivering the coarse sand to the sides of the machine, and beneath is an inclined amalgamated plate, upon which the material which falls through the screen is received, and from which it passes to the next adjacent screen.

WANTED.

Competent Assayers and Chemists and Experienced Ore Samplers,

To take charge of our branch offices in the Republic of Mexico, through which we purchase Ores, Bullion and Sulphides, and sell Mining and Milling Supplies. Must be thorough, active and careful workers. Knowledge of Spanish desirable. Address, with references, THE LEWIS COMPANY, Apartado 71 B, Mexico City.

MINING AND MILLING MACHINERY.

DOUBLE CYLINDER SINGLE DRUM HOIST.

THE above form of Hoist has certain features of construction which make it superior to all others. It is mounted on a single solid base, with standboard for the operator. The engines are reversible link-motion and the drum is fitted with post-brakes and helical teeth, which assure quick and safe operation. The design is compact and superior and the construction strong and substantial. We furnish them either with or without clutch pinions. The above cut illustrates an 8½ inch by 10 inch. Other sizes in stock and built to order.

GOLD IN COLORADO!

Colorado has within its limits some of the greatest gold mines that have ever been discovered. In Cripple Creek in 1892 there were a few prospectors looking over the hills; in 1895 the camp turned out over $8,000,000 in gold. Leadville, the old bonanza camp and the mineral product of which made Denver what it is to-day, is becoming a big producer of gold. New inventions for working low-grade gold ores, together with the discoveries made to work rebellious ores, have opened up a field for the miners such as they have never enjoyed before, and Colorado has inducements to offer such as no other district in the world possesses; the record of the State in gold production for the last three years speaks for itself. Among the other prominent camps in the State are Telluride, Ophir, Rico, Silverton, Mineral Point, Durango, La Plata, Ouray, Saw Pit, Ironton, the Gunnison district and many others. New finds are being made and new camps are springing into existence every day. The Denver & Rio Grande Railroad, which is the pioneer road of Colorado and which has always been the miner's friend, reaches all the mining camps in Colorado. For elegantly illustrated descriptive books, free, of mines in Colorado, send to

PATENT SOLICITORS.

ESTABLISHED 1863

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class agency. We have able and trustworthy associates and agents in Washington and the capital cities of the principal nations of the world. In connection with our scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us enables us to give advice which will save inventors the expense of applying for patents upon inventions which are not new. Circulars and advice sent free on receipt of postage. Address **DEWEY & CO., Patent Agents, 220 Market St., S.F**

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.

This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly, [SIGNED] S. I. HALLETT.

These Tables have displaced belt tables of almost every make, as is shown by letters in our possession.

Market Reports.

The Markets.

SAN FRANCISCO, June 17, 1897.

Jobbers state that for the season general business not only holds up but is showing a steady expansion. Harvesting causes a freer call for goods which will enlarge for the next two months. In prices no material change has taken place the past week. It appears to be the opinion that on nearly all lines in which advances have taken place, they will just about cover the contemplated increase in the tariff. With this opinion ruling dealers are not disposed to carry stock in excess of nearby trade wants. While this prevails yet it is undeniable that the better informed look for a decided improvement in general trade, and that the buying by distributors will be freer than for several years past. Many hold to the opinion that stocks will have to be enlarged very considerable so as to meet requirements. Manufacturers as a rule look forward with some degree of confidence to more active times, particularly with iron-workers. It is stated that the outlook is quite promising for more structural materials than for fully three years, owing largely to larger crops and lower transportation charges on farm products. The East reports a steady revival in business, with the belief prevailing that it will continue to enlarge for some time to come, but it is a disputed point how values will rule. The general opinion is that they will not be much higher, while in some lines there may possibly be some fractional declines.

In the local money market there continues an oversupply of funds, with the banks still exacting in their demands regarding security. It is the consensus of opinion with close observers of current events in commercial and financial circles that the situation will soon change, and that bankers will be as anxious to place funds as they are now to hoard coin. They think that confidence is slowly returning, and, after the tariff bill is out of the way, it will be more pronounced. There is more disposition here and at the East to speculate in leading industrial and railroad securities, which is a good sign. At the East the speculative mania in these kinds of securities seems to intensify, and, as it grows, it will only be a question of a short time before the general public will be drawn in, when general business will feel its beneficial effect. This is being felt already in iron, and there is an old saying that iron is the barometer of trade. New York advices report time loans higher and quite active, but short loans are practically unchanged.

New York Silver Prices.

NEW YORK, June 17.—Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	27⅛	59¾
Saturday	27⅛	59¾
Monday	27⅛	59⅞
Tuesday	27 9-16	60
Wednesday	27 9-16	60⅛
Thursday	27 9-16	60⅛

	Copper.	Lead.	Iron.	Tin.
Fri.	10 75 @11 20	3 30	10 00@12 25	13 60
Sat.	10 75 @11 20	3 32½	10 00@12 25	13 75
Mon.	10 75 @11 20	3 32½	10 00@12 25	13 75
Tue.	10 90 @11 20	3 32½	10 00@12 50	13 80
Wed	10 90 @11 15	3 35	10 00@12 50	13 80
Thur.	10 90 @11 15	3 35	10 00@12 50	13 80

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.85
London Sight Bankers	$4.88
Refined Silver, peroz., 1000 fine	60½
Mexican Dollars	49@49½

SILVER.—The market has been steadily gaining at New York, with quite an advance to-day, but London is slow to respond. It is stated that the American markets have been quite a factor in sustaining values abroad. The latter seems to have been largely governed by offerings from this side. If this is the case, then it is reasonable to look for better figures abroad. It is quite impossible to learn on what the strengthening at New York is based, unless it is on private advices regarding the feeling abroad as to the movement for an international monetary convention. It is an open secret that the present administration is quite earnest in its efforts to bring it about, and, if accomplished, more favorable results are likely to follow than did any former convention.

MEXICAN DOLLARS.—The market is quiet but firmer, in sympathy with silver. Exchange is said to be more in favor of dollars. The London *Bullionist*, May 29, says: "There is some talk of the reopening of the Indian mints, but so far we have had no confirmation of the report. Money continues very tight in India, and as a consequence the Bank of Bombay has raised its rate from 9 to 10 per cent, being the same as that charged by the Bank of Bengal."

QUICKSILVER.—The market has been steady but firm.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—Our market has held steady. New York mail advices report continued free outward movement, which has had a steadying influence. The American consumptive demand has been confined to actual wants, which do not show much enlargement.

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ & 5-16, 20c; ⅜ and larger, 17

TIN.—Pig has been quite strong at the East, with further advances reported at New York. Light stocks and an enlarged consumption have favored sellers. The consumption in this country, it is said, shows an increase over the corresponding time in 1896. Our market is strong at quotations.

We quote as follows in a jobbing way:

Pig, per lb		14c@	—
Plate, I C coke, heavy, per box	$4 00@	4 15	
" " " light, "	3 90@	—	

LEAD.—While our market is not quoted higher, yet the indications point to better figures, in sympathy with the East, where the markets have made perceptible advances, closing quite strong.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
Bar	—	@	4 50
Sheet	5 62½	@	6 12½
Pipe	4 87½	@	5 37½

SHOT.—There is a fair demand, with a firm tone reported at the close.

Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—The demand from the mines continues active.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—The market is steady to firm.

The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4¼

IRON.—We are informed that more buying has been the order than for some time, in view of the improvement at the East. The consumption here is said to be increasing. The East reports large transactions for forward delivery, with sales made well into next year. This has had the effect of advancing the views of sellers and causing strong markets at the advance. Our advices indicate that the advances are apt not only to be maintained, but still better figures rule. The export movement is quite free.

AMERICAN.

	To Arrive.	Spot.
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50

ENGLISH.

Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—The market is without essential changes to report. Prospective tariff legislation has not, as yet, had any influence outside of steadying the views of holders.

We quote as follows:

SPOT FROM YARD—PER TON.

Wellington	$8 00@	—	
Greta	6 00@	6 50	
Nanaimo	6 50@	7 00	
Gilman	5 50@	6 00	
Seattle	5 50@	6 00	
Coos Bay	— —@	4 75	
Cannel	8 00@	—

TO ARRIVE—CARGO LOTS.

Australian	5 50		
Liverpool Steam	6 25		
Scotch Splint	—	—	
Cardiff	6 25		
Lehigh Lump	9 00		
Cumberland	13 00		
Egg, hard	10 00		
West Hartley	6 50		

COKE.—The market is quoted as follows:

Gas Companies'	— —		— —
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

ANTIMONY.—The market is steady.

Our market is quoted at 7¼@8¼c in a jobbing way. New York mail advices quote 7¼c for Cookson's, 6⅞@7⅛c for Hallett's and 6⅞@7c for Japanese.

NAILS.—The market is strong and active.

Wire, carloads, basis per keg		
" jobbing, " "	$2 35	
Cut, carloads, " "		
" jobbing, " "	2 25	

PLATINUM.—Very little doing.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is firm at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steady.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

So far as we are able to learn, there is practically nothing new to report. Long-continued debate on the tariff by Congress admitted of such free importations at the East as to make stocks cumbersome. At this writing everything seems to be waiting, which makes new features hard to get.

SPELTER.—Eastern advices state that galvanizers have been buying quite free, which caused smelters to feel steady in their views.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—The market is steady.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steady.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—There is nothing new to report.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

CAUSTIC SODA, 60%.—The market is slow at 3c per pound in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—Market is quiet.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1¾c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL.—Our market is quiet.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, June 17, 1897.

The market strengthened slightly up to Monday and Tuesday mornings, with the Gold Hill shares, under the lead of Challenge, showing the largest percentage in the gain. In the north end shares Sierra Nevada exhibited the most strength, as did Chollar in the middle shares. Tuesday afternoon the market began to ease off, with Potosi suffering the most. Yesterday morning there was a further decline along the line, except Best & Belcher, which gained slightly on reports of an improvement on the 300-foot level on the Brunswick lode. In the afternoon Chollar and Potosi sold lower, causing a weakening in everything except Hale & Norcross, which held up well. It is reported that the strength in the latter is due largely to buying by one of the contesting parties in the suit for control of the mine; but there are other reports that it is due to buying by persons who expect an early decision—say, within the next three months—in the suit of Fox et al. against the old management. The way in which the market acts causes some surprise. It only emphasizes the fact that moneyed outsiders cannot be drawn in, owing to the management of some of the mines. The showing in some of the mines, prospects in others and the character of the work in about all ought to be productive of much higher prices, particularly with speculation reviving at the East, where quite a boom has taken place, and also greater activity and higher prices for local industrial securities in this city.

From the Comstock mines the news grows in interest at several points, especially the long west crossdrift run jointly by Confidence, Challenge and Con. Imperial. Last official advices state they had struck a flow of water. This is accepted as favorable particularly when it has been preceded by softer and more favorable formations, as it was in this case. This, no doubt, accounts for the strength shown the past week in Challenge for the insiders put it out that the crossdrift is in Challenge ground, although it was at first and for several weeks afterwards officially given in Con. Imperial ground. Perhaps the management had more Challenge shares than Con. Imperial to sell. Some talk is still heard of favorable formations in Sierra Nevada, which has strengthened the shares. The joint work that is being done by Crown Point, Kentuck and Yellow Jacket is being closely watched by mining men, as if it will result in anything good unless so willed by the management. In Utah the north drift is in porphyry, clay and quartz. They are making fair progress in extending west crossdrift No. 2 on the 900-foot level. Good things are expected of this drift, but it will take time. On the Layton tunnel they have repaired the north drift. On this level they are still driving ahead the west crossdrift. There is no change in the work underway in Union. In Mexican, the last official letter reports more favorable formation with a slight seepage of water in the northwesterly drift. The work in Ophir on the central tunnel and 1000-foot levels is practically unchanged. They are still driving slowly ahead on the north drift on the 175-foot level. Last week 134 tons of ore were extracted and raised by Con. Virginia. Car sample assays average over $76 to the ton. The company is milling accumulated ore. The work in this mine is practically unchanged since our last review. Private advices state that there is a more important body of ore below the 1450-foot level than the insiders wish known. The joint work by Best & Belcher and Gould & Curry is on the same level and direction heretofore reported in the department. Hale & Norcross is in a muddle. The mine is in control of its Grayson-Hayward contingent and the office, books, etc., down here by the Fox combination, with the lawyers making the money. The Savage official letter does not report any material change during the week. Work is being done in Potosi which indicates more active exploiting on the under levels. Work is continued on the long drawn out north drift by Bullion. It looks as if they ought to be in the Potosi ground. Last advices from Alpha were more favorable so far as regards the west crossdrift on its 500-foot level. But this has been the case about every year since they struck the fair to high grade ore about five or six years ago. In the Con. Imperial Challenge-Confidence west crossdrift has struck a flow of water. The management think they are near the west lode. In Confidence they are working from the ore consequently none was raised last week. Work is being done jointly to the west by Yellow Jacket, Crown Point and Kentuck. From Crown Point nothing new is at hand, and as for that nothing new has come to hand from Belcher, Seg. Belcher, Overman, Caledonia and Alta. Ore is still raised by Belcher and Overman, but not in sufficient quantity to pay current expenses.

Interest in the Brunswick lode is beginning

In one of the best mines in the State, with a past record of over One Million Dollars. Large plant in operation, with rich ore. A few thousand shares can be secured by addressing "Investment," care of Mining and Scientific Press.

Who Sees Your Advertisement?

Is an important question. When asked for an "ad" demand proof of extensive circulation among probable purchasers.

to shift to the joint work in Best & Belcher on the 300-foot level, where an improvement is reported to have taken place. Mining men expect good results in Gould & Curry, Best & Belcher and Con. Virginia, but more particularly in the latter. The joint work in the above is on the same levels and direction published last week. Nothing new has come to hand from the work on the 550-foot and 650-foot levels of Occidental. In Chollar the work is confined to the same levels heretofore reported, with no essential change since our last week's issue.

The following illustrates the changes of the week:

Assessment Notices.

JAMISON MINING COMPANY.—Location of principal place of business, San Francisco, California. Location of works, on Jamison Creek, near Johnsville, Plumas County, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 27th day of November, 1896, an assessment (No. 9) of 5 cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the company, 120 Sutter street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 25th day of January, 1897, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 22nd day of March, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

SAM W. CHEYNEY, Secretary.

Office Room 50, 120 Sutter street, San Francisco, California.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 25th day of January, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on the 24th day of February, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 21st day of April, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of February, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on FRIDAY, the 26th day of March, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on FRIDAY, the 21st day of May, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 26th day of March, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on SATURDAY, the 24th day of April, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on SATURDAY, the 19th day of June, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of April, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on MONDAY, the 24th day of May, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 19th day of July, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

POSTPONEMENT.

At a meeting of the Board of Directors of the Jamison Mining Company, held on the 24th day of May, 1897, it was resolved that any stock upon which the above assessment shall remain unpaid on WEDNESDAY, the 23rd day of June, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on WEDNESDAY, the 18th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

SAM W. CHEYNEY, Secretary.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 9th day of June, 1897, an assessment (No. 7) of 2½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44, Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 17th day of July, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 9th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

In the Superior Court of the City and County of San Francisco, State of California, Department No. 8. John V. Kimball, plaintiff, vs. Mabel L. Kimball, defendant. Action brought in the Superior Court, City and County of San Francisco, State of California, and the complaint filed in said City and County of San Francisco, in the office of the clerk of said Superior Court. The people of the State of California send greeting to Mabel L. Kimball, defendant. You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court, City and County of San Francisco, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this county; or, if served elsewhere, within thirty days. The said action is brought to dissolve the bands of matrimony now existing between yourself and plaintiff, on the ground of habitual intemperance on your part for more than one year past. All of which will more fully appear in the complaint on file herein to which you are hereby referred. And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the said plaintiff will apply to the said Court for the relief prayed for in the complaint. Given under my hand and seal of said Superior Court at the City and County of San Francisco, State of California, this 9th day of April, in the year of our Lord, one thousand eight hundred and ninety-seven. C. F. Curry, Clerk. By Joseph Riordan, Deputy Clerk. R. Thompson, Attorney for Plaintiff.

Assaying Gold

.....AND.....

Silver Ores.

A Standard Work.

THIRD EDITION JUST OUT.

By C. H. AARON.

This work is written by an experienced metallurgist who has devoted many years to assaying and working precious ores on the Pacific side of the American Continent. He writes whereof he knows from personal practice, and in such plain and comprehensive terms that neither the scientist nor the practical miner can mistake his meaning.

The work, like Mr. Aaron's former publications ("Testing and Working Silver Ores," "Leaching Gold and Silver Ores,") that have been "successfully popular," is written in a condensed form, which renders his information more readily available than that of more wordy writers. The want of such a work has long been felt. It will be very desirable in the hands of many.

Table of Contents:—Preface; Introduction; Imleme nts; Assay Balance; Materials; The Assay Office; Preparation of the Ore; Weighing the Charge; Mixing and Charging; Assay Litharge; Systems of the Crucible Assay; Preliminary Assay; Dressing the Crucible Assays; Examples of Dressing; The Melting in Crucibles; Scorification; Cupellation; Weighing the Bead; Parting; Calculating the Assay; Assay of Ore Containing Coarse Metal; Assay of Roasted Ore for Solubility; To Assay a Cupel; Assay by Amalgamation; To Find the Value of a Specimen; Tests for Ores; A Few Special Minerals; Solubility of Metals; Substitutes and Expedients; Assay Tables.

The volume embraces 138 12-mo pages, with illustrations, well bound in cloth; 1896. Price $1.00 postpaid. Sold by the Mining and Scientific Press, 220 Market St., San Francisco.

MINE BELL SIGNALS. Adopted, Used and in Force in Accordance with State Law.

FOR THE CONVENIENCE OF OUR READERS IN THE MINING COUNTIES WE PRINT IN legal size, 12x36 inches, the Mine Bell Signals and Rules provided for in the Voorhies Act, passed by the State Legislature and approved March 8, 1893. The law is entitled "An Act to Establish a Uniform System of Mine Bell Signals to Be Used in All Mines Operated in the State of California, for the Protection of Miners." We furnish these Signals and rules, printed on cloth so as to withstand dampness, for 50 cents a copy. MINING AND SCIENTIFIC PRESS. 220 Market St., San Francisco.

The right of the advertiser to know the measure of his purchase in circulation is no less than the right of the publisher to know the weight of print paper received from the mill.

THE BROWNELL "PATENT LIP" FLANGE FRUE VANNER BELTS.

It has taken years of ceaseless testing and experimenting to produce the superior belt which we now offer, with elastic flanges and pliable body reinforced with specially woven duck. Every belt is manufactured by experienced workmen, and carefully tested on machines especially built for that purpose; consequently we are to-day manufacturing the best belts that mechanical ingenuity, combined with honesty of construction, can possibly produce.

SUPT. OFFICE WILDMAN GOLD MINING COMPANY, SUTTER CREEK, AMADOR CO., CAL., Feb 22, 1897.

MR. JAS. S. BROWNELL, 132 Market St., San Francisco, Cal.—DEAR SIR: Replying to your favor of the 18th inst., will say that in the two mills operated by this company we have nineteen of your Patent Lip flange concentrator belts in use; some of them have been in constant use for the past two years and have given entire satisfaction. I know of no better flange for a side shake machine.

Yours truly, JOHN ROSS JR., Superintendent.

MEXICAN MILL, EMPIRE, NEV., March 28, 1897.

MR. J. S. BROWNELL, San Francisco, Cal.—DEAR SIR: For some years we have used three different styles of belts on our Frue vanner at the Mexican mill, and for smooth working and endurance the Brownell Patent Lip flange belt has proved its superiority over all others, and I unhesitatingly recommend it to all who are using Frue machines.

Yours truly, EUGENE MAY, Foreman.

For any information regarding Frue Vanner or Belts, call on or address

MINING AND SCIENTIFIC PRESS.

AND PACIFIC ELECTRICAL REVIEW.

No. 1929.—VOLUME LXXIV. Number 26. SAN FRANCISCO, SATURDAY, JUNE 26, 1897. THREE DOLLARS PER ANNUM. Single Copies, Ten Cents.

California's Water Power.

Many owners of large ditches, with water rights to thousands of miners' inches, upon the prohibition of hydraulic mining, considered these properties of little value. A few were far-seeing enough to guard their rights, in the hope that they might sometime be made use of, particularly for irrigation. None, however, foresaw what has come to pass—that no more valuable properties may be owned in California than water at points where there is demand for power generated by electricity.

The abundance of water available for generating power for nearly every part of the State, and the want of cheap coal of good quality, have caused the erection in California of the largest power transmission plants in the world. First was that to supply the City of Sacramento from Folsom dam, 22 miles in length. Then came the Bakersfield and Fresno lines—the latter transmitting power 35 miles. Now the Southern California Power Company is about to put in an electric transmission plant to carry power 80 miles, or more than twice as far as any other in existence. In time every town and village, every factory in California, will be supplied with cheap power from the torrential streams of the mountains, and with cheap power will come more factories and greater material prosperity in many directions. The upbuilding of manufacturing industries in a climate where men and machinery can do their work as well in one season as any other, will give to California an advantage over other parts of the world.

COMPRESSOR HOUSE, NORTH STAR MINE.

In the mining districts—particularly those in which there are many large plants—the water rights are already becoming of more value than they were in the palmy days of hydraulic mining. The cost of installing independent plants for each mine is being done away with by the transmission of power by electricity and the use of compressed air. This is doing much in an indirect way to foster and encourage prospecting on a large scale. There are along the Sierras many mines upon which the owners would sink shafts with power purchased as they go, and as development work would warrant, but would not take the risk of erecting independent power plants. As the demand for power increases, as it is bound to do, it will become cheaper and in time do much toward decreasing the cost per ton of mining and milling ores. The great abundance of water precludes the possibility of its being monopolized and the prices of power held up.

On this page is illustrated the compressor house of the North Star mine at Grass Valley. The water supply is obtained from the South Yuba Water Company and conveyed to the Empire Mining Company's works in a 22-inch pipe built more than ten years ago. The new conduit is a riveted steel pipe, 20 inches in diameter, joined to the lower end of the old one, under a head of 420 feet, and continues 7070 feet to the power house, where a head of 775 feet is obtained, sufficient to develop 800 to 1000 H. P. A pipe conveys the air at 90 pounds pressure from the power house to the company's shaft on Massachusetts hill, 800 feet distant and 125 feet higher, where it runs a 100 H. P. hoisting engine, a 75 H. P. pump and other pumps, blacksmith's forge, drills, etc.

West Australia's Progress.

Probably no mining district of importance has so lost the confidence of the British speculating and investing public as Western Australia, not through any fault of West Australians or of the mines themselves, but simply because the London promoters indulged more boldly and recklessly in overcapitalization in respect to mines from that colony than elsewhere. In spite of this want of confidence of the public, mining men and others directly interested have insisted that West Australian mines would soon make a good showing. In May the export of gold amounted to 59,111 ounces, valued at £224,624, and the increase has been steady and large since the first of the year.

Marking Claims Discovered by Tunnel.

In the very recent case of Campbell v. Ellet, the United States Supreme Court has held that a lode discovered by a tunnel claimant in running the tunnel need not be marked upon the surface. "Indeed," says the Court, "the conditions surrounding a vein or lode discovered in a tunnel are such as to work against the idea or necessity of a surface location. We do not mean to say that there is any impropriety in such a location, the locator marking the point of discovery on the surface at the summit of a line drawn perpendicularly from the place of discovery in the tunnel and about that point locating the lines of his claim in accordance with other provisions of the statute. It may be true, as suggested, in Morrison's Mining Rights, 8th ed., p. 182, that before a patent can he secured there must be a surface location. U. S. Rev. Stats., Sec. 2325. But the patent is not simply a grant of the vein, for, as stated in the section 'a patent for any land claimed and located for valuable deposits may be obtained in the following manner.' It must also be noticed that Sec. 2322, in respect to locators, gives them the exclusive right of possession and enjoyment of all the surface within the lines of their locations, and all veins, lodes and ledges, the tops or apexes of which are in such lines. * * * * It is enough to hold, following the plain language of the statute, that the discovery of the vein in a tunnel worked according to the provisions of the statute, gives the right to the possession of the vein to the same length as if discovered from the surface, and that a location on the surface is not essential to a continuance of that right. We do not mean to hold that such right of possession can be maintained without compliance with the provisions of the local statutes in reference to the record of the claim, or without posting in some suitable place, conveniently near to the place of discovery, a proper notice of the extent of the claim—in other words, without any practical location. For in this case notice was posted at the mouth of the tunnel, and no more suitable place can be suggested, and a proper notice was put on record in the office named in the statute," of Colorado, wherein the property was situated.

The Measure of Increased Mining Prosperity.

The increased importance to the country of mining for the precious metals, caused by the so-called "revival" of the past few years is not appreciated probably even by the miners themselves. That there has been an increased activity is shown to the public mainly by the increased output in value of the minerals. Yet this is no gauge of the growth of the business. This increase has come largely from greater activity in old mines, partly through the introduction of capital and from the many small mines which have been opened. The large mines upon which considerable development work must be done have not been heard from. This is true of nearly every district in the west. In Utah the Mercur district will, it is predicted, double the output of six months ago in less than a year from mines which have been developed at great expense, but from which no ore or very little has been taken. In Amador county, Cal., near Jackson, there are mines upon which large sums are being spent, which promise, when opened, to increase the yield of that county from 50 to 100 per cent. So, in all the older mining counties there is a similar state of affairs. Even in Nevada county, where there has never been a loss of faith in the mines, there is a certainty of increase in the old districts.

The new districts all over the West have added little to the output, and most of their yield has come from small mines. With the introduction of capital, which takes time, these will increase their yield very largely. It may be said that more money is being put into the industry than is being taken out of the mines, but most of this is for machinery or development work, which will in time return many fold.

If the mines of the Kootenays in British Columbia are not speedily developed it will not be for want of facilities furnished by capital. Railroads in process of construction or to be built will soon give low rates of freights and fares. That ample smelting facilities will soon be afforded seems beyond doubt and besides all this there is a growing desire on the part of capital in the cities of the Northwest, in eastern Canada and London to invest in British Columbia mines.

Our New Office.

This is the last issue of the MINING AND SCIENTIFIC PRESS from 220 Market Street, where it has had its home for so many years. At the head of this article is represented our new home, to which we will remove July 1st, and where even more than in the past it is designed that the office shall be headquarters for mining information, and mining men resident or visiting the city are invited at any time to make use of its facilities.

The new office of this paper is just completed, and is a modern building occupying one of the best business sites in this city. It is one block southwest of this location, being No. 330 Market street, at the intersection of Battery and Bush streets.

Our friends and patrons everywhere will kindly accept this as a general notification of change of address and will please in future see that all communications are sent to 330 Market street.

Mine Costs of the Rand.

The Mines Commission appointed by the Government of the South African Republic to examine into and report upon the condition of mining, is bringing out through the witnesses called some interesting data. It would appear generally that any large reduction in the cost of mining and milling on the Rand can not be expected without the aid and consent of the Government, particularly as to reduction of freights and the cost of dynamite. A reasonable reduction in these two items it is shown would affect an average reduction of 2 shillings, or about 50 cents per ton.

The rate of wages of the natives has been reduced so low that they are in reality little better off than slaves, their wages being fixed at from 28 to 60 cents per day. The rates of wages paid to white men are high, and lately J. B. Robinson gave notice of a reduction of 10 per cent on one of his mines that could not be made to pay at the cost of working, whereupon there was a strike. It was a question of reduction of wages or closing the mine. The percentage of white labor to the whole cost per ton of working at the Geldenhuis Deep, one of the representative large mines, is given as 35.89 per cent, while that for native labor was only 21.20 per cent. The average wages paid to white men in one of the large mines was given as about $120 per month, including superintendency, while the wages of the natives are from $7 to $16 per month.

The cost of powder was shown to be on the Princess mine about $1 per ton of ore milled, or about 13 per cent, against five cents at the Alaska-Treadwell, which is about the price in some large mines in California. This high cost comes from the dynamite monopoly. The price could be reduced, it is claimed, so that dynamite would not be more than 3 or 4 per cent of the cost of working, and still leave large profits on its manufacture.

According to the *South African Mining Journal* one witness, who is known as a friend of the Government, proved that if passenger rates were reduced 15 per cent and freight rates 30 per cent on the railways, the mining industry would save £801,900 per annum, and the Netherlands railway would still have 8 per cent in its capital.

"The Government might then call a conference of the managers of the South African railways and propose reductions on Mr. Brakhan's basis, by which the Transvaal would save £1,195,200, while the Cape would retain an interest of 6 per cent, the Orange Free State nearly 20 per cent, and Natal 8 per cent. All these are points on which the Government might easily take action at once, and earn the gratitude of the whole community."

It was shown that on a lot of Oregon pine from Delagoa bay which cost £2,679 the carriage was £14,500.

Yet in spite of all those difficulties the yield of the Rand increases rapidly each month and many new properties are developed and are beginning to produce. That the yield will increase for some time there seems little doubt and the reserves are large enough to continue it for a long time.

Alaska.

In a late issue the London *Mining Journal*, which is generally well informed as to mining in different parts of the world, there appeared an editorial on Alaska, in which it was said: "Alaska, among other remote countries on the globe's surface, is a tract of territory that may not improbably come to the fore at some future time as a gold-producing country. We published a short while ago the chief figures of the output for last year, distributed under the heads of the different contributing companies, and from this tabulated statement it might easily be gathered that the bleak and unpromising ice slopes of northwest America contain considerable auriferous potentialities. The yield for last year was just about £1,000,000 sterling—a figure that acquires additional significance from the multitudinous difficulties that have to be faced if mining operations are to be carried on continuously in a country where the thermometer sinks for long periods together to 60° or 70° below zero."

Continuing, the article goes on to describe the methods and difficulties of mining in the Yukon, inferentially implying that these apply to all mining in Alaska. Nothing is said of the comparatively mild climate along the coast of southeastern Alaska, where are the great quartz mines which have produced large sums of money for many years, before the discovery of the Yukon placers attracted prospectors, and were the cause of introducing large capital into Alaska, not a small part of which came from London. The mines at Douglas Island are well known to mining men the world over. There the climate—near the shore—is very pleasant in summer and in winter the thermometer seldom registers lower than 8 to 10 degrees below zero, Fahrenheit. An abundance of water power and timber is to be had all along the coast, and altogether the conditions there for mining are fully as favorable as in most well known districts in the world. The presence of water and timber and low rates of freight from good markets more than compensates for a little cold weather in winter.

These mines, and others along the coast, are worked the year round, water power being used in summer and steam in winter. Going north along the coast it becomes colder, until there is a limit beyond which mining cannot be conducted. So, inland, little has been done, partly owing to the cold and partly to the want of means of traveling. Yet the coast line on which quartz mining upon large scales is being conducted extends over 1000 miles beyond Douglas island. Along this coast last year there were worked over 500 stamps, and by 1898 it is expected that the mills now being worked and arranged for will increase this number to over 1000.

There is much of Alaska that the prospector will never travel over, yet there is enough country that is hospitable to make one of the most extensive mining districts in the world.

Mining Titles in Mexican Grants.

Representative Bell of Colorado has introduced a bill in Congress to provide for the location of mining claims on confirmed land grants. In some of the Mexican or Spanish grants the mineral was reserved and belongs to the Government, the grant owner only having title to the surface. This has led to considerable confusion as to how prospecters or discoverers may acquire title. The owner of the grant may exclude outsiders and prevent prospecting, but has not himself the right to work any mines.

Mr. Bell's bill provides that any one authorized to prospect on the public domain may do so also within the limits of a private grant. He is also empowered to locate a mineral claim and institute condemnation proceedings to acquire title to so much of the surface as he may require.

Concentrates.

CINNABAR has been discovered on Prince of Wales Island, Alaska.

THE $53,000,000 in the San Francisco mint is being counted this week.

IT is proposed to put in a cyanide plant at the Mammoth mine, at Bingham, Utah.

A NEW strike of copper ore has been made on Squaw creek, Shasta county, California.

SECRETARY MAHON estimates an attendance of 10,000 at the Denver Convention next month.

THE Sacramento Power Company are figuring on extending their wires to Woodland and Chico.

EXCHANGES will please change the address of this paper to our new number, 330 Market street.

A DREDGER for gold mining is to be put in the Rio Grande river, in New Mexico, this summer.

THE statement of the Anglo-Mexican for March shows production of £8963, expenses £5092, profit £3871.

THE Peck plant at Dayton, Nevada, was started up last week and is working 200 tons of tailings a day.

AT the Adelaide copper mine, at Golconda, Nevada, the concentrator will be ready for work about September 1.

THE British Columbia Exploration Company has purchased the Ottawa mine, near Trout Lake, B. C., for $20,000.

NEARLY every train from Spokane, Wash., for British Columbia, carries from 100 to 200 passengers for the mines.

NEARLY 900 new subscribers since January 1st, 1897, is pretty good, even for the MINING AND SCIENTIFIC PRESS.

IT is proposed to erect a mill with a capacity of 100 tons daily, in the Horse Shoe mining district, Park county, Colo.

AT Cripple Park, near Guffey, Colo., a cyanide plant with a capacity of 200 tons daily is to be erected to treat low-grade ores.

THE Waverly, a mine on Albert canyon, is being placed on the London market by the Canadian Gold Fields, Limited, at £100,000.

THE three miles of tunnels in the Santa Ana canyon for the Southern California Power Company are to be finished January 1, 1898.

CONSIDERABLE prospecting for gold is going on in the western part of Tehama county, Cal., on the Tehama-Trinity county divide.

THE receipts of bullion at the Denver mint for the first four months of 1897 were $6,942,877, against $4,198,021 in 1896, a gain of $2,744,854.

FIVE nuggets, valued at a total of $1330, were brought into Baker City, Oregon, by a miner last week from the Gimletville placers in Grant county.

ON the Rand group of mines, in the Rand district, Kern county, Cal., thirty-six men are working, and the output is twenty-eight tons of ore daily.

A LOT of twelve tons of ore from the Trade Dollar mine, near Boise, Idaho, sent to a smelter, netted $72,000, of which $48,000 was in gold and $24,000 in silver.

JUAN PEDRAZZINI has sold his El Carmen mine, in the Arizpe district, near Hermosillo, Mexico, for $1,500,000, while still retaining an interest in the property.

AT Bannock, Montana, the Chicago Gold Dredge Co. are working a dredge with electric power and hoist, about 1000 yards of auriferous gravel in eleven hours.

FROM Olinghouse Canyon, eight miles west of Wadsworth, Nevada, is reported an unusually rich gold find, and the usual number of men are heading for the new camp.

THE demand for silicious ores created by the copper smelters at Keswick, where they are used for flux, has opened up many properties in the vicinity of Shasta, Cal.

IN Calaveras county, Cal., Tryon & Co. have sold a French syndicate 700 acres of mineral ground near Angels Camp, including the Garnett and Ghost mines, for $333,000.

THE water jacket copper smelter at the Afterthought mine, at Cooper City, Shasta county, will start up for a season's run this week. It has a capacity of fifty tons per day.

EX-SENATOR S. W. DORSEY has organized a company in London to work his Picacho mining properties in San Diego County, California. A 100-stamp mill is to be erected.

THE Horne-Payne Company, in the Slocan district, B. C., have purchased the Bad Shot group for $100,000, the Broadview mine for $15,000, and the True Fissure for $50,000.

OF the seventy-seven acts passed by the Legislature of British Columbia at its last session, thirty-seven were connected with the development of mining in the province.

THE area of the proclaimed gold fields of Western Australia is over 300,000 square miles, and there are still unexplored districts into which prospectors have not yet penetrated.

S. F. MOORE and others have bonded to L. C. Moreland, for $5,000, a two-thirds interest in the Bay Horse and Irma gold mines in Mesquite district, San Diego county, California.

THE Comet mine at Berner's Bay, Alaska, is being developed by a tunnel to the 1000-foot level, the deepest workings in that Territory. A 40-stamp mill has lately been started up.

ILLINOIS capitalists who recently purchased the Watus mine in the Santa Maria District, Arizona, have now acquired the J. D. Thorne mine. Both properties will be developed immediately.

THE shipments for the week ending June 19 from Rossland mines were: Le Roi, 940; War Eagle, 175; Iron Mask, 100; Columbia and Kootenay, 65; Josie, 65; Cliff, 125; total, 1470 tons.

SINCE the settlement of the Indian troubles by the treaty with the Yaquis a mining boom has set in throughout the Sierra Madre mountains in the States of Chihuahua, Sonora and Durango, Mexico.

IN Mono county, Cal., according to the Bodie *Miner*, all the cyanide plants are in operation to their full capacity, and give employment to nearly 100 men. They treat about 6000 tons of tailings weekly.

THE North Bloomfield Gravel Mining Company, of Nevada county, Cal., has been allowed an appeal to the Circuit Court of Appeals from the recent decision of Judge Ross enjoining its hydraulic operations.

IN the Summit mine, at Nevada City, after a long battle with the large flow of water encountered some months ago, the management have decided to run a drain tunnel 3200 feet in length from Deer creek.

CONSUL WEISIKE, at Managua, has informed the State Department that the President of Nicaragua has issued a decree providing for the free entry into that country of all materials necessary for mining.

A DEPOSIT of bituminous coal of good quality, said to be extensive, has been discovered at Garlock in the Rand district, California. Should the coal be sufficient in quantity it will do much for the mines of the desert.

EX-GOVERNOR GRANT and E. W. Nash of the Omaha and Grant smelter, of Denver, Colo., have lately made an examination of the Pilot Bay smelter in the Slocan district, B. C., and are reported to have purchased it.

THE Kootenay Mine Owners' Association have decided to invite capitalists to consider the question of manufacturing powder in Kootenay, promising support to any one outside of the combine who should start in the business.

THE Detroit Copper Company has had a survey made for bringing water by flume from Eagle Creek to Morenci, Arizona, a distance of sixty miles. The cost would be nearly $500,000, and a final survey is now being made.

THE Alice mine, located in the Lincoln district, near Idaho Springs, Colorado, has been sold to a Chicago syndicate for $250,000. The property covers 981 acres of patented ground, and has been a producer for a number of years.

MUCH freight for Yukon and Clondyke, Alaska, is cached at Sheep creek until next winter, as the snow melted this year before it could be taken over the divide. Provisions are reported very scarce in the Yukon mining camps.

COLONEL GEORGE V. BRYAN has taken a bond on several of the best gold properties near Murray, Idaho, including the Golden Chest, Katie Burnett, Dora, Idaho, Joe Dandy and Paymaster. He represents De La Mar interests.

THE old Hanover mine, near Silver City, New Mexico, is being reopened. This mine was worked thirty years ago and 100 tons of copper was smelted in adobe furnaces by the Mexicans, but water was encountered and the mine closed.

ON the Alaska-Treadwell mines, in Douglas Island, Alaska, a shaft 8x12 will be sunk to a depth of 1000 feet. Very little is known as to the depth of the pay in those mines, and the results of this sinking will be looked for with interest.

THE new tunnel in the Tom Boy mine at Telluride, Colo., has cut the main ore body in that property 45 feet below the old workings. The upper workings have shown a continuous body of free milling ore over 2000 feet long, and 9 to 14 feet wide.

THERE are two surveying parties in the field to lay out a connection between the Great Northern road at Bonner's Ferry and the foot of Kootenay lake. The promoters propose not only to build the road and run steamships, but also work mines.

EXPERTS have been examining a group of nineteen claims at Gold Mountain, Sevier county, Utah, including the Holland group, the General Connor, the Sevier, and the Surprise group, for Eastern capitalists who have an option for their purchase.

AN unusual amount of prospecting and development work is going on this season on the coast and islands of Alaska. Most of the ledges are low grade but large. On Prince of Wales island what is claimed to be a good quality of coal has been discovered.

THE first copper refined in British Columbia came from the Hall mines furnace last week. It is proposed to ship a train load to England. As an advertisement, the Canadian Pacific Railway has arranged to run a special train from Revelstoke across the country.

NOTICE has been given in the Canadian Parliament to delay for six months the bill granting aid to the Canadian Pacific Railway for the construction of the Crow's Nest Pass line. This would delay much contemplated work in mines in the Fort Steele country.

ONE of the mills at Idaho Springs, Colo., is to experiment with compressed air in the settling of slimes, it being claimed that it would work to good advantage with hydraulic sizers, and that by such a process the finer mineral could be moved more rapidly over the tables.

IT is not often that a mine sells at a large price at auction. The Victoria copper mine, otherwise known as the Dyer, near Vernal, Utah, was sold by order of the United States Court last week and brought $65,000, James L. Gates, of Milwaukee, Wis., being the purchaser.

THE rich strike made a few weeks ago in the Mollie Gibson mine at Aspen, Colo., has proved to be but a pocket. Two shipments have been made from it, one of twenty-six tons, averaging 628 ounces to the ton, valued at $8500. The other shipment ran 2632 ounces to the ton.

THE Alaska-Treadwell Gold Mining Company of Alaska reports the clean-up for the month of May as follows: Period since last return, thirty days; bullion shipment, $40,928; ore milled, 20,383 tons; sulphurets treated, 295 tons; of bullion there came from sulphurets, $10,597.

AN unusual number of "smelter schemes" are reported. It takes so much capital, skill and ability to start and successfully run such a concern, that the chances have to be thoroughly canvassed before putting up the money, the usual result being the postponement of the enterprise.

AT the O'Neill onyx mines north of Phœnix, Arizona, lately purchased by C. N. Fowler of New Jersey, and others, in the progress of development last week a new and broader stratum of onyx of great beauty was discovered. The owners are conferring with the Santa Fe Railway for a branch road from Prescott.

ACCORDING to the Albuquerque, N. M., *Citizen*, Colorado and Eastern capitalists have closed negotiations for the purchase of a tract of land of several thousand acres in the Rio Grande valley, at Algodones, and will erect reduction works at some point along the river on the Santa Fe Railroad in the near future.

IN the early days of placer mining men naturally reasoned that the gold dust came from the mountains above. In a recent lecture before the Seattle, Wash., Mining Bureau, P. L. Trout, a mining man of large experience, in a lengthy treatise argued that such gold came "from the skies." An airship seems more needed than ever.

A DENVER company has agreed to put in a cyanide reduction works in the Chance district, in Gunnison county, Colo., treating the ores at a cost of $2 per ton, and guaranteeing to save 98 per cent of all gold and silver values, on condition that the mine owners of the district will assure them forty tons of ore per day for treatment.

THE exports of gold from the United States during May amounted to $5,466,711, against $19,106,913 for May, 1896. During the eleven months the imports exceeded the exports by about $48,271,000. The silver exports during May amounted to $4,337,342, and during the eleven months exports of silver exceeded the imports by about $46,000,000.

ON the Rand, South Africa, the rates of wages of native labor has been reduced in the mines by about thirty per cent, the new schedule issued by the Chamber of Mines, which took effect June 1, placing the rates at from one shilling and two pence to two shillings and six pence per day. This amounts to from $7 to $16 per month of twenty-six days.

ON pages 563 and 564 of this issue appears an index of some of what has been published in the 564 pages of this paper during the past six months. Those who do not regularly see the paper have little idea of the immense amount of practical information given and the large number of subjects treated in every volume of this paper. This issue closes the seventy-fourth volume.

THE receiver of the Golden Cross mines in San Diego county, Cal., has been ordered to turn them over to the defendants in the suit of the Golden Cross Mining & Milling Co. vs. James Spiers and others, who hold trust deeds to the property for the payment of $150,000 indebtedness. The property is paying from $20,000 to $30,000 a month profit and is being negotiated for by an English company.

THOUGH the annual report of the country's gold yield for 1896 by the Director of the Mint places California at the head of the list, yet many California miners hold that an injustice is done to the State in chronicling an alleged decrease from the total of 1895. The mint statistician's report, a conservative calculation, showed a large increase, and was considered to be not an exaggerated statement.

IN the Canadian parliament last week, Minister Fielding stated that the Government would take the necessary power to enable the governor-general-in-council to put in force a statute by proclamation imposing an export duty on logs, pulp wood and certain kinds of ores. It has not yet been decided exactly on what ores the Government will ask for power to put an export duty, but copper, lead and nickel are likely to be dealt with in this way.

THE Iron Mountain Company, of Montana, reports for the fiscal year that 57,970 tons of ore were mined that produced 4,376 tons of concentrates. The ore concentrates at the proportion of thirteen tons of crude rock into one ton of concentrates, a high rate permitting low grade ore to be worked to advantage. The net returns for the year were $207,626.36, and the gross returns were $308,418.61, divided as follows: Silver, 337,677.64 ounces, $210,148.23; lead, 3,833,693.96 pounds, $98,270.38.

F. B. TURNER, Manager of the Mines Exploration Company in Montana, is putting up a plant in which he will first crush the ore so that it will pass through a 10 mesh screen, then treat it in the tanks with cyanide. After leaching the ore will be pulverized to pass through a 30-mesh screen and then run over copper plates. He claims that his tests show that the cyanide process will extract about 50 per cent of the value and that 40 per cent will be saved in the plates; making a total of 90 per cent. The capacity of the plant which has been contracted for is about 40 tons in 24 hours.

NEAR Red river, New Mexico, there has been discovered an old mine worked by the Spaniards over a century ago. The ancient Spanish method of mining was in evidence from the blackened walls and irregularity of the roof, walls and floor. The method at that time was to heat the walls and roof to as great a degree as possible by building a fire against it and then dashing water upon it which caused the rock to burst, but the result was not always what was desired, which is evident from the large cavities in the formation and even in the floor which in some instances has been blown out for 4 or 5 feet in depth.

THE *Mining Investor* of Colorado Springs says that the fundamental cause for Eastern and foreign antipathy to mining stocks is apparently the light regard in which stockholders are held. This gross error appears to be prevalent among company managements of the West. Some managements bulldoze their stockholders with brazen effrontery; some politely decline to give out any information; some bluff their stockholders by telling only just so much as they want to tell; some mislead as the fancy or their pockets suit them; some try to come near doing the right thing, but mighty few succeed in giving satisfaction.

THE Treasury Department at Washington, D. C., is in receipt of a letter from the Collector of Customs at Grant Falls, Mont., submitting the question whether, in determining the respective values of lead and silver contained in imported ores, the prices of these metals in the markets of the United States at the time of importation or at the time of withdrawal for consumption shall be taken. Assistant Secretary Howell stated in reply that the prices prevailing at the time of withdrawal of such ores for consumption, or of entry for a bonded smelting and refining warehouse, are to be taken for the determination of the dutiable character of the ores.

AT a meeting of the Sacramento, Cal, Chamber of Commerce last week, the following resolution was adopted: We believe that the time has come when a speedy and amicable adjustment of the difficulties between the interests of the valley and the mountains can be had and that the two organizations representing these interests are best qualified to act in the matter. Our intercourse with some of the active supporters of both organizations warrants this conclusion. Therefore, we respectfully recommend that the Anti-Debris Association and the State Miners' Association each appoint a committee of three on conference, having in view, first, the restoration and preservation of the rivers; second, the immediate and active encouragement and development of quartz and drift and legitimate sluice mining.

THE Denver *Republican*, after stating that the director of the mint's estimate of the gold product last year credits California with $15,235,900 and Colorado with $14,911,000, says that Colorado gold producers should exert themselves to surpass California this year, and continues: "California is looked upon as the center of gold production. Its name is almost synonymous with terms indicating great wealth in gold. Colorado, on the other hand, is looked upon as distinctively a silver State. In order to achieve a reputation as a gold producer, it must not only outstrip California, but it must demonstrate that it is more than a silver producer." The yield of gold from California mines in 1896, according to the statistician of the United States Mint, was $17,181,562. It is to be hoped that the output of Colorado will exceed even this.

An Interesting Region.

Written for the MINING AND SCIENTIFIC PRESS by DAN DE QUILLE.

In the southern part of Nevada, in the lower part of Esmeralda county and in the southwestern part of Nye county, lies a section of country of great interest to the geologist, mineralogist and the mining man. This region begins on the eastern border of California and extends across the southern part of Esmeralda county into Nye county, with Silver Peak as a central point. It is a section in which there is at present a lack of transportation facilities, but it is probable that in the near future one of the several schemes for the construction of a railroad from Salt Lake to Los Angeles through that part of Nevada will be carried out. With a railroad road within reach, the mines in this southern section of Nevada would soon be developed and would probably prove to be as valuable as the De Lamar, State Line and other mines to the eastward along the line of Utah and Nevada.

Silver Peak district was visited last October by Charles D. Walcott, Director of the United States Geological Survey, who was greatly astonished to find so many promising lodes as he saw there and in neighboring camps lying idle and deserted. Mr. Walcott went into that region in order to determine whether it was desirable to enter upon the topographical mapping and geological survey thereof, and he was so impressed with what he saw that he thinks the work should be taken up at once. He was so enthusiastic in regard to the mineral features of the districts examined by him at and about Silver Peak that he gave a lecture descriptive of the region before a leading scientific society in Boston.

Silver Peak district was located as early as 1865. The town of Silver Peak is situated on the western side of a large valley that opens out to the north into a great desert near the town of Columbus. In the valley that lies in front of Silver Peak is a deposit of salt of great purity and unknown depth that covers an area of thirty square miles. On the northwestern side of this deposit is a hot salt spring, about which are found a variety of curious and beautiful crystals.

The early miners gave little attention to any mines except those producing sliver ores. In the fall of 1865 a 10-stamp mill was moved to Silver Peak from Jacobsville, Reese river, but it was such a rattletrap that by the next spring it had gone to pieces—was wrecked beyond repair.

Among the early mills was a large one built of stone by a New York company. For this mill there was brought out from the East a lot of heavy patent machinery, but it was never set up, as the company were unable to find paying ore in their mine. The leading mines of the camp were very rich, yielding ore worth from $100 to $1500 a ton. After the rich surface bonanzas were worked out the camp gradually decayed, and finally was almost wholly deserted. In 1866 over 500 locations were made in the district, but no work was done on the majority of the claims taken, on others holding work was done for a time, while a few were developed to some depth and paid well for two or three years.

Six miles north of Silver Peak is a gold belt several miles in length which was scratched over in places by the early miners; but the craze then being for silver mines, gold-bearing lodes were little valued. The lodes in the gold belt are very large; and Mr. Walcott says, taken as a mass, the ore will pay $10 to $12 a ton, with chutes and bunches much richer. He thinks this single group would yield at least $1,000,000 a year should it be properly opened and worked.

The mountains of Silver Peak district consist of slates, blue limestone and yellow magnesian limestone, with large intruded masses of gray granite and porphyry dikes. The limestone, where in contact with granite, has in many places been converted into crystalline marble. The limestones contain abundant remains of seaweeds, corals and other fossils which seem to point to a Silurian age. The veins of the district seem inclined to run in groups. In the old Pocotillo series of veins there are no fewer than thirteen seams of quartz, each from three to five feet wide. These parallel veins are separated by an equal number of beds of blackish-green porphyry. In the Vanderbilt series are two such veins and in the Sessions series five. The lodes are traceable on the surface to great distances, and everything indicates a strong and permanent formation.

In this region are seen many evidences of volcanic action. About five miles north of Silver Peak is to be found one of the most perfect craters in the State. It stands on a low bench and is about 400 feet in height. At the top it is 1500 feet in diameter and almost circular. The crater contains a cavity 250 feet in depth and the rim is perfect except at the northeast, where it is broken down to a level with the bench land. The surrounding section is covered with lava and the debris of volcanic rocks.

In Springfield district, Nye county, west of Monitor valley, is a smaller crater, which the early miners christened the "Devil's Punch Bowl." The cone is in the shape of an inverted washbowl; it stands in a valley and at the base is a quarter of a mile in diameter, with a flat top about 100 feet in diameter. The sides of this cone are smooth and regular, while in the top is a circular chasm of great depth, with vertical walls. At the bottom of the chasm is a hissing cauldron of boiling water of unknown depth. This old crater still retains great heat at a slight depth beneath its base, and is constantly foaming, bubbling and sending up columns of steam and hot gas.

There are a great number of these craters in the Great Basin region and they are nearly always found in the valleys and on low benches instead of in the peaks of the mountain ranges. They represent the closing scenes of great plutonic and volcanic disturbances in the section of country lying to the eastward of the Sierra Nevada range. There are many of them about Inyo, and in Owens valley is a line of volcanic cones almost in the center of the valley. The reason they are seen in the valleys is that they followed the upheaval of the mountain ranges which always have a central mass or core of granite or some other igneous rock. The volcanic cones come up at the point of least resistance, which was in the valleys where the sedimentary country rocks were fractured by their being elevated on either side by the upheaval of the igneous rocks of the parallel ranges. There are two or three old craters on the eastern slope of the Sierras, but all are situated upon fissures in the granite supposed to have been formed by earthquakes at the time of the volcanic disturbance that pushed up the many cones seen throughout this region.

About twelve miles south of Silver Peak is an immense deposit of pure sulphur. The sulphur is found in hills of white mud or volcanic ashes, and occurs in large veins and bunches. These sulphur hills are cut through in all directions by veins of pure alum, varying in width from mere seams to streaks several inches in thickness. In the hills are inexhaustible supplies of both sulphur and alum.

In Volcano district, partly in Esmeralda and partly in Nye, occur many beautiful petrifactions. These are generally of vegetable growths and among them are found large trees. The predominant rocks are limestones, and these are full of fossil remains of various kinds. In Volcano district is a great copper belt. In the belt are no fewer than thirty distinct lodes. All these lodes carry from $5 to $50 or $80 in gold and silver, as well as a high per cent of copper.

In San Antonia district, in Nye county, at the south end of Smoky valley, is a formation of slate and porphyry. In the slate were found at the surface rich veins of chloride of silver. The deepest work done was from 100 to 200 feet. Most of the mines were abandoned as soon as the surface bonanzas were worked out, or when the ores paid less than $100 a ton—$100 a ton being the charge for reduction. On a mountain in this district are found a great abundance of geodes filled with quartz crystals of various colors and chalcedony in beautiful forms. This district is about sixty miles east of Silver Peak, with no water between points; to the southward of the San Antonia mountains all is an unbroken valley that extends down into the great Amargoso desert. About the mines are several big springs, but wood is very scarce.

Just east of San Antonia lies the Ralston valley, the scene of the death of Judge J. H. Ralston, who wandered away from Austin in the winter of 1864, and ended his life alone on the desert. A monument of rough stones marks the spot where his body was found.

Alida valley joins Silver Peak on the southeast and its mines have been worked more or less in a small way ever since their discovery in 1871. The country rock is limestone, with dikes of porphyry. The lodes of the district carry both silver and gold, the latter predominating in several of the leading mines. The mineral belt is seven miles wide by sixteen in length.

Tule Canyon district is situated about ten miles from Alida. It contains large and rich placer mines that have been worked off and on for many years. Nuggets of gold worth from $50 to $100 are occasionally found. The placers cover an area of about ten miles square. Water is scarce. The only water in the district comes from a few small springs. In places which cannot be reached with water the miners dig up the gravel with their picks and pick out by hand such pieces of gold as they happen to see. With a good supply of water these placers would pay immensely. Above the placers some rich gold lodes have been found. The prevailing formation is limestone and granite.

Twenty miles south of Alida valley lies Gold Mountain district. The lodes are from 5 to 20 feet in width and all gold-bearing. The district is a network of veins. Some very rich surface bonanzas were found by the first miners. The lodes are inclined to be pockety, a condition in them that discouraged the early miners. On the croppings of the Oriental lode was found a big boulder that assayed at the rate of $64,000 a ton. It was all alive with gold. When it was broken up, several thousand dollars worth of it was carried away as specimens. When first found this was thought to be the lost Breyfogle mine.

Red Mountain district joins Silver Peak on the north. This is a gold belt eight miles long and four miles wide. The silver belt in Silver Peak is parallel with it and about the same length. Red Mountain is full of gold-bearing lodes. The main lode is the Gold Mountain, which is from 6 to 30 feet wide, and crops out for miles. In one place it forms the face of a precipice for a distance of 600 feet and stands bare to a depth of over 800 feet. Gold is found in it in large, irregular grains and sheets, but is principally fine. Many tests show the vein to average $15 to $25 in fine gold. Parallel to this lode to a distance of five miles in width are many similar lodes from 2 to 5 feet in width. Little work has been done in the district in the last ten years.

Palmetto district is still farther north of Silver Peak. It contains many lodes carrying gold, silver and copper. At the head of Palmetto valley are the Palmetto placer mines. These placers were discovered in May, 1869, by a Spaniard. The only water is in a few small springs. The gold is coarse, but is worth only $13.60 an ounce, owing to the copper it contains. The placers are very extensive, reaching almost to Alida valley.

In this region is found an abundant growth of a species of arborescent aloe. In the head of the young shoots of this aloe grows a bulbous mass about the size of a hen's egg, which the Indians use as food, cooking it in various ways. The raw bulb cuts like a potato, and has a slightly bitter taste. When roasted in hot embers this bulb is quite palatable. It is well for the prospector to know that this peculiar fruit will not only sustain life, but is also as wholesome as the potato. In marshy places were found an abundance of "grass nuts." They grow on the roots of a kind of a reed grass, and are about the size and shape of filberts. They may be either boiled or roasted, when they taste like the sweet potato.

To southward, down toward Death valley, indications of terrific volcanic outbursts multiply on every hand, and in some places appear to be comparatively recent, as gravel beds are seen that are capped with flows of basalt. Some of the gravel beds are hundreds of feet in depth. In places they are tilted at all angles with the shales, sandstone and conglomerate, in many instances standing in a vertical position. The conglomerates appear to be of great age. Through them often run veins of compact limestone, while in other places they are lava-capped. Some of the hills are built up of strata of white, red, yellow, blue, brown and black volcanic material—almost every color is seen except green. The whole country seems once to have been a sea of volcanic fires covering thousands of square miles.

Silver Peak is the center of a section of country in which sooner or later some wonderfully rich mines will be developed. In places here and there the region wsa surface-gouged in the early days when only the richest ores would pay for handling. Ores that did not pay over $100 per ton could not be touched; for shipping it was necessary to so assort the ore that it would not be worth less than from $300 to $500 a ton. The little mills erected in the new camps charged $100 a ton for working ore, and then did not save more than two-thirds of the contained precious metals. Ores containing all kinds of base metals were worked by the process in use for the free milling ores of the Comstock—"It is the only way to work silver ores," said the millman. When the first bonanzas were worked out and assessments were called for, stockholders refused to respond. Then wild speculation finally culminated in a big smash on the Comstock in 1864. In the panic nobody would put up money on prospects. It was bad on the Comstock, but in the new camps out in the wilds it was ruinous—it shut down everything in far away outside regions.

For years little has been done in any of the old camps until recently. Now a start has been made at De Lamar and other places in the eastern part of the State, and we may expect soon to see a rush to the region the wonders of which have been briefly touched upon in this article. With up-to-date machinery and improved ore working processes this central section of Nevada would soon be as famous as Cripple Creek or any other mining region on the Pacific Coast.

THE production of platinum in Russia continues to be almost entirely from the placers of the Oural. The production increased steadily until 1894, but in 1895 there was a considerable decrease. For 1896 the output is estimated at 4800 kegs. It is believed that real production is above that reported, the miners themselves stealing a part, while another part is concealed to avoid the payment of tax. Some authorities estimate that 25 per cent, at least, should be added to the official statement. This would make the total 5500 kegs in 1895 and 6000 kegs in 1896. The crude platinum obtained is not refined in Russia, as a rule, most of it being sent to Germany for that purpose. Iridium is found in connection with the platinum. The quantity obtained in 1895 was 4100 kegs, and for 1896 it is estimated that a total of 4250 kegs was produced.

THE dust collected from the smoke of some Liege furnaces, burning coal raised from the neighboring mines, produces, when dissolved in hydrochloric acid, a solution from which considerable quantities of arsenic and several other metallic salts may be precipitated.

Mr. Burger's Article on Treating Pyritic Gold Ores.

The following correspondence is self-explanatory:

TO THE EDITOR:—My attention has been called to the article, in your issue of April 3, 1897, on the Practical Treatment of Pyritic Gold Ores at Gibbonsville, Idaho, by C. C. Burger. I am glad to know that it is so successful, but regret that he does not give due credit to A. Thies, Esq., the originator of the method, and from whom Mr. Burger got the whole idea of treatment when visiting the Haile mine, in South Carolina, where Mr. Thies has had a large plant in successful operation for over eight years, and the same kind of plants are working at several other points from Nova Scotia to Mexico.

The Gibbonsville plant follows the same routine as at the Haile mine, except the use of a Pierce turret furnace for the first roast and filters working under pressure, the latter a doubtful improvement from an economical standpoint. In 1895 Mr. Burger obtained from the Mecklenburg Iron Works, Charlotte, N. C., full working drawings of the plants as erected under Mr. Thies' direction, and afterwards was furnished with data for the practical working.

Such being facts, the claim made in the article of the plant at Gibbonsville being "designed and operated by Mr. McDonald and the writer," C. C. B., seems strange, as the credit should be given to the one who originated, and, after many years of work, brought to success the method, viz., A. Thies. JOHN WILKES.

Charlotte, N. C., May 27, '97.

TO THE EDITOR:—In answer to Mr. Wilkes' letter, I would say that it is true that I obtained full working drawings, details, etc., of chlorination plants built by the Mecklenburg Iron Works under the direction of Mr. Thies. Similar figures and information were obtained from other machinery firms. My purpose in getting such facts from Mr. Wilkes was thoroughly honest and usual, my intention being to lay them before the company and urge their acceptance. The conditions prevailing at Gibbonsville rendered this impossible, it being necessary to install the chlorination plant in a building already on the ground, requiring a much greater concentration of plant than offered by Mr. Wilkes. The proposal of the Mecklenburg Iron Works comprised five one-ton barrels and fifteen sand filters, each 6x8 feet. The same work was accomplished by two 1½-ton barrels and two pressure filters. The machinery was procured from the Gates Iron Works of Chicago, and not one iota of the information supplied by Mr. Wilkes was made use of.

In the actual working of the plants there are only two points of similarity—the chlorinating barrel and sulphate of iron precipitation. I believe Mr. Thies claims the credit of having developed the modern barrel from the old Mears barrel. However that may be, R. P. Rothwell did this, independently of Mr. Thies altogether, at Deloro, Canada, in the early 80's, subsequently improved by John E. Rothwell, resulting in barrel chlorination as it is carried on today in South Dakota and Colorado.

The details of precipitation were modeled after the writer's knowledge of California practice. Mr. Thies derived his information from the same source. Other important adjuncts of modern chlorination, such as mechanical roasting, pressure filtration, etc., used at Gibbonsville, Mr. Wilkes rejects as "not economical."

Taking all these facts into consideration, it seems to me to be the very height of presumption to say that the credit for our success in treating Gibbonsville ores should be given to Mr. Thies.

It was not claimed that any great discovery was made in the plant. It was claimed that it was an improvement over existing methods of chlorinating concentrates. The cost per ton at Gibbonsville is almost the same as at Mr. Thies' plant at the Haile gold mine, South Carolina, yet at Gibbonsville we were a hundred miles from a railroad, and labor and all supplies, fuel, etc., cost us from three to four times as much as they would in South Carolina.

I consider Mr. Thies' method of working, comprising old-fashioned hand-rubbled reverberatory furnaces and gravity sand filtration, as slow, expensive treatment, and altogether out of date. A Thies plant would make a very poor showing alongside one of the modern chlorination works now operating in Colorado.

Mr. Wilkes' statement that pressure filtration is "a doubtful expedient from an economic standpoint" goes hand in hand with Mr. Thies' statement in the *Engineering and Mining Journal*, some time ago, that chlorinating barrels of over one to two tons capacity were only successful in one or two places in the Black Hills. These expressions are highly ludicrous to those of us engaged in chlorination in the West, who know that five-ton barrels and pressure filtration are used in plants at Gillett, Florence, Colorado City and Boulder, Colorado. The capacity of these plants, together with those in the Black Hills, will soon reach 800 tons daily. Such results would be impossible without the two above essential features.

In conclusion, I would state that the only omission as regards the "credit" of the success of the Gibbonsville plant was that more stress should have been laid on the leading part taken in the work by Mr. Bernard MacDonald, then president and manager of the company, to whom is due, more than to myself, the success of the plant, and at whose request the article was written. C. C. BURGER.

Boulder, Col., June 8, '97.

From Mine to Mint.

NUMBER V—CONCLUDED.

By D. K. TUTTLE, Ph. D., Melter and Refiner of the United States Mint at Philadelphia.

From what has been said about segregation it will be readily understood that a silver ingot is not uniform in composition. In a cross section the center of such an ingot is appreciably richer in silver than the outside surface, which first chilled in contact with the iron mold. The ingot, being a flat bar, is rolled out by the coiner into long strips the thickness of the future coin. The rich center of the bar has now become the rich central line of a long, thin strip, and disks or planchets punched from such a strip will necessary be richer in silver than the scrap.

It will now be easily seen that if the melter and refiner furnished to the coiner silver ingots of 0.900 average fineness, the planchets cut therefrom would make coin above standard.

It has been found by long experience that the silver ingot which will produce standard coin should not assay above 0.899 in silver.

All calculations for amount of copper required in making up silver melts have 0.899 as the final result desired. The problem is still further complicated by the fact that about one-half of the weight of ingots sent to the coiner comes back as clippings and of lower fineness than the average. These clippings are added to each melt of fresh bars when available, and their lower fineness must be allowed for in calculating the alloy required for the bars.

When two rows of planchets are cut from strips, as is the case in quarter dollar and dime coinage, the central line is left intact, and the clips are, therefore, richer than dollar and half dollar clips, from which but one row of planchets have been cut. It thus appears that not only the quantity but the kind of clippings added to the bar melt modify the quantity of alloy to be added.

No two silver bars have the same weight, and they usually differ a few thousandths in fineness, so that the alloy must be calculated for each individual melt. With ten furnaces in operation on ingots, making five or six melts each per day, it will be seen that the calculations required involve much labor, and an interesting chapter might be written on the short-cut methods of wonderful accuracy which the ingenious computer is driven to invent by the constant iteration of similar yet never identical calculations.

Such are some of the perplexities arising from "segregation" in silver copper alloys.

The manufacture of gold ingots is much less troublesome to the computer. The same crucible which has a holding capacity of say 3300 ounces of standard silver will serve for a gold melt of 6000 to 6500 ounces (400 to 430 pounds avoirdupois).

The fineness of gold bars is furnished to the melter and refiner by the assayer to the tenth of one-thousandth.

Bars, preferably of identical fineness, are weighed off in proper quantity for a melt, and placed on a hand truck with a melt number tagged to each little pile of bars. A sufficient number of such are prepared for a day's melting. A chest of drawers mounted on truck carries suitable sized boxes, each having a permanent number plainly marked on it.

The copper requisite for melt Nos. 1, 2, 3, etc., is placed in boxes 1, 2, 3, etc., and the trucks with bars and the one carrying the boxes of alloy meet in the melting room, where the distribution is made, a single melt at a time—bars and alloy—to each furnace.

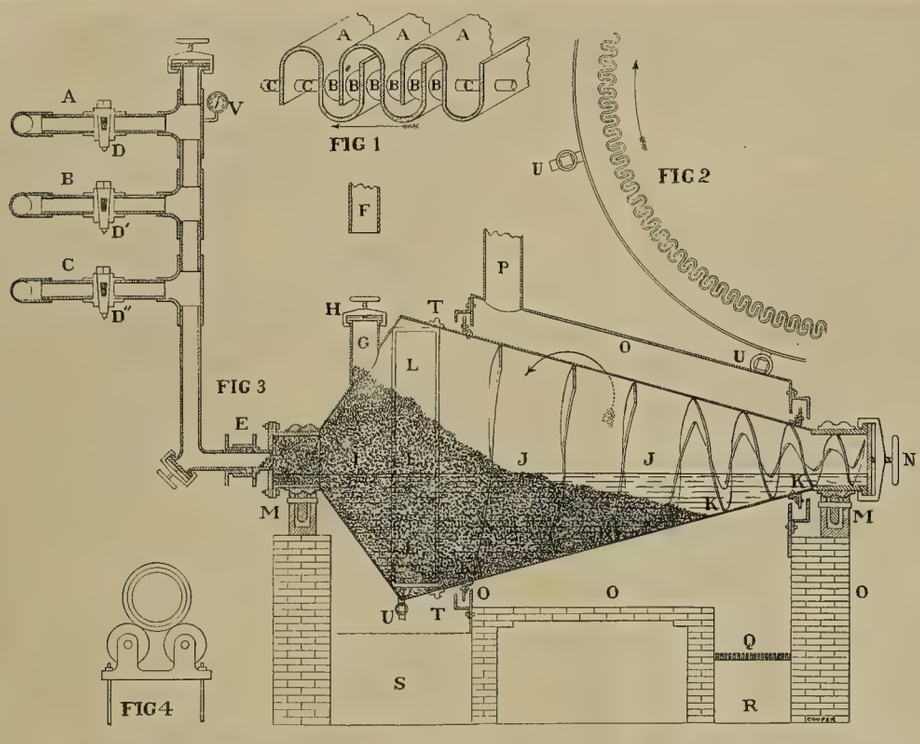
A strict record is kept and the melting room is charged with weight of all metals sent into it in the morning. At the close of work for the day and before the workmen are dismissed all returns from the room, whether ingots, tops, filings, etc., are weighed, when any shortage, real or apparent, will be noted. Of course, the returns never exactly equal the charge sent out, since some little metal will adhere to the crucibles and some will be found in the ashes. This is afterwards recovered as "sweeps." But for the time being these shortages are unknown quantities. Experience, however, has shown what may be expected to pass into the sweeps, and an allowance is made in comparing the charge and returns from the day's work.

"*Sweeps.*"—This is a very broad general term in mint practice, and includes every kind of waste known to contain, or likely to contain, gold or silver, except actual sweepings. The floor of the melting room is swept each day, but the gatherings from the broom are carefully mingled with a suitable flux and thrown into one of the crucibles, still hot and surrounded by the fire left from the day's work. A crucible is selected which has seen such service as to entitle it to retirement from age. On the following morning the contents of the crucible will be found to have "sweated" down, the flux to have fused into a glass, and a lump of metal or "king" will be found at the bottom on breaking the crucible. This king is weighed, credited to the melting room, sent to and charged to the refinery.

The actual "sweeps" consist of broken crucibles and dipping cups, all ashes from the fires, burnt gloves, aprons, sawdust, and packages in which bullion has been sent to the mint, settlings in catch wells and in roof gutters; in short, everything which may contain bullion without its being visible to the eye.

All material of this kind is sent to the sweep cellar, and such as needs crushing is passed under heavy cast iron rollers mounted in a mill similar in principle to the Chilian. The advantage of the roller crushing is that, while brittle materials are reduced to a coarse powder, any pellets of metal will be flattened out and caught in the sifting operation which follows.

These metallic scales are melted down and find their way to the refinery. What passes through the sieves still has value, and, if the product of silver working, it is sampled, assayed, barreled, and sold to smelting works.



If the powdered material is from furnaces in which gold has been worked, it is passed through an amalgamator into settling tanks. The mud from these is dried, sampled, assayed and sold.

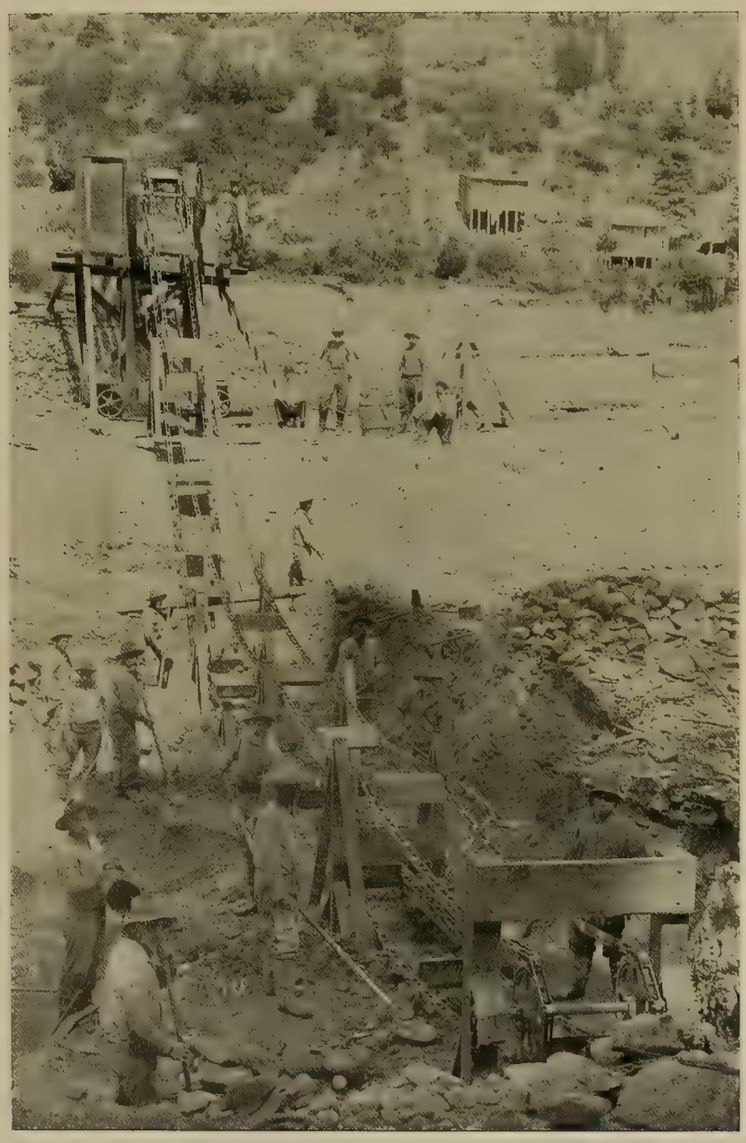
The melter and refiner receives a credit in his bullion account for the amount of gold and silver shown by assay to be contained in the sweeps sold. Sales are made on competitive bids, and the returns from this source at the Philadelphia mint are from $18,000 to $20,000 per annum from sweeps produced in the melting department alone.

Mining Location Boundaries.

TO THE EDITOR:—With reference to mining locations, in one of your leaders of last week's issue, permit me to give you my method of locating on mineral-bearing veins, which seems to me the only rational way and one that must be indisputably correct, and if generally adopted would save any and all future litigations and subsequent disputes. Having found a prospect and the formation being satisfactory, the vein showing a true fissure characteristic with dyke or one wall (I am very partial to eruptive formations), I proceed to mark off my quartz claim approximately correct by rough measurement and in accordance to the mining laws and the requirements of Chapter 6, Title 32 of the Revised Statutes of the United States and the local customs, laws and regulations. I start in to more fully prospect vein and test for values—for free gold samples—with mortar and horn; if sulphurets, determine value by assay, finding also percentage. When I am satisfied my prospects indicate that a chute is present, from my explorations and long mining experience, I get a deputy mineral surveyor and have the said claim correctly surveyed and tied to some Government corner of section line with an exact bearing to some natural object or witness tree, or to the line of some patented mine. Then a map is made, the same sketched and transferred to and into the books of County Recorder kept for that purpose, the map being attached to my notice of location on a reduced scale, being a part thereof, the paper notices being so easily destroyed by wind or rain. I place on the mine a painted notice on tin or zinc, stating name of mine, area, volume and page of county records, and name of locator, so that the passing prospector can see who owns the land; if he wishes to search the records, he has the information to do so. The map on the record book will clearly show him the boundaries, distances and bearings, all being placed thereon. If the original paper notices had been allowed to remain, for even a short space of time, the writing would have become invisible and unintelligible; but by the tin painted sign, securely nailed to a tree or strong post at each end of the claim, would be as nearly permanent as can be devised. The side monuments, being 300 feet from each side of center line, can, if destroyed, be easily found by measurement. I have adopted this plan and precaution and find it works well, and security is accomplished with very little trouble or expense. When a patent is needed the surveyor has all his field notes; the owner is then ready to apply for his patent with little delay. If the new law had been thus formulated, many of the objectionable features would be removed; the $100 of work done during current year; the survey made compulsory; the extra $50 of expenditure, as now ordered, could be done away with; continuous work and development would probably have resulted, as few men would allow such a piece of property to remain unworked. The survey being prima facie evidence that the owner proposed to continue developing, hence no claim would be valid without survey and the proper recording of said plat, should be the law. Then one recording would suffice, which would be positive and absolute. Three months should be allowed a prospector to define the values of his vein; this time should be sufficient to arrive at fair conclusions that his claim is worth his holding and securing properly by this method, or abandon it altogether. W. FRANK DRAKE, E. M.

Sonora, Cal.

A. S. COOPER'S APPARATUS FOR EXTRACTING GOLD AND SILVER ORES BY THE CYANIDE PROCESS.



A Gravel Talings Lift.

For working gravel more new and novel devices have been introduced, probably, than for any other branch of mining. There is illustrated on this page a device put up at the Alturas mine, in Plumas county, made necessary by the want of grade for dump. The bed of Slate creek is worked, and the richness of the gravel enables the owners to work at an expense per yard that could not be borne by the usual gravel banks.

British Investors.

The London *Advertiser* says of American mine investments: "Considerable interest has been taken of late in American mines, and this interest has been increased by articles which have recently appeared in the *Statist* and elsewhere, as well as by the fact that the Exploration Company (with which Messrs. Rothschild are largely identified) bas purchased one-quarter of the stock of the Anaconda Company of Butte, U. S. A., at a cost of $7,500,000, besides a controlling interest in the Helena & Frisco Mining Company of Idaho, the Tom Boy of Telluride, Colo., and others. But it has been noticed that these shrewd financiers have not found it advisable to reincorporate these companies under British law, preferring instead to re-register under the laws of the United States. Other prominent investors have followed their example, believing that gold mining is the only business that is unaffected by panics and international disturbances, gold being the one product that never has to seek a market."

THE California Asphalt Company in Ventura county, California, is expending about $100,000 on its plant there. The asphalt will be shipped East via the ocean route to San Pedro, thence over the Santa Fe railroad.

TAILINGS WORKS OF THE ALTURAS MINE.

Apparatus for Extracting Gold and Silver From Ores by the Cyanide Process.

Invented by A. S. Cooper, California State Mineralogist.

Cyanidation.—Gold and silver are soluble in an aqueous solution of cyanide of potassium when oxygen is present. This reaction is expressed in Elsner's equation:

$$2Au(\text{or } 2Ag)+4KCy+O+H_2O=2AuKCy_2$$
$$(\text{or } 2AgKCy_2)+2KOH.$$

Washing and Neutralizing.—Frequently ores contain oxidized pyrites, acid earths or other objectionable ingredients, which are destructive to the cyanide. Some of these are soluble in water and should be removed by washing, or be neutralized by a caustic alkali or alkaline earth and then washed. The employment of hot water for this purpose would be more efficient than that of cold water.

Temperature.—The activity of oxygen and of the cyanide of potassium is increased greatly by increase of temperature, consequently the solubility of gold in cyanide of potassium is effected by temperature. Exactly what temperature is most effective and economical has not been determined. The gold is dissolved at a considerable rate at a temperature of 80° to 120° Fahr. But, unfortunately, the solubility of oxygen in water is greatly decreased by temperature. At 122° Fahr. the amount dissolved is about one-half of the amount dissolved at 86° Fahr.

Oxygen.—Gold leaf placed on the surface of a cyanide solution will dissolve in a few minutes, and the stronger the solution the quicker it will dissolve. This is in consequence of the oxygen present on the surface. But if the gold leaf is immersed in the solution it dissolves but slowly, the strength of the solution affecting its rate of dissolution slightly. The slowness of the action is owing to the absence of oxygen beneath the surface. By the action of this agitator or mixer each and every part of the ore is brought above the surface of the solution and into the compressed oxygen, and then slowly sinks below the surface. This action can be frequently repeated. Oxygen also becomes entangled in the interspaces of the ore when it is brought above the surface, and then when it sinks below the surface the ore carries the oxygen into the solution, thoroughly oxygenating the solution.

The dissolution of the metals in a solution of cyanide of potassium is in consequence of the action of oxygen which may be absorbed from the air or artificially supplied. Oxygen occurs mechanically mixed with nitrogen in the atmosphere, of which it forms about 21° by volume and more than 23° by weight.

The more cyanide a solution contains the less oxygen or air it will absorb.

Agitation.—Mechanical agitation expedites solution and lessens the time of extraction by quickly diffusing the saturated solution, which immediately surrounds the solvend while it is being dissolved. It assists the water in absorbing the oxygen which is necessary in the chemical reactions attending the cyanide process.

Filtration.—When the extraction is completed the solution of cyanide and gold is separated from the ore by drainage. To be worked successfully, different ores, even ores of the same class, require different treatment as to washing, neutralizing injurious substances, degrees of temperature, amount of cyanide of potassium and oxygen present, and length of time agitated. An apparatus that will effect these mechanical and chemical operations quickly and economically is to be greatly desired. The following described apparatus fills, to a certain extent, the requirements stated above:

Description and Details of Apparatus.—All those parts of the apparatus with which the cyanide soution comes in contact are made of steel. The apparatus consists of a rotary drum formed of two oppositely projecting cones with coextensive bases and sides of unequal angles. The longer cone *JJ* (Fig. 3) forms the body of the drum. The shortened cone *I* is arranged so that the line of its lowermost edge will be almost at right angles to the lowermost edge of the longer cone. A spiral blade *KKK* is located within the longer cone, which, when the drum is turned in the direction shown by the arrow, will force the material toward the shorter cone. The disposition of the shorter cone is such that it performs the work of giving the material forced against it by the spiral blade a tendency to gravitate towards the small end of the longer cone. When the drum is turned in a contrary direction to that indicated by the arrow the material is carried towards the small end of the longer cone, and when the cover *N* is removed the material is discharged. The spent material can be discharged into and carried away by a launder or car. In order to reduce friction the drum revolves on the wheels *MM*, a side view of the same being shown in Fig. 4. A sprocket wheel surrounds the drum at *J*. This is run by suitable power and mechanism so that the drum can be run at the required speed and the direction of its rotation changed at will. The drum is encased in an iron and brick covering *OOOO* into which areopenings to the firebox *A* and ashpit *R* and smokestack *P*. By this arrangement the cyanide solution can be brought up

to the required temperature. When the cover *H* is removed the ore is fed into the drum through the opening *G* from the ore chute *F*. The pipes *A*, *B* and *C* are stationary and are connected with the drum by the stuffing-box *E*. The stuffing-box permits the pipes to remain still while the drum is rotated. Neutralizing solutions and water for washing are conveyed by the pipe *C*, their flow being regulated by the cock *D*''. The cynanide solution is conveyed by the pipe *B*, its flow being controlled be the cock *D*'. Pipes *C* and *B* are connected with suitable tanks. Atmospheric air or other gases are carried by the pipe *A*, which is connected with a suitable compressor or generator. Their supply to the drum is controlled by the cock *D*, and their pressure is indicated by the gauge *V*. Neutralizing, wash and cyanide solutions can be removed to a sufficient extent from the ore by the filter shown in Figs. 1, 2 and 3. Plates of steel (*AAA*, Fig. 1) are bent in the form of the letter *S*, and these are connected together by steel wire *C* and washers *BBBB*. Several wires are put through the plates at the required distances. By this form of construction fluids are permitted to go through the filter, but the solids are arrested by their gravity; especially is this true when the filter is turned in the direction indicated by the arrows.

The lowermost cock of the cocks *UU* is opened and the liquid is carried by gravity through it to waste or received in the sump *S*. Filtration can be accelerated by introducing compressed air from the pipe *A* into the drum and upon the surface of the liquid. A small amount of ore usually escapes through this filter. This can be caught in settling tanks or otherwise and returned to the ore bins or to waste.

This apparatus will wash, neutralize, heat, oxidize, agitate and partly filter ores and solutions in the cyanide process. The ores and solutions are also cheaply and easily handled. Less power is required to operate this mixer than those containing paddles.

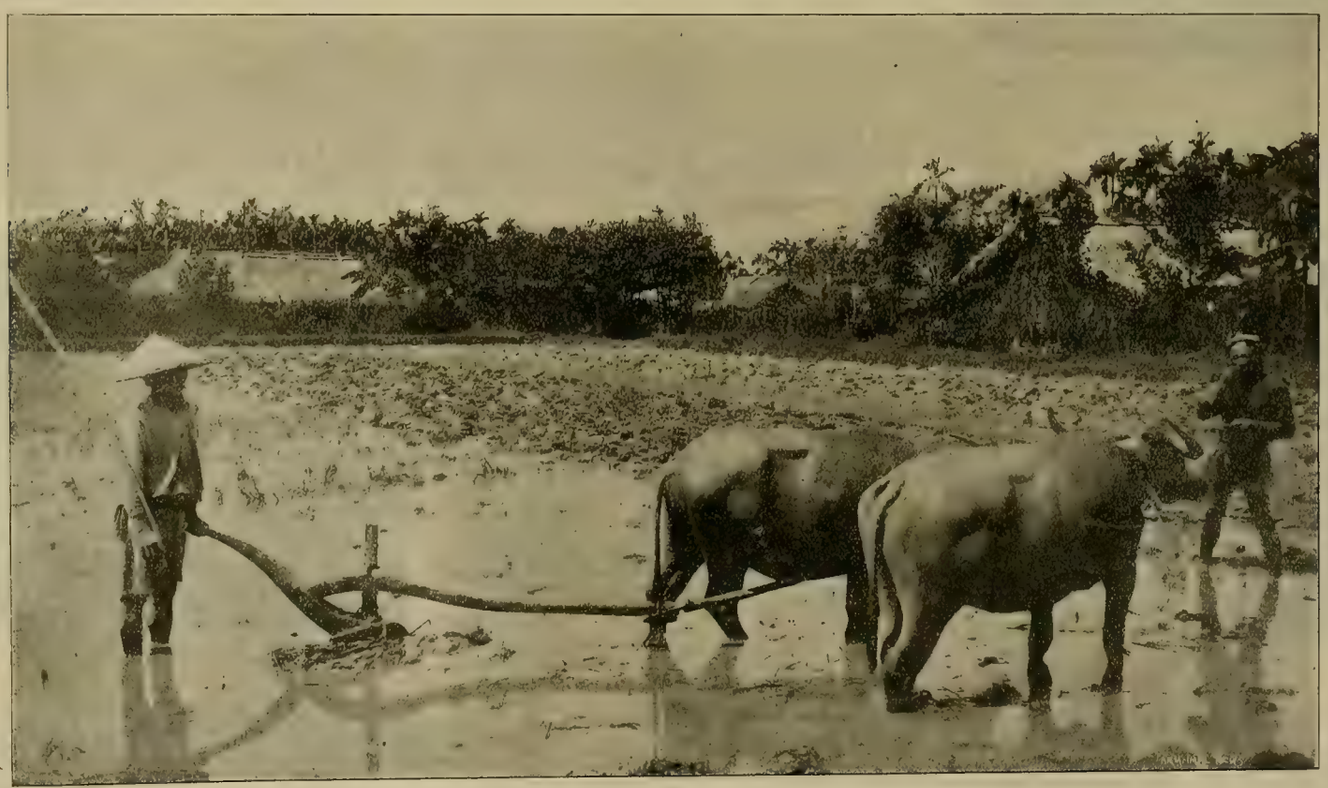
By the use of pumps, pipes and tanks these mixers can be placed in battery of two or more and solutions conveyed from one to the other through the pipes *A*, *B* and *C*, using solutions of different strengths and several times.

UNDER the new Canadian tariff all mining machinery, provided that the same kind is not manufactured in Canada, may enter free. The Kootenay Mine Owners' Association contend that the mining machinery manufactured in eastern Canada is usually of a poorer class than that made in the United States, and it is proposed that a resolution should be passed asking the Government at the next session to put mining machinery on the free list if the Canadian manufacturers did not in the mean time raise the quality of their machines to the equal of those made in the United States.

THE value of the yield of the mines of the Kootenay country, B. C., in ore and matte exported from January 1 to June 19 of this year is returned at $3,374,906.

Japanese Agriculture.

The two illustrations on this page show two very diverse phases of Japanese agriculture. One illustrates the small-scale irrigations which are widely practiced, in which the farmer acts as his own motor for pumping by rigging up a treadmill by which he throws out a small stream from a mud-hole on a river margin to the the low land adjacent on which he has his crop. If this Japanese had a better conception of the utility of domestic animals he could save himself from this everlasting climbing, for a good, heavy dog could do the work if he were properly rigged for it, while the farm owner discussed the Hawaiian question with the lonely lady on the bank. Proper appreciation of mechanical helps would also save the man's time for other pursuits, for probably a rude windmill or a current wheel would be raising water while he slept. But the Japanese will not long be tramping up imaginary hills on treadmills, as they are fast learning progressive arts. We cannot, however, refrain from a single appreciative word for this benighted pumper. It is manly to do the work himself instead of setting his women folks at it, as barbarians would do, and at the same time it is a mark of his intelligent insight that he keeps the gad in his own hand instead of passing it over to the divinity on the bank. The Japanese seems disposed to trust the new woman thus far and no farther.



JAPANESE TREADMILL FOR WATER LIFTING.

The larger engraving shows the Japanese style of preparing rice ground with the water oxen. Rice growing on enlightened lines does not require wading around in a mud hole in this way, and the Japanese themselves have better practices which give them decently tillable ground and submergence when each is needed. But the picture is none the less illustrative of one phase of their work, which an American would never do in the way shown. He might condescend to invent a steamboat, with plows beneath or as trailers, and he would tread the deck with an air of conscious triumph; but to wade around in the mud and malaria, exhorting a pair of rebellious cattle, an American would never do, even if he had to run for office to avoid it.

An Arizona Copper Mine.

The United Verde mine of Arizona is producing about 2,000,000 pounds of copper per month, and, according to C. M. Rolker, in an interview in the Salt Lake *Tribune*, will before long output six times as much. "It is rather startling," he says, "to think of the effect on the price of copper that will be produced by such a tremendous increase in the supply. The consumption will have to be wonderfully increased to prevent the price from going down." At the rate predicted the yield from this mine alone would be 360,000,000 pounds per year. The total production of copper in the United States in 1895 was about 385,000,000 pounds, and in 1896 470,000,000 pounds, over half of which went abroad. The main hope of sustaining prices of copper lies in an increase in home consumption. This promises to grow very fast.

IT has been suggested by the Kootenay, B. C., Mine Owners' Association that the government be asked to set up monuments to which surveyors may tie up their work in surveying mineral claims. This would do much to prevent unnecessary litigation over titles to property.

JAPANESE PLOWING RICE LANDS WITH PRIMEVAL PLOW AND WATER OXEN.

The Finlayson Wire Rope Tramway at the Noble Five Mine, Sandon, B. C.

The Finlayson patent wire rope tramway, manufactured and controlled by the Colorado Iron Works Co. of Denver, Colorado, is a tramway of the double

Fig. 1.—Trestle—Leaving Upper Terminal—Side View.

rope type, automatic in the matter of attaching and releasing the buckets from the running or traction rope. C. T. Finlayson, of Denver, has patented this device, in which the buckets are attached and detached from the traction rope automatically, and the

Fig. 2.—Derrick Construction From Timber on the Ground.

buckets dumped automatically, with a view to lower cost in handling the product.

The Noble Five Consolidated Mining & Milling Co. are operating a group of five claims, located near Sandon, British Columbia. Their line was 6200 feet

Fig. 3.—Looking up the Line From the Mill.

long, with a fall in that distance of 2100 feet; the tramway was to carry 20 tons per hour. The very steep grade and tonnage seemed to require that it be constructed in two sections. The Colorado Iron Works Company held that the line could be constructed in one section, the product handled automatically, and at the same time the line be operated successfully at a low cost for transportation. They were awarded the contract, and work commenced about December 1st, 1896, and on January 14th, 1897, the tramway was in active operation, carrying the ore without any difficulty, the automatic features working satisfactorily. The Noble Five Consolidated M. & M. Co. did the construction under the supervision of Mr. Finlayson.

In the Finlayson system, the clips, to which buck-

Fig. 4.—Lower Terminal—Empty Bucket Going up.

ets are attached, are placed on the traction rope, spaced as tonnage demands. They are never taken from the rope. The clip casting is 8 inches long, and is held securely to the rope by means of dropped forged bands, which encircle the rope at either end of clip casting. This casting is of steel. The bands have the lay of the rope forged into them, so when they are brought around the rope their projections fit the rope strands exactly, and when riveted into

Fig. 5.—Tension Station—Middle of Line.

the clip casting it is claimed to be an impossibility for the clip to slip on the rope, no matter how heavy the load, or how steep the grade. It will be noticed, in attaching these clips to the rope, that all hold on the rope is taken from the outside, and by having two distinct holds on the rope, besides giving a double factor of safety, there is no liability of the rope making a short bend, and thus causing undue

Fig. 6.—Looking up From Tension Station.

wear when the clip is passing over the carrying sheaves. The hold of rope being entirely on the outside, is a very important item, as it relieves all possibility of stranding the rope.

The buckets, to which these clips attach themselves, are in the standard sizes of a capacity of four and a half cubic feet, and are hung from two pendant arms, which in turn are hung from a walking beam casting, at either end of which are the carrying sheaves which travel on the standing rope. When the line is in active operation, there are always two more buckets on the line than are actually attached to the running rope, one being at the upper terminal in the accelerating carriage, either ready to load or unload, and one at the lower terminal, either dumping or dumped.

At each terminal is an accelerating carriage, and

Fig. 7.—Looking Down From Upper Terminal.

the action of each is identically the same. Hung between the pendant arms of the bucket is what is called the "grip frame." This frame contains the automatic attaching and releasing devices. As the upper bucket comes into the terminal it passes around terminal wheel and into the releasing rods. The rods force the grip up and the clip then passes out of the grip frame and on to the accelerator. It must be borne in mind that the loaded bucket is in the ac-

Fig. 8.—Lower Terminal—Carrying up Mine Timber.

celarator carriage, and is waiting to be attached to the clip on the running rope just released from the incoming bucket. As the clip comes in contact with the accelerator, it starts the same gradually from a dead stop to the full speed of the rope. In doing this the full bucket is started and attains the same speed as the running rope. As the bucket attains this speed it is attached to the clip on the running

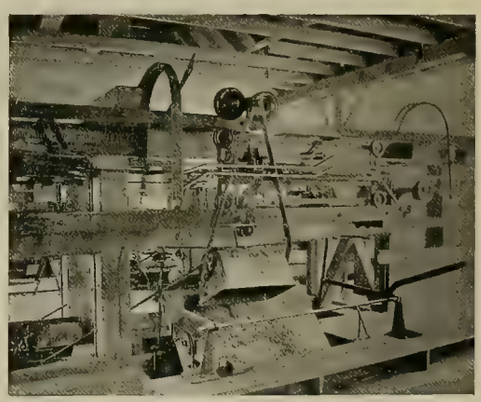


Fig. 9.—Lower Terminal—Automatic Dumping.

rope, which has thrown the accelerator out of the way. At this point the attaching rods force the grip frame down and the grip has attached itself to the clip. The bucket passes out of the terminal and on down the line. The accelerator carriage, in moving along with the accelerator, has moved the empty bucket up to the former stationary position of the loaded bucket, and in the carriage returning

to its resting position has taken the accelarator back to its proper position for again starting the bucket as the next clip comes around. The patentee asserts that this is the only device in the tramway line that attaches its buckets to the running rope at the same speed as the running rope and doing it automatically.

It will be noted that the grip catches hold of the clip and does not in any way take hold of the rope.

Fig. 10.—Looking up the Line From Mill.

As a rule, a bucket with its load weighs about 900 pounds. The ordinary speed of running is from 250 feet per minute to 300 feet per minute. In doing this work automatically it saves labor, and does away with excessive wear and strain.

On account of its flat construction the Finlayson clip can run over or under a carrying sheave, just as desired. In being able to do this the necessity of making extremely long spans is avoided, and by this

Fig. 11.—950 Feet Span—Buckets 450 Feet Above the Ground.

means the cost of construction is lessened. In the method of carrying the running rope the strain on the grips is reduced to the minimum. As this traction rope is carried on sheaves at the towers, and is always carried at exactly the same distance from the standing rope, this relieves the gripping arrangement at the bucket from carrying the entire weight and strain of the traction rope and puts it where it

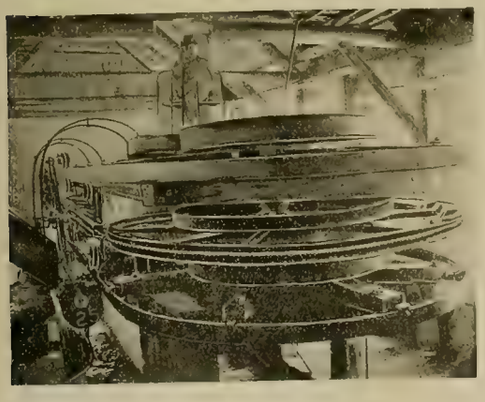

Fig. 12.—Upper Terminal.

can be taken care of with no damage whatever. The clip being able to pass under or over a sheave, lessens the cost of construction, as it enables both terminals to set on a level, and, in doing this, admits of much less material going into construction.

At the terminals are the large terminal grip wheels, around which traction rope runs. These grip wheels lie horizontal, and in face of same are the clamps, which take hold of the rope and admit of having tramway under perfect control at all times, as brake wheels are attached to upright shaft, which passes through brake wheel and grip wheel. As rope enters the grip wheel it is clamped or rather forced to the upper rim of grip wheel; it is held in this position until grip wheel has made half a revolution, when rope, running off of a true circle, is automatically released from the grip wheel. These grips are put into wheel as often as is required by the conditions of grade and load. Special arrangements have been made to take care of the tension on each standing rope. The slack of the traction rope is taken care of at the lower terminal.

At the lower terminal the dumping arrangement is attached. The empty out-going bucket dumps the loaded one, tipping the bucket completely over, thus insuring a positive spilling of its contents. The buckets are released and attached in exactly the same way as at upper terminal. The dumping attachment is positive in its action. As stated before, buckets are not taken off of the line to load or unload, unless it is desired. If this be the case, switches are arranged so that this can be done, buckets, however, being released and attached automatically.

The route over which this tramway runs starts at ore bins, which have been erected just below mouth of tunnel No. 4. All ore from upper levels is conveyed in chutes to this level; here it is taken in ore cars to bin, and from bin it is loaded into buckets, as is shown in Cut No. 12. This cut shows bucket loaded in accelerator carriage waiting to be attached to clip. Owing to the steepness of this line, it was necessary to place three break wheels on upper terminal shaft. As bucket leaves terminal it travels on frame work, Cut No. 1 being a side view of same, and Cut No. 7 being a top view. In these cuts it will be seen how the running rope is carried on the sheaves, bucket No. 39 is just about leaving frame work, and will run onto the standing rope and then on down the line. Bucket No. 41 has just come up the line and is on its way to terminal, where it will be automatically dropped from running rope at accelerator carriage, and bucket No. 40, loaded, being picked up. Bucket No. 41 shows clip in grip frame. Cut No. 11 shows buckets crossing the Noble Five slide. This span is 900 feet long, and it is 400 feet from bottom of gulch to the top of standing rope.

Cut No. 6 shows line, looking up from tension station, the long span being between the second and third derricks shown. No. 5 shows tension station with bucket No. 18 coming down loaded. As this bucket reaches the station, it will run from standing rope to rail, rope passing down to weight box, and, on running off of rail, it will run onto second section of standing rope. This cut also gives a view of sheave carrying traction rope. No. 4 shows empty bucket going up the line, having just left the lower terminal. No. 8 shows log going up the line in timber hooks, and also shows running rope on under side of carrying sheaves. No. 2 shows derrick construction. No. 9 shows interior of lower terminal and bucket dumped. This cut shows accelerator carriage, accelerator and releasing and attaching rods, and back view of grip frame on bucket 32. Bucket 31 shows front of grip frame. No. 10 shows mill and entire line. No. 3 shows mill, with office building and freight cars. Having seen upper terminal (Cut No. 12) and freight cars (Cut No. 3), one can readily understand how the Noble Five handle their product from the time the ore is dumped into bins at upper terminal. It is handled automatically, until the sacking floor for the concentrates is reached; here the product is sacked, loaded into the Kaslo & Slocan R. R. cars and sent to market.

Mr. R. M. Sherman, general manager of the Noble Five Co., tells the Colorado Iron Works Co. that all up-freight and supplies for the mine were carried on tramway and the saving thus affected paid operating expense of tramway, a large estimated wear and tear account and the interest on the investment, thus carrying their 480 tons of material every twenty-four hours for what they would have to pay for packing up freight alone.

One of the treats in traveling through the Slocan country is a ride over this tramway line. At lower terminal one is suspended nearly 700 feet in midair over 50 feet from the ground, then passed over derricks, crossing a snowslide over 400 feet between derricks, passing the tension station and over the big slide. Here, as a rule, the passengers are treated to a stop of a moment to appreciate the scenery, as well as the sensation of being hung up in midair 400 feet from the ground and on a wire rope 900 feet between supports, again moving along to the upper terminal, where a stop is made to observe how handling ore is automatically done, again climbing into the bucket, shoved into accelerator carriage and with no jar in starting speed down the line, recrossing the long spans and reaching the lower end in safety, having in forty-five minutes an experience which can be talked of for the rest of one's life.

The Colorado Iron Works Co. are now filling an order for one of the Finlayson patent wire rope tramways, 8300 feet long, which will be placed on the Sunnyside mine, near Silverton, Colo., and operated by the Terry Mining & Milling Co.

Suggestions as to River Dredging for Gold.

TO THE EDITOR:—I am pleased to see in your last issue Mr. Jno. Richards' letter about river dredging for gold. He being an authority on the centrifugal pump, what he says on that subject is well worth considering; the more especially, as developments in Feather river, both by the Pearce and McLaughlin companies, have shown that in the rocky canyons of that river the gold cannot be got in sufficient quantity to pay the cost of extraction.

But that is no reason, as Mr. Richards says, why gold may not be got in other places to pay, especially where the grade of the stream is moderate and the width considerable, having the right kind of bedrock.

Mr. Richards ascribes the failure of the Oroville scheme to want of evolution, which is the fashionable way of saying it was due to gross ignorance of the natural pneumatic principle that air will rise through water.

Now, Mr. R. thinks that with the use of methods which are no longer experimental, the gold which L. L. Robinson could not get can be got now at a profit.

No engineer will challenge that statement, coming as it does from such a careful, conservative and capable authority as Mr. Richards. At the same time, those who knew Mr. Robinson will be apt to think twice before making the attempt to find gold where he failed.

There are no great difficulties to be encountered in dredging fine silt or gravel from a soft or smooth bottom, but when the bottom of the river is a crystalline rock formation of a very ragged character, containing boulders from 100 pounds up to 100 tons weight, the difficulties then become such as require engineering skill and capital to overcome. But, strange to say, Mr. R. does not say how these difficulties are to be overcome, nor does he mention the only method whereby they have yet been overcome, viz., by the Evans hydraulic elevator.

What we would like to know from Mr. Richards is whether he would prefer to use the centrifugal pump in preference to the hydraulic elevator in dredging gravel where, as he says, "the boulders are such that one person's idea is to pass them through the pump; another, to raise them by separate tackle or apparatus; a third, to move and stir but not to raise them."

An answer to that question will enable us to form a fair idea of the feasibility of Mr. Richards' scheme to extract the gold at a profit from the Oroville bed of the Feather river. ROBERT STEVENSON.

San Francisco, June 15th, '97.

What the Telluride Ores Look Like.

Before me as I write is a box full of very rich gold-bearing telluride ores, lately come from Cripple Creek. Some of the rock has been heated, and the gold roasted out onto the surface in little round bubbles of bright yellow metal; it looks as if the rock had broken out with a violent rash of gold pimples. The remainder of the specimens are in the unaltered gray rock (presumably phonolite) just as they came from the mine. The general appearance of this telluride-bearing rock is that of a dull gray, fine-grained homogeneous mass, occasionally streaked or clouded by darker gray lines of greasy looking quartz, characteristic of what is called tellurium quartz. This is on one surface of the rock, the other, which doubtless faced the interior of the vein, is full of little cavities lined with yellowish green botryoidal quartz, upon which, here and there, are little round yellowish balls that on fracture show a starlike or radiated structure, and are probably some form of zeolite, such as wavellite. Running in and out amongst these miniature cavities, or partly surroundnig them, there appears to the naked eye a sparkling network or lace work of the bright shining tin file fakes and crystals of telluride. Sometimes these are aggregated into a brownish moss-like mass, at other places individual flakes or blades, or crystals of telluride are scattered all through the gray mass of the rock, or follow certain ill-defined minute gray seams in it.

The telluride crystals might almost be taken for native silver, only the lustre is brighter and more tin-like. The rock is sometimes quite a dark lead gray, from which the little specks of telluride glitter brightly. Under the magnifying glass the appearance of crushed masses of these tellurides reminds one of gray copper, (tetrahedrite), only of a brighter and more tin-like lustre. The magnifying glass shows sometimes a sort of columnar grouping of crystals, at others a lamellar structure like crystals of mica. They seem at times to be burnished as if oxidized, generally it is hard to make out distinct crystalline forms only broken crushed masses, glistening flakes and burnished blades. The appearance of the roasted out gold under the magnifying glass is very brilliant. The little bubbles of gold are hollow, the outside or crust of the bubble is of rough filagree bright yellow gold.—A. Lakes in Colliery Engineer.

Mining Summary.

CALIFORNIA.

Amador.

(Special Correspondence).— The Reward mill started its ten stamps again last Tuesday, after being shut down for two weeks. A new ore body over 20 feet wide has been opened by a 400-foot tunnel, but none of the rock has yet been tested in the mill.

The new 6-foot mill has been put in place at the Robinson or Monte Cristo mine, near Volcano, and is expected to begin crushing ore about the 1st of July.

The recent unwatering of an old shaft on the Mitchell mine, near Pine Grove, disclosed a ledge from 6 to 15 feet in thickness, carrying a small amount of free gold, with considerable additional value in the sulphurets.

The Marklee Mining Company has about concluded negotiations for a complete plant of machinery needed in reopening that mine five miles northeast of Volcano.

It is reported that the Fogus mill will start again very soon, with plenty of good rock in sight. Mr. W. S. Lyle, one of the trustees of the State Mining Bureau, Superintendent.

In the district round about Pine Grove wood for fuel is worth $3.50 per cord, delivered at the mines. Water for power costs about 15 cents per inch for a twenty-four hours' run.

Heavy teams—generally ten horses or mules—are now busy hauling mine timbers to the larger mines on the Mother Lode. Many of these teams pass Pine Grove nearly every day.

Pine Grove, June 22, '97.

Republican: The Zeila mill will not be started during the present month. Considerable work must be done in the shaft yet before rock crushing will again be resumed.

At the Anita a heavy flow of water was struck a few days ago, which has gradually gained on the pumps ever since. It is thought that with the present pumping facilities the water cannot be handled. This flow of water is considered a good indication.

Gates & Groome are erecting a tailings saving plant below the site of the Argonaut mill.

The Doyle Gold Mining and Milling Company has been incorporated by W. R. S. Foye, A. W. Bogart, C. D. Olney, L. B. Doe and C. E. Elliot, to work the Doyle mine on the mother lode at Jackson.

Ledger: The death of W. B. Carr caused the cessation of operations in the Gover, but Mr. Purrington soon had new capital interested, and the work of taking out the accumulated water was commenced by starting pumps and skips Monday, June 7th.

Butte.

Mercury: The Consolidated Gold Mines of California have received a boiler for the Banner mine.

The depth of the Banner mine is being increased. They will now sink to the 1700 foot level. The mill is crushing ore from the Clark & Coffee and Amosky mines. New hoisting works are in course of erection on the Clark & Coffee mine, the pumps are being lowered into the Golden Feather, and the steel derricks are in place and are being operated with compressed air—they used steam last season. The Golden Feather will be pushed hard this season; three shifts of eight hours each will be worked. In this way no time will be lost; this gives an additional force of men employment in this mine—seventy will be employed in lieu of fifty last season. The Banner mine will also handle seventy men.

The Pete Woods mine will also be re-opened in the near future—probably within ten days—with an increased force of men.

The Consolidated Gold Mines, George H. Evans, manager, will do some active work this season.

El Dorado.

Nugget: At the Pocahontas they are sinking on the 500-foot level and prospecting the property.

At the German they are getting out good rock. They are on the 100-level and sinking.

E. A. Stent has purchased from H. Koerner some properties near the Griffith Consolidated.

Encouraging reports come from the Griffith Consolidated. In the tunnel and on the 250-foot level the rock is showing up well.

In Garden valley E. W. Ashton, late of England, is making arrangements for timbering and sinking the shaft of the Garden Valley G. M. Co., known as the Esperanza.

F. M. Bell has bonded his mine, the Lady Emma, to a company in San Francisco. Work has already begun, the power being generated by steam.

The Big Four mine is being pumped out by a company in San Francisco, with the intention of buying.

Calaveras.

Prospect: At Murphys a company has recently bonded the Rocky Bar and are taking out a test crushing from the levels.

A recent milling of a few tons from the Mexican mine yielded very well and was in every detail satisfactory to the gentlemen who have it under bond.

At the Gwin it is announced by Superintendent Thomas that the result of the clean-up for last month was a block of gold weighing 152 pounds. The 40-stamp mill is kept running steadily and the works are all illuminated by electricity. Preparations are under way to pump out and repair the old south shaft, after which 60 stamps will be added to the mill, making 100 in all.

A bond has been secured by Colonel Robinson on the old Western quartz mine at Mokelumne Hill and the work of developing the property will be begun at once. This property yielded some rich ore in early days, but it had been abandoned for upward of thirty years. The colonel, having heard that a rich ledge existed there, cleaned out one of the old shafts and found at the bottom of the hole, without sinking a foot into the quartz, a large body of ore that will mill at $9 to the ton. It also shows a good quantity of galena sulphurets. As there was any quantity of the same kind of ore in sight, and as the ledge seemed to hold out well with sinking, a 10-stamp mill was purchased at Plymouth, which will be put up at once.

Arrangements have been made for the survey for an incline shaft 1100 feet deep for the Madison mine. It will be started on Gold Cliff ground, running down at an ang'e of 40°, and striking the north drift on the 900-foot level of the Madison.

Chronicle: At the Esperanza mine the shaft has reached a depth of 580 feet and the work of sinking is going steadily on. Good rock was encountered on the 400-foot level, still better on the 500, while in the bottom of the shaft the best rock in the mine was found.

Inyo.

Register: Southern Inyo is now receiving marked attention at the hands of persevering prospectors. As a result of their labors several new districts have been opened up with a very promising outlook for future prosperity, although not yet far enough advanced to determine their stability.

The Lane mine at Darwin is working three 8-hour shifs.

Mr. Newman of Tulare lately located 160 acres of placer ground in Mazourka canyon, east of Independence. It is the intention of himself and associates to run a long tunnel to secure a water supply, and develop the property on an extensive scale.

Nevada.

(Special Correspondence).—The Maryland mine keeps thirty-five stamps busy. When operated by the Idaho Company, it produced a little over $12,000,000, half of which was paid in dividends. It is a continuation of the Eureka vein, from which over $17,000,000 have been extracted.

The North Star mine, abandoned many years ago as being worthless, is still in operation, another evidence of what may be accomplished by the judicious investment of a little capital. In 1884 it was re-opened, and has since produced nearly $3,000,000. At this time it is worked chiefly on the tribute system.

The Empire mine, the oldest in operation in Grass Valley, has been developed to a depth of over 2,000 feet, and the vein at that point is very productive, keeping the 40-stamp mill busy. This mine has a recorded production of nearly $6,000,000.

The Omaha Con. is one of the great producers of this district.

The Bullion Consolidated, comprising the John Bright, Galena, Ione and Alaska claims, is developed to a depth of over 800 feet.

The W. Y. O. D. mine still continues production. It is equipped with milling, hoisting and pumping plant capable of developing it to a depth of 3,000 feet.

The Massachusetts Hill mine is in full operation, employing a large number of men on tribute and day's pay. The company has determined to sink a shaft midway between the North Star and Massachusetts Hill mines, to be known as the Central mine. A hoisting and pumping plant will be erected on the property, and it is expected the vein will be tapped at a depth of from 500 to 700 feet.

The Gold Hill mine has been re-opened. It is located on the ground where gold quartz was first discovered in California. At a depth of 500 feet over $4,000,000 was produced.

It is stated that underground operations will soon commence at the Allison Ranch mine. For over a year preparations have been going on for the resuscitation of this mine. It is now supplied with machinery capable of developing the property to a great depth. The mine is now owned by Mackey, Flood, et al., and much will be expected from it. It has been idle for thirty-five years, but during the time of its operation it produced a great amount of gold. In October, 1855, a crushing of 18 tons of ore yielded $6,000, while in December of the same year a crushing of 62 tons yielded $23,000. Mr. Mackey is expected to spend the summer in Grass Valley, and will give personal attention to its success.

Supt. Brockington is pursuing the developments of the New Orleans mine, which is situated between Ophir Hill and Osborn Hill, and is generally supposed to be an extension of the Empire vein.

At the Pennsylvania mine it is stated that every ton of rock extracted from the vein will yield $45, exclusive of sulphurets. For eight years the stockholders paid assessments prospecting and developing the mine, and when it is remembered that the company is composed mostly of Grass Valley and Nevada City business men, it must be acknowledged that they are deserving of all they receive. The shaft is down over 800 feet. It is expected that great improvements will soon be made on the property. John Eddy is the superintendent.

The Gold Hill mine, now the property of the Weissbien Bros., was recently leased to a party of Grass Valley miners for three years. It is their intention to re-open the shaft which is now 200 feet deep, and repair the plant, and push development. This mine has produced well in the past.

Not since quartz mining was placed on a practical basis have so many men been employed in the Nevada City mines. Next to Grass Valley, this is the largest mining town in the State, having an approximate population of 6000. It is also second in point of gold production. The quartz veins of this locality do not contain the same percentage of free gold, but are more highly mineralized than the Grass Valley veins, containing in some instances from 40 to 70 per cent of mineral. The sulphurets are also higher grade.

The Champion is a consolidation of several mines and ledges, and is very productive. The shaft has reached a depth of 1800 feet, with a promising vein in the bottom. Work is being prosecuted at several different levels and the ore extracted is of a good grade. Two hundred men are on the company's payroll, and over $15,000 is disbursed in wages every month. The mill has seventy stamps busy night and day. Some time ago it was reported that the London Exploration Co. was about to purchase the mine and had made an offer for it. The negotiations fell through, however, because of inability to agree on the figure which represents the true value of the mine. Fred Zeitler is the superintendent of this mine and he has transformed it into a dividend-paying mine.

The Providence mine, one of the oldest quartz mines in the State, is opposite the Champion mine on Deer creek, and is in a prosperous condition. Up to the present time nearly $6,000,000 has been extracted, and there is yet plenty in sight. The mine has been developed to a depth of nearly 2000 feet, and the vein at that depth shows as strongly as at any other point. There is a 40-stamp mill on the property, which is steadily employed reducing ore. A year ago the chlorination works were destroyed by fire, causing much loss and inconvenience to the owner. A new plant is building. The Providence is a steady dividend payer and for over two years has been under the management of William McKinley.

The Mountaineer mine three years ago was allowed to fill with water, the company having turned their attention to some new ground which they had purchased. A year later new machinery was put in and the shaft pumped dry, sunk 400 feet and levels driven from each side. W. A. Dennis has been the superintendent of this mine for the past ten years.

At the Cadmus, owned in San Francisco, work progresses. A 10-stamp mill and an air compressor have been put in.

At the Summit mine development work is being pushed. This mine was bonded some time ago by F. W. Page for a company and the sale recently consummated. The price was $50,000. The shaft has been sunk several hundred feet, and drifting on the vein is in progress. The ore in this mine is high grade. The property is under the supervision of Capt. Geo. A. Nihell.

The Reward mine, presumed to be an extension of the old California vein, is producing some good ore, and employing a number of men.

The Mayflower mine continues to be a bullion producer. There is a 20-stamp mill and a fine plant on the property. It is managed by W. H. Martin.

The Kirkham mine was bonded some months ago by a party represented by John Buffington, who is the superintendent. They have concluded to erect a hoisting plant and a 10-stamp mill.

The Murchie mine, at one time a profitable bullion producer, is still in operation under the supervision of A. W. Blundell. Development work is going on.

The East Harmony and West Harmony gravel mines are extracting good gravel.

There are several smaller mines in operation here, all of which tend to benefit the town commercially and financially. In other portions of the county the outlook is very promising, many hydraulic mines having reopened under the Caminetti act. In the Washington and San Juan districts quartz mining is quite active and some beneficial results may be expected.

June 15, '97.

Colfax *Sentinel*: A company of capitalists from Salt Lake and San Francisco have acquired a number of claims in Meadow Lake district and are negotiating for a smelter to be erected on the South Yuba river near C. P. Railway.

B. A. Cardwell & Co., who secured a franchise from the supervisors of Nevada county to construct a toll road from Cisco to Meadow Lake, have the work well under way and are working a force of twenty-six men. The road is now complete seven miles from Cisco to a point near Old Carlysle at Old Man Mountain. At this point the town site of Cardwell, three miles from Meadow Lake, has been located. The road will be completed into Meadow Lake in about ten days.

The company expects to secure a franchise from the supervisors of Sierra county to extend the road to Sierra City, making the distance from Cisco less than thirty miles.

Quite a number of mining men and prospectors have gone into the Lake district. The California Gold Mining Company, of Salt Lake, own the Washington, Crown Point, Oakland and others. A force of men have been employed and development work commenced.

C. A. Shaw, representing Los Angeles capitalists, has bonded some claims and expects soon to commence work.

Colonel Blakeley, of South America, has representatives in the district who have taken hold of some claims with a view of developing them.

A number of mining men from Salt Lake will visit the district about June 20th.

Roy Bemis, of Salt Lake, is in camp. Austin Bemis, who represents a Salt Lake syndicate, has been there this week.

Several matte furnaces and concentrators will be erected in the district.

John Clark, George Clark and Jos. William, who have had faith in the camp for many years, went in last week to commence work on properties held by them.

Telegraph: Some time ago the machinery at the Brunswick mine broke down and in the delay of repairing considerable water accumulated. But now the mine is clear of the water and the work of mining has been resumed.

Corporations have been formed by Andreas Goetz, Jose Ruiz Rojas, Charles Stepp, Gustav Ruiz Rojas and Carl Goetz to work the Texas and Minerva mines.

Union: The Norambagua mine, at Forest Springs, was worked in early days by a Sacramento company consisting of Newton Booth and his partners, at which time there were 100 men employed. It is now owned by Wm. Campbell. It is a small ledge, but the old pay shoot was 1000 feet in length. Recent work has been done on another shoot which is 300 feet long.

Placer.

Sentinel: At the Pioneer a short time ago a rich pay chute was struck on the Lynn vein in the lower tunnel known as No. 4. The chute is now over 100 feet long. The vein has been from two to six feet in width, and still shows a width of four feet in face. No. 4 tunnel is 510 feet below tunnel No. 3. The dip of the ledge will give the company considerably more than 500 feet of backs to stope. The company owns fourteen mining claims, covering an area of 300 acres. Pioneer quartz mine has for years been a heavy producer.

The Blue Canyon Mining Co. have ceased hand work in the tunnel, which is now in 422 feet. They are preparing to put in a compressor of 30 H. P., to be used to run two power drills.

Nine men are engaged working on leases at the Paragon mine at Bath. The company has 11 men at work.

The Dorer mill in Humbug Canyon, seven miles from Towle, is steadily running on custom ore.

Plumas.

Independent: The Eastern owners in the California Gold Mines and Investment Company have been inspecting their property at the old Taylor diggings, and they express themselves as pleased with the prospects, and desirous of pushing work as soon as the suit now in the courts can be terminated. This company possesses a large bank of auriferous gravel and exceptional water facilities, which can be largely augmented at a comparatively slight expense. The result of their run last year was satisfactory.

J. B. Sutton will begin the development of the Blue Ball channel struck near Quincy last fall.

Shasta.

Free Press: Cannon & Hanley have been developing a body of ore on Tom Neal creek, between the Sacramento and McCloud rivers. They have had four men at work this spring, and have run an 80-foot crosscut tunnel which tapped the ledge at a depth of 200 feet. They will now run another tunnel 400 feet to crosscut the ledge at a depth of 700 feet. The ledge is 13 feet in width and the ore carries free gold.

F. R. Enright, superintendent of the Afterthought smelter on Cow creek, is repairing and improving the smelter furnace, preparatory to a season's run. The furnace, which is the steel water jacket pattern, was not completed until late last fall, and, owing to the early rains, the plant was closed down until spring. During the winter months considerable ore was taken from the mine and roasted. The ore is very similar to that of the Iron Mountain mine. They now have 1000 tons of roasted ore on hand, and, as soon as the work on the furnace is completed, it will be started up. The plant has a capacity of thirty tons per day and was erected as an experimental one.

A bond entered into last November by Panter & Berr, owners of the Garfield quartz mine at Old Diggings, and A. Walrath of San Francisco, was given in consideration of $2000, to apply on the purchase price of the property, in the sum of $50,000. Mr. Walrath was required to perform $3000 worth of development work.

A rich strike of sulphide ore was made a few days ago on Muletown mountain on the property being worked by the London Gold Tunnel Company. An outcrop of ore near the mouth of the tunnel which the company is running was opened by blasting to a depth of 4 feet, showing a solid mass of sulphurets, which later excavations show to be about 60 feet in width. This mass of sulphide is shown by the limited tests made to carry a paying percentage of gold, silver and copper.

The Milkmaid Mining Company has been incorporated to work the Milkmaid mine, at French Gulch, recently purchased by Senator Jones and Lon Hamilton.

The stations on the new ropeway from the Mammoth-Garfield mine in Old Diggings to the smelter of the Mountain Copper Company, at Keswick, have been completed, and on Wednesday the work of stretching the cable was begun. The entire plant will be in operation in less than two weeks.

At Kennet there are eighteen men employed at the Windy Camp mine. The ore is richer in copper as depth is attained, and it holds the usual percentage of gold and silver.

Sierra.

(Special Correspondence).—The Butte Saddle mine has two tunnels, both on the ledge, the upper 100 ft., and the lower, 1100 ft., with 215 ft. backs. There is a 10-stamp mill 6,000 ft. below the lower tunnel, connected with it by a rope tramway. The ledge averages 7 ft. in width, and mills $8 exclusive of sulphurets. There are no concentrators. A recent assay of sulphurets yielded $306 per ton. The works were closed one year ago, probably not so much on account of discord, as a want of means to run a much needed lower and longer tunnel. The company began without any capital, and erected a 10-stamp mill and all the other improvements. T. J. Seitz is the principal owner. The property is in close proximity to the rich producer known as the Sierra Buttes. The formation is slate and porphyry. Water right accompanies the property.

The Bullion group comprises eight claims, and is 3½ miles northwest of town. The country rock is greenstone. There are two tunnels, the lower cross-cutting the ledge at 1,000 ft. The upper tuunel is 1,200 ft. long on the ledge. The property was worked under lease and considerably gouged, though all the work was confined to one claim. The other seven are still virgin ground. The ore by mill test averaged $7.50. The sulphurets are impregnated with galena. The property is idle for want of capital. It is owned by F. J. Cook, Spellenberg & Devine.

The Phœnix, with a good record as a pro-

ducer, fine mill and excellent buildings, is in litigation.

Few camps can produce a longer record of good properties which men sought to operate with either a limited knowledge of mining, or a too limited capital, or both; but the merit of the ore bodies, the modern business methods of mining and milling should not be long in bringing them into successful operation, and into producing mines. J. F. L.

Sierra City, June 19th, '97.

(Special Correspondence).—Situated about ½ day's drive from Nevada City, and surrounded by huge mountains, is the thriving village of Forest. From the early 60's to 1884 the annual gold product of this section reached the million dollar mark several times. With the exception of a few properties, gravel mining in this region was not carried on in any methodical manner, and yet the product of the precious metal was remunerative.

Within the past few years, however, a few capitalists have found their way hither, and to-day the outlook for Forest to again become a prosperous mining camp is very promising. This will be the case not only in deep channel mining, but in quartz likewise. The great area of country hereabouts, with its thousands of acres of auriferous gravel, following upon the success of present operators, must soon attract the attention of outside capital. There are many local holders of good properties but they lack the means for extensive development, and they offer favorable inducements to outside wealth. In future letters I will enter somewhat into detail on the several properties now in successful operation, together with the extensive and systematic plans of development work pursued.

There are thousands of acres here and miles of channels awaiting the miner's pick and shovel when capital comes to his aid. The amount of channel gold presented at Wells, Fargo & Co.'s office in Forest from week to week, and a visit to several of the mines in the neighborhood, leave no room for doubt in the careful observer's mind as to the advisability of investment in this section, nor to the practicability of making judicious purchases of channel-bed acres. It may be safely asserted, after weeks of travel through California, that few, if any sections of the State present alike favorable opportunities for rich returns on money invested in gravel mines.

The favorable location to principal stage roads, proximity to market supplies, timber and water resources, and added to these a charming mountain climate, and the rich gold deposits in the extensive ancient channel beds, being the principal feature, must ere long bring about a renewed spirit of activity in the production of the precious metal in and around the one-time flourishing mining camp of Forest City. J. F. L.

Forest City, June 20th, '97.

Siskiyou.

Under guard of four armed men, says the *Reporter*, W. P. Bennett came out of the Salmon River mines last Tuesday with $36,000 in gold, which he took to San Francisco for coinage.

Reporter: At Happy Camp, R. Aubery has shut down for the season. His clean-up was very good. This is a high channel claim. The banks run from twenty to thirty feet deep. Water is taken from Aubery Creek in a ditch thirty inches wide, a mile in length, supplying a ten-inch pipe of 750 feet equipped with a No. 2 giant.

Elliott Bros., at Cottage Grove, have just finished a four mile ditch from Shulip Creek, giving them water till August. They have about 800 feet of eleven-inch pipe, and a No. 2 giant.

News: The Klamath Flume and Mining Company will make extensive developments this season, and have established permanent headquarters at Happy Camp. The work is under the immediate supervision of T. J. Nolton. The enterprise is attracting miners and laborers to Happy Camp from all directions.

Journal: The Boyle mine, on Humbug, which it is expected to soon start up, is well equipped with the best machinery. The property has been closed down for more than a year owing to legal difficulties which have just been settled.

Trinity.

Journal: It is reported that London capitalists will soon purchase the Bullychoop mine properties.

A. N. Butts, Superintendent of the Poker Bar Mining Company, will soon start work at Poker Bar.

Tuolumne.

Independent: The Mascot mine, on Mormon creek, is having a 5-stamp mill erected. The App mine is now down 900 feet, but sinking will continue. The new mill at the Confidence mine is now crushing ore. Sinking has commenced on the Omega mine at Rawhide. The Trio mine is pushing work on their three-compartment shaft, fifteen men being engaged. A new vein has been struck in the Green mine 60 feet in from the mouth of the tunnel. The new mill at the Santa Ysabel is about completed and will shortly commence to crush the ore on the dumps. The Dutch mine has closed down, but will in all probability start up by the end of the month, by which time the extra ten stamps now being put in will be in place. Work on a large scale will shortly be commenced on the Pena Blanco group of mines, a company having been formed for that purpose by Redwood City capitalists.

Union-Democrat: The Patterson, one of the greatest gold producers of early days, is soon to be operated on a big scale. It has an immense width of vein and the plan is to quarry the rock, similar to the handling of the ore at the Alaska mines. In addition to the mill of a large capacity which will be erected, a new shaft north of the old one will be sunk to a depth of 1200 feet.

The new 10-stamp mill on the Arbona will be completed and running by July 1st. The main tunnel is in over 200 feet, with drifts running both north and south on a big ledge.

At the Black Warrior and North Star Consolidated mines on Moccasin creek the length of tunnel necessary to tap the ore body is less than 500 feet. Of this distance 270 feet is now run, and, at the rate of 3 feet for each twenty-four hours, the objective point should be reached within the next sixty days.

Work on the 150-foot level in the Maryatt shaft is being pushed south. Day and night shifts are being worked. Face of level is in good milling ore, and quality is improving as progress is made toward the Gagners ground.

G. W. Bailey and partner have struck rich gravel in their placer mine near Confidence. They are ground-sluicing, and have cleaned up quartz that will yield well.

NEVADA.

Reno *Gazette*: The Mountain Boy is owned by Griswold, McPherson, Anderson and Plane. It has a tunnel in 30 feet. They are sacking the richest of the ore taken out.

No. 2 extension is down 30 feet on a ledge 30 feet wide. This mine is owned by McClane, Pool and Bellum.

Proctor and Norris have two claims, the Ora and Jennie C. They have a 2-stamp mill, removed from White Horse, which they propose setting up.

The Crown Point parallels the Ora on the north, and is owned by Jack Sheehan. He is taking out some rich ore.

The claims visited are mostly located on a green colored butte, about 1500 or 2000 feet in circumference.

Silver State: The borax teams have arrived at Winnemucca from the Oregon refinery with 25,000 pounds of borax for shipment.

Sixty men are employed at Crevice Gulch, Gold Creek, and it is expected that the force will be enlarged shortly.

Reno *Gazette*: Olinghouse Canyon is situated about eight miles west of Wadsworth. In the Hutchinson, owned by W. J. Pollock, N. A. Hummel, W. H. McInnis and A. J. Gill, they are down on a ledge about 33 feet. The shaft is 5x6 feet and in a solid ledge that has assayed well from the grass roots down. They have about 60 tons of ore on the dump.

The Gold Center, owned by Brooks McClane, has a tunnel in 20 feet.

UTAH.

Mercur *Mercury*: Immense ore reserves, whose presence was unsuspected two years ago, are being developed by the open-pit work at the Mercur mine.

The owners of the Camp Floyd group, near Five Mile pass, propose to resume work soon. While doing the last work on the property a body of ore 20 feet thick and averaging $3 was cut, and the vein has since been traced around to La Cigale. By drifting on the ore body it is believed that milling values will be obtained.

Salt Lake *Tribune*: At the Eagle at Tintic arrangements are being made to put the low-grade ores into marketable form, and to that end 1000 tons are to be run through the Sioux mill. The ore, it is said, shows a valuation of $15 in gold and 12 ounces silver per ton, and should it be demonstrated that the ores can be successfully treated through the Sioux mill it is very likely that a plant will be erected and the handling of ore in large quantity at the Eagle undertaken.

At the Niagara mill Col. Heffron is now rushing through fifty tons a day of gold bearing ore, and to increase the amount four new tanks are being added.

Tintic *Miner*: Shipments from the district for the week are as follows: From the Bullion-Beck, 20 carloads ore; Centennial Eureka, 5; Ajax, 2; Sioux, 1; Swansea, 1; South Swansea, 7; North Star, 6; Buckeye, 1; Four Aces, 1.

The Gemini Company has made an ore contract with one of the Sandy smelters, and it is expected to commence shipments at once.

The new tunnel on the Uncle Sam is in about 30 feet and is going ahead at the rate of about 4 feet a day. It is about 400 feet down the hill from the first tunnel in which ore was struck, and will tap the vein at a depth of about 200 feet lower.

The Southern Eureka shaft has reached a depth of 375 feet. Crosscutting will not be commenced until the 500-foot level is reached.

A six-carload shipment from the Uncle Sam is being loaded and will go out in a day or two.

A. A. Noon is driving a tunnel to develop his iron mine east of Eureka.

Sinking in the Alaska shaft has been commenced by the contractors. The shaft is now down 155 feet.

A shipment of 500 tons of second-class ore is being made from the Spy to the Sioux mill for a test run, and if the result is favorable a large quantity of the ore may by worked.

Eureka *Democrat*: The tunnel of the Eagle has been progressing steadily, and an upraise from the 700-foot station has been run.

At the Alaska work is being pushed rapidly and contractors are again sinking on the shaft, which will be put down to the 400-foot level.

Bingham is suffering from the increased rate of marketing ores, and several of the old producers will shut up until more favorable conditions prevail.

Another strike is reported in the Uncle Sam tunnel at a point 248 feet from the mouth. It is said that 12 feet of ore has been encountered.

Bingham *Bulletin*: The Argentine group, on the Tooele side of Clipper Hill, has a crosscut tunnel in 900 feet, at about 750 feet depth, and it is to be continued 300 feet farther, to catch the main vein. Five veins or spurs were encountered in its course, but no drifting has been done. There was some time ago talk of a combination to extend this tunnel through the hill a distance of 3000 feet.

There is considerable activity at the Winnamuck, it being the intention to put the mine in condition for quite extensive operations, ready for any move that may be decided upon. A contract has been let to sink the Winnamuck incline 120 feet, and work will begin as soon as the water can be pumped out.

Col. Heffron is increasing the capacity of the Niagara cyanide mill, and his operations will be much more important than last season.

Park *Patriot*: Arrangements for the resumption of work on a large scale in the Daly-West are almost completed. The smelters are beginning to look for a favorable chance to descend from their high monopolistic perch.

Ore shipments this week: Silver King, first class, 361 tons; Anchor, 11; Daly-West, 202½; Silver King concentrates, 138 tons; Niter & Reece concentrates, 22 tons.

Mammoth *Record*: Sinking on the main shaft of the Boss Tweed is still being continued, and a depth of 200 feet from the tunnel level, making in all 400 feet from the surface, has been attained.

MONTANA.

Spokane *Chronicle*: At the present time one of the largest steam dredges ever used in placer mining is earning $600 a day in the bed of Grasshopper creek in Beaverhead county. It can handle from 4000 to 5000 yards of dirt every twenty-four hours. A larger dredge is being built in South Milwaukee for the same company. There is, perhaps, no place in Montana, where the dredge can be used with so much success as in Grasshopper gulch. For many years the bed of the creek has baffled all ordinary methods of working. The gold in that gulch dips at bedrock from 20 to 30 feet below the surface, and because of the excess of water it could not be worked by either shaft or tunnel.

The success of the steam dredge in Grasshopper gulch has induced an Eastern company to buy up a large part of Alder gulch with a view of putting in a machine or two there.

There is a steam dredge in Mitchell's gulch, near Helena. It is not in operation, but will be in a few days, having just been shipped in.

Altogether it seems probable that through the dredge scores of old placer grounds that were once abandoned will be reopened again. Ground can be worked with the dredge at a cost of from five to eight cents a yard.

Inter-Mountain: The new engine to be used at the 1400-foot level in the Green Mountain mine of the Anaconda company will be used to develop the shaft. It was at first intended to sink the shaft an additional 200 feet, but since the installation of the big engine it has been decided to sink 400 feet, making the total depth of the shaft 1800, 300 feet deeper than any mine in the camp. The High Ore shaft, however, is being rapidly developed and will possibly be 2000 feet deep before the Green Mountain crew reaches the 1800.

News has been received in Butte of the closing down of the Mohegan mine and mill at Red Bluff. The Mohegan has been operated by a Boston company since last Fall and it was understood that the mine was paying. One of the Boston officers states that he has orders to close down the whole works.

In the Lucky Dream in the Gaylord district the workmen have struck a big body of gold ore at a depth of less than 100 feet. The claim adjoins the Spread Eagle only a short distance from the celebrated Mayflower and is owned by three Butte men, who leased and bonded it some weeks ago to Upton, Williamson and others.

The Mayflower a few weeks ago ran into a another rich ore shoot and the miners have since been steadily employed.

On the adjoining claim, the Celebration, Sam Ayotte has a force of men extending the tunnel which was run by the Knight brothers.

Butte *Miner*: The Weasel Gulch Mining Company's holdings in Granite county comprise sixty acres of placers in Bilk gulch, and are being worked by hydraulic. The company put in a plant two years ago, costing $60,000, which carries the water 800 feet high to a large storage reservoir. At the present time the company has men washing gravel.

Ore was discovered recently in the Homestake in Jefferson county near the surface, and widened out as it went down. To a depth of 75 feet the ore is of an oxide nature, carrying gold, and below that is changed to a sulphide, carrying at the 100-foot level about 2 per cent copper. The company has announced its intention to continue the sinking of the shaft 500 feet.

Leasers on the Michael Devitt lode claim, which was sold for $351,100, are taking out about sixty tons of ore daily that is very rich, going about 30 per cent copper.

COLORADO.

Republican: At Cripple Creek the Moon Anchor yields per week about 100 tons of low grade ore, most of which is stored for the mill. The company will join the Anchoria Leland and the sampler combine in building at Colorado City.

The connection has been made between the Moon Anchor shaft and the Cripple Creek and Gold Hill tunnel at 320 feet depth, and in 200 feet of drift. Water pipes are now being put in, and in a short time drainage through the tunnel and work in the lower levels of the mine will be resumed.

The Cripple Creek and Gold Hill tunnel is now within a few feet of 2300 feet into the hill, has passed through the Bonanza King and is now in Lilian Leland ground. With the perfect air given by connection with the Moon Anchor, exploitation on the Midget ore body will be resumed in a few days.

So far this month the Anaconda has shipped 180 tons of mill ore of an estimated average grade of $30 a ton, and there are now in the bins from 75 to 100 tons of the same grade.

A new plant has been ordered for the Standard tunnel, being run into Beacon hill by New York capital, and contracts are being made with lessees on the west slope of the hill, with the understanding that the new plant is to be in operation within thirty days. The bore has been run by hand to within 360 feet of the Fanny B. vein.

W. G. Harden and John Spreyer are working the Pride of Cripple Creek on the east slope of Ironclad, under bond and lease that has eighteen months yet to run. While working through the old shaft on the property and mining two grades of ore at 75 and 200 feet depth, they are sinking a new shaft.

The Callahan shaft on block 17 has opened a fine body of sylvanite ore at 100 feet depth, and is looked upon as the most important ore body that has yet been opened in the hill at that depth.

The Burns shaft on the Portland has passed the 800-foot point, and a sump is now being cut. The mine is producing heavily, and both the lower levels, that at 600 feet and the other at 700 feet, are yielding large quantities of high grade ore. A new 12-drill compressor is now in operation.

J. H. Sanborn, manager of the Little Montana Company, associated with D. H. Fuller and W. E. Upjohn, of Kalamazoo, Mich., has secured, under a bond and lease of two years, the Burns, of Bull Hill.

A party of Leadville miners have taken an eighteen months' lease on the Kacinko, on Guyot Hill, and will put on a new hoisting plant.

The shipments from the Orpha May, of the Union Gold Company, during the past week amount to nine cars, two of which were high grade.

The Uinta tunnel, from Eclipse gulch has reached the greatest depth it will attain, and is cutting under the summit of Battle Mountain, more than 1100 feet from its head.

The Old Gold tunnel into Beacon is being pushed steadily by hand, is now 300 feet into the hill. It has passed through the Raaler and is now in Columbia ground, and is nearing the phonolite dike, along which values are expected.

There is unusual activity in the mining districts of the LaPlata and Needles mountains. Fully 200 men are at work developing the numerous mineral lodes of those districts, and others are going in for the purpose of prospecting further.

At Guffey the Carbonate King, backed by Denver parties, is pushing work in the shaft down 295 feet.

The American Flag, an incorporated company with B. Wey as manager, whose property is located half a mile northwest of town, has 400 feet of tunnel and is developing a group of patented claims with large bodies of low grade ore in sight.

The Manchester Gold Mining Company is down 90 feet and working night and day shifts.

The Annie Laurie, owned by H. L. Pigg and J. W. McBeth, is down 125 feet.

The Union Co-operative Mining Company has good showings with twelve men working three shifts. The shaft is down 166 feet, and the company will put on a steam hoist at once.

The Hub Hill Finis Mining Company, of which E. Prewett is manager, is down 50 feet on the Hub Hill shaft, and will put up a whim at once.

Dr. A. Harvey, of Denver, and others are driving the Sylvanite tunnel, and are in some 300 feet.

At Idaho Springs Darling & Metcalf, of Denver, have finished installing their plant, and are ready to resume the development of the Falu claim, from which some very rich ore has also been taken quite recently. They have a shaft to a depth of 200 feet, and on one wall have about 18 inches of solid mineral, carrying a high percentage in copper and gold.

John Owen is extending the levels on the Gum Tree mine from the shaft at 240 feet. He has one foot of smelting ore and some mill dirt. The streak is copper-iron.

The Trail Run Company has opened up from 2to 3 feet of pay ore in the Magnolia lode, on which they are now sinking a shaft.

BRITISH COLUMBIA.

Rossland *Miner*: Crosscuts about 40 feet long have been run on either side of the main tunnel at the east end of the ore chute, and neither crosscut has yet found the wall. In other words, the ore body has been proved to be more than 80 feet wide. A crosscut has just been started to the south, 120 feet west of the first crosscut, and this is now in 10 or 12 feet with a magnificent body of ore in sight. The ore seems to be quite uniform in character. It carries a certain amount of waste, but taken as a whole, it carries high values in both gold and copper. The gold-bearing substance is a sort of rotten black quartz. Small pieces of pure sulphide, showing much copper, are scattered through the entire mass.

At Sandon the trail for the Payne tramway has been completed and work on the tram proper will be commenced at once. A force of about eighty men will be employed. They are at present shipping two cars of ore per day, which will be increased to three cars next week.

The Slocan Star shipped during May 800,000 pounds of ore over the Kaslo & Slocan.

Work will be resumed on the Canadian group at once.

Tho Freddie Lee has resumed operations.

Work has been resumed in the shaft on the Boundary Creek Mining and Milling Company's G. A. R. claim, Providence camp.

Rosslander: On the Old Gold four men are working on a tunnel which is in 55 feet. The lead is expected to be tapped in about 30 feet.

Four men are working on the Denmark and Seattle, two claims of the Seattle group, on Whiskey creek. A shaft is being sunk on the vein.

Seven men are working on the Little Giant and are down about 60 feet. The vein is a quartz mixed with iron.

The shaft in the Columbia is down 25 feet; the contract is to sink to 75 feet.

On the Ibex a contract has been let to continue the tunnel, now in 162 feet, for 50 feet further, with an option of 100 feet.

(Special Correspondence.)—While it is true that there are but few proved mines in the districts along the coast proper, the prospects

in the immediate future are very bright indeed. In West Alberni, on Vancouver Island, many apparently very valuable copper deposits have been located.

On Lynn creek, opposite and a few miles from Vancouver, smelting propositions are being worked that run $5 on the surface.

In Harrison Lake district the Providence mine is shipping to Tacoma, and the results to date are excellent, the ore running $100 in gold and silver. In the same district a large amount of money is being spent on the Money Spinner, whose vein runs vertically down the mountain side. This vein has been stripped 130 feet, and its 18-inch pay chute runs high in free gold. The vein is a true fissure.

At Lillooet the Golden Cache Company are putting up their mill and will commence crushing their free gold rock in August.

At Fairview, in the Okanogan country, the Tinhorn Company are waiting the arrival of their San Francisco mail to commence crushing. Their mine is proved for 1400 feet, and all is ready for feeding the crusher.

Vancouver, June 17, '97.

Nelson *Miner*: Returns of produce of the Kootenay mines to June 12 for this year are as follows:

ORE EXPORTED.

	Tons.
From Slocan via Kaslo	11,649¼
Slocan via Nakusp	2,842½
Rossland via Northport	7,673¾
Rossland via Nelson	52
Total	22,217¼

Total Value:—

Through Nelson Custom House	$1,258,362.37
Through Revelstoke (Nakusp)	306,919.65
Total	$1,565,282.02
Average value per ton	$70.453

PRODUCE OF SMELTERS.

OREGON.

Baker City *Bedrock-Democrat*: At the Con. Virginia the buckets in the shaft have been replaced by cages. A depth of 600 feet has been attained in the shaft and crosscutting to the Virtue ore vein is to commenced at once. This property is being worked by David Keith, of Park City, Utah.

At the Virtue mine the shaft is 800 feet deep, and to this level the big pumps are being lowered from the 600-foot level. Larger and richer ore bodies are exposed in the lower workings than above.

Bradbury Bros. have made another quartz strike at the Cliff mine, north of the Flagstaff, where they have a ledge 5 feet wide in the drift in the bottom of the 80-foot shaft.

The Eastern Oregon Gold Mining Company has filed articles of in corporation. It is formed to work property in McCord gulch.

At the Baisley-Elkhorn there are thirty men employed.

B. B. Shepherd, who has been selected by the California people having a bond on the Cyclone mine as their superintendent in charge of operations, will put a force to work and deep sinking will commence.

Rogue River *Courier*: The Blue Bucket ledge, like that of the Lost Cabin, seems to be turning up in all portions of the coast. A party is now out in Grant county expecting to find gold by the bucket full, according to the legend. The Lost Cabin mine has not been found now for several months. Any person who knows of its whereabouts can get up a party of prospectors in Grant's Pass.

A San Francisco company is about to work the Philips-Strong copper ledge, a mile and a half from Waldo. The ore is situated in a creek bed, where a pumping plant will be put in to keep the shaft clear. The rock assays 20 per cent copper and $10 a ton gold.

The Lewis mine cleaned up last week and the result was highly satisfactory. A great deal of money has been expended in putting these diggings in shape.

The Baylord-Iliff pump works are running in daylight hours with seven men.

The Coast Range Mining Co. are running their pump works ten hours each day, just below Woodville.

Medford *Mail*: C. E. Smith on Little Applegate has a ledge 50 ieet in width which, while the ore is not high grade, will be a good working proposition.

Articles of incorporation have been filed in the Secretary of State's office incorporating the Pearl Minning Company, with a capital of $110,000.

The Elk creek mining excitement has gone a-glimmering, in the minds of most people. One party reports an abundance of ore there, but it is so low grade it will not pay for milling. While it is true that the majority of reports are derogatory, it is, as well, true that some are favorable. It is reported that there are between 600 and 700 people at the mines, and that the district is fifteen miles in length and five miles in width.

On the Great Applegate Mining Company's ditch there are from fifteen to twenty men at work.

WASHINGTON.

Spokane *Chronicle*: Around the headwaters of Flat and Fifteen Mile creeks, on the reservation, are some of the best mining prospects in the State. This district lies about ten miles southwest of Rossland. The formation is the same and the character of rock is similar. It has the same iron capping as at Rossland, but more highly mineralized. The rock carries gold, silver and copper.

The Alert Mining Company of Seattle own a group of five claims. Most of the work has been done on the Alert claim. In running a tunnel they have crossed a well-defined ledge and are now going down on it.

On Iron mountain the Lafayette Mining Company own three claims. The company have commenced work on the Lafayette claim.

At Goat creek, Okanogan county, there are more men at work than ever before in the history of the camp, and strikes of rich gold-bearing ledges are not of infrequent occurrence.

A number of claims have recently been bonded to Eastern capitalists. John Donnelly of Spokane has taken a bond on the Handley group, which is located on Goat creek, for $30,000.

The Perrines group of three claims, in the same locality, have also been bonded for $75,000. Both these properties show good ore bodies very near the surface.

The Black Warrior Company are working two shifts in their tunnel, which is being run to cut the ledge.

IDAHO.

Cœur d'Alene *Press*: Kendrick reports that travel toward the old gold fields of the Florence, Elk City, Warren's and Pierce district, still continues in large numbers, the disappearance of the snow having a great effect in livening up travel toward these districts.

The Banner shaft, at Florence, is sunk to a depth of 190 feet, and shows a well-defined ledge, four feet in width. Owing to water interference, work has been suspended until the new steam hoist can be put in. They have about 600 tons of ore on the dump, and they say they will put a 10-stamp mill on the property as soon as it can be done.

On the Toledo the ore is said to be quite rich. A force of men have been put to work on the property.

The Tiger-Poorman mine at Burke, in the Cœur d'Alenes, shipped 1980 tons of concentrates for the 27 working days in May. Its new plant is hoisting 400 tons of ore daily from the 1100 foot level. One hundred and fifty men are employed, and the mine and mill are working night and day. The monthly expenditures are about $27,000, and the average wages are $3.72 per day. In the mines development work is well ahead. They are still sinking on the main shaft, which is now down 1200 feet, with a 14 foot ore body.

Idaho City *World*: D. B. Huntley, superintendent of the De Lamar mine, has been examining the Lucky Boy mine for the Englishmen to whom Vivian Thorne is endeavoring to make a sale. The Lucky Boy has a big ledge, 75 feet wide. It is believed that the entire ledge will pay from wall to wall with a big mill. Different good-sized veins carry high-grade ore.

Elmore *Bulletin*: The owners of the Idaho Consolidated mines, near Rocky Bar, have let a contract for running a tunnel 250 feet in length upon their claims. This company has been idle for a great many years.

Knittle, Brainard and Cook recently discovered extensive placer mines on the banks of Bear creek, about one mile below Rocky Bar.

In the Neal district the Hidden Treasure mine under the management of F. Howe is working twelve men with good results.

Spokane *Chronicle*: In the Jerome mining district the Gold Bug has made a strike of a much better chute of ore than has yet been shown on the property or even in camp.

The Daisy stamp mill has been started and will stamp outside ore, yet a little ore from the Daisy mine will be crushed.

Jesse Bishop, one of the owners of the Bishop mine, reports that work will begin on that property soon.

Work is still progressing on the Gypsie, the ore showing a better color and quality than heretofore.

Spokesman-Review: One of the first Cœur d'Alene quartz mines to be developed by home capital was the Daddy, of which the Coplen brothers of Latah were the original locators. Ever since the mill was started there have been three kinds of rock in each ledge worked—there are five or six running through the ground. One is a low grade rock that barely pays for mining and milling. It is in the way, and must be removed. This quality of ore is found in large quantities, the mill working on it almost exclusively for weeks, and sometimes even months at a time. Again, at times the rock changes into a grade yielding about $20 per ton. Then there is another kind found in pockets that carries values varying from $30 to $2000 per ton. They have a 10-stamp mill, which crushes from twenty-five to fifty tons of ore about 340 days out of the year. Since it was first started, it has run almost continuously. About thirty-five men are employed now in mine and mill.

There is considerable development work being done in the Willow creek district, in Boise county, and not a little money being invested by Salt Lake, Ogden and Pittsburg people. A syndicate, headed by A. G. Duey of the Trade Dollar mine, at Silver City, has purchased about twenty claims in a group, and considerable machinery is being put in. Among the shipping mines are the Last Chance, Red Warrior and Checkmate. Over 4000 locations have been made in the district during the last year. Pearl is the principal town, and is reached by stage from Boise.

At Murray the lower or new mill of the Golden Chest, that has been idle since last January, will start up soon. The Golden Chest is one of the properties bought by Louisville men in the early days, and, with the high freights, high wages and extravagant management then prevailing on the North Fork, by the expenditure of $190,000 the owners succeeded in erecting a 5-stamp mill on almost the highest point of the claim, above most of the ore and water, that would not pay running expenses. When three different companies, organized in Louisville, spent $725,000 for ground and in making improvements thereon, the North Fork was wild with joy, and yet that very investment cost the camp many times as much, for none of the investments paid under the mismanagement with which they were cursed, and their failure caused a distrust of the whole district by men who had money to spend in exploiting mines. That this distrust was not warranted by any fault of the natural conditions of the district was known by everyone resident here. Ore has been blocked out in the mine until there is enough in sight to last for a long time to come. About twenty-five men are now on the pay-roll, which may be increased to thirty when the lower mill starts.

ARIZONA.

Tucson *Star*: There are several small camps springing up tributary to the Saginaw. Dr. Purcell Sr. has established a camp two miles east of the Dakota mine and is developing a prospect.

Connell & McKay have a camp north of the Saginaw, called the Golden Flat camp, and are developing some old properties and have some good ore.

F. A. Drake and Col. Seibert have established a camp east of Saginaw and are developing a gold prospect.

The Saginaw is working thirty men, and the force will be increased sinking, drifting and crosscutting. A drift is in on the ledge 45 feet and crosscut 8 feet.

The mill is running in connection with the Wifley concentrators, working ore from the Dakota mine.

Prescott *Journal-Miner*: J. C. Rankin has closed a deal with Dan Thorne for his mine near the Goodenough, on the Santa Maria. About $50,000 is the purchase price.

L. A. Davies of the Sun Dance Mining Company is shipping two carloads of concentrates, the product of his mill since starting up.

Deeds from C. N. Fowler to W. P. Stevenson, and from the latter to Arizona Onyx Company, for the Big Bug onyx property, have been filed for record.

Mr. Penrose is engaged in building a mill at the Pearce mines, below Wilcox, that will work forty tons per day; it is, however, being so constructed as to be increased to eighty tons per day. About one-half of the output is gold at the present working depth. At first about three-fourths of the output was silver.

The Monte Cristo mine on Groom creek continues to keep up its record, both in richness and quantity of its ore. The tunnel is now in 330 feet. In the face of the tunnel the ore body is from 12 to 18 inches wide.

A. McCann, who recently purchased from Shackelford, Marsh and Ainsworth, the Fortuna mill and an interest in a number of mining claims at Minnehaha, will start up a complete cyanide plant about June 25. He has about 4,000 tons of old tailings which according to samples will go $5 per ton. They can be worked at a cost of $1.30 per ton.

Kingman *Miner*: B. F. Shaw has leased the old dumps of the Keystone mine, and after getting into the early workings found ore that was thrown over that runs 1600 ounces in silver and several ounces in gold.

Twenty men are working for the Southwestern Mining Company at El Dorado canyon.

The mill of the Elkhart will be completed and ready to run on or about the 20th of July. It will handle 100 tons of ore daily.

Republican: The Empire smelter has been running for seven days—running eighty tons through per day. The Old Flux and Hard shell mines are furnishing the ores. About 100 tons are being delivered per day at the smelter. These are lead, silver and gold ores, so that their lead bullions will be high grade.

Geo. H. Miles' mine, one mile south of Yuma, has been bonded to Edward Gronendyke and D. D. Fowler of Pasadena for $4,000.

Silver Belt: The progress and importance of Arizona's mining industry is remarkable when we consider that the surface of our ore-seamed mountains has only been scratched. There are few examples of deep mining in the Territory, yet those exceptions (the Congress mine being a notable instance) encourage the belief that our mines go down, and as this opinion becomes generally recognized an impetus will be given to deep minining.

The Black Warrior Copper Company on its several claims in Webster gulch is running five levels in the Black Copper mine, the lowest at a depth of 340 feet, and developments are very encouraging. About twenty-five men are now employed by the Black Warrior Company and the force is to be further increased.

Superintendent N. L. Amster is preparing to begin work on the Excursion group of gold mines at Payson, recently bonded by his principals, the North American Exploration Company.

On the Continental property fine ore has been encountered in the drift from the 50-foot level of the 96 shaft, and which is believed to be the continuation of the main ore body opened by the working shaft, 300 feet distant. The mine is being well opened and ore is exposed in many places.

NEW MEXICO.

New Mexican: In the Moreno valley, near Elizabethtown, a number of reservoirs in the foothills, pipe lines extended into the valley, and several companies are at work washing away the hillsides by hydraulic machinery and saving the gold in sluice boxes. In the Moreno valley are rich placers, but the lack of sufficient fall to carry off the tailings has heretofore prevented the successful working of this portion of the deposits.

On the Red Bandana quartz mine a tunnel has been driven into the hill 2,500 feet, a shaft sunk 200 feet and a mill erected.

On Baldy mountain the Aztec has been worked to a depth of 300 feet and for 1200 feet along the vein, and is equipped with a 40-stamp mill.

The Black Horse has two veins running parallel about 90 feet a part. The workings consist of 3000 feet of shafts and levels. A 10-stamp mill is on the property.

In the Ponil district, on the French Henry, a 15-stamp mill is run.

AFRICA.

African Mining Journal: Before the Mines Commission the secretary of the Rand Mines, Limited, gave the following percentages of costs of working in the Geldenhuis Deep:

	Per cent.
Native labor	21.20
Native food	3.89
White labor	35.89
Coal	8.45
Dynamite	10.70
Cyanide	2.20
Zinc	.15
Oils and lubricants	1.00
Candles	.40
Dies, quicksilver, mill-cleaning	1.00
Sundry stores, assaying, chemicals, machinery	5 60
Insurances, licenses, rents, printing, native premiums, sundries	5.5

Hennen Jennings presented to the Government's Mine Commission the following comparison between the costs of the Crown Reef and Alaska-Treadwell. They prove that the Crown Reef, working on American prices, might have saved 5s 6d per ton, exclusive of coal, though white wages are at least as heavy in Alaska as they are in Africa:

	Amount used.	Alaska price.	Crown Reef price.
Dynamite	200,089 pounds	£5,134 11 2	£17,354 12 2
Fuse	14,314 coils	474 5 0	268 7 9
Caps	75,133	168 5 0	150 8 0
Timber	14,909 cu. ft.	482 0 0	3,168 2 0
Steel, mining	25,519 pounds	429 16 5	637 18 0
Oils	6.545 gallons	428 3 5	1,309 0 0
Candles	272 boxes	177 15 0	145 0 0
Mortars	2	96 0 0	304 0 0
Mortar liners	58,058	756 12 0	1,209 10 10
Cam shafts	3	59 4 0	52 10 0
Guide blocks	120 pairs	32 16 0	856 0 0
Shoes & dies	151,932 pounds	2,178 17 3	2,278 16 8
Screens	1,300 sq. ft.	109 6 0	97 10 0
Heads	12	49 16 3	73 0 0
Sulph. acid	328,000 pounds	1,000 0 0	4,100 0 0
Salt	455 tons	790 8 6	2,733 0 0
Bar iron	63,503 pounds	275 9 0	529 5 10
Lead	1,461 pounds	18 4 6	52 11 6
		£12,651 10 0	£35,324 10 9

Mr. Jennings showed that 185 companies have been floated in this Republic, with a capital of £45,000,000. There have been 5135 stamps erected; in 1896, 3470 were running. The decrease is chiefly due to the fact that light stamps have been superseded and heavier stamps are now in use. But since last year the number of companies working has been reduced to nine—which is due to the impositions set upon the industry. Mr. Jennings calculates that 1000 fresh stamps will be set to work during the current year if conditions are favorable.

Mr. Catlin, the mining engineer of the Simmer and Jack group of companies, explained the working of the bonus system. In the month of April, in the Catlin shaft, 142 feet were sunk by hand; the bonus amounted to £483, in addition to the wages of the miners. This is a record sinking, not only for the Rand but for the world, and this system enables more work to be done at a less price than any other system. Common experience shows that in the ordinary way, by daily wages alone, without bonus, a progress of 80 feet per month is very good work. The result in the Catlin shaft is that, if only 80 feet had been sunk at a daily wage, the cost per foot would have been £24 1s 1d. As a matter of fact, the sinking was 142 feet and the cost per foot was £19 7s 10d, thus saving the company £289 1s 6d and giving them 62 feet more of sinking in the shaft.

The following figures are from the returns of the Geldenhuis Deep for the first quarter of 1897:

	January.	February.	March.
Number of stamps running	130	135	155
Days milling	25½	24	27
Mill: Ore crushed, tons	14,400	14 475	18,345
Yield in bullion, ozs.	4,158	4,249	5,840
Tailings treated, tons	11,280	11,690	14,655
Yield in bullion, ozs.	2,844	2,702	3,243
Total yield in bullion, oz.	7,002	6 951	9,083
standard gold, ozs.	6,240	6,252	7,600
Revenue	£23,855/	£24,145/	£30,060/
Working expenses	£19,420/	£18,690/	£22,000/
Profit	£4,535/	£5,455/	£8,060/
Cost per ton	£1 6 11½	£1 5 8	£1 3 11½
Profit	£0 6 3½	£0 7 6½	£0 8 9½

The following is from the report of the City and Suburban for March: Profit for month, £11,426 8s; total expenses per ton, 24s 8.0051d; value of yield per ton, 35s 7.9004d; profit per ton, 10s 8953d; estimated quantity of ore developed at March 31st, 366,118 tons. The milling results for the month are as follows: 160-stamp mill worked 28 days 12 hours 11 minutes; tons (2000 lbs.) crushed, 20,030; tons crushed per stamp per day, 4.391; yield in smelted gold (equal to 5,809.2464 ozs. fine gold), 6,504.2 ozs. bullion; yield in smelted gold per ton (equal to 5.8005 dwts. fine gold), 6 4944 dwts. bullion; assay value of tailings per ton in fine gold, 4.37 dwts. The results from cyanide treatment for the month are as follows: 15,592 tons treated (2000 lbs.) at a cost of 2s 8.1084d per ton (equal to 77.84 per cent of the tonnage crushed); assay value of sands per ton before treatment, 4.78 dwts. fine gold; bullion produced (equal to 2,633.8344 ozs. fine gold), 3,319.9 ozs.; yield of gold in bullion (equal to 3.3784 dwts. fine gold) per ton treated, 4.2584 dwts. Slags containing 90.1435 ozs. fine gold have been shipped. Yield in fine gold per ton crushed—by mill amalgamation, 5.8005 dwts; by cyanide treatment, 2.6298 dwts; by slags, 0.0900 dwts; total yield per ton (in fine gold) from all sources, 8.5203 dwts. During the month 351 natives were engaged, 114 were discharged, and 120 deserted, making a net increase of 117 men. An average number of 2319 men were employed during the month, as compared with 2288 in February.

AUSTRALIA.

The Queensland gold returns for May are as follows:

	Tons Crushed.	Yield in Ounces.
Charters Towers	34,300	27,200
Mount Morgan	7,300	16,700
Gympie	4,800	6,500
Croydon	5,800	7,200
Other Fields	7,400	6,800
Alluvial Gold	....	2,600
Total output		67,000

The calls paid for the Charters Towers district amounted to £5000, and the dividends to £17,100. Gympie calls, £8900; dividends, £8500. Croydon calls, £2000; dividends, £1500. Mount Morgan, no calls; dividends, £25,000.

Mechanical Progress.

The Use of Compressed Air for Mining Purposes.

NUMBER VII—CONCLUDED.

A lecture delivered to the Engineering Students of the Leland Stanford Jr. University, May 3, 1897, by EDWARD A. RIX, M. Am. Soc. M. E.

On March 19, 1897, W. Hampson, of Glasgow, Scotland, announces that he has succeeded in liquefying air commercially, at a pressure of eighty-seven atmospheres. A telegram in one of the New York papers, about April 1, 1897, announces that Prof. Linde, of Germany, has succeeded in liquefying air commercially and producing it at a very small price per cubic foot. How long previously to the announcement of the success of these experiments these gentlemen had perfected their apparatus, I know not, but I believe that Mr. Charles E. Tripler, of New York, more than twelve months ago, and possibly longer, succeeded in accomplishing the same thing. Probably to him is due the honor of being the pioneer in this proposition. The secrecy which was imposed upon me when I first witnessed these experiments has by special request, and for the purpose of this particular occasion, been somewhat lightened and I am permitted to speak in general on the subject.

I look upon the commercial production of aerine as a very important discovery, and I think the future question of economy in motive power is intimately associated with this liquid.

Compressed air, at pressures ranging from 1000 pounds upwards, is conducted from an air receiver through a small pipe, is refrigerated to expel its moisture, and is then conducted into the apparatus which liquefies it completely, without the use of chemicals of any kind, and it flows from this apparatus in a stream about the size of a lead pencil (in the apparatus which I saw) into a glass insulated receptacle containing about two gallons. I saw this receptacle filled in a very short time. Of course, being in an open vessel, aerine has no pressure, but its temperature is approximately —385° Fahr., or 445° below the atmosphere at 60° Fahr. Inasmuch as it is boiling rapidly on the surface, owing to its absorption of heat from the atmosphere, it looks like carbonated milk on the surface, but upon dipping some of it out in a glass, and observing its color through a glass, it has very much the appearance of ordinary water and about the same weight. Its temperature is very deceptive, for as it runs from the condenser one may allow it to trickle over the fingers for a short space of time and it appears to have the atmospheric temperature. The truth, however, of the matter is that it does not come in contact with the fingers at all. The hand being something like 480° warmer than the liquid, it throws the liquid into a spheroidal state and interposes between it and the finger a film of atmospheric air. The sensation is very much like pushing one's hand into a bag of feathers or into a mercury bath, allowing, of course, for the difference in weight between the mercury and the aerine. If, however, you immerse your hand in the liquid a sufficient time to establish contact, the flesh would be burned, the same as if it were exposed to 440° of heat measured above the atmospheric temperature. If a test tube of 1½ inches diameter, having a couple of pounds of mercury in the bottom, is immersed in aerine, the mercury will be frozen solid in a few seconds and may be hammered out and otherwise manipulated, the same as lead.

An alcohol thermometer of large size will be frozen instantly upon being immersed in the liquid.

An idea of the tremendously low range of temperature may be gathered from the fact that it will take several minutes to thaw out the small bulb of this thermometer, by covering it with the palm of the hand. That is one of the peculiarities of these substances, which I noticed at these low temperatures, that the surfaces of these frozen substances were not sufficiently large to absorb heat fast enough to restore their condition, excepting after a considerable length of time.

A tablespoonful of aerine poured on about a fluid ounce of whiskey will freeze it at once into flat scales, giving the whole the appearance and color of cyanide of potassium. This may be emptied out on the table and will remain frozen in that condition for fully five minutes.

One thing which impressed me was that while molecular motion was practically arrested at this temperature, the odor was perfectly distinct, showing that these particles which stimulate the sense of smell are actively independent of the temperature.

A teacupful of aerine poured on top of a tank of cold water goes into its spheroidal state instantly, in globules of about half the size of an ordinary marble, which fly around on the surface, leaving a trail of white vapor behind them.

A handkerchief of either silk, linen or cotton, saturated with the liquid, will be charred and destroyed just the same as if it were put in an oven and browned, though no change of color is apparent. Its evaporation is quite slow and it may be carried about for a number of hours in an open vessel without entirely disappearing. It probably represents a compression of about 700 atmospheres and would therefore in a confined space, and at 60° temperature, represent a pressure of somewhere from 10,000 to 12,000 pounds to the square inch.

Of course, it is rather disappointing to have our ideas of absolute zero completely upset. While we have always appreciated the fact that it was a purely theoretical conception, and while it was perfectly possible to think of a point where air would have no pressure, it was not possible to think of its having no volume. Still, not being able to prove to the contrary, we have accepted the absolute zero as a possible reality. Of course, this has all been based upon the proposition that air was a permanent gas. In experiments, however, of the kind that I have just alluded to, we find that at a temperature of —385°, air changes its physical state, yields up its latent heat and becomes a liquid, bringing into play a new series of phenomena, which are not at all consistent with the equations which we have depended upon. At about —425° it becomes a solid, after which we know of no means of further changing its state; so that —461°, the absolute zero, is an impossibility, both in conception and realization.

Just what aerine has to do with thermo dynamics, I must leave you at present to conjecture, for I am not permitted to say; but I know of some, and look for many other, remarkable developments.

For transmission purposes, there seems to be no reason why aerine should not be pumped through an insulated pipe, the same as water. When this becomes possible, the diameters of pipes to transmit large horse powers would be exceedingly small. For instance, inasmuch as one pound of air will yield in properly reheated engines about 1.6 H. P., 1000 H. P. would require 620 pounds of air, or aerine, per minute. This 620 pounds would occupy a space of but 10 cubic feet. The transmission pipe, then, would have to convey 10 cubic feet per minute. Let us say the transmission is for five miles. It is easy to calculate from ordinary hydraulic formulæ that a 3-inch pipe would convey this power with a pumping pressure at the point of supply of 200 pounds. The only pressure which the pipe would have to resist would be the pumping pressure; consequently, ordinary gas pipe or tubing could be used, the cost of which, together with its insulation, would be an insignificant figure in comparison to the horse power it would transmit.

A WORKMAN in a cutlery factory in Sheffield, England, has recently made a dozen pairs of shears, each so minute that they all together weigh less than half a grain. That is about the weight of a postage stamp. Each pair was perfect and would cut if sufficiently delicate material could be found. Lying on a piece of white paper, they seemed no larger than fleas.

The Limitations of Government in Water Power Plants.

By MARK A. REPLOGLE, Engineer.

The first part of this article appeared in the issue of June 5, discussing the regulation of the speed of a water wheel in a power plant. The following is the second and concluding part:

"Capacity of plant for stored energy," the third element to be considered in the government of water power, is perhaps the most important factor, and often receives the least consideration. It is too often a chance factor. The capacity of the plant for stored energy may be easily understood. The following comparison partially illustrates the idea: To reduce the walls of a fortress may require a gang of laborers to use their united energy for several months of time, yet a few hundred pounds of steel in the form of a projectile fired from a cannon can in an instant be charged with energy enough to carry it a number of miles, and at the end of its flight it yet may retain power enough to reduce the fortress in a moment of time. This principle of storing energy in material in motion is the fundamental principle of all speed government.

If the above cannon ball were forged into a flywheel, and could be revolved on its axis with such rapidity that its average speed equaled the velocity that it had when fired from the cannon, it would contain the same quantity of energy, and this quantity might amount to many thousands of foot-pounds per second. In speed regulation this stored energy can be used to supply the demands for power until gravity can generate it. In like manner this capacity for energy storage can absorb power when the load has decreased until the power supply can be cut off. It can readily be seen that any and all of the moving or revolving parts of a power plant are storehouses for energy, and their capacity depends upon their weights and velocities. The physical laws governing the quantities of energy under the various conditions are well understood by our scientists and engineers, hence advantage can be taken of them in the construction of our modern water power plants.

The careful steam-engine builder has learned by experience that he must provide this power-storage capacity in his engine, and he varies it according to what is required of it in government. There is no doubt but that the use of flywheels on engines is a result of experience in trying to maintain even speed, and that their prime purpose is to carry any change in load until the power supply from the boiler can be brought into play to carry the new load, and to supply the power that the flywheel gave out in advance of it. The time required to get gravity effects is always greater than the time required to get the expansive effects of steam; therefore, the capacity for power-storage should be correspondingly greater in water powers if the same efficiency of regulation is required.

The momentum of water power plants is often very much less than that of steam power plants, and this lessens the possibilities of government to an extent determined by the changes in the load, the time required for gravity to act, and the quantity of power stored in the moving parts of the plant. This factor, power storage, cannot be too carefully considered. It is the factor above all others that the designer of a water power plant can most easily control. It is the one factor that can be varied to counteract all the bad effects of all the others; therefore, an intelligent application of it should be made in all water power plants where good government is important.

The last factor to be considered is the "governor." The governor is often considered to be the most important factor in the government of a water power; but it is only one of the important factors, and, if it is a perfect machine, it may still be limited in its efficiency by the three above discussed factors. A good governor can only play the part of an honest judge: Evidences of strife in the form of changes in load are placed before it; facts of design and construction are placed at its disposal; the unerring laws of physics are brought to bear upon each new case, and honest judgment is meted out in the form of speed or government of the plant, and no jury or supreme court can set aside the verdict.

A good governor must move the wheel gates as fast as gravity will respond in giving the proper velocity to the increased quantity of water required to supply the demand made for power. If it operates too fast, the results are detrimental to good government. The governor must have wrought into it the principles that co-operate with the power storage of the plant. It must be so designed and constructed that it will stop moving the gates when they have reached the proper position to supply power for the new condition of load. A good governor must make its judgments quickly and accurately, always returning the speed to normal after correcting the inertia and momentum effects of the change in load. A good governor should also be simple in design and mechanism; otherwise, it will be an expensive and unsatisfactory part of the plant. The constant and reliable duty expected of a governor requires it to be a powerful machine; the positive and quick judgments it must make requires it to be sensitive and delicate in some of its parts, and the importance of its position in a plant requires it to be symmetrical in appearance and mechanically perfect in its construction.

The possible regulation in a water power plant need no longer be a matter of experiment and doubt. The designer of such a plant need no longer be in darkness as to the government of his plant until he has experimented with several governors. He can design his plant for any desired efficiency of regulation, and a properly designed governor can govern it.

All plants already built are capable of a certain degree of regulation. If this degree is not satisfactory, and figures show that it cannot be improved, then further calculations will show positively what changes must be made in order to obtain the desired results.

In conclusion, it should be said that if the limitations of water-power government were investigated more carefully, there would be less doubt about the possibilities of government, and no doubt concerning the results in any particular case. Many of our conservative engineers who have not taken time to make these investigations have still some doubts regarding reliable and automatic government of water powers; but the results where these limitations have been intelligently calculated and the proper remedies applied, prove beyond all doubt that any desired efficiency of government can be provided for, even to the finest steam engine practice.

IN a report to the State Department Consul Monoghan, at Chemnitz, Germany, says that a new invention has been brought out in Berlin and Leipzig, to be known as iron felt. It is made of the best woolen materials, impregnated with the inventor's patented preparation, which gives it a 2220 pounds power of resistance to every square centimeter. The article is most useful for railroads of all kinds. Placed between the rails and sleepers it deadens sound, prevents shocks, and consequently lessens the wear and tear on the road. The first experiments with the new material were made on the Berlin street railway, over which 360 trains pass daily. The results surpassed the company's most sanguine expectations, and persons living along the line of the road were delighted. Not only was the noise brought down to a minimum, but the wear and tear is materially diminished; hence the cost of running the road is considerably re-

duced. This new material is to be tried on the new roads that are now being constructed in Leipzig. Old buildings and buildings of stone and iron suffer most from the shocks and noise of passing trains. Where these are, such an isolated material is a necessity. The material seems to be specially adapted for elevated roads.

Scientific Progress.

New Uses of Aluminum.

The use of aluminum in the arts does not grow in proportion to the reduction in the cost of the material. A few years ago the price of the metal was from $10 to $15 a pound. It is now sold at 32 cents a pound. At that price it is now cheaper than copper or brass for the same purpose, because for a given strength the weight is much less. The Chicago *Journal of Commerce* says the consumption of these metals in 1896 was: Copper, 156,000 tons; brass, 60,000 tons; aluminum, 650 tons. The producers of aluminum, in order to make a market for the metal, have been obliged to discover nearly all its uses, invent methods of handling it, and build the works for turning out the finished products. Thus far it has nearly displaced nickel in the arts, and it bids fair to eventually displace brass for most purposes, except where exposed to a heat of over 300°. It is largely used for cooking utensils and keeps bright. It is used in laboratories, and for the handles of surgical instruments, not only for its lightness, but because it is not affected by the antiseptics used. Dentists use it for plates for false teeth, and it has been used to replace a broken jaw. One of its latest uses is for lithographic plates, instead of stones, cheapening the process. In electric apparatus it is cheap on account of its non-magnetic quality. In Europe it is being used to reduce the weight of military accouterments—canteens, buttons, belt plates and the like being made of it. The anticipated output in 1898 is 2000 tons, and in 1900 10,000 tons.

A Railway Hospital Car.

Consul Morris writes from Ghent, that the latest novelty in Belgian railroad matters is the hospital car. In the event of a serious railroad accident, the car may be run to the spot, where the wounded may be picked up and carried to the nearest large city for treatment, instead of being left to pass long hours in some wayside station while awaiting surgical attendance. It also enables the railway companies, at certain seasons or upon special occasions, to transport large numbers of invalids to health resorts. The interior is divided into a main compartment, a corridor on one side, and two small rooms at the end. The largest compartment is the hospital proper; it contains twenty-four isolated beds on steel tubes hung upon powerful springs. Each patient lies in front of two little windows, which may be closed or opened at will. Each bed is provided with a little movable table and a cord serves to hold all the various small objects which the patient may need. The corridor on the outside of the hospital chamber leads to the linen closet and the doctor's apartment. In the latter is a large cupboard. The upper portion is used for drugs; the lower part is divided into two smaller compartments—one serving as a case for surgical instruments, the other as a receptacle for the doctor's folding bed.

The hospital compartment is carpeted with linoleum to deaden the sound of walking. Trap-doors in the floor, when opened, disclose an ice chest, a compartment for disinfection of soiled linen, and a provision cellar. If necessary, a portion of the hospital chamber may be transformed into an operating room for urgent cases.

REPRESENTATIVE JEFFERS has introduced a bill in the Pennsylvania Legislature similar to one introduced by Congressman Bingham in the House of Representatives, in which the latter asks that $25,000 be appropriated to the Franklin Institute of Philadelphia and the Purdice University of Lafayette, Ind., for the purpose of determining the quantity of the so-called "hammer blows, centrifugal lifts and tangental throw" of locomotive driving wheels in use on American railways. It appears that the unequal balancing of locomotives is the cause of the thumping and jarring which railway travelers find so inimical to their comfort and railway owners so injurious to their property. It is the hammer blows which bend, break or spread rails, which jar the roadbeds, tear out fastenings, fracture bolts, shatter bridges and cause so much loss of life and property. Railway accidents are sometimes caused in this manner. In the city's streets the hammer blows loosen the asphalt in which the rails are imbedded and entail not only an unsightly condition of the streets, but constant expense for repair and reconstruction.

Extent of the Universe.

On some aspects of the problem of the extent of the universe light is being thrown even now. Evidence is gradually accumulating which points to the probability that the successive orders of smaller and smaller stars, which our continually increasing telescopic power brings into view, are not situated at greater and greater distances, but that we actually see the boundary of our universe. This indication lends a peculiar interest to various questions growing out of the motions of the stars. Quite possibly the problem of these motions will be the great one of the future astronomer. Even now it suggests thoughts and questions of the most far-reaching character.

A STUDY of ozone from a technical standpoint, by E. Andreoli, appears in the *Journal of the Society of Chemical Industry*. Theoretically, one should be able to produce a kilo of ozone per electric horse power, but in practice only ten or twelve grams are obtained. By improvements in the apparatus for producing ozone, the author increases the production to thirty and even fifty grams per horse power, making the cost about 75 cents a kilo. The author proposes practical applications of ozone, such as purification of drinking water, cleansing of beer casks, preparation of wood for instruments and furniture, bleaching of starch and dextrin, oxidation of drying oils, purification of wine and brandy, etc. It does not appear, however, that any of those proposed uses have been tested practically and on a large scale.

"WHAT year was the electric light discovered and introduced, and in what country?" is answered in a contemporary as follows: Humphry Davy produced electric light with carbon points in 1800. Prof. Tyndall lectured at the Royal Institution, London, by the light of Jules Duboscq's electric lamp in 1855. The South Foreland lighthouse was illuminated by electricity in 1858, and the French Government ordered eight lighthouses to be so illuminated in April, 1861. In 1878 T. A. Edison of New York discovered a method of producing more light at less expense, and from that time the movement towards electric lighting rapidly advanced.

GLACIAL erosion is one of the most important methods of lake formation, and glacial deposition makes lakes on a smaller scale. A valley, having moraine material deposited at its lower end, will, when the ice sheet has disappeared, become the site of a lake if a stream flows there. With a glacier flowing past the end of a valley, the lateral moraines piled up will likewise form dams and thus lakes.

PROF. ALEX. GRAHAM BELL is now busily engaged in perfecting an instrument which carries words on the rays of light. He has already succeeded in telephoning by this means for a single mile.

Electrical Progress.

Calcium Carbide as a Reducing Agent.

Since the introduction of calcium carbide, it is significant that scientific men have been content to allow the product to rank solely as a water decomposer, and thus regard the production of acetylene the only available product. Researches of a somewhat lengthy description, which have lately been carried out at the Liverpool Research Laboratory, involve the use of calcium carbide as a metallurgical reducing agent.

In the first instance an excess of litharge was heated to redness in contact with the carbide, in a clay crucible, the reaction being accompanied by vivid incandescence, resulting in the formation of metallic lead and calcium oxide, CaO. A further portion was now selected, in which the proportion of carbide exceeded that of the litharge; this was further subdivided into various smaller portions, each portion being exposed to various temperatures, resulting in a regulus of calcium and lead of varying percentage, together with the expulsion of CO_2.

The alloys thus formed are all more or less brittle, and to a certain extent sonorous when struck, their melting point ranking below that of pure lead, and are slowly, but completely, decomposed in contact with aqueous vapor, the reaction being much less energetic than that afforded by alloys of lead with the alkaline metals. Stannic oxide, cupric oxide, and also ferric oxide, at corresponding higher temperatures, were readily reduced, yielding results of no practical value; in the case of the cupric alloys those samples containing under 1 per cent of calcium being rendered cold-short and breaking under very small strain; while, on the other hand, iron containing calcium approaches in appearance that of ferromanganese, being even more brittle, and very oxidizable in contact with water.

In a further operation, oxides of manganese nickel, cobalt and even chromium, molybdenum and tungsten were readily reduced, yielding calcium alloys. Results of experiments comprising the reductive action of the carbide upon the earthy chlorides and their haloids will be shortly at hand. The already partial success of these reactions seems to point most conclusively toward a new and powerful reducing agent, which at the same time, considering the market value of the carbide in question, could not fail to replace both sodium and potassium.—H. N. Warner in Chemical News.

The Direct Current Transformer.

The transformation of energy is at present, more than ever before, the main problem on which electrical and scientific men are working all over the world.

Viewing this subject from a practical standpoint, there are only two methods at present known which are worth considering.

One is using the storage battery. This necessitates a continuous-current source, or an alternating current rectified by means of a synchronizing commutator. The other is the magnetic induction method, which requires an apparatus in which either the conductor or the magnetic field is moving, as an ordinary dynamo, or a changing magnetic field set up by an alternating or pulsating current supplied to it. A transformer of this kind, having no moving parts, and requiring so little attendance, it has frequently been found preferable to use it, and to construct alternate-current machinery, giving a frequency best suited for its use. This is the only recommendation that can be given or assigned to the alternating current — the simplicity and cheapness of transforming it. In almost every other respect it is objectionable. It requires larger conductors than the direct current, and is more apt to produce all kinds of induction troubles in its own conductors and neighboring lines. The use of the alternating-current transformer is at present limited to electric lighting and to power transmission in connection with polyphase-current working.

The direct-continuous current is the ideal method for transmitting electrical energy, and it has advantages over the alternating current in almost all cases, and embraces a broader field, as, for instance, the operation of the telephone and telegraph systems which cannot at present be operated in any other way.

The objections to the direct current transformer are not so much questions of efficiency, as it is the first cost and running expenses. An apparatus having bearings, commutator and brushes, will necessarily cost more than one having only two coils incased in a stationary magnetic field.—C. Thorardson before the Chicago Electrical Association.

Overhead Trolley Without Wires.

An electric trolley system to be shortly introduced in Paris differs from that ordinarily employed in this country, overhead wires being dispensed with. The new system is the invention of Bochet, who establishes overhead contacts from the electric lamp posts belonging to the city, the distance between posts being somewhat smaller than the length of the electric train, consisting of two cars, so that contact is always assured at one point at least. Through flexible points of contact suspended from each electric light post along the proposed line the current will be taken up by means of a copper rail fastened along the edge of the roof of the car not less than 14 or 15 feet from the ground. The contact point will slide along that copper rail, and, it is claimed, there is no difficulty in establishing a continuous current if the points of contact are made sufficiently elastic. The current returns to the power station through the track as usual. This system claims all the benefits of the overhead as well as of the underground systems, without any of their shortcomings.

Electricity and the Growth of Plants.

It has at last been practically proved that electricity is a real incentive to the growth of plants. This is the result of experiments made at the Massachusetts Agricultural College by A. S. Kinney, an expert. He submitted different seeds to the action of an electric current, and found that germination was much accelerated. He took two lots of twelve groups containing 112 seeds each, soaked them in water until thoroughly moistened, and while wet placed them in glass cylinders open at either end. Copper disks which were connected at the poles of an induction coil were pressed against the seeds and a current passed through them for one or two minutes. After this the seeds were sown, the temperature being kept at 45 to 50 degrees. The result was an increase of growth in the seeds to which electricity was applied over the seeds not subjected to the experiment, of 30 per cent.

The result of the experiment showed that electricity exerts an appreciable influence upon the germination of seeds; that the application of certain strengths of current to seeds for short periods of time accelerates the processes of germination. Those lots of seeds receiving electrical stimulation gave a higher percentage of germination than the normal. The range in the strength of current which accelerates germination is exceedingly limited. Seeds subjected to but one application of electricity show the effect only for a few hours. Electricity when applied hourly to germinating seeds or growing plants does not lose its effect but acts as a constant stimulation to their growth and development.

THE visit of Professor Forbes to Egypt to inspect the natural water power of the Nile seems successful. He expresses a favorable opinion as to the utilization of the power of the Nile cataracts for generating electricity.

Motors and Pumps for Irrigation.

Some months ago we published accounts of the efficiency of wind power and windmills as a means of lifting water for irrigation. These statements came from the great interior arid regions and some of our California readers thought that they counted too much on the wind and on the windmill. We have now a careful statement prepared by F. H. King, University of Wisconsin, and would like to have these statements and estimates reviewed in the light of California experience.

Lifting Water by Wind Power.—At the present time there is much talk about the utilization of wind power for irrigation purposes, and where the areas to be irrigated are small, and particularly where the lift is very low, the windmill makes a cheap and effective motor for lifting water, but a single mill never can be depended upon to do work on a large scale.

As the windmill is at present used upon a piston pump, it will be helpful to consider what work can be done by piston pumps under different conditions, and in the table below is given the number of days required to pump the amount of water needed to irrigate one acre to the extent of two inches and four inches, respectively, with a single-acting piston pump working eight hours per day and making thirty strokes per minute:

NUMBER OF DAYS REQUIRED TO PUMP TWO AND FOUR ACRE-INCHES OF WATER WITH A SINGLE-ACTING PISTON PUMP WORKING EIGHT HOURS PER DAY AND MAKING THIRTY STROKES PER MINUTE.

Diameter of piston.	Time required to pump two acre-inches with—		Time required to pump four acre-inches with—	
	6-inch stroke.	12-inch stroke.	6-inch stroke.	12-inch stroke.
Inches.	*Days.*	*Days.*	*Days.*	*Days.*
3	20.5	10.3	41.1	20.5
4	11.6	5.8	23.1	11.6
5	7.4	3.7	14.8	7.4
6	5.1	2.6	10.3	5.1
7	3.8	1.9	7.5	3.8
8	2.9	1.4	5.8	2.9
9	2.3	1.1	4 6	2.3
10	1.8	0.9	3.7	1.9
11	1.5	0.8	3.1	1.5
12	1.3	0.6	2.6	1.3

It is claimed by Wolff that the average length of a day's work for windmills in the United States is 8 hours, and they are not likely to average more than 30 strokes per minute where single-acting pumps are used; and, this being true, the table above shows what the range of work done by the windmill may be when used for irrigation if worked upon pumps such as are indicated in the table.

It is generally conceded by the best authorities on the subject that existing data bearing upon the actual work which windmills are able to do when used for irrigation are not sufficient to enable tables to be constructed which will show what wheels of different pattern and sizes may be expected to do when set up in different sections of the United States. But if windmills can be set up which will work single-acting pumps at the rate and under the conditions indicated in the table above, then the areas to which 2 acre-inches and 4 acre-inches of water may be applied every 10 days would be as follows:

AREAS IRRIGATED BY WINDMILLS WORKING SINGLE-ACTING PISTONS 8 HOURS PER DAY AT THE RATE OF 30 STROKES PER MINUTE.

Diameter of piston.	2 inches every 10 days.		4 inches every 10 days.	
	6-inch stroke.	12-inch stroke.	6-inch stroke.	12-inch stroke.
Inches.	*Acres.*	*Acres.*	*Acres.*	*Acres.*
3	0.49	0.97	0.24	0.49
4	0.87	1.73	0.43	0.87
5	1.35	2.70	0.68	1.35
6	1.95	3.89	0.97	1.95
7	2.65	5.30	1.33	2.65
8	3.46	6.92	1.73	3.46
9	4.38	8.76	2.19	4.38
10	5.41	10.82	2.70	5.41
11	6.55	13.09	3.27	6.55
12	7.79	15.58	3.89	7.79

From this table it appears that if windmills can be constructed which will work pumps at the rates here assumed, areas varying from 0.24 acre to 15.58 acres may be irrigated at rates of 2 to 4 inches every 10 days.

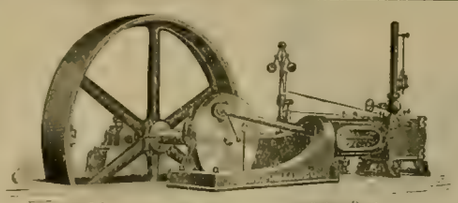
Wolff gives a table in his work, "The Windmill as a Prime Mover," showing the capacity of first-class windmills for work in irrigation, which is based upon results actually attained in practice, and from this the following table is computed:

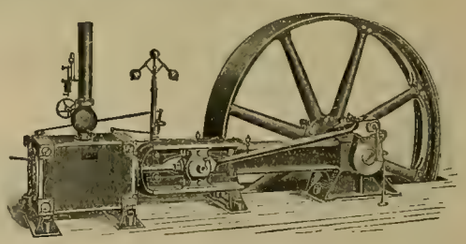
NUMBER OF ACRES A FIRST-CLASS WINDMILL WILL IRRIGATE 2 AND 4 INCHES DEEP EVERY 10 DAYS WHEN WORKING 8 HOURS PER DAY AND LIFTING THE WATER 10, 15, AND 25 FEET, RESPECTIVELY.

Diameter of windmill wheel.	Lift of 10 feet.		Lift of 15 feet		Lift of 25 feet.	
	2 inches.	4 inches	2 inches.	4 inches.	2 inches.	4 inches.
Feet.	*Acres.*	*Acres.*	*Acres.*	*Acres.*	*Acres.*	*Acres.*
8.5	1.35	0.67	0.9	0.45	0.55	0.27
10	4.57	2.13	2.85	1.32	1.70	0.80
12	7.66	3.83	5.11	2.55	3.00	1.50
14	9.87	4.93	6.58	3.29	3.94	1.97
16	13.79	6.80	9.10	4.54	5.64	2.82
18	22.00	11.04	14.14	7.05	8.64	4.32
20	27.46	13.98	18.55	9.69	11.47	5.86
25	37.06	23.33	31.38	15.69	18.46	9.36
30	65.46	47.73	64.42	32.21	38.06	19.04

It will be seen that according to this table the largest area which can be irrigated to a depth of 4 inches every 10 days by a 12-foot wheel, lifting the water 25 feet, is 1.5 acres. It should be said in connection with this table, however, that with the improvements which are being made both in the construction of windmills and of pumps adapted to them, it is quite probable that considerably higher efficiency will be attained.

Lifting Water With Engines.—When it comes to lifting water with engines for the purposes of irrigation, the amounts so raised to considerable heights at a comparatively small cost for fuel become very great.





It is claimed that at the present price of gasoline the gasoline engines now made will produce 1 applied H. P. at a cost of 1 to 1.5 cents per hour for fuel. At the higher figure the water necessary to irrigate 1 acre to a depth of 4 inches could be lifted 20 feet high at a fuel cost of 14 cents, and if the irrigation were repeated six times the total cost per acre for fuel alone would be only 84 cents.

At the Wisconsin Station, with a rated 8 H. P. farm engine, water has been drawn from a lake through 110 feet of 6-inch suction pipe to a height of 26 feet at the rate of 22½ acre-inches per day, with 1 ton of coal. At $4 per ton for coal the fuel cost for 4 acre-inches lifted 26 feet high was 72 cents, which makes six such irrigations cost for fuel alone $4.32, or upon the basis of a 20-foot lift, $3.03. It should be stated regarding this case that the cost includes the waste of fuel incident to frequent stopping and starting to firing up in the morning and allowing the engine to cool down at night.

Some form of plunger pump is necessarily resorted to in wells where the water is more that 20 feet below the surface, and in using such pumps for irrigation purposes, especially where the driving power is limited, it is very important that the suction and discharge pipes shall have diameters nearly or quite equal to the diameter of the plunger itself, otherwise the loss of power through concussion, friction, and unnecessary velocity of discharge will be great.

UNION IRON WORKS,

222 Market Street, San Francisco, Cal.

MAKE THIS SMALL

DOUBLE CYLINDER SINGLE DRUM HOIST

HOIST FOR PROSPECTING.

For Prospecting Purposes or Underground Work,

USING COMPRESSED AIR.

The entire hoist is self-contained, being mounted on an iron sole plate or bed which carries all the operating levers and provides a footboard for the operator. The engines are provided with reversible link motion and the drum with a broad strap brake, insuring safe and rapid work.

The general lines upon which this hoist is designed are neat, strong and substantial and all the operating parts are conveniently arranged.

The size herewith illustrated is the 4 in. x 10 in., rated at 15 horse power. The larger sizes, 8 in. x 12 in. and upwards are provided with post brakes.

Electrical Engineering Co.,

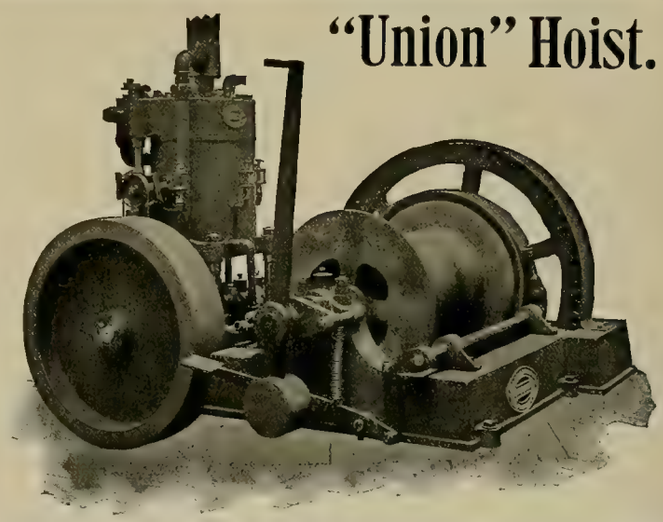
34-36 MAIN STREET,

SAN FRANCISCO, CAL.

Manufacturers of All Kinds of

Electric Machinery

For Mines, Mills and Hoists.



Girard Water Wheel Co.,

34-36 MAIN STREET,

SAN FRANCISCO, CAL.

These wheels are durable, highly efficient, and are the only wheels which have perfect regulation, which feature makes them especially suitable for the operation of electric machinery.

"Union" Hoist.

The above cut represents our 10 h. p. Double Cylinder Engine of latest type, and Hoist combined on strong iron base. This hoist is designed to raise one ton125 feet per minute from an inclined shaft, or 1500 pounds at the same speed vertical lift. The drum will hold over600 feet of ⅝-inch cable. The outfit weighs 3500 pounds.

A STEAM ORE STAMP.

One of the BONANZA MINES of the Black Hills was developed by a **TREMAIN STEAM STAMP MILL,** installed last summer at a cost of about $1600. After six months' run the superintendent wrote the following letter:

HILL CITY, S. D., Feb. 2, 1897.

Gates Iron Works, 650 Elston Ave., Chicago, Ill.—GENTLEMEN: It gives me great pleasure in informing you of our success with the Tremain Steam Stamp Mill which we have been running since last July. We have been running on hard, white quartz, some of it of a flinty character and a small portion of it slightly decomposed. We average about ten tons every 24 hours through a forty-mesh screen. If our financial standing had been a little better, so we could have put in a small engine and rock crusher, I am confident we could put through 14 to 15 tons in 24 hours. The wear and tear is considerably less than an ordinary stamp mill, it all being on the shoes and dies. The last we used of these were of the aluminum steel, which are the best wearing shoes and dies I have ever seen. The parts are all well made and durable, I having failed to see any weak point about the machinery.

We use one cord of pine wood in 24 hours, and run the mill with 70 to 80 lbs. of steam.

I have followed mining in connection with milling for thirty years and have never seen its equal for convenience, durability and cheapness. To parties wishing to purchase a quartz mill I cheerfully recommend the Tremain Steam Stamp Mill for its small cost, economy in operation and complete results of working. Very truly yours, [SIGNED] JAMES C. McDONALD,
Supt. St. Elmo M. & M. Co.

This Mill has the capacity of a 5-stamp gravity mill and costs less than half to install. Automatic feeder of approved design. Weight of entire Mill 3300 lbs. Made sectional for mule-back transportation.

Coast Industrial Notes.

—Oregon now proposes to make tea boxes for China.

—The San Joaquin Valley road is being extended to Visalia, Cal.

—The Nicaragua Canal Co. will shortly issue $15,000,000 5% bonds.

—The State Fair at Sacramento, Cal., will be held from Sept. 6 to Sept. 18, '97.

—A free market on the San Francisco water front will be established next month.

—Half a million pounds of wool were sold last week at Echo, Or., for 7 cents per pound.

—Another cut in Northern rates is reported, the fare now being $5 between San Francisco and Puget Sound.

—C. F. Juillard, of Sebastopol, Sonoma county, Cal., is about to ship 100 carloads of wine to New Orleans.

—Twenty cents per ton is the price paid for several thousand tons of tailings of the Good Hope mine, Perris, Cal.

—Eugene Debs talks of a scopy scheme —the building up of a new colony of communistic workers in the State of Washington.

—The Manufacturers' and Producers' Association will take a prominent part in the coming Fourth of July celebration in this city.

—The old scheme of an electric road from Marysville to Nevada City, Cal., is again revived, and local papers say surveyors are at work.

—According to a recent ruling of the Commissioner of Navigation, vessels propelled by gas, naphtha, fluid or electricity are classed as steam vessels.

—The Utah Central Railroad, running from Salt Lake to Park City, Utah, was sold last Wednesday to the Rio Grande Western Railway Company for $325,000.

—The British Columbia Development Company of Victoria proposes to build thirty-six miles of railway in central Alaska, with coast terminus at Skagaway bay.

—The California State Mining Bureau is going to prepare a register of mines and minerals of California, with maps of each county, location and description of mines, etc.

—The probability of the passage next month of a new tariff has rushed big cargoes of Oriental goods here. Four steamers in ten days have 20,000 tons freight from China.

—General Traffic Manager Eccles denies the report that the Oregon Short Line had opened the Butte gateway, which would allow the Great Northern and Northern Pacific railroads to compete with the Rio Grande, Western and Union Pacific lines for Eastern business.

—General Land Office Commissioner Hermann has issued an order regarding cutting timber on public lands under special permits from the Government. The former maximum of 2560 acres has been reduced to 160 acres, and sworn evidence is required in renewal of such permit.

—Surveyors at Kernville, Cal., are locating the route of a canal for the Los Angeles and Kern River Electric Company, which will head near Kernville and continue twelve miles to the power house. The transmission line as proposed goes through Tehachapi and east of Mojave.

—Among bids for three Government torpedo boats, to be of not less than thirty knots speed, are those of the Union Iron Works, of this city, for one 330-ton boat, $245,200, two, $490,500; one 284-ton boat, $225,000, two, $440,000. Wolf & Zwicker, of Portland, Or., bid for one 240-ton boat $214,500, two, $424,000.

—Cattle shipments through Albuquerque for 1897 to June 1 are unprecedently large. For the season to that date they numbered 166,872 head, all going north to feed or market. For May they numbered 105,191 head. The cattle are divided as follows: New Mexico and Arizona, 120,870; Old Mexico, 35,000; Texas, 11,000.

—It is expected that the Sonora railway, in Mexico, will be turned over to the Southern Pacific by the Santa Fe next week. The exchange of the line of Mexican road for the line between Mojave and The Needles was to have been made a month ago, but both companies have to await the permission of the Mexican Government to make the trade.

—Official statistics on the imports and exports of Japan show that the United States is now purchasing over $19,000,000 worth of manufactured articles and raw material a year of Japan, while that country is taking less than $5,000,000 worth of us. The British manufacturers are annually selling to the people of Japan about $20,000,000 worth of goods, while they are taking in return only $4,668,000 worth.

Book Notices.

The "Chlorination Process." By E. B. Wilson; octavo 120 pp. This little book is mainly a condensation of practical chlorination methods as successfully practiced in various sections, giving a description of the process, its cost and practical results. Considerable space is devoted to roasting-furnaces. Due credit is given G. F. Deetken, of Grass Valley, the first man to make a commercial success of the chlorination process in this country. A table of average cost is given, the figures not varying much from those previously published. The book is issued by Jno. Wiley & Sons., 53 E 10th St., N. Y. City; price, $1.50.

Recently Declared Mining Dividends.

Geyser — Marion, Utah, $9,000, payable June 30.

Personal.

J. P. Turner has been appointed superintendent of the Last Chance mine at Bingham,

A. B. Bowers has filed a suit against the Government for $500,000 for use of his patent dredger.

S. J. Eckman has been appointed superintendent of the Hexter mine in Calaveras County, California.

Charles A. Raymond has been appointed superintendent of the Grand Victory mine in El Dorado County, California.

Jas. Cronan, late superintendent Hale & Norcross, Virginia, Nev., is in the city on his way to Spokane, Wash., where he has mining interests.

Mr. Geo. E. Ames Jr., resident representative of the Union Iron Works in the City of Mexico, is in San Francisco on a brief business visit.

Mr. Bernard MacDonald, mining engineer of Butte, Montana, whose services have been engaged by a Canadian and European syndicate to find mining property for them in British Columbia, is now in Rossland, which will be his headquarters for a time.

The Plumas County Miners' Association has appointed a committee to further the objects of the association, as follows: A. B. White, Spanish Ranch; W. H. Leek, Crescent Mills; Geo. Standart, Greenville; R. A. Costar, Prattville; C. Lee, Butte Valley; Ed. Remick, Taylorville; F. B. Hosselkus, Genesee Valley; Julius Pauley, Mohawk; J. Nevill, Johnsville; T. L. Jones, Beckwith; Wm. Schuld, La Porte; E. M. Garnett, Hepsidam; W. T. Byers, Bucks Ranch; Joe Peppin, Granite Basin; G. G. Odneal, Rich Bar; P. Traynor, Cromberg; N. Mullen, Sawpit.

Commercial Paragraphs.

Dividend No. 24 of 25 cents per share has been declared on the capital stock of the Paraffine Paint Company, payable at its office, 116 Battery St., San Francisco, on the 29th inst.

The Risdon Iron Works have shipped to the Consolidated Gold Mines, of California, at Oroville, a Heine boiler weighing 50,480 pounds, to generate 350 horse power.

Smith and Irving is the new firm name of the assaying establishment, 128 N. Main St., Los Angeles, Cal. There is no change in the personnel of the firm, but simply a change of name.

The Edward P. Allis Co., of Milwaukee, Wis., have closed a contract with the Le Roi Mining & Smelting Company for machinery for their new 300 ton smelter. The outfit will consist of two 38x120 inch blast furnaces, one Bolthoff-Wethey calcining furnace, one 14x24 foot Reverberatory Matte smelting furnace, two No. 7 Connersville blowers, machinery for 300 ton sampling mill, Reynolds Corliss engine, boilers, etc., necessary for a complete and modern smelter, to be completed and working by Jan. 1st, '98.

The Jeffrey-Robinson Coal Washing System, which is manufactured by the Jeffrey Manufacturing Company, of Columbus, Ohio, is receiving much attention at this time from the coal operators in general. Its claims for superiority, efficiency and low cost of operation seem demonstrated in the many plants now in use. Among some of the recent orders for complete 400 ton washing plants are the following: Kansas and Texas Coal Company, mines at Huntington, Arkansas, Muddy Valley Mining and Manufacturing Company, Hallidaysboro, Illinois, The Chickamauga Coal and Coke Company, Chickamauga, Ga., and the Toms Creek Coal and Coke Company, of Pulaski, Va.

MINING AND MILLING MACHINERY.

DOUBLE CYLINDER SINGLE DRUM HOIST.

THE above form of Hoist has certain features of construction which make it superior to all others. It is mounted on a single solid base, with standboard for the operator. The engines are reversible link-motion and the drum is fitted with post-brakes and helical teeth, which assure quick and safe operation. The design is compact and superior and the construction strong and substantial. We furnish them either with or without clutch pinions. The above cut illustrates an 8½ inch by 10 inch. Other sizes in stock and built to order.

PACIFIC AMALGAMATOR

FOR QUARTZ MILLS, Placer & Beach Sands.

Takes the place of plates. Will save the fine as well as the coarse gold. It has a large silver-plated amalgamating surface, constructed so as to produce a complete contact. Will save fine gold that cannot be saved on ordinary plates. No extra cost of operating. Cheap, durable and practical. Send for Catalogue. VULCAN ROPEWAY

—WITH—

AUTOMATIC ORE LOADER AND AUTOMATIC DUMPING DEVICE.

For Conveying Ore, Cordwood, Etc.

EMPIRE, NEVADA, April 17, 1896.

Vulcan Iron Works.—GENTLEMEN: The Ropeway furnished by your company to convey tailings from Morgan Mill to Mexican Mill, a distance of seven-eighths of a mile, is giving entire satisfaction. We transport 200 tons of tailings in ten hours; one man does the whole business, including elevating tailings from hopper in the ground, operating Vulcan self-loader, and attending to the Ropeway generally. The self dumper requires no attention whatever. The Vulcan loader I consider the best feature in the whole Ropeway, making it possible for one man to load 200 tons in ten hours.

Yours very truly, J. P. WOODBURY, Supt.

ASPEN, COLORADO, April 8, 1897.

The Mine and Smelter Supply Co., Denver, Colo.—GENTLEMEN: Your favor of the 5th inst. at hand and noted. In regard to the Wilfley Table I wish to say that I consider it to be the best device in use to-day for concentrating fine ores; that it will save everything that a gold pan will; that it combines the clean saving of a Rittinger with the capacity of a buddle. I think that without question it will supplant in time all other devices for handling fine and slimy ores. This includes all the vanning machines and buddles.

This is higher praise than I am in the habit of giving, but I feel sure that it is deserved, and you may make any use of this that you desire. Yours very truly,

[SIGNED] S. I. HALLETT.

THE BEST BOOKS

Are always the **CHEAPEST.** All the latest and best works on **Mining, Metallurgical, Electrical and kindred subjects** can always be obtained through the office of the MINING AND SCIENTIFIC PRESS. Below will be found a list of standard books in their various lines. If you do not find what you want in it, send for catalogue and price list of **Standard Mining Works and Scientific Publications.**

MINING AND SCIENTIFIC PRESS,

220 Market Street.....San Francisco, Cal.

Assaying.—Part I—Gold and Silver Ores.
Third edition; Just Out. Rewritten and Improved by the Author, C. H. Aaron. Embraces 130 12-mo pages, with illustrations; well bound in cloth; 1896. Price, postpaid.....$1 00

Assaying.—Parts II & III—Gold and Silver Bullion, Lead, Copper, Tin, Etc.
Latest edition. Contains 161 pages with illustrations, and is strongly bound in cloth. Much of the original text is replaced by new matter. Price, postpaid.....$1 75

Notes on Assaying and Assay Schemes.
By P. De Peyster Ricketts, E. M., Ph. D., Professor in Assaying in the School of Mines, Columbia College, N. Y. Prepared with special reference to the wants of the student and practical assayer. Containing also Rules for the Examination of Mines, Assayer's Outfit. Treatment of Ores, etc. Fifteenth edition. 8vo., cloth.....$3 00

Prospector's Field Book and Guide.
By H. S. Osborn.....$1 50

A Practical Guide for Prospectors and Miners.
By C. W. Moore. With numerous illustrations.....$4 75

Roasting of Gold and Silver Ores and the Extraction of their Respective Metals Without Quicksilver.
Second edition. By Guido Kustel, M. E. Contains 156 pages, embracing illustrations of furnaces, supplements and working apparatus. Price, postpaid.....$3 00

The Lixiviation of Silver Ores with Hyposulphite Solutions.
With special reference to the Russell Process. Second edition. Completely revised. By Carl A. Stetefeldt. Price, bound in cloth.....$5 00

Modern Copper Smelting.
By Edward Dyer Peters, Jr. Seventh edition. Rewritten and enlarged. Profusely illustrated....$5 00

Electricity in Mining.
By Sylvanus P. Thompson.....80 cts.

Practical Treatise on Hydraulic Mining.
By Aug. J. Bowie, Jr. On the use and construction of Ditches, Flumes, Dams, Pipes, Flow of Water on heavy grades, methods of mining shallow and deep placers, history and development of mines, records of gold washing, mechanical appliances, such as nozzles, hurdy-gurdys, rockers, undercurrents, etc.; also describes methods of blasting; tunnels and sluices; tailings and dump; duty of miners' inch, etc Price, postpaid.....$5 00

Practical Hydraulics.
A book for Civil Engineers, Miners, Millmen, Hydraulicians, Mining Engineers and Irrigators. By P. M. Randall. Contains useful tables for ready reference, in which the results of abstruse calculations are all placed in a form so that one can find what he wants in a moment. For the engineer the principles, formulæ, coefficients, etc., are given; and for those not familiar with higher mathematics, examples, rules and tables are prepared. Is specially applicable to the Pacific Coast. Price, postpaid, $2

The Metallurgy of Silver.
By M. Eissler. Profusely illustrated.....$4 00

Manual of Mining.
For the use of Mining Engineers and Technical Schools. Treating of Preparatory and Exploratory Work, Methods of Mining, Hoisting Machinery, Pumping, Ventilation Shafts, Tunnels, Blasting, Timbering, etc., etc. By Prof. Magnus C. Ihlseng, E. M., Ph. D. Second edition, with Appendix. 500 pages, 8vo., cloth.....$4 00

The Explorer's and Assayers' Companion.
A third edition of selected portions of the "Explorer's, Miner's and Metallurgist's Companion." By J. S. Phillips, M. E. A practical exposition of the various departments of Geology, Exploration, Mining, Engineering, Assaying and Metallurgy. Price, postpaid.....$6 00

Aaron's Leaching Gold and Silver Ores.
By C. H. Aaron. The most complete handbook on the subject extant; 164 pages, octavo. Illustrated by twelve lithographic engravings and four wood cuts. Fully indexed. Plainly written for practical men. In cloth, postpaid.....$3 00

Manual of Assaying—Gold, Silver, Copper and Lead Ores.
By Walter Lee Brown, B. Sc. One colored plate; 132 illustrations on wood. Fifth edition. 12 mo. 533 pp. Price, postpaid.....$2 50

The Metallurgy of Gold.
By M. Eissler. Profusely illustrated.....$5 00

A Text Book of Mineralogy.
Based upon the System of Mineralogy of Prof. J. D. Dana. Embracing an extended Treatise on Crystallography and Physical Mineralogy. By Edw. S. Dana, Curator of Mineralogy, Yale College. With upward of 800 woodcuts and one colored plate. Seventeenth edition. 8vo., cloth.....$3 50

Notes on the Treatment of Gold Ores.
By Florence O'Driscoll, Associate Member of Institute of Civil Engineers. 8vo., cloth.....$2 00

A Practical Manual of Minerals, Mines and Mining.
By H. S. Osborn.....$4 50

Cyanide Processes for Gold and Silver Ores.
By E. B. Wilson, E. M. 12mo., cloth.....$1 5

DEWEY & CO., Patent Solicitors.

220 MARKET ST., SAN FRANCISCO, CAL.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced first-class agency. We have able and trustworthy associates and agents in Washington and the capital cities of the principal nations of the world. In connection with our scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us to give advice which will give inventors the expense of applying for patents upon inventions which are not new. Circulars and advice sent free on receipt of postage. Address **DEWEY & CO., Patent Agents, 220 Market St., S. F.**

Assessment Notices.

THORPE MINING COMPANY.—Location of principal place of business, San Francisco, California; location of works, Fourth Crossing, Calaveras County, California.

Notice is hereby given that at a meeting of the Board of Directors held on the 9th day of June, 1897, an assessment (No. 7) of 2½ cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the secretary, at the office of the company, room 44, Phelan building, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 17th day of July, 1897, will be delinquent and advertised for sale at public auction; and, unless payment is made before, will be sold on MONDAY, the 9th day of August, 1897, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

A. F. FREY, Secretary.

Office—Room 44, Phelan building, San Francisco, California.

Golden Gate Gas Engine.

With Mine Hoist Connected.

These HOISTS are now in use on several mines and they have proved practical, safe and economical. Starts and stops with ease. Speed under perfect control.

The entire plant, engine and hoist, is light and compact. Can readily be placed in any position, on the surface or underground.

Capacity from 4 to 50 h.p.

The "Golden Gate" uses Gas or Gasoline; it is the simplest and most reliable engine built. It furnishes power wherever required at the lowest cost.

Send for circulars with full particulars.

RISDON IRON WORKS,

Office and Works: Cor. Beale and Howard Sts., San Francisco.

READ WHAT MINERS THINK OF THE BRYAN PATENT ROLLER QUARTZ MILL AND JOHNSTON CONCENTRATOR.

OFFICE OF THE CANDELARIA CONSOLIDATED MEXICAN MINING CO.,
SAN DIMAS, DURANGO, MEXICO, October 25, 1888.

RISDON IRON WORKS, San Francisco—Gentlemen: Our company has been operating three of the 4-foot Bryan Roller Quartz Mills, one of which has been running steadily for three years, one for two and one for one year. Our quartz is very hard; we crush through a No. 60 mesh screen. Our mills run 55 revolutions per minute, and each crush through 60-mesh screens 12 tons in 24 hours; through 50-mesh, 15 tons; and through 40 mesh, 18 tons. This proportion has been continuous.

One set of dies will crush from 1500 to 1600 tons.

One set of tires will crush 1500 tons.

One ring plate will crush from 2200 to 2300 tons.

The mills require very little attention. At our mill an ordinary "peon," earning one dollar per day, has complete charge.

In regard to sliming, in comparison with stamps, by reason of the discharge surface and the continuous agitation by the scrapers, a MUCH less amount of slime is created. A three years' experience teaches me that, in every respect, the mills are a complete success, and of material benefit to the mining world. They can be set up and running in forty-eight hours and can be dismounted in the same time and removed to wherever desired. Ours were packed on our mule trail over as difficult a road as any in Mexico. As a gold amalgamator it is unequaled by any mill now in existence. Yours truly,

D. M. BURNS, Superintendent.

BULLION-BECK AND CHAMPION MINING COMPANY,
EUREKA, UTAH, August 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: Referring to contract made by you with the Bullion-Beck and Champion Mining Company, by which you were to furnish one 5-foot Bryan Roller Quartz Mill on four months' trial, in competition with the Huntington Mill, would say that we have made the test, and the Bryan Mill has proven so greatly superior on all points claimed, viz., capacity and economy, that we have ordered a second Bryan Mill from you and have concluded to discontinue the use of the Huntington Mill.

Yours truly, JOHN BECK. Pres.

SIMON BAMBERGER, Director. [Copy.] W. J. BEATIE, Sec't'y.

BULLION-BECK AND CHAMPION MINING COMPANY,
EUREKA, UTAH, Aug. 24, 1895.

THE RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: In February last, in connection with the five-foot Bryan Roller Mill which we took from you to test in competition with the Huntington Mill, we also took a six-foot Johnston Concentrator to be tested with ten Frues, one end shake with four belts and one side shake Woodbury. We have been working these machines since the mill was completed, at such times when we had sufficient water.

The terms on which the test was made was that the machine doing the most satisfactory work should be accepted and the others taken out. This did not apply to the Frue, as they were purchased with the plant. In compliance with this agreement, we now inform you that the Johnston Concentrator has proved so superior over the other machines that we now order from you four more of the Johnston Concentrators. Yours truly, JOHN BECK. Pres.

SIMON BAMBERGER, Director. W. J. BEATIE, Sec't'y.

GREAT SALT LAKE AND HOT SPRINGS RAILWAY.
S. BAMBERGER, President and Manager.
SALT LAKE CITY, UTAH, October 10, 1895.

B. R. TAWNDRAW, ESQ., care Guyer Hot Springs, Ketchum, Idaho—Dear Sir: In reply to yours of the twenty-eighth of September, we have been using at the Bullion-Beck Concentrating Works, Frue Vanner, Woodbury and Johnston machines, side by side for the last four months; and after a thorough trial of all of them, we concluded that the Johnston Vanner was doing the most accurate work and was the best; hence, we bought four more Johnston machines and shall continue to use them in preference to any other.

You will find it the easiest regulated machine and very much easier set up than either of the other machines. We bought our machines from the Risdon Iron Works, of San Francisco, where Mr. Johnston, the patentee, personally superintends the manufacturing of them.

Hoping you will make a success, I remain, Yours truly,

[Copy.] [Signed] SIMON BAMBERGER.

THE GOLD VALLEY MINING COMPANY OF SAN FRANCISCO.
C. C. McIVER, President; D. CUSHMAN, Secretary.
MISSION SAN JOSE, CAL., Oct. 17th, 1895.

RISDON IRON AND LOCOMOTIVE WORKS, San Francisco—Gentlemen: We take great pleasure in having to inform you that, after a careful investigation extending over a six weeks' steady run alongside of six other concentrators, the Johnston which you put in for us was the only machine from which you could not find a loss in the tailings. It has done all you claim for it and has proved more than satisfactory. We intend replacing all our other concentrators with Johnston's, as we are convinced they will pay for themselves many times over in a year. CHAS. C. McIVER, President.

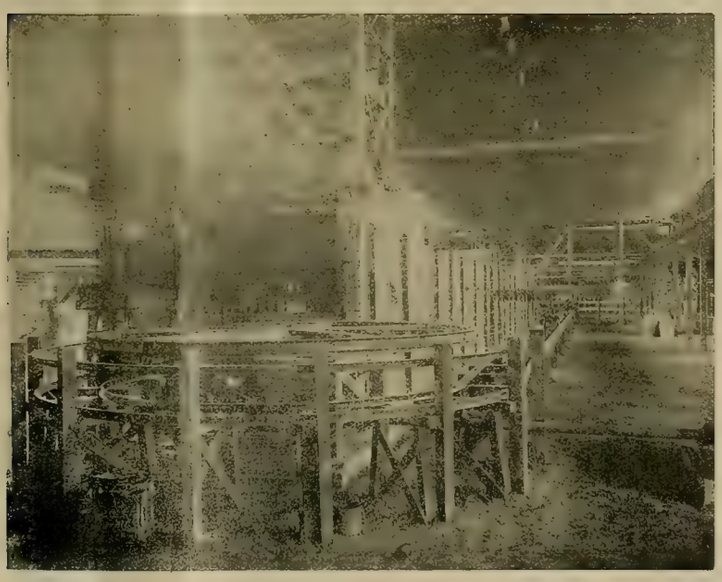
Daniel Best Crude Oil Engine,
Kinkead Quartz Mill,
Smith Striking Stamp Mill.

Springer Ore Concentrator,
Truax Ore Cars,
Rock Breakers, Hoists, Etc.

Why the Springer Concentrator is the Best:



It will do more and cleaner work than any rubber belt machine.
It weighs only one-half as much as some of the six-foot concentrators.
Is the most simple in its construction of any machine in the market, and only one-third as many pieces in it as in some of the others. Was invented by an old miner of forty years' experience handling every known concentrator on the market.
Should any piece need repairing, it can be removed without disturbing any other part of the machine.
Can be set up by any inexperienced miner.
Its distributor is perfection itself, distributing the pulp evenly over the entire surface of the belt.
Grade of shaking frame can be changed while the machine is running at full speed.
It is the strongest, lightest running and most inexpensive to keep in repair of any
Will save more of the fine slimes than any other machine.
Is cheaper than any other six-foot machine, costing only $350.00 f. o. b. cars or boat, San Francisco.
Will handle the pulp from five stamps better than any other Concentrator.
Has adjustable eccentrics, and any length of stroke can be had, thereby giving different speeds per minute.
The belt is very durable, being made of No. 3 Canvas, woven especially for the Springer concentrator.
This machine requires so little attention that one man will easily attend to a dozen of them.
It has a solid rubber flange, which no other canvas belt has.
Wear and tear upon this machine is not one-third as much as upon some of the other concentrators.

ROPP STRAIGHT LINE FURNACE

FOR ROASTING, CHLORINATING AND DESULPHURIZING ORES.

Extracts from Letters Received from Mr. Philip Argall, Manager the Metallic Extraction Co., Cyanide, Colorado:

January 2, 1897.

"The roasting is invariably good. We can do 80 tons per day to 0.13% sulphur, when everything runs smooth. Our month record which, of course, includes all delays, is 1700 tons, from 1.94% sulphur to 0.16%."

February 19, 1897.

"Our furnace is now running very nicely indeed, averaging 90 tons per day to 0.10% sulphur, and doing excellent work; in fact, it has improved right along and we are highly pleased with it.
"For 24 hours ending 7 A. M. to-day 102 tons were roasted."

The ROPP FURNACE is now in successful operation at the following reduction works: The Hanauer Smelting Works, Salt Lake City, Utah (one furnace); The Metallic Extraction Co., Cyanide, Colo. (one furnace); The Colorado-Philadelphia Reduction Co., Colorado City, Colo. (three furnaces); The Selby Smelting & Lead Co., Selby, Cal; (one furnace); The Mount Morgan Gold Mining Co., Rockhampton, Queensland (one furnace); and Broken Hill Proprietary Co., Broken Hill, New South Wales (two furnaces).

Catalogue on Application.

Market Reports.

The Markets.

SAN FRANCISCO, June 26, 1897.

The local money market begins to show signs of easing, with more outside money offering. The impression grows that in view of the steadily growing feeling of confidence, lower rates of discount will rule within the next 60 or 90 days, owing to banks letting out their hoarded stock of coin. So far the inquiry for funds does not show any increase, but it is expected that next month there will be a good demand for crop moving purposes. The crops of all kinds, except hay, are turning out larger than has been estimated, which will call for more money. The East reports a growing demand for money, which is accepted as a harbinger of better times. The call comes from speculators, manufacturers and merchants, and also for crop moving purposes.

The between-season dullness continues in about every branch, except groceries and other necessities. Jobbers in these branches report a fairly active demand, but with the margin of profit in many lines wiped out by close competition. In hardware, metals, etc., the demand is fairly active. We are creditably informed that three of the largest iron and machine works in this city have work ahead which will run well into next year, notwithstanding they are employing a largely increased number of hands. One harvest machine manufacturer reports more work than for several years, which gives employment to nearly double the number of men that were working for it last year. This speaks well for more prosperous times. Our Eastern exchanges are no longer pessimists, but are quite enthusiastic over the outlook, and unhesitatingly state that we have rounded the corner.

New York Silver Prices.

NEW YORK, June 24.—Following are the closing prices for the week:

	Silver in London.	Silver in N. Y.
Friday	27¾	60½
Saturday	27⅝	60¼
Monday	27 9-16	60⅛
Tuesday	27 9-16	60⅛
Wednesday	27 9-16	60⅛
Thursday	27 9-16	60¼

	Copper.	Lead.	Iron.	Tin.
Fri.	10 90 @11	12½ 3 37½	10 00@12 50	13 92½
Sat.	10 90 @11	12½ 3 37½	10 00@12 50	13 95
Mon.	10 90 @11	12½ 3 37½	10 00@12 50	13 95
Tue.	10 90 @11	12½ 3 37½	10 00@12 50	13 95
Wed.	10 90 @11	12½ 3 37½	10 00@12 50	13 95
Thur.	10 90 @11	12½ 3 35	10 00@12 50	13 95

The local bullion, money and exchange quotations current are as follows:

Commercial Loans, % per annum	7@8
Commercial Loans, prime	6@8
Call Loans, gilt edged	6@7
Call Loans, mixed securities	7@8
Mortgages, prime, taxes paid by lender	6@8
New York Sight Draft	17½c Prem
New York Telegraphic Transfer	20c Prem
London Bankers' 60 days	$4.87
London Merchants	$4.85
London Sight Bankers	$4.88
Refined Silver, per oz., 1000 fine	60⅛
Mexican Dollars	49@49½

SILVER.—The market shaded off slightly the past week in sympathy with the East. Europe continues to take sparingly, but if China should negotiate for a loan of $80,000,000, it is thought that a large part will be taken in silver, particularly if the money is for home use. The export movements from the port of New York have been largely of foreign silver, chiefly that imported from Mexico. The steamer for China took out for Japan and China 152,000 ounces.

MEXICAN DOLLARS.—The market is quiet, although steamers now leaving for China take out increasing quantities. The last one took out 166,721 dollars.

QUICKSILVER.—The market is steady to firm, with a continued fair demand.

Our market is quoted at $40.50 for domestic consumption.

COPPER.—The market has held steady. There have been liberal receipts of ingots the past week. The East reports a firm to strong market. James Lewis & Sons of Liverpool report in their last circular: "Less American copper is now offering than for some time past, and a considerable quantity of electrolytic and wire bars previously sold have recently been bought back by the original vendors. There are signs of improved trade in the United States, and as soon as the present session of Congress ends this improvement is expected to further develop. The demand for manufactured copper is not very active, and India has only bought small quantities of yellow metal and sheets. Best selected is becoming scarce. Birmingham is being offered. The use of high conductivity wire continues to extend both in this country and on the Continent, and wire drawers are busy."

The local market is quoted as follows:

Ingot, jobbing	—@14
Ingot, wholesale	—@13
Sheet copper	—@17
Bolt	¼ and 5-16, 20c; ⅜ and larger, 17

TIN.—The consumption continues large of both plate and pig, but this does not affect values owing to requirements having been met by forward purchases some time ago.

We quote as follows in a jobbing way:

Pig, per lb	—@ 15
Plate, I C coke, heavy, per box	$4 10@4 25
" " light, "	4 00@—

LEAD.—The market holds to strong prices with a fairly free consumption reported on this coast and also at the East. Foreign markets are firm to strong.

Our market is quoted in jobbing lots as follows:

Pig	4 00	@	4 25
"	—	@	4 50
"	5 62½	@	6 12½
"	4 87½	@	5 37½

SHOT.—The market is firm at full figures. Our market is quoted as follows:

Drop, sizes smaller than B, per bag of 25 lbs	$1 35
Drop, B and larger sizes, " "	1 60
Buck, Balls and Chilled, do, " "	1 60

POWDER.—The consumption shows an increase over last year. There was sent to Hawaii the past week 150 cases and 150 kegs.

The market is quoted as follows for Hercules: No. 1, from 11¾c to 17¼c, according to strength and quantity; No. 2, from 9c to 11c, according to strength and quantity.

BORAX.—The market is steady to firm. The market is quoted as follows:

Refined, in carload lots, in barrels	5
Refined, in carload lots in sacks	4¾
Powdered, in car lots	5
Concentrated, "	4½

IRON.—The market is firm to strong for all kinds. The East continues to report an active market, with sales made into next year. The consumption is larger than for years.

	To Arrive.	Spot.
AMERICAN.		
Sloss	$20 00	$22 00
Thomas	21 00	22 00
Salisbury	29 00	31 50
ENGLISH.		
Barrow	$21 00	$23 00
Gartsherrie	21 50	23 00

COAL.—There is nothing new to report in our market. The consumption of steam is increasing.

COKE.—The market is quoted as follows:

Gas Companies'	— —		— —
English, to load	9 50	@	— —
" spot, in bulk	10 00	@	— —
" in sacks	11 00	@	12 00
Cumberland	— —	@	— —

PLATINUM.—Very little doing.

Our market is quoted in a jobbing way at $10 to $15 per ounce.

ZINC.—The market is firm at quotations.

Our market is quoted at 10 to 15 cents, according to thickness.

ALUMINUM.—The market is steady.

We quote in jobbing lots at 50 cents per pound for ingots.

Chemicals.

There is absolutely nothing new to report. The long dragged out action on the tariff has admitted of the markets on this coast, and at the east being well stocked up, and consequently dealers fear there may be a selling pressure before the close of the year, which makes them conservative.

SPELTER.—The market is quiet but steady.

We quote our market in a jobbing way at 5 cents a pound.

BISMUTH.—The market is steady.

Our market is quoted in a jobbing way at $1.50 a pound.

PHOSPHORUS.—The market is steady.

We quote in a jobbing way at 70 to 75 cents per pound.

BONEASH.—There is nothing new to report.

Our market is quoted in a jobbing way as follows: Extra, 4c a pound; No. 1, 3½c; No. 2, 2½c.

SODA ASH, 58% (LeBlanc process).—The market is steady at $1.55 per 100 lbs. in a jobbing way.

CAUSTIC SODA, 60%.—The market is slow at 3c per pound in a jobbing way.

HYPOSULPHATE OF SODA.—There is a slow demand at 2½c a pound from stores.

NITRATE OF SODA.—Market is quiet.

Our market is quoted from store at 4c for 95%.

ACETIC ACID.—The market is steady at 6 to 12c per pound from store for carboys, according to make.

SULPHURIC ACID.—The demand is light.

We quote in a jobbing way at 1½c per lb for 66%.

NITRIC ACID.—Our market is reported steady from store at 6½@7c per pound in carboys.

BLUE VITRIOL.—Our market is quiet.

We quote in a jobbing way at 4½c per pound.

Mining Share Market.

SAN FRANCISCO, June 24, 1897.

The mining share market has been dull throughout the past week with a steady shrinking in values. This is contrary to reports put out last week that before July 4 there would be a strong up-move with many of the shares more than doubling on the shorts. It is quite likely that these reports caused persons on the short side to fill and as the majority of persons dealing in the market were loaded up there was no support. It seems to be a recognized fact that at the declining prices of the past few weeks there has been a steady absorption of the shares thrown out by the public. It is stated that strictly commission brokers have fewer shares for outsiders than ever before known. It is also said that the number of shares held on the outside, and paid for, is very considerable below that ever before held. These low holdings cause the inquiry to be raised "who has been buying them?" Experience has taught that it makes little difference if an inside pool holds the large bulk of shares, for they will not make a deal until they are ready. When they are ready and prices have been materially advanced and there is an opportunity of making a deal then a body of ore is shown up in the leader with the usual results, the outside heavy buyers at high prices on big ore developments, but later on they are big sellers on assessments and a petering out of the ore.

The news from the Comstock mines, so far as official letters placed on file are concerned, is devoid of interest. Some of these letters appear to be made to order, for, more than once, one or more of them have been at variance with what the inside pool has been furnished. Even officials of the mines and members of other pools, but not of the inside pool, are kept in ignorance of the true condition of the mines, when, by so doing, the "inside" is able to better accomplish a desired purpose. With persons claiming to be informed on the mines there is a strong belief that two or more good sized bodies of ore can be removed at any time desired. While believing this they do not operate in shares, well knowing that the mines are one thing and the stock market quite another, yet, out of both, money is made by the inside. From the north end group mines the news from there is of an interesting character to miners, but to outsiders it is of no particular interest. Some of the work is being run in the right direction, yet fears that it may be stopped, as has work for several years past, before reaching an ore body, keep informed outsiders from buying. In Utah work is confined to the surface tunnel level, with nothing new to report. In Sierra Nevada work is continued on the surface tunnel level and also 900-foot level. So far as official letters go, nothing of interest is reported, but Comstock miners state that the work in the 900-foot level is in the right direction. Probably this is why the shares have ruled strong. Nothing new comes to hand from Union. Official letters do not report quite so much active work. In Mexican they are still running a south drift from the northwesterly workings on the 1000-foot level. The material is not of an encouraging character. Long-suffering outside shareholders of Ophir ought to feel in better spirits, for the last official letter states that quartz assaying $1 a ton has been found in the mine, but this is not sufficient to shut off an assessment soon.

In Andes they are still exploiting the 175-foot level. The work in Con. Virginia begins to lose interest owing to a strong dropping in prices. The market value of the shares now with over 100 tons of good ore raised every week is not so high as it was when no ore was found, and only fair prospects ahead. In this mine active work is being done on the 1000-foot, 1550-foot, and 1650-foot levels. On the latter two levels the work is quite interesting, for the latter show that the mine is far from being worked out, and that when the work is in better shape more ore can be extracted than is now. At several places veins varying from a few inches to 2 or 3 feet have been cut, giving assays from $15 to nearly $100 a ton. The work in Best & Belcher, and Gould & Curry, is in the same direction, and on the same level heretofore reported. In the Alpha they continue to make slow progress about as fast as ever. Only 10 feet was made the past week in the south drift from the west crossdrift on the 500-foot level. This drift is being run so as to put the mine in position for better working when desired by the inside. In Bullion they have abandoned the work that they have been doing for months past, and are going to run an east crossdrift from the work shaft. The joint west crossdrift of Con. Imperial, Challenge and Confidence is in harder material. From Confidence nothing of interest is at hand. The work is the same as reported last week in the Crown Point, Belcher, Seg. Belcher and Overman. In the joint west crossdrift of the Yellow Jacket, Kentuck and Crown Point, only fair progress is being made. Nothing new comes to hand from Alta.

From the Bruswick lode nothing of particular interest has come to hand. The last official letter from the joint work of Con. Virginia, Best & Belcher and Gould & Curry state that in the Best & Belcher ground they ran into one foot of ore assaying a little over $39 a ton, and that 15 tons of ore had been extracted. If with over 2000 tons of good ore extracted last week by Chollar an assessment has to be levied, the one-foot ore in B. & B. is not very encouraging. In Chollar they are pushing work on the 300-foot, 400-foot, 500-foot and 600-foot levels. There was extracted last week 226 tons of ore assayed by battery samples $13.22 gold and 13.02 ounces of silver to

WILL NEGOTIATE with owners or their duly authorized agents only.

WILL INVESTIGATE only thoroughly bona-fide properties, either Mines, Prospects or Mineral Lands, whose owners are willing to make reasonable terms. When sending reports on properties also send terms on which you are willing to sell or lease.

E. N. BREITUNG,
Marquette, Mich., U. S. A.
Operator and Dealer in
Mines, Mining Properties and Mineral Lands,
Mining Stocks, Bonds, Options, Leases, Contracts and Securities.

MONEY LOANED ON BONA-FIDE MINES.

WILL EXAMINE on reasonable terms all kinds of Mines, Mining Properties and Mineral Lands as to their value, method of working and the condition of their titles.

WILL GIVE Options, Leases, Bonds and Contracts on all kinds of Mines, Mining Properties and Mineral Lands.

Assay and Chemical Work Done on Reasonable Terms.

Have best of bank and other references. Use McNeill's or A B C Telegraphic Codes.

DO ALL OUR OWN EXPERT AND CHEMICAL WORK.

THOMAS J. FRY, President. JOHN SYLVANUS, Sec'y & Treas.
T. R. MILLER, Vice-Pres't. JOHN D. FLEMING, Counsel.

CAPITAL STOCK, $100,000.

THE Mining Investment Company,
No. 521 to 524 Cooper Building,
DENVER, COLO.
Branch Office, - COLORADO SPRINGS.

Gold and Copper Properties Wanted. We have prospective purchasers for developed and producing mines and desire to correspond direct with owners of such properties. We handle properties on legitimate commission only and prefer to deal with owner or authorized representatives.

WANTED.—An Assay Outfit
IN GOOD CONDITION.
Address JOHN G. SMITH, 474 Edwards Street, Oakland, Cal.

WANTED.

Competent Assayers and Chemists and Experienced Ore Samplers,

To take charge of our branch offices in the Republic of Mexico, through which we purchase Ores, Bullion and Sulphides, and sell Mining and Milling Supplies. Must be thorough, active and careful workers. Knowledge of Spanish desirable. Address, with references, THE LEWIS COMPANY, Apartado 71 B, Mexico City.

WANTED.

Old Iron Shafting,
5 to 15 in. Diameter.
Address "IRON," Mining and Scientific Press.

DIVIDEND NOTICE.

The German Savings and Loan SOCIETY,
526 California Street.

For the half year ending June 30, 1897, a dividend has been declared at the rate of four and twenty-hundredths (4.20) per cent per annum on Term Deposits and three and fifty-hundredths (3.50) per cent per annum on Ordinary Deposits, free of taxes, payable on and after THURSDAY, July 1st, 1897. GEO. TOURNY, Secretary.

DIVIDEND NOTICE.

San Francisco Savings Union,
532 California Street, Corner Webb.

For the half year ending with the 30th of June, 1897, a dividend has been declared at the rate per annum of four and two-tenths (4.2) per cent on Term Deposits and three and five tenths (3.5) per cent on Ordinary Deposits, free of taxes, payable on and after THURSDAY, July 1st, 1897.
LOVELL WHITE, Cashier.

NOTE.—Plain and Certified Copies of U. S. and Foreign patents obtained by Dewey & Co., by mail or telegraphic order. American and Foreign patents secured, and general patent business transacted with perfect security, at reasonable rates, and in the shortest possible time.

In the Superior Court of the City and County of San Francisco, State of California. Department No. 8. John V. Kimball, plaintiff, vs. Mabel L. Kimball, defendant. Action brought in the Superior Court, City and County of San Francisco, State of California, and the complaint filed in said City and County of San Francisco, in the office of the clerk of said Superior Court. The people of the State of California send greeting to Mabel L. Kimball, defendant. You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court, City and County of San Francisco, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this county; or, if served elsewhere, within thirty days. The said action is brought to dissolve the bands of matrimony now existing between yourself and plaintiff, on the ground of habitual intemperance on your part for more than one year past. All of which will more fully appear in the complaint on file herein to which you are hereby referred. And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the said plaintiff will apply to the said Court for the relief prayed for in the complaint. Given under my hand and seal of said Superior Court at the City and County of San Francisco, State of California, this 9th day of April, in the year of our Lord, one thousand eight hundred and ninety-seven. C. F. Curry, Clerk. By Joseph Riordan, Deputy Clerk. R. Thompson, Attorney for Plaintiff.

FOR SALE.

A GOOD PAYING MEDICAL PRACTICE

In a Thriving California Mining Town,

Insuring a steady income from mine and outside practice. An unusually favorable opportunity. Price $350. All statements guaranteed. Address L. T., this office.

FOR SALE CHEAP.

First-Class Air Compressor (Steam Driven) and Drill, New.

Also, 3-Ton Capacity Pulverizer.
